C.P.R. Immigration Work.—C.P.R. authorities in London, Eng., inaugurated a novel plan recently for the promotion of emigration from England to Canada. Two Canadians, specially educated for the purpose, started on a walking tour through England to advertise Canada and to give information to applicants wherever they stop. The route to be followed was from London to Birmingham, Shrewsbury, Chester and Carlisle, returning to London by an eastern route.

Canadian National Railways Elevator lease.—The C.N.R. invited tenders recently for the lease of the Government elevator at Transcona, Man., from Sept. 1922, to Aug. 31, 1923. The elevator has a capacity of 1,000,000 bush, and there is connected therewith 1.52 acres of land.

Equipment Painting Section, Mechanical Division, American Electric Railway Association's annual meeting, which was fixed to be held at Cleveland, Ohio, Sept. 5-7, has, owing to present unsettled conditions, been postponed until further notice.

C.P.R. Rail Accessories Order.—The Nova Scotia Steel & Coal Co. is competing for the delivery of 3500 tons of angle bars, tie plates, bolts and spikes, which are being shipped by water from New Glasgow, N.S., to Fort William, Ont.

Railway Finance, Meetings, Etc.

Algoma Central & Hudson Bay Ry.—Gross earnings for May, \$151,085, against \$196,889 for May, 1921. Gross earnings for 11 months ended May 31, \$1,555,520, compared with \$2,526,560 for same period, 1920-21.

Algoma Eastern Ry.—A London, Eng., press report of Aug. 3, stated that in view of the company's failure to meet the instalment of interest on the 5½% 1st mortgage, 50-year gold bonds, due Mar. 1, steps were being taken to form a committee to protect the bondholders' interests. A. Roger, J. C. Dalton, C. B. B. Smith-Brougham, and A. Williamson, who have been acting as a committee for the bondholders of the Algoma Central & Hudson Bay Ry. Co., and the Algoma Central Terminals, two allied companies, are reported to have been asked to act for the Algoma Eastern Ry. bondholders. The whole three companies are associated with the Lake Superior Corporation.

Canadian Pacific Ry.—At a directors meeting at Montreal, Aug. 14, dividends were declared as follows: On preference stock, 2½% for half year ended June 30, and on common stock, 2½% for quarter ended June 30, being at the rate of 7½% per annum, and in addition 3½% per annum from special income account, all payable Sept. 30, to shareholders of record Sept. 1.

New York Central Rd.-Michigan Central Rd., etc.—There has been deposited with the Secretary of State at Ottawa, an agreement dated June 1, between M. S. Barger, H. G. Snelling and H. A. Stahl, vendors, the Guaranty Trust Co., New York, trustees, the New York Central Rd. Co., the Michigan Central Rd. Co., and other associated railways, and dated July 10, the Guaranty Trust Co., to the N.Y.C. Co., the M.C. Rd. Co., and associated companies, both documents being deposited in accordance with the Canadian Statutes, 1907, chap. 38.

Minneapolis, St. Paul & Sault Ste. Marie Ry. Co.—A press report of Aug. 16, stated that Judge Booth had issued a restraining order directing that a dividend of 2½%, declared by the company, cannot be paid until the U.S. Circuit Court passes on the legality of the issue. The Continental Insurance Co. and the Fidelity Fire Insurance Co. are appealing against a decision of the courts that the directors acted within their rights in declaring the dividend, hence the reason for the present restraining order.

Strange Theft from Railway Premises.

—A strange and rather audacious theft was reported from Windsor, Ont., Aug. 2. The thieves are said to have appropriated a locomotive, backed it to the Essex Terminal Ry. sheds in Windsor, coupled it up to a freight car containing about 1,000 cases of beer for export, and hauled it about six miles away, where it was broken open and 70 cases of beer taken out. The car was then hauled back, put in the freight shed, and the locomotive returned to the yard. Local railway employees are believed to be implicated, but so far no clue has been discovered as to the perpetrators.

British Columbia Ties for Indian Railways.—About two years ago a start was made in exporting ties from British Columbia to India, and over 300,000 ties have been sent across the Pacific for this purpose. The Indian Government returns shows the value of the ties imported into India from Canada in 1920-21 as \$1,000,000.

Locomotive Stokers for Canadian National Railways.

As stated in Canadian Railway and Marine World for August, the Canadian National Ry. ordered 25 locomotive stokers for installation on Santa Fe, Mikado and consolidation locomotives. Ten are being applied at the Moncton, N.B., shops to Santa Fe locomotives, and 15 at the Transcona, Man., shops, 10 mikado locomotives and 5 heavy consolidations. We were advised, Aug. 21, that installations had been completed on two Santa Fe's at Moncton, and that the locomotives have been returned to service. Although nothing in the nature of a complete test to determine the economy secured by the stoker's use and the degree of increase in boiler efficiency, has been undertaken as yet, we are informed that the stokers operate smoothly and efficiently and that their performance is entirely satisfactory. At the time of writing (Aug. 21) no report had been received of an equipped locomotive being turned out of the Transcona shops, but installation of the stokers is proceeding on several. The stokers were made by the Canadian Westinghouse Co., Hamilton, Ont. under the supervision of H. C. Woodbridge, of the Locomotive Stoker Co., Pittsburg, Pa., and delivery is about completed.

Freight Car Location on Canadian Railways.

The Railway Association of Canada has issued a report on the location of freight cars on Aug. 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Central Vermont, in Canada; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Michigan Central, in Canada; Napierville Jct.; Pere Marquette, in Canada; Quebec Central; Quebec Montreal & Southern; Timiskaming & Northern Ontario; Temiscouate; Toronto, Hamilton & Buffalo; Wabash, in Canada; as follows: Cars owned by reporting railways, 221,867; home cars on Canadian foreign lines, 15,832; home cars on U.S. lines, 37,159; home cars on home road, 168,876; Canadian owned foreign cars on home lines, 13,167; U.S. owned foreign cars on home lines, 18,985; total number of cars on line, 201,028; per cent. of cars on line to total owned, 90.6; deficiency on line from total owned, 20,839; bad order home cars on line, 19,214; bad order foreign cars on line, 441; total bad order cars on line, 19,655; per cent. in bad order to total owned, 9.8; privately owned U.S. cars on line, 1,889; privately owned Canadian cars on line, 1,264.

The number of immigrants who arrived in Canada during May is reported by the Dominion Government to have been 11,199, of whom 8,333 came by ocean ports, and 2,866 from the United States.

C.P.R. Angus Shops Assessment.—Montreal City Council is reported to have fixed the assessment value of the C.P.R. Angus shops for the next five years at \$1,000,000. The original valuation was \$400,000, and the period during which this had to run having expired, the company suggested \$750,000 as a new basis; the city executive suggested \$1,000,000, and some aldermen suggested \$2,000,000. The new valuation was agreed to by 21 to 9.

The Fuel Situation and the Railways.

Hon. W. C. Kennedy, Minister of Railways and Canals, C. A. Magrath, of Ottawa, and F. McCourt, Vice President, Century Coal Co., Montreal, have been appointed by the Dominion Government as a central advisory committee on the fuel question. F. L. Wanklyn, General Executive Assistant, C.P.R., Montreal, has been appointed as one of the Province of Quebec's representatives.

The coal situation as affecting Canadian railways was discussed at a conference between members of the central advisory committee and representatives of the transportation companies at Ottawa, Aug. 15. Plans for distributing the necessary supplies of coal were arranged. The railways being interprovincial in their scope, are dealing directly with the Dominion body while the provinces are expected to look after their own wants through the appointment of fuel administrators where necessary, and draw upon the Dominion committee as an advisory body, which will assist them in securing fuel wherever possible. So far as can be learned, none of the Canadian railways are facing actual fuel shortages. The Province of Quebec has contracted for the delivery of coal for their use, and all maintain, as far as possible, an emergency supply of fuel to tide them over whatever difficulties of delivery may arise.

Grand Trunk Railway Shareholders' Appeal Dismissed.

The Imperial Privy Council's Judicial Committee which has stated in Canadian Railway and Marine World for August, heard the Grand Trunk Ry. shareholders' appeal against the majority decision of the arbitrators that the company's preference and common stocks, had now no value, in connection with the taking over of the company's lines by the Dominion Government of Canada, gave its decision July 27, the announcement being made by Lord Cave as follows:—"Their lordships considered it convenient that they should announce their decision at once, and give their reasons later. Having considered the arguments for and against the appeal, they have come to the conclusion that the appeal fails, and should be dismissed, and they advise His Majesty accordingly. There is no question as to costs." The reasons for this finding had not been made public up to the time of writing, Aug. 25.

C.P.R. Damages Suit.—About two years ago Dr. W. Chambers, eye, ear and throat specialist, Calgary, Alta., was killed in a railway accident on the C.P.R., leaving a widow and a young son. The widow sued for damages in the Alberta courts, and the C.P.R. offered to settle for \$50,000. The case, however, went to trial, and the jury assessed the damages at \$65,000 for the widow and \$15,000 for the son. The company appealed and the Alberta Court of Appeal reduced the award to the widow to \$25,000. An appeal by consent was taken direct to the Imperial Privy Council, which, after hearing arguments, recently gave judgment fixing the amount of damages to be paid to the widow at \$42,500, and confirming the original award of \$15,000 for the son, which had never been contested. Costs were divided, two-thirds to be paid by the company.

Board of Railway Commissioners Autumn Circuit.

The Board of Railway Commissioners will hold sittings as follows:—Quebec, Que., Sept. 6; Saskatoon, Sask., Sept. 9; Edmonton, Alta., Sept. 11; Jasper, Alta., Sept. 12; Lucerne, B.C., Sept. 12; New Hazelton, B.C., Sept. 13; Victoria, B.C., Sept. 18; Vancouver, B.C., Sept. 19; Kamloops, B.C., Sept. 22; Nelson, B.C., Sept. 25; Lethbridge, Alta., Sept. 27; Calgary, Alta., Sept. 28; Regina, Sask., Sept. 30; Winnipeg, Man., Oct. 2; Fort William, Ont., Oct. 4.

The members who will go on circuit are expected to be Chief Commissioner Carvell and Messrs. Rutherford and Lawrence.

Increased Equipment Orders in the United States.

This year, up to date, has seen a large increase in the U.S. railway supply industry, orders for cars and locomotives particularly having been given in large volume. To the end of July, 335 locomotives had been ordered, the largest number being contracted for in July, the figure for that month being 353, compared with but 5 in January, 8 in February, 76 in March, 272 in April, 99 in May, 192 in June. Freight car orders for the first seven months totalled 103,847 and 1,352 passenger cars were ordered during the same period. One of the most notable orders for locomotives was that placed in July by the New York Central Lines for 150 mikado locomotives of the type tested recently on the Michigan Central Rd., no. 8000.

In view of the unsettled labor conditions prevailing in the U.S., these large equipment orders are significant, as indicative of the belief held by railway executives and financiers that industrial prosperity is returning and can be only delayed temporarily by existing industrial troubles. It is a well known fact that in good business times the U.S. railways have always been caught with equipment shortages, and it is evident that the U.S. railway executives are making such provision as they are financially able to do to meet the heavy traffic conditions of the future. Owing to the fact that economic conditions in Canada follow closely the changes taking place in U.S. conditions, it may be hoped that conditions in the railway supply industry in this country will soon show the same degree of improvement as in the U.S.

In this connection, however, it is to be noted that in recent months the U.S. railways have experienced great improvement in their operating position, and in the financial results secured, and it is evident that this condition is only to inspire hopefulness in railway executives and encourage them in the belief that industrial prosperity will return eventually. If railway operating results in Canada were showing the same improvement as in the U.S. there would be more expectation of a revival in the railway supply industry, and in all industry, than there is at present. But notwithstanding the handicap placed on industry, and the railway supply industry in particular, by the narrow margin between railway income and expense at present, signs that conditions are on the up-grade are not wanting. It is inconceivable that growth and development in the industry of this young and wealthy country should be forever restricted to the rate of the past few years, and the present economic tone is more favorable than for some

time past. It will be well, though, if those in authority come to a realization of the fact that permanent prosperity in the transportation industry, and in industries that depend on transportation, and, in fact, in more or less degree in all industry, will be impossible till the railways are placed on a basis where they will be allowed earnings commensurate with the value of the service rendered.

Fire Prevention Regulations Sus- pended for Canadian National Railways.

Fire prevention regulations for railways prescribed by the Board of Railway Commissioners are given in full on pgs. 450 and 451 of this issue. The Board has also passed the following orders:—

32,657. July 24.—Re general order 362, April 19, 1922, and the application of the Canadian National Rys. for temporary suspension of clause 8 of the order (due to the applicants' inability, owing to the miners' strike in the Northern Alberta coal mines, to secure delivery of coal having good coking properties, in quantities sufficient to enable the applicants to maintain the necessary train services on portions of their Western Lines: Upon the report and recommendation of its Chief Operating Officer and its Chief Fire Inspector, the Board orders that, effective until Aug. 15, 1922, the provisions of the said clause 8 be suspended in so far as they apply to portions of the applicants' Western Lines operating through non-forested territory; provided that such suspension shall not be construed as permitting the use of lignite coal as fuel on locomotives, steam shovels, ditching machines, and pile drivers.

32,759. Aug. 16.—Re general order 362, April 19, 1922, and order 32,657, July 24, 1922, suspending until Aug. 15, 1922, the provisions of clause 8 of general order 362, as set forth in the general order, and the application of the Canadian National Rys. for a further extension of the provisions of clause 8: Upon reading what is alleged in support of the application and the report and recommendation of its Chief Operating Officer and its Chief Fire Inspector, the railway company undertaking to limit the use of sub-bituminous coal to such territories as have the least hazardous conditions, and to replace it by the use of bituminous coal as rapidly as the latter can be secured, the Board orders that, effective until Sept. 1, 1922, the provisions of clause 8 of general order 362 be suspended, in so far as they apply to portions of the applicants' Western Lines operating through non-forested territory; provided that such suspension shall not be construed as permitting the use of lignite coal as fuel on locomotives, steam shovels, ditching machines and pile drivers.

United Lines, Limited has been incorporated under the Ontario Companies Act, with authorized capital of \$600,000, to carry on business as general carrier, forwarding agent, storage and warehouseman, transfer and express agent, and any other similar business, and to operate motor trucks, motor buses or other vehicles, steam and other vessels, storehouses, warehouses, elevators, yards and buildings. The provisional nominal directors are: G. N. Shaver, et al, Toronto.

S. Lewis, of Toronto, was fined \$25 and costs or 30 days in jail, at Ottawa, recently, for travelling on the G.T.R. without paying a fare.

Railway Rolling Stock Orders and Deliveries.

Abitibi Transportation & Navigation Co., has received 12 flat cars at Iroquois Falls, Ont., for the logging railway which it is building from there to Hughes.

The private wooden car Estonia, formerly owned by Sir John Eaton, who died recently, and which, as stated in our last issue, has been bought by the C.P.R., is to be used as a spare business car.

The G.T.R. has given National Steel Car Corporation, Hamilton, Ont., an order to rebuild 100 freight refrigerator cars with steel underframes. This is in addition to a previous order for rebuilding 250. It has also ordered from the same builders a railway motor passenger car to be built in accordance with G.T.R. specifications.

The G.T.R. has placed an order for the repair of 500 fifty ton steel hopper cars with the Eastern Car Co. These repairs will be heavy, including the installation of all new center sills, friction draft gear and type D couplers. It is expected that the work will be commenced during September and completed by the end of the year.

The C.P.R. has ordered 15 steel baggage and express cars from National Steel Car Corporation, Hamilton, Ont. They will be practically duplicates of those already in service. Following are the principal dimensions:—

Length over end frame	79 ft. 1 in.
Length over all	82 ft. 3 1/2 in.
Truck centers	57 ft. 6 in.
Height at eaves	10 ft. 1 in.
Height over ventilators	14 ft. 11 in.
Height at eaves	11 ft. 1 1/2 in.
Height rail to side sheets	3 ft. 7 1/2 in.

The C.P.R. has ordered 25 steel underframe freight refrigerator cars from National Steel Car Corporation, Hamilton, Ont. They will be the regular C.P.R. standard cars, with brine tank system of refrigeration, and arch bar type trucks, outside metal roofs and Cardwell friction draft gear. Following are the principal dimensions:—

Length over end frame	41 ft.
Length over all	44 ft. 8 in.
Truck centers	31 ft. 2 in.
Width at eaves	9 ft. 10 in.
Height over brake mast	14 ft. 0 1/2 in.
Height at eaves	12 ft. 8 1/2 in.
Height rail to bottom of side sills	3 ft. 3 1/2 in.

The Abitibi Power and Paper Co. has ordered a mogul (2-6-0) locomotive, type S142, from the Montreal Locomotive Works. Following are the chief particulars:—

Weight on drivers	121,500 lb.
Weight on truck	18,000 lb.
Total weight	142,500 lb.
Wheel base, driving	12 ft. 10 in.
Wheel base, total engine	21 ft. 3 1/2 in.
Wheel base, total engine and tender	49 ft. 10 1/2 in.
Cylinders, diam. and stroke	19 x 26 in.
Driving wheels, diam.	39 in.
Boiler, type	Extended wagon type
Boiler pressure	180 lb.
Boiler, diam. inside first ring	60 3/4 in.
Firebox, length and width	94 1/2 x 42 1/2 in.
Tube, no. and diam.	115 x 2 in.
Flues, no. and diam.	21 x 5 1/2 in.
Heating surface, tubes	785 sq. ft.
Heating surface, flues	349 sq. ft.
Heating surface, total	1,134 sq. ft.
Heating surface, arch tubes	17 sq. ft.
Heating surface, total	1,251 sq. ft.
Graze area	100 sq. ft.
Tractive power	28,700 ft. lb.
Factor of adhesion	4.3
Tank type	Sloping back
Tank capacity, water	4,500 U.S. gals.
Capacity, fuel	9 tons
Coal type	Ventilator

F. X. Belanger, Traffic Manager, Fraser Companies, Ltd., Edmundston, N.B., writes: "I enclose cheque in payment of my subscription to the Canadian Railway and Marine World, which, I trust, is always a welcome visitor."

Canadian National Railways Construction, Betterments, Etc.

Prince Edward Island.—Considerable tie renewals, ballasting, bank widening, strengthening of bridges, etc., is being done on the Island Division, particularly on the portion of the Charlottetown Subdivision between Summerside and Tignish, 68.33 miles.

Desbiens, Que., Station.—The Board of Railway Commissioners has approved of location of and detail plans for a standard type B station at Desbiens, mile 18 from Quebec and Lake St. John Ry.

Ties for Central Division.—Tenders will be received to Sept. 15, for 1,500,000 ties to be cut between Oct. 1922, and May 1923, and delivered between Dec. 1, 1922, and Sept. 30, 1923, on C.N.R. lines in Ontario and Quebec, north of the St. Lawrence River and east of Armstrong and Port Arthur, in accordance with specification 3856, dated March 18, 1919. While no tenders for less than 5000 ties will be considered, arrangements will be made for buying ties in small quantities cut by actual settlers on their own lands. The ties are delivered as follows:—350,000 on National Transcontinental Ry. between Armstrong, Ont. and Harvey Jct., Que.; 200,000 on Canadian Northern Ry. between Hawkesbury, Ont. Quebec City and St. Felicien, Que.; and 850,000 on the Canadian Northern Ry. between Ruel and Port Arthur, Ont.

Maynooth Subdivision Bridges.—We are officially advised that a number of bridges on the old Central Ontario Ry., located within the Maynooth Subdivision, Ontario District, C.N.R., are to be rebuilt. Following are details of the old and new structures.

Lonk Lake Creek, mile 4.3.—The existing structure consists of two I beam spans each 18 ft. overall on 2 masonry abutments and one masonry pier built in 1882. This will be replaced by 2 reinforced concrete slab spans, each 18 ft. over all resting on the existing substructure, which will be left unchanged. The grade will be raised about a foot.

Cold Creek, mile 7.7.—The existing structure consists of 2 through plate girder spans, each 55 ft. in overall, and originally resting on 2 masonry abutments and one masonry pier, and was built in 1882. The spans are on a skew of 66 degrees, 15 min. Some years ago an additional concrete pier was built under the center of each span. This will be repaired with four I beam spans 24 ft. deep, the ends of which will be built normal to the track and skewed on the piers. These I beam spans measured along the center line, will be respectively 27½ ft., 24½ ft., 24½ ft. and 24½ ft. Some small additions to the existing masonry piers and abutments will be necessary to accommodate them.

Moir River, mile 36.6.—The existing structure consists of 2 through plate girder spans, each 45 ft. over all, resting on 2 masonry abutments and on a masonry pier built in 1883. This will be replaced with 4 reinforced concrete slab spans, each 22 ft. 7½ in. over all, 2 new concrete piers will be added to the existing substructure to carry them, and new copings will be built on the abutments. The foundations are all of solid rock. The grade is to be raised 3 ft.

Moir River, mile 46.3.—The present structure is a through plate girder span, 45 ft. over all, resting on masonry abutments, built in 1884. The new work to be done is the building of a skew pier; half-way between the abutments, the addition of copings to abutments, and the

installation of 2 spans of reinforced concrete slabs each 22 ft. 10½ in. long on the center line. Each span will consist of 2 slabs. The pier will rest on solid rock. The grade will be raised 2½ ft.

Beaver Creek, mile 60.3.—The existing structure is a through plate girder span, 75 ft. over all resting on masonry abutments built in 1884. The new work will consist of the addition of concrete wings to the existing abutments and the replacing of the superstructure with a half through plate girder 74½ ft. overall. The grade will be raised 3 ft. to give room for a more modern design of deck.

All these bridges are now too light for the locomotives which it is desired to operate over the subdivision, and are being reconstructed to Cooper's loading class E. 40, with 4000 lb. uniform load.

Cherry St. Yards, Toronto.—A contract has been let to Lumsden Concrete and Paving Co., Toronto, for paving and drainage work at the Cherry St. yards, Toronto.

Mount Yard, Port William.—A press report states that at the end of July about 150 men were at work on this new yard. Another report says that R. G. Duncan, formerly President Port William Board of Trade, on a recent visit to Winnipeg, stated that 250 acres of land had been acquired for the yard, and that when the work is completed there will be three district yards—a westbound departure yard with 14 tracks; an eastbound arrival yard with 8 tracks, and a classification yard with 20 tracks; That the yards will be so laid out that the capacity of each can be doubled when required; That the yards would be built on an incline so as to do away with an artificial hump; That the buildings connected with the yards would consist of 24-stall locomotive house, machine shop, stockhouse, repair shop, van sidings, tanks, coaling station, yard offices, power house, and permanent bank houses, together with the necessary water and sewer systems, and that the whole work will be done by the company's own forces.

Elevator B Dock, Port Arthur.—Tenders were invited to Aug. 18 for removing the old dock, situated out shore from Elevator B, Port Arthur, Ont. The dock is of timber deck constructed on piles and it is estimated that there are 1700 piles and approximately 200,000 ft. b.m. of timber walling and deck to be salvaged.

Graham-Kashabowie Subdivisions Connection.—Tenders were invited to Aug. 16 for the construction of a connection, approximately 4 miles long, between the Graham and Kashabowie Subdivisions, near Rowan, Ont. Rowan is on the Canadian Northern Ry. line, mile 36.3 west of Port Arthur. (Aug., pg. 406.)

Port Frances Subdivision Bridges.—The Board of Railway Commissioners has authorized the rebuilding of the following bridges, on the Port Frances Subdivision, Ont.: Over Boucher's Creek, Emo, Ont., and over Everett's Creek, mile 252 from Port Arthur, and over Pine River, near Pinewood, mile 273 from Port Arthur.

Ties for Western Lines.—Tenders will be received to Sept. 16, for the supply of 4,500,000 ties to be manufactured between October, 1922, and May, 1923, and delivered between Dec. 1, 1922, and September 30, 1923, on the C.N.R. west of Armstrong and Port Arthur, Ont. as follows: 1,000,000 between Armstrong and Winnipeg; 500,000 between Port Arthur

and Winnipeg, excluding the lines in Minnesota; 100,000 in Minnesota; 200,000 in Manitoba west of Winnipeg, and in Saskatchewan; 300,000 in Alberta; 500,000 between Red Pass Jct. and Port Mann, B.C.; 100,000 between Red Pass Jct. and Endako, B.C.; and 500,000 between Endako and Terrac, B.C. No tenders for less than 5,000 ties will be accepted, but arrangements will be made through the District Tie Agent at Winnipeg, to buy ties in small lots from settlers who cut them from their own lands.

Western Lines Betterments.—Tenders were received recently for the erection of 28 miles of fencing on Thunderhill Subdivision, between Lintlaw and Kelvington, Sask., for grading an earthen dam and spillway for water supply at Radville, Sask., for construction of a 5 x 5 ft. reinforced concrete culvert at mile 43.5, Lovell Subdivision, Alta., and a 5 x 7 ft. reinforced concrete culvert at mile 1576, Bullock Subdivision, B.C.

Western Lines Water Supply.—A press report states that contracts have been let as follows:—To W.A. Dutton, Winnipeg, for building drains at Pope, Man.; Raymore, Maryfield and Conquest, Sask., and Mecheche, Alta. To Northern Construction Co., Winnipeg, for building a dam at Wiseton, Sask. To C. G. Anderson, Norwood, Man., for building a dam at Rama, Sask. To Greene and Elsasner, Winnipeg, for building pipe lines at Wiseton, Rama, Raymore and Maryfield, Sask. To G. M. Irwin, Stonewall, Man., for building pipe line at Pope, Man. To Jamieson Construction Co., Edmonton, Alta., for building a pipe line at Mecheche, Alta. To Riley and Reid, Patience, Alta., for building a pipe line at Tilvey, Sask. To Simpson and Sons, Stratford, Winnipeg, for building 10,000 ft. pipe line at Lloydminster, Sask.

Oakland Subdivision Fencing.—A press report states that a contract has been let to the Ideal Fence and Spring Co. of Canada, Winnipeg, for the erection of approximately 50 miles of fencing on the Oakland Subdivision, Man.

Regina Track Connection.—We are officially advised that a contract has been let to Roosa and Wickstead, Saskatoon, Sask., for grading and culvert construction on a connection 3.28 miles long, between the Canadian Northern Ry. north line, and the Grand Trunk Pacific Ry. tracks at the west end of the latter's terminals at Regina, Sask. The work is expected to be completed by Dec. 31.

Minard-Lampman connection.—We are officially advised that a contract has been let to Gibbs Brothers, Lumsden, Sask., for grading and culvert construction on a connection, 1.74 miles long, between Minard, on the Grand Trunk Pacific Ry. Boundary Subdivision, and Lampman, on the Canadian Northern Ry. Radville Subdivision. The work is expected to be completed by Dec. 31.

Kindersley Pipe Line.—A press report states that a contract has been let to C. U. McManus, Moose Jaw, Sask., for building a pipe line, approximately 16,200 ft. long, at Kindersley, Sask.

Edmonton Car Shops.—A press report states that construction has been started on car shops at the Calder yards on the outskirts of Edmonton, Alta., and that about 40 piles a day were being driven for the foundation, and that about 600 of them have to be driven. The building will, it is said, be 600 x 175 ft. and will be of brick and steel.

Canada, United Kingdom, most other British pos-
tations (except Australia), and to Mexico, \$2 a
year. Extra postage United States, \$1.50 a year;
for other foreign countries, except Mexico, \$1.50
a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.
ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

TORONTO, CANADA, SEPTEMBER, 1922.

The Diesel Electric Drive for Self-Propelled Cars.

Judging from the attention being given the matter in Canada, the United States and other countries, the self propelled cars are rapidly establishing a hold for itself in railway operation. An article on other pages of this issue deals fully with developments in self propelled car service on the Canadian National Ry., the Greater Winnipeg Water District Ry., the Quebec Central Ry., the Quebec, Montreal and Southern Ry., and on a Government railway in Australia, and in previous issues cars used on other lines. While Canadian Railway and Marine World has not yet received complete records of operating and maintenance costs, it is evident that both the gasoline driven and the storage battery cars are reliable and economical. There is no doubt that the providing of steam train passenger service on the majority of branch railway lines is a losing proposition, and the introduction of the branch line operation of any type of self propelled car which is reliable and much more economical than a steam train is certainly of value to the railways and the public.

There is one type of drive applicable to self propelled cars for railway service, which as far as we know, has not been tried in Canada, but from the results of operation elsewhere, it would seem that great advantages might be derived from its use. We refer to the Diesel electric motor cars used on certain Swedish railways, the first of these cars having been in service for over six years. Four different types of motor cars equipped with the Diesel-electric drive are in use, two having 75 h.p. engines and two having 120 h.p. engines, and a number of cars to be equipped with 160 and 250 h.p. engines are being built. The latter will be somewhat like the nature of locomotives, and will haul a limited number of trailers. The cars at present in use in Sweden are all operating on privately owned railways.

It is well known that the Diesel engine is superior to all other prime movers in efficiency as a heat engine. Whereas the ordinary internal combustion engine transforms from 20 to 22% of the thermal value of the fuel consumed into useful work, the Diesel engine will get from 30 to 35% out of it. In the operation of a Diesel engine, combustion is complete, and analysis of the exhaust gases shows them to consist of carbon dioxide, water vapor, and the nitrogen contained in the air of compression, so that the waste is negligible. High compression and complete combustion effect an economy not obtained by any other prime mover, and as ignition is caused solely by high air pressure, no special ignition devices, liable to get out of order, are required. With a large supply of cheap crude oil available for fuel, the economy in operating engines of this nature in self propelled cars is evident.

In the Swedish railway cars, the engines are started electrically, and the power consumed by the engine is transmitted electrically to the driving axle, through generator and motors. The engine and generator are mounted on a common frame, the generator being shunt-wound, and, in addition, provided with a separate series winding, the latter being connected to the circuit only

when the generator is used as a motor driven from a storage battery included in the equipment. The two motors are standard series-wound railway motors, with commutating poles. Power is transmitted to the two inside axles by spur gearing.

We are informed by a Canadian railway officer, that two 50 ft. passenger cars could be equipped with a Diesel-electric outfit, to operate as a self propelled 2-car unit, for \$25,000, this providing for the acquisition and installation of Diesel engine and all necessary electrical equipment in one car, and for equipping both cars with ball bearing trucks. The same officer informs us that maintenance costs have been demonstrated as exceedingly low, the electrical equipment particularly requiring but infrequent attention. Experience has shown that the cars require overhauling about every 50,000 miles.

Reasonable first cost, low maintenance cost and low operating cost, together with simplicity in operation and reliability, indicate that cars of this type in suitable rail service would be a paying proposition. Actual experience with them in Sweden has demonstrated this. A trial of one of them on a Canadian railway might possibly lead the way to further progress in the task of decreasing railway operating expenses.

Sir Alfred Smithers, M.P., who, until May, 1921, was Chairman of the G.T.R. board of directors, is stated in a press dispatch, to have voted in the British House of Commons recently against the motion to remove the embargo preventing Canadian live cattle from being admitted to Great Britain, the reason given for his action being that, among his other activities, he is a cattle breeder. If that was his reason, it will only tend to increase the contempt in which he has been held in Canada since the evidence before the arbitrators, on the value of G.T.R. shares taken over by the Dominion Government, showed his participation in the manipulation of the company's accounts for the apparent purpose of deceiving both the Government and the company's shareholders.

The Labor Congress, at its meeting in Montreal recently, passed resolutions urging that an adequate number of employees be engaged on railway maintenance of way work. There is not the slightest evidence that an inadequate number of employees are engaged in railway maintenance of way work on any of the principal Canadian railways, the management of which can safely be trusted to see that the tracks are maintained properly.

Railway Tramps Nuisance.—Calgary, Alta., Board of Public Welfare, in a report to the City Commissioners, recently stated that about 25 men were arriving in the city daily by the "box car Pullman," and becoming either public charges or nuisances. It was suggested that action be taken along with other cities, to ask the Board of Railway Commissioners to take some action in regard to the matter.

Railway Lands Patented.—Letters patent were issued during June, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Canadian Northern Ry.	Arrows.
Canadian Pacific Ry.	13.20
Nicola, Kamloops & Similkameen Ry.	26.98
Total.	52.86

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian National Rys.—O. N. BAIRD, Air Brake Inspector, Maritime District, Charlottetown, P.E.I., is about to be superannuated.

E. H. BROCK, heretofore section foreman, has been appointed Assistant Roadmaster, Titchfield, Sask.

H. W. FLEMING, heretofore Assistant Engineer, Construction Department, Toronto, has been appointed Assistant Engineer, Ottawa Division. Office, Ottawa, Ont.

A. J. HOULE, General Shop Foreman, Island Division, Maritime District, Charlottetown, P.E.I., is about to be superannuated.

R. KNOX, heretofore acting Superintendent Engineer, has been appointed Superintendent Engineer, Coastal Steamship Services, Canadian National Rys. and Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C.

W. H. LEACH, heretofore section foreman, Biggar, Sask., has been appointed acting Roadmaster, Calgary, Alta., vice F. C. Mackay transferred.

RONALD MACDONALD, heretofore clerk in Division Storekeeper's office, Island Division, Maritime District, Charlottetown, P.E.I., is acting as Division Storekeeper, vice S. F. Hodgson, retired under the Provident Fund.

R. W. SAUNDERS, heretofore chief clerk, General Agent's office, Chicago, Ill., has been appointed Travelling Passenger Agent, Canadian National-Grand Trunk Rys., there, vice G. L. Bryson, whose appointment as Travelling Passenger Agent, Canadian National-Grand Trunk Rys., Cincinnati, Ohio, was announced in our last issue.

F. SCOTT, heretofore section foreman, has been appointed Assistant Roadmaster, Fort Rouge, Man.

S. J. STINSON, heretofore signal maintainer, Saskatoon, Sask., has been appointed acting Signal Supervisor, Saskatchewan District, vice R. G. Gardner transferred. Office, Saskatoon, Sask.

Canadian Pacific Ry.—F. BENNETT, heretofore Assistant Locomotive Foreman, Farnham, Que., has been appointed Assistant Locomotive Foreman, London, Ont., vice W. J. McDiarmid transferred to Farnham.

J. L. BROMLEY, heretofore dispatcher has been appointed Night Chief Dispatcher, Sudbury, Ont., vice G. S. Depew, appointed Chief Dispatcher.

ALLAN CAMERON, heretofore Superintendent, Land Branch, Natural Resources Department, Calgary, Alta., has been appointed Oriental Manager, Canadian Pacific Steamship Lines, Hong Kong, China, as indicated in our last issue. We were advised recently that no appointment of a successor to him had been made.

C. B. FOSTER, heretofore Assistant Passenger Traffic Manager, Eastern Lines, has been appointed Passenger Traffic Manager, Rail Lines. Office, Montreal.

A. CARTLAND, heretofore car man, has been appointed Assistant Car Foreman, Glen Yard, Montreal, vice J. Mitchell, who has been given a position as car man.

F. DAVIS, heretofore Chief Dispatcher Sudbury Division, Algoma District, Sudbury, Ont., has been appointed Chief Dis-

patcher, Laurentian Division, Quebec District, Montreal, vice C. O. McHugh, appointed Transportation Assistant, Quebec District, Montreal.

C. E. E. Ussher,
General Passenger Traffic Manager, Canadian
Pacific Railway.

C. B. Foster,
Passenger Traffic Manager, Canadian Pacific
Railway.

G. S. DEPEW, heretofore Night Chief Dispatcher, Sudbury, Ont., has been appointed Chief Dispatcher, there, vice F. Davis, transferred to Montreal.

M. DIXON, heretofore fitter, West Toronto, has been appointed Assistant For-

man, Schreiber, Ont.

J. H. HOLLEY, formerly in city ticket office, Grand Trunk Pacific Ry., Winnipeg has been appointed Travelling Passenger Agent, Ocean Traffic, C.P.R., Winnipeg, vice R. W. Greene, whose appointment as Assistant General Agent, Ocean Traffic, C.P.R., Calgary, Alta., was announced in our last issue.

D. McCORKILL has been appointed Night Foreman, Schreiber, Ont.
W. J. McDIARMID, heretofore Assistant Locomotive Foreman, London, Ont., has been appointed Assistant Locomotive Foreman, Farnham, Que., vice F. Bennett, transferred to London.

C. O. McHUGH, heretofore Chief Dispatcher, Laurentian Division, Quebec District, Montreal, has been appointed Transportation Assistant, Quebec District, vice H. J. Main, Car Service Agent, whose appointment as Superintendent, Trenton Division, Ontario District, Toronto, was announced in our July issue. Office, Montreal.

W. J. McKAY, heretofore Night Locomotive Foreman, Chapleau, Ont., has been appointed Assistant Locomotive Foreman there, vice C. Norris, who is out of the service.

M. MILLER, heretofore fitter, has been appointed Night Foreman, Glen Yard, Montreal, vice T. Burnside superannuated.

P. PINCOMBE, heretofore Assistant Locomotive Foreman, Schreiber, Ont., has been appointed Locomotive Foreman, Webbwood, Ont., vice W. H. Gougeon, who has been given a position as hostler there.

A. L. RAWLINSON has been appointed Antwerp Passenger Agent, Antwerp, Belgium. Office, 25 Quai Jordaens.

W. STEWART has been appointed Glasgow Passenger Agent, Glasgow, Scotland. Office, 25 Bothwell St.

C. TAYLOR, heretofore car man, has been appointed Assistant Car Foreman, Glen Yard, Montreal, vice F. Clarke, who has been given a position as car man.

C. E. E. USSHER, heretofore Passenger Traffic Manager, has been appointed General Passenger Traffic Manager. Office, Montreal.

J. H. WEBB has been appointed Southampton Passenger Agent, Southampton, England. Office, 7, Canute Road.

Grand Trunk Railway. MAJOR GRAHAM A. BRILL, C.M.G., Deputy Minister of Railways and Canals, has been appointed a director, vice H. G. Kelley, resigned.

W. C. CHISHOLM, K.C., General Solicitor, has been appointed head of the Legal Department, owing to the death of W. H. Biggar, K.C., Vice President and General Counsel, Office, Montreal.

W. D. ROBB, heretofore Vice President, Transportation, Construction and Maintenance, was, on Aug. 17 appointed ranking Vice President, with title of Vice President and General Manager, to "exercise the authority and perform the duties exercised and performed hitherto by the President." H. G. Kelley, whose resignation as a director was accepted by the Dominion Government on Aug. 14.

JAS. A. YATES, heretofore Assistant Treasurer, has been appointed Treasurer, vice Frank Scott, Vice President and Treasurer, resigned.

French railways are reported to have reduced freight rates on foodstuffs and other commodities by 10 to 25%, and also to have made reduction on commodities necessary for the metal industries.

Steam Railway Operating Revenues, Expenses and Other Statistics for May.

The following comparative table for May, 1922 and 1921, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There is a slight increase in the number of roads included under this heading, so that the data for 1922 and 1921 is not directly comparable with previous reports.

As the Canadian Government, Canadian Northern and Grand Trunk Pacific Railways are under one management, and operated as one system, the monthly operating reports for 1922 contain a consolidated report for these railways, under the heading "Canadian National Rys.," which includes the old Canadian Government Rys., viz., Intercolonial, Prince Edward Island, National Trans-

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.; the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government; and the Grand Trunk Pacific Ry.

The column headed "Canadian Pacific" includes also the Montreal and Atlantic and Esquimalt and Nanaimo Rys.

The column headed "Grand Trunk" includes all the G.T.R. Co. of Canada lines, including 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Rys., 1.21 miles; Vermont & Canada Ry., 22.18 miles; Vermont & Provincial Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair rivers.

Items 1 to 6 in the table include rail

lines revenues only. Previous to this year they included water lines. Operating income items have been added. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. In former years the total of mixed train miles were added to both freight and passenger train miles when computing averages. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, excess baggage, parlor cars, etc., whereas previous reports gave an average per train mile of passenger receipts only. The number of employees is also a new feature of this year's reports.

*Contains a proportion of mixed train miles.

The Railways' Operating Results for May.

Canadian railways' operating revenues for May increased substantially over those for May, 1921, and also over those for April 1922, and were exceeded in 1922 to the end of May only by those of March when they were \$331,430 greater. For the railways as a whole, the freight revenues in May were \$2,692,930 greater than in May, 1921, and \$4,092,236 greater than in April 1922. As between May 1922 and May 1921, all roads had increases in freight revenue, and increases were made by all roads as between May and April. In passenger revenue, however, the roads as a whole decreased from May 1921, as did all the roads individually, while as between May and April, some increase was made by the roads as a whole, but this is due to the fact that the increase in passenger revenues enjoyed by the C.P.R. was sufficient to more than counterbalance the decreases suffered by the Canadian National Rys. and the G.T.R.

Railway operating expenses increased somewhat over those of April, but did not increase to nearly the same extent as did the operating revenues. As compared with May 1921, the operating expenses made a gratifying decrease. The major part of this decrease is accounted for by the remarkable showing made by the Canadian National Rys. The railways as a whole had a good decrease in transportation expenses as between May 1922 and May 1921.

On account of the May revenues having substantially increased over those of April, while expenses did not increase in anywhere the same proportion, the May operating ratio was much more favorable than that for April. Compared with May 1921 operating expenses decreased, while operating revenues did not increase as much as they did over those for April, while operating expenses decreased, instead of increased, with the result that the net effect, as expressed in improvement in operating ratio, was about the same as when compared with April. It is a remarkable coincidence that the operating ratio for April 1922 should be practically the same as in May 1921, viz: 95.51 for April 1922, and 95.50 for May 1921.

The financial results secured by the various roads are best expressed by the operating income accruing to them. Examination of this item shows the real measure of improvement which took place between May 1921 and May 1922, and it is evident that, for the roads as a whole, the improvement was great. However, the improvement was not secured by all the roads individually, but increase in the Grand Trunk's operating income, combined with the better result shown by the Canadian National Rys. to counterbalance the falling off suffered by the C.P.R. and to show a better result for the roads as a whole.

The Canadian National Rys. revenues increased \$1,344,990, or 16% over May 1921. The increase was entirely in freight receipts, passenger receipts being 18% less than for May 1921, with decreases in both passengers carried and passenger miles. With an increased ton mileage in all freight of 27%, freight train miles increased only 7.5%, indicating an increased train loading of 7.9 tons per train. While the average car loading showed an increase of 1.7 tons per car, the number of cars per train increased by 1.9 loads and 3.2 empties. Maintenance expenses decreased slightly, but transportation expenses decreased 20.8%, and the total pay roll decreased 6%, with

practically no change in employees. The G.T.R. had increased freight traffic of 17%, increasing the freight revenue 4%, but passenger traffic fell off 4% and passenger receipts 14%, the total decrease in revenues being 3%. Operating expenses decreased 8%, giving a net operating revenue of \$610,572 and an operating ratio of 80.47, compared with \$321,186 and 94.57 respectively for May 1921.

The C.P.R. revenues decreased \$254,103 or 1.8%, from May 1921, and operating expenses increased 6.5%, giving an operating ratio of 82.72, against 76.29 for May 1921. Freight revenues increased 7.7% with an increase in ton miles of 19.5%, but passenger revenues decreased 7.5%, on account of a decrease in passenger miles of 12.6%, and decreased rates. Maintenance expenses increased substantially over last year, but transportation expenses decreased 5.6% with an increase in total miles of 14%.

It does not require more than a superficial comparison of the figures for May 1922 with those for May 1921, to demonstrate that the railways have succeeded in reducing their costs in a very great degree, and it is further evident, without the necessity of detailed enquiry, that the benefits of these lowered costs have been passed on to the public in the form of lower transportation charges. An average charge for all roads of but 1.24¢ per revenue ton mile represents a large reduction from the figure for May, 1921, while the reduction of from 3.13¢ to 2.975¢ per revenue passenger mile represents a large decrease in the railways' gross passenger revenues.

In addition to showing the reduced costs which the railways have secured, and the manner in which the benefits of the reduced costs have been handed on to the public, the May report also outstandingly demonstrates the efficiency with which railway operation is being carried on. An examination as to the increase in the number of train miles operated, made coincident with an examination into the increase in the number of revenue tons carried, and the number of ton miles of freight transportation furnished, shows that train movement has been most efficient. The gratifying increase in the number of tons of freight per freight train mile speaks well for the increased efficiency in train loading, and the increase in the average number of loaded cars per freight train mile, accompanied by a very slight increase in the average number of empty freight cars per freight train mile, shows that every effort has been made to take advantage of the heavier power now operating and to govern the distribution of cars in accordance with the existing currents of traffic. The only let-up evident in the average car loading, but as the National Rys. car loading is governed so largely by trade and commercial requirements and the character of traffic offering, the decrease noted cannot be fairly taken as any indication of a lessening in operating efficiency.

Another feature of the May report worthy of special attention is the vast improvement secured by the Canadian National Rys. compared with May 1921, the decrease in the operating ratio from 130.65 in May 1921, to 100.49 in May 1922, being most gratifying. The result secured was due primarily to the large increase in freight tonnage handled which, despite the lowered average freight rate, increased the freight re-

venue by a large amount. This, in combination with the large decrease in transportation expense, brought the relationship between revenues and expenses to the favorable condition indicated by the large improvement in the operating ratio. A more convincing demonstration of the truth of the proposition that the National system's great need is increased traffic, and that only with increased traffic can it be placed in a permanently prosperous condition, would be difficult to discover.

It is customary in most matters to base forecasts for the future on the experiences of the past, and, basing our predictions concerning the future for the railway industry in Canada on the operating results for 1920 and 1921, we think that prospects are good for greater improvement in the railways' operating position in the latter part of this year than in the preceding two years, subject to a condition. That condition concerns the relationship between railway expenses, principally wages, and railway rates, and is discussed elsewhere in this issue. It must be evident to all concerned that if the public is to be given the benefit of proposed reduced costs in the railway business, before the railways have actually secured the benefit of the proposed reductions, the railways are bound to suffer financially. If, however, but small delay is experienced in giving the railways the benefit of the reduced costs, it is likely, on account of the fact that in 1920 and 1921 railway revenues continued to increase from early summer till they reached the peak in October, that the net revenues secured by the railways will be much better in the latter part of this year than in the May operating ratio of 95.53 for 1920, when the May operating ratio was 95.55, and than in 1921, when the May operating ratio was 95.50. The matter comes to this, if the railways get a square deal, they will benefit financially by their efficiency in operation, but if their revenues are unduly restricted and their expenses unduly increased by government action, their net results will be disappointing in spite of all the efficiency they can display in the operation of their properties.

Electrification of Netherlands East Indies Railways.—The Trade and Commerce Department's Trade Commissioner, P. W. Ward, has written from Singapore, June 15, 1922, that a study of conditions, extending over several years, the Netherlands East India authorities have decided to electrify the whole railway system. Direct current at 1,500 volts is to be used, but later the Batavia-Sourabaya section may be raised to 3,000 volts on a single-phase, if circumstances warrant. Two power stations, giving about 40,000 h.p., are being erected; one 44 miles and the other 63 miles from Batavia, the northwest terminus of the line. It is estimated that of this 40,000 h.p., 30,000 will be required for the line, and that the remaining 10,000 will be available for light and power in other directions. It is expected that the first portion of the lines between Tandjong Priok, a growing port some miles to the east of Batavia, and Meester Cornelis, a junction some miles to the south of Batavia, will be in operation early next year.

Scratch Railways are reported to have agreed upon a general reduction in freight rates, conforming with the rates put in force recently on English lines.

Canadian Pacific and Canadian National Railways' June Earnings and Expenses.

The C.P.R.'s June gross earnings were \$13,810,448, a decrease of \$651,195 from June, 1921. Operating expenses were \$11,448,134, an increase of \$91,249 over June, 1921. Net earnings were \$2,362,313, a decrease of \$742,445 from June, 1921. It is evident that the C.P.R. results were much less favorable than they were in corresponding months last year. The cumulative effect of these less favorable monthly showings is evident on examining the operating figures for the first 6 months of this year, the gross earnings totaling \$65,350, a decrease of \$7,760,312 from the first 6 months of 1921. Operating expenses totaled \$66,481,287, a decrease of \$4,624,218. Operating expenses decreasing \$3,136,094 less than gross earnings, net earnings for the six months of course also decreased by that amount.

The Canadian National Ry.'s gross earnings for June were \$8,235,603, a decrease of \$51,367 from June, 1921. Operating expenses were \$10,199,592, a decrease of \$682,635 from June, 1921. The operating loss was \$1,963,989, a decrease of \$631,268 from June, 1921. While this represents a substantial improvement over June, 1921, the June, 1922, results were not nearly as good as those in May, when the operating loss was but \$47,055.

From the figures given above it is abundantly clear that up to the middle of the year but little progress has been made in restoring conditions in the Canadian railway industry to the point to which they should be restored, and the C.P.R. results would indicate that conditions are becoming worse instead of better. We looked forward during 1921 to a time when, in the near future, an improvement in business conditions would combine with a desirable policy of rate regulation to bring about a proper relationship as between railway operating revenues and expenses. Because it is necessary for railways to continually make additions and improvements to provide the transportation service demanded by an increasing population, it is desirable in the public interest that the railways enjoy a reasonable degree of prosperity, and for that reason our hope and expectation of a restoration of better conditions in the railway business was a reasonable and proper one. As Canadian industrial prosperity generally goes hand in hand with industrial prosperity in the U.S., and because industrial prosperity in the U.S. had been seriously retarded by an almost complete absence of railway purchasing power due to insufficient net earnings, we had also looked forward to a restoration of railway prosperity in that country. In the U.S., hopes in that direction are being rapidly realized, and net railway operating income has shown a gratifying improvement during recent months, but, in Canada, conditions in the railway industry have not improved, and, in fact, are becoming worse. This constitutes a most undesirable state of affairs.

Nor does the immediate future hold out much promise of improvement in Canadian railway affairs. Details of the legislation affecting the Crown's agreement, and the Board of Railway Commissioners' action in ordering reductions in basic commodity rates, effective Aug. 1, have been given in pre-

vious issues, and it is evident that large reductions in railway operating revenue will inevitably result. At the time of writing (Aug. 16.) it is stated that the railways have finally yielded to representations made by the Dominion Government as to the desirability of withholding projected wage cuts until a board of arbitration has investigated and reported. In discussing the matter of railway rates and expenses in a previous issue, we took the stand, and it was a reasonable one, that rate reductions should not have been put in effect until the reduction in expenses were an accomplished fact. However, the rate reductions are operative while the expenses remain at their previous high levels, and in this way an unfortunate situation has been brought about, unfortunate for the railways, and, if long continued, even more unfortunate for the public.

It is a recognized fact that a railway is a quasi-public undertaking, and for that reason it must be subject to governmental supervision and regulation. In the past, in Canada, regulation has been efficient, as far as it has gone, and generally fair to the railways and the public. In this case, however, the railways have been handed the "short end of the stick." On account of the Dominion Government's unwarranted action in interfering in the wage dispute between the railways and their shopmen, the situation is that, between government and regulative commission action as to the Crown's net and other rates, and government action as to wages, the calculated relationship as between railway revenues and expenses has been seriously disturbed. We certainly do not desire to see the field of railway regulation extended so as to threaten to usurp any of the functions of railway management, but a situation like the one which has now arisen makes one wonder whether railway regulation, to be really efficient, will have to ultimately undertake to regulate all classes of railway expenditure, as well as railway revenues so as to preserve the proper relationship between them.

At all events, it should be recognized by all concerned in the matter that the latest developments will tend to make the net earnings of Canadian railways less favorable even than in the past. Recognition of this fact, coupled with recognition of the fact that unfavorable results in railway operation constitute a serious drag on present and future national prosperity, should move those in authority to take prompt and decisive action to better conditions in the railway industry, and thus contribute largely to an improvement in conditions in Canadian industry generally.

Railway Lands Patented.—Letters patent were issued during July, for Dominion Railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

Canadian Northern Ry.	Acres.
Canadian Western Ry.	139,07
Canadian Pacific Ry., roadbed and station ground	9,82
	31,91
Total	304,83

The Denver & Rio Grande Rd. will, it is said, lay 250 miles of new steel rails within the next 12 months.

Johnson Street Bridge, Victoria, B.C.

The highway and railway bridge under construction across the harbor at Victoria, B.C., which has been referred to in previous issues of Canadian Railway and Marine World, is being erected by the city, aided by a contribution from the C.P.R., as the bridge will be used by its subsidiary, the Esquimalt & Nanaimo Ry., and by a contribution from the B.C. Government, which is interested in the development of land on one side of the harbor. The original estimated cost of the structure was \$720,000, towards which the C.P.R. contributed \$100,000 and the B.C. Government \$200,000. A bylaw providing for the carrying out of the work, and the confirmation of the agreement with the railway company and the Government, was passed in 1920, and another by-law has been passed recently, authorizing the raising of \$100,000 additional to complete the work. The main reason for this additional amount being required was that the original estimate was low, no detail plans having been prepared, and neither the form of the substructure, the number of spans, or the type of the bascule span were known.

For construction reasons the bridge is being built in two portions, owing to the proximity of an old swing bridge and the necessity of keeping both the railway traffic upon it and the harbor traffic under way. Commencing from the easterly side the combined bridge consists of one 110-plate girder span, one 54-ft. lower span, one 150 Strauss bascule span and one 73-plate girder span. In order to obtain an under crossing for the roadway under the railway on the westerly side, the bridge has a regular pier and the roadway portion of the bridge drops on a 4% gradient from that point. The greater part of the substructure was built by day labor by the City Engineer's Department at a cost of \$206,086—a saving over the lowest contract schedule amount of \$33,680. The contract for the superstructure on the highway side was let to the Canadian Bridge Co. for \$239,400 and this portion of the work is nearing completion. The contract for the railway superstructure has also been let to the same company for \$197,400. The highway portion of the bridge provides an 8-ft. sidewalk, and a 30-ft. roadway, with double tracks for electric railway traffic, and the railway portion is 20 ft. wide, in order to give facility to the railway company for unloading passengers, the tracks being offset for this purpose.

A press report states that it is planned to remove the old Johnson St. bridge about the end of July, and to lay temporary tracks on the highway portion of the new bridge to enable it to be used by the railway pending the completion of the railway section of the new structure. The B. C. N. Ry. is reported to be about to install a small bridge to carry the railway tracks after they leave the western end of the new bridge.

The Board of Railway Commissioners has authorized the Esquimalt & Nanaimo Ry. to build a temporary deviation of its main line at a point east of Johnson St. bridge. This will be done to enable the new Johnson St. bridge to be used for railway purposes, pending the removal of the present bridge and the completion of the railway section of the new bridge. A small bridge is to be installed by the E. & N. Ry. to carry the railway tracks after they leave the western end of the new bridge, to a connection with the present tracks.

Railway Rates for Carriage of Mails.

For years, prior to 1921, the various Canadian railways contended that they were most inadequately paid by the Post Office Department for carrying mails, and made repeated efforts to obtain redress. Towards the end of the Laurier Government's term, it was decided to refer the matter to the Board of Railway Commissioners for determination, but when Mr. Pelletier became Postmaster General in the Borden Government, he repudiated the arrangements which had been made, and restored to the Postmaster General the power of affixing the rates, as he ineffectually tried to do with the rates to be paid electric railways for carrying postmen, and for the postage rates to be paid for the transmission of newspapers. However, in Feb. 1917, when Mr. Blondin was Postmaster General, it was decided to refer the matter to the Board of Railway Commissioners, to determine as to the accuracy or inaccuracy of the claims made by the railways, and, if it was found that the existing rates were inadequate, to determine, as the result of evidence to be submitted by both parties, viz., the P.O. Department and the different railways interested, what would be a fair rate of payment for the service. After many delays, a hearing was held in Ottawa in March 1919 and on July 5, 1919, Commissioner McLean made a report, which, however, did not become public until June 1920, when Canadian Railway and Marine World, after having been unsuccessful in several directions, obtained a copy and published it. On Feb. 16, 1921 the Dominion Government passed an order in council providing for the rates recommended by Commissioner McLean to go into effect on March 1, 1921, for one year. Following is a comparison of the rates per mile in effect prior to that date, and of the new rates then established:—

Full length postal car, or storage car, 40 ft.	16c	Old rate	New rate
Half car, 30 ft.	9c	19.52c	31.7c
Baggage car, 15 ft.	4c	8.67c	19.52c
Special trains	\$1.25	\$2.75	\$2.75

Another order in council was passed on Feb. 19, 1921, requesting the Board of Railway Commissioners to further consider the rates to be paid for the carriage of mails, and to make a report and recommendation thereon prior to Feb. 28, 1922, to which date the new rates were to apply. In order to have the question of an extension of time might receive consideration.

Early in 1922, after Mr. Murphy had become Postmaster General in the King Government, an order in council was passed extending the new rates as given above for three months from Feb. 28, 1922, until May 31, 1922. On Feb. 13, 1922, the Postmaster General secured the passage on an order in council which stated that on further consideration it was not deemed advisable to refer the matter to the Board of Railway Commissioners, and the order in council of Feb. 19, 1921, was therefore cancelled and the matter was withdrawn from the Board.

Prior to the expiry of the order in council which extended to May 31, 1922, the rates which went into effect on March 1, 1921, R.A.C. Henry and V. I. Smart were appointed by the Minister of Railways and Canals and the Postmaster General, to recommend rates to be effective from June 1. Mr. Henry has been employed by the Railways and Canals Department since 1912 as inspecting engineer, assistant engineer and subsequently as engineer in charge for the

G.T.R. arbitration. He is now engaged on special transportation problems. V. I. Smart, consulting engineer, Montreal, has been in the Railways and Canals Department employ since May 1920, first as operating engineer in connection with the G.T.R. arbitration, and latterly in studying special transportation problems with Mr. Henry. Messrs. Henry and Smart recommended the following rates per car mile:—

Full length postal cars	35c
Storage cars, 40 ft.	35c
Compartment postal car, 30 ft.	20c
Special trains run exclusively for P.O. Dept.	\$2.70
When other than postal cars are attached to special train, per train mile	\$2.15
Closed pouch mails, storage, or overflow mail carried in baggage cars, in charge of baggage man and without a mail clerk in charge, to be paid for at the following rates for each mile of service: 4 ft. unit space, 4c; 7 ft. unit space, 6.5c; 15 ft. unit space, 13c; 30 ft. unit space, 20c	

These rates were embodied in a draft, of regulations for the transportation of mails, which was prepared in the Post Office Department and submitted to the railways for consideration. Some of the conditions proposed were objected to by the railways, whose representatives had a conference with the P.O. Department officials early in July, and it was expected that an order in council would be passed shortly thereafter, putting new rates and regulations in force, but we were officially advised on Aug. 21 that this had not been done.

Among the Express Companies.

Jas. H. Young, agent, Dominion Ex. Co., Victoria, B.C., died there Aug. 3.

The Canadian National Ex. Co., has opened offices at Tide Head, N.B., Pathlow, Sask., and Bellis, Alta.

John Pullen, President, Canadian National Express Co., and Mrs. Pullen, have been staying at Metis Beach, Que.

The Dominion Ex. Co. and C.P.R. Co. have moved their Manchester, Eng. office, from 1 Mount St., to 31 Mosley St. J. W. Maine is agent.

Canadian National Ex. Co. opened offices at Adamsville Bartibog, Berry Mills and Red Pine, N.B. Aug. 1, and at Des-saints and Old Lake Road, Que., Aug. 23.

T. E. Macdonnell, Vice President and General Manager, Dominion Ex. Co., Toronto, was on an inspection trip of the company's Maritime Provinces offices, during August.

The Canadian National Ex. Co., through its Foreign Department, has entered into an arrangement with the Red Cross Society, London, Eng., whereby personal packages, not including dutiable goods, such as tobacco, will be handled by it free, from London to Russian destinations, when parcels are sent to return succor to those in distress in Russia. It is necessary, however, to prepay all charges to London.

The Express Traffic Association of Canada's application to the Board of Railway Commissioners for approval of Supplement B to Express Classification 5, restricting empties which may be returned at one-half the outgoing rate to the following: egg cases, cream cans, ice cream tubs, meat, bread and cake hampers (not baskets) and standard poultry coops, was heard at Ottawa, during the meeting of the Montreal and Toronto Boards of Trade, the Canadian Manufacturers' Association, and the Compressed Gas Association, and the Can-

adian Carbonate Co., being represented. The Board issued order 32652, July 31, refusing the application.

As stated in Canadian Railway and Marine World for August, the question of whether the C.P.R. Co. has the right, under its agreement of May 13, 1896, with the G.T.R. Co., to take express traffic from or to any station on the joint section between Toronto and Hamilton, or to from any station on the lines of the C.P.R., or its connections, beyond the section, was answered by the arbitrators in the affirmative. We are advised that while under this decision the Dominion Express Co., has the right to do business to and from any station on the joint section, for places beyond, for the present, at least, its activities will be confined to car load freight traffic from the Burlington district.

Telegraph, Telephone and Cable Matters.

Vice President Gerrard, of the Commercial Cable Co., has been in Newfoundland, in connection with the company's recent acquisition of the Port Aux Basques-Canso cable.

The Commercial Cable Co. has opened new offices in Cabot Bldg., St. John's Nfld., which has been renovated after a fire, which occurred there a few months ago. D. Barron is in charge.

Work was commenced during July on the erection of a wireless telegraph station at Victoria Beach, Man., to be operated by the Dominion Government, in connection with a station at Norway House. The aerial will be 75 ft. high. The work is in charge of Major Steele of the Canadian Air Board.

The Commercial Cable Co.'s new cable repairing s.s. John W. Mackay, arrived at Halifax, N.S., during July, under command of Capt. Lardner, P.R., and it is reported that she has been dispatched to Ireland, to undertake repairs at certain of the cable landing stations, where damage has been done by rebels.

Senator G. Marconi, G.C.M.G., has been presented with the John Fritz gold medal, the highest engineering honor in the gift of the U.S. It is awarded not often than once a year, accompanied by a certificate quoting the specific achievement for which it is given, and is signed by representative of the national societies of civil, mechanical, mining and electrical engineers.

Communication over the Commercial Co.'s cable between the U.S., Ireland, France, Germany and Northern Europe, was cut off, Aug. 7, by Irish rebels, who seized the cable station at Waterville, Ireland. They also seized the Marconi wireless station at Clifden, Ireland, and the company arranged to receive stations at Ongar, Essex, England, to act temporarily as a substitute. Latest reports from London, Eng., state that there is no alteration in the cable service through Ireland, since the rebels captured the Commercial Cable Co.'s station at Waterville and the Western Union Telegraph Co.'s station at Valencia. Apart from the Imperial cable, only 4 cables are in operation between the British Isles and America. It appears that all the cables landing on the west coast of Ireland have been cut. Operations have not yet been resumed at the Marconi Wireless Telegraph Co. at Clifden, Ireland, which was seized by the rebels, but has since been recovered.

Electric Railway Department

Additional Cars for Toronto Transportation Commission.

The Toronto Transportation Commission has recently ordered 50 motor cars and 100 trailers from Canadian Car and Foundry Co., Montreal, and 50 motor cars from Ottawa Car Mfg. Co., Ottawa. The motor cars will be 4 ft. 8 in. shorter than those acquired by the Commission in 1921, and described in preceding issues of Canadian Railway and Marine World, and are not to haul trailers. They will be equipped so as to be suitable for one-man operation if required by traffic conditions. The trailers will be similar in general design to those secured in 1921, but a new feature will be the arrangement of the doors, by means of which the central one of the three doors may be used for entrance or

side sills and other members in contact with same. The side sills will be of open hearth steel angles, continuous on each side of the car between the body corner posts. On the closed side, the side sill will be straight and on the door side it will be depressed and suitably reinforced at the door opening to provide for the steps. The body bolsters are designed to carry a safe load of 11,000 lb. at each end, when supported in the center. The side body bearings will be of 4 x 1 in. open hearth plates, secured to the body bolster by 5-8 in. bolts. The side bearings will be located 2 ft. 2 in. from center of car to center of side bearings, and a clearance of 1-8 in. between side bearings and truck bear-

The side sheathing will be 3-32 in. open hearth steel, securely riveted to side sill angle, T-bar posts and belt rail. The joints of sheets will be at the posts and covered with splice plates. The letter board plates will be of 16 gauge open hearth steel, securely riveted to the side posts and side plate angle, the bottom edge of the letter board to be reinforced by pressed steel drip moulding. The body side posts will be of rolled steel T-bars, inserted in white ash wood posts, and there will be double side posts adjacent to the door openings. The belt rail will be continuous between the body corner posts on the closed side of the car and between body corner posts and the center door posts on the door side.

Elevation and Plan of Motor Cars—Toronto Transportation Commission.

exit at occasion demands. The chief dimensions of the motor cars will be as follows:

Length over vestibule	45 ft. 10 in.
Length over bumper	47 ft.
Width over side sill angle	8 ft. 4 in.
Width over lower deck eaves	8 ft. 6 in.
Width inside of side lining	8 ft. 1 5/8 in.
Width of center doors between stanchions	5 ft.
Width of front doors between door shafts	5 ft.
From top of rail to under side of sill at center sliding door	9 3/8 in.
Height from rail to top of roof	10 ft. 8 5/8 in.
Height from top of rail to top of floor and body	9 ft. 7 3/8 in.
Center to center of trucks	22 ft. 8 in.
Center to center of side posts	2 ft. 5 in.

The motor cars will be of the front entrance, center exit type, with arch roof extending the full length, as shown in the accompanying illustration, and of steel construction.

The underframe will be of open hearth steel, reinforced by diagonal bracings connected securely to the center sills and

sills will be provided. The center plates will be the Commission's standard of cast steel. The underframe is to be made to carry and support, without undue deflection, a uniformly distributed passenger load of not less than 125 lb. per sq. ft.

Platform Framing. The rear end of the car is to be built with the platform continuous in line with the body framing, and circular in form. Both ends of the car will be equipped with 7 in. rolled steel section anti-climbers, joined to the platform end sills by open hearth steel angles or pressings. The rear and sill will consist of an open hearth structural steel member, shaped and connected to the side sill angles and body corner posts with gussets and side plates, and the front end sill will be an open hearth structural steel member, connected to the side sill angles at the body corner posts, running to the front entrance door.

Arch type bulkheads will be provided at each body end, built up of open hearth steel plate, extending clear across the car. The bottom edge of the plate will be reinforced by a steel angle. In addition to the plate at the top of the bulkhead, lateral reinforcement will be provided at the connection between the bottom of the body corner posts and the body end sill, by gussets, to prevent weaving of the body.

The roof will be of the plain arch design, and steel carlines will be used at each post, riveted to the side plate angle by angle connections. White ash wood carlines will be bolted to the steel carlines, and will also be used midway between the steel carlines. The roof boards will be of poplar or basswood, 7-16 in. thick by 2 1/4 in. face, tongued and grooved, and nailed to the wood car-lines. The entire roof will be covered with no. 8 cotton duck, laid in white lead and oil.

The main body floor for the motor cars will be double. The lower floor will be laid diagonally, and will be 5-8 in. thick by 2½ in. face, red pine or spruce. The upper layer will be 5-8 in. thick by 2½ in. face, hard maple. All flooring will be tongued and grooved, and the floor will be supported by steel under-frame members. In the aisles and standing spaces throughout the car, 3-8 x 1 in. maple mat strips will be laid longitudinally at ½ in. spacing, and in such a way as to extend 1-8 in. above the line of the top flooring.

The interior finish will be in birch. The headlining will be 3-16 in. agasote. The advertising card moulding will be birch, and will extend the entire length of the car body. The wainscoting in the car body at the cross seats will be 3-16 in. agasote, and at the longitudinal seats and at the circular seats at the rear will be 5-16 in. white pine, shiplapped.

The seating plan for the motor cars is

single plate, chilled iron type, with 2½ in. treads, pressed on the axles at not less than 30 tons and not more than 40 tons pressure. The side bearings will be of the roller self-lubricating type. Axle dimensions will include 3 ¾ x 7 in. journals, 4 15-16 in. wheel seats, 5 in. gear seat and 80 ¼ in. length over all. The axles will be of open heart steel, forged and annealed. All connecting pins for the truck levers will be case-hardened and all holes in the levers will be bushed with case-hardened seamless bushings.

The electrical equipment will include 35 h.p. motors, and both electrical and air brake equipment will be furnished by Canadian General Electric Co. The cars will be equipped with the standard one-man safety car apparatus, to provide for one-man operation.

Special equipment. All the wiring will be installed in galvanized steel conduit, except that for the buzzer and single

under the longitudinal seat on the left hand side, so as to sand one rail in front of the forward trucks, and one under a transverse seat on the right side, so as to sand one rail in front of the rear trucks. Each car will be equipped with a life guard, fitted with detachable gate and all necessary equipment. A staffless type hand brake, 12.52 ratio, will be installed in the front vestibule, and the cars will be completely equipped with hand brake rigging, working in conjunction with the air brakes. A switch cabinet, made of wood to match the interior finish, and lined with transite, will be provided in the front vestibule. Drawbars, for emergency purposes only, will be installed so that they will not foul on a curve of 37 ft. 4½ in. radius. These drawbars will be securely anchored to the underframe of each platform, and will have circle bars of the same radius as those on the cars now operated by the Commission.

Elevation and Plan of Trailer Car—Toronto Transportation Commission.

shown in one of the accompanying illustrations and the general arrangement will be similar to that in the motor cars secured by the Commission in 1921, but as the new cars will be 2 panels shorter, there will be a corresponding decrease in seating capacity. All seats will be of birch slat construction.

Heating will be by forced draft heaters, and a 20 gauge galvanized iron graduated duct will run at the floor line from the heater to the bulkhead at the rear of the car, and to the motorman's position at the front.

Lighting will be by 3 circuits of 46 watt, 115-220 volt mill type lamps, suitable for series burning, and arranged 7 in a row at each side of the car. The arrangement of the lighting will be such that in the event of one circuit failing, the remaining lights will be evenly distributed throughout the car. An additional circuit of five 36-watt mill type lamps will be provided for the headlight and front vestibule steps.

The trucks are designed to carry the dead load, and a live load of 150 passengers, assuming an average weight of 150 lb. per passenger. The wheels will be the Commission's standard 26 in. diam.

stroke bell systems, and the cable from the trolley to the lightning arrestors, the latter to be in loom. A switch iron and holder will be installed in the front vestibule. Ten arch roof ventilators, equipped with registers, will be installed, the air opening for each ventilator being approximately 6 x 8 in. A high voltage push button will be placed on each side post and also on the rear vestibule of the car body, there being 29 buttons in all. Electrically welded 2 in. square wire mesh window guards will be applied to all body and rear vestibule windows, except the center rear window. Stationary hand grab poles will be located over the longitudinal seats. The conductor's signal system will consist of 3 high voltage push buttons, one at the conductor's position, one at the rear of car, and one at the front vestibule, which will operate single stroke bells, one in front vestibule and one near the conductor's position. All stanchions and rails will be of hard drawn aluminum. Two foot gongs, complete with floor tube and plunger, will be installed, one at the motorman's position and one in rear vestibule for use when the car is backing. Two sand hoppers will be provided, one

As the cars are to be equipped with but 35 h.p. motors, they will not, as stated above, haul trailers. In using the cars in one-man operation, they will be run on the "pay-as-you-leave" system; the center doors will be inoperative and passengers will enter by the front door nearest to the car body and leave by the front door nearest the front end of the car.

The trailer car's chief dimensions will be as follows:

Length over vestibule	48 ft.
Length over bumpers	49 ft. 2 in.
Width over side sills	8 ft. 4 in.
Width over lower deck eaves	8 ft. 6 in.
Width inside of side sills	8 ft. 1 5-8 in.
Width of center doors between stanchions	8 ft. 1 5-8 in.
Exit doors	2 ft. 6 in.
Entrance doors	5 ft.
Height from rail to top of roof	10 ft. 4 1-8 in.
Height from rail to top of ventilator	10 ft. 4 1-8 in.
Height from top of rail to top of floor 2 ft. 4 in.	26 ft.
Center to center of trucks	26 ft.
Center to center of side posts	2 ft. 5 in.
Height from top of rail to under side of side sill at sliding doors	10 in.

The foregoing dimensions are for the most part the same as those of the trailer cars bought in 1921 and now being operated, and, in general, the new trailers will be very similar to them. In view of the fact that the constructional details

embody the same standards as those of the motor cars above described, and that the trailers now in use have been thoroughly described in preceding issues of Canadian Railway and Marine World, a detailed description of the new trailers will not be given here. Attention is called, however, to a radical departure in door arrangement to be embodied in the new trailers. As shown by one of the accompanying illustrations there are three doors at the center, the one at the right being used always as an entrance door, the one at the left being used always as an exit door, while the center door may be used as an exit or an entrance door, at the conductor's will. The idea, which originated with D. W. Harvey, Assistant Manager, Toronto Transportation Commission, is that under conditions where there are a large number of passengers to enter, the conductor can move the movable bar shown, to the position indicated by the solid line, leaving two doors by which passengers may obtain access to the forward or non-paid portion of the car. If there are a large number of passengers to leave, the conductor will move the bar to the position indicated by the dotted line, giving

A Notable Toronto Street Railway Intersection Installation.

The accompanying illustrations show two stages in renewing the street railway intersection at the corner of Bloor and Bathurst Sts., Toronto, the Toronto Transportation Commission having installed a grand union in that location, recently. Fig. 1 shows the work of excavation preparatory to the removal of the old intersection. The excavation was begun on July 13, and completed on July 15. The concrete was broken by drills, operated by compressed air supplied from compressor cars, and carted away by motor trucks of the type shown in fig. 1. As excavation proceeded, the old steel was blocked up on tiers of ties. The old steel was taken out and the new steel laid in the early morning of July 16, and the speed with which the change was made probably constitutes a record. The removal of the original steel was begun at 12.05 a.m., with the uncoupling of all castings and rail sections, and the burning of the rods by acetylene flame. As the steel was uncoupled, it was removed in sections by two crane cars, one operating from the south on Bathurst St., and

tions were of solid manganese steel, the rail portion including 1094 ft. of 140 lb. guard rail and 500½ ft. of 122 lb. 7 in. grooved girder rail, A.E.R.E.A. standard. Other material included in the installation was as follows: 64 flat tie rods; 60 round tie rods; 296 pair joint plates; 1704 track bolts; 1764 h.p. nut locks; switch boxes and other miscellaneous materials. The castings inserted included the following: twelve 1750 lb. 15 ft. switches; twelve 1400 lb. 15 ft. mates; four 1350 lb. 12 ft. switches; four 1700 lb. combination mate crossings; 80 crosses ranging from 600 to 1450 lb.; 4 triple frogs, with frog angles 18° 47' 40", 25° 28' 47", and 44° 27' 32"; 4 triple frogs, with frog angles 21° 07' 45", 23° 10' 04" and 44° 27' 32"; 8 half diamonds, angle 89° 59' 06".

All curves in the intersection are spiralled to the Commission's standard, and are of such clearance that the Commission's large new cars may operate past each other on them. All parts were made according to the Commission's Way Department's standards, and all castings were drilled and assembled, and the com-

Fig. 2. New grand union intersection installed.

the passengers from the rear or paid portion of the car two doors by which to leave. Operating conditions are generally such that where there are many people to enter the car, there are but few to leave, and vice versa, and it is felt that the new door arrangement will do much to facilitate loading and unloading. Three door engines will be installed, one under the conductor's stand to operate the single door, one under the conductor's stand to operate the middle door, and one under the longitudinal seat to operate the forward door.

Upon these cars being delivered, the seating capacity of the Commission's rolling stock will be from one-third to one half greater than that provided by the former Toronto Railway Co. and Toronto Civic Ry. cars combined, and there will be a total of 1010 cars, 850 of which will be motor cars and 160 trailers. Delivery of the new cars herein described is expected to begin in November and to be completed in Jan. 1923.

Toronto Railway Arbitration.—The board of arbitration to decide the amount to be paid by the City of Toronto for the Toronto Ry. Co.'s properties which it took over on Sept. 1, 1921, will resume its sittings in Toronto on Sept. 19, to hear counsel's arguments on the evidence taken. It is expected that a decision will be given in November.

the other from the east on Bloor St. These cars carried the sections of old steel a hundred yards or so down each street, where they were unloaded at the roadside to be left temporarily. The old steel was all out at 1 a.m., 55 minutes sufficing for this part of the job. The tie sections of new steel, tie rods and other parts were then brought forward on the crane cars, and on flat cars operating on the parallel track, and the installing of the new intersection commenced. Various sections of new steel had been bolted together beforehand, two half crossings being joined, for example, before delivery to the job, this work being done at one of the Commission's material yards. The new steel was all in place and bolting-up practically completed at 4.30 a.m., but 3 hr. and 30 min. being necessary for this portion of the work. Upon all the new steel being placed, the crane cars were dispatched to pick up the old steel which had been temporarily left at the sides of Bloor and Bathurst Sts., and by 5.30 a.m. all the old material had been cleared from Bloor St., and by 6.30 a.m. from Bathurst St.

Fig. 2 shows the new grand union installed complete. It is one of the largest installed on any Canadian electric railway. The total weight of rails and castings which entered into its construction was 203,000 lb. The casting por-

tion complete intersection inspected, at the steel plant before being taken apart for shipment. The speed with which the intersection was put in, and the absence of delay to traffic in an installation of this magnitude, constitutes a remarkable achievement in electric railway track work, and is characteristic of the efficiency which has consistently marked all the Commission's rehabilitation and reconstruction work.

Hull Electric Co.'s Power Project.—Ottawa press despatch, Aug. 22: "Following prolonged negotiations, the Hull Electric Co., has acquired large property holdings in Low Township, along the shores of the Gatineau River, including the riparian rights to the Pagan Falls, about 35 miles from Ottawa, and will, in the course of the next year, establish a hydro power plant, with an ultimate capacity of 150,000 h.p. The cost of construction, it is said will approximate \$10,000,000."

The American Institute of Electrical Engineers, opened its 11th annual meeting at Vancouver, B.C., Aug. 8. W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., being chairman for the reception gathering. The members visited the B.C. Electric Ry. hydro-electric plant on Aug. 11, and were entertained at luncheon by the company at the Wigwam Inn.

Winnipeg Electric Railway Franchise Negotiations.

A Winnipeg City Council special committee which, for some months has had under consideration matters connected with the franchise of the Winnipeg Electric Ry. Co. presented a majority and a minority report to the council recently. The majority report, after giving a review of negotiations based on the company's request for a 10-year extension of the franchise, states the company's last offer of concessions was to reduce fares Aug. 1, 1922, and subsequently effect reductions Aug. 1, 1923, 1924 and 1925, when a 5c fare by ticket would be introduced and would remain in effect until 1937 though subject to revision in 1927 and 1932. It refers to valuation of the traction utility which the company places at \$11,009,925, plus joint use properties, and then places the following considerations before council:

"1—Bylaw 543 under which the contract granting franchise to the company specifically states the period to be 35 years. The bylaw was passed Feb. 1, 1922.

"2—The franchise will expire Jan. 31, 1927.

"3—Bylaw 543 is not the original bylaw governing the contract with the company. This bylaw was 541, which was repealed in favor of bylaw 543 when the latter bylaw was enacted.

"4—The original contract when drafted was for 25 years, which term was altered to 35 years at the time bylaw 541 received its three readings by the city council.

"5—The additional life of 10 years to the franchise was granted at the company's request and was not a voluntary act on the part of the council.

"6—No provision is contained in bylaw 543 giving the company or the city any power to make an application for an extension of the franchise period, but clause reads: 'Six months prior to the expiration of the franchise the city must notify the company if it is the intention to assume ownership.'

"In view of the foregoing considerations, the committee feel that it is for council to determine whether this committee has any authority to negotiate terms of the franchise governed by bylaw 543 may be extended for 10 years as requested, or if in view of the clause specifically stating at what time any change in ownership shall be negotiated, the present time is inopportune for action in this respect.

"After several weeks of conferences and after weighing very carefully the matters involved in A. W. McLmont's letter, and in the instructions of council, your committee has decided to make the following recommendations:

"Item 1.—The question of taking over the street railway at present or in 1927 should be decided by the people and not by council. That it is inopportune from the citizen's standpoint that any plebiscite should be taken at present, our reason for such opinion being that municipal ownership of traction utilities in various parts of this country is in its infancy. That by the time the franchise period falls in we will be possessed of definite and accurate information as to the success or failure of similar undertakings in cities of comparable size to Winnipeg, or even larger (we have in mind Toronto, Seattle, Detroit, and San Francisco.) The citizens cannot but be assisted in arriving at a proper decision

either to renew the franchise or assume ownership when the time comes, by the actual experience of such cities as we have just referred to.

"Item 2.—The agreement for July, 1921, as to fares, controls the relations of the company and the city up to the beginning period of the franchise. The company in its application for extension only offers a reduction of fares. This, however, is covered by the agreement referred to, which makes provisions for an annual revision, only no definite valuation for fare-making purposes has been mutually agreed upon. This agreement provides that in fixing this fare, regard must be had to the value of the property devoted to the service of the citizens. This value has never been definitely ascertained and unless this can be done by agreement the fixing of this value may in the future involve another arbitration. The Public Utilities Commission fixed a value for ratemaking purposes in 1920. This valuation has, however, not been accepted by the city, and the company has definitely stated that it is not satisfied with it.

"Item 4.—This must be settled by the citizens when the time has arrived to determine the franchise and for the present we recommend continuance under bylaw 543 and subsequent agreements.

"Your committee feel that some compensation must be taken of the claim made by the company that it finds itself financially embarrassed; that certain extensions are required, and overdue accounts to the city remain unpaid and it cannot finance these from current revenues. It has occurred to your committee that in so far as necessary extensions of lines with in the city are concerned, the city might assist the company in a practical manner to carry such work.

"Your committee realizing it has no specific authority to discuss negotiations from this angle, and following the recommendations contained herein, that bylaw 543 and subsequent agreements be left in effect and the franchise question left until such time as council decides to refer same to people, that your committee be authorized to confer with the company for the purpose of discussing and if possible arriving at a basis upon which extensions could be financed by the assistance of the city, and if a satisfactory plan can be worked out to report back to council for authority to carry same into effect."

The minority report says:—"We feel that there is opened to the council in this matter one of four courses:

"1—Let matters stand as they are until 1927, or,

"2. To finance all required expenditures of the company up to an estimated amount of \$2,500,000:

"3. Finance the requirements of the traction system within the city or up to an estimated amount of \$1,000,000:

"4.—Extend time for falling in of the franchise from 1927 to 1937 for a consideration and on conditions to be negotiated and settled between the company and the committee, which settlement will have to be approved by the council, certain fundamental conditions being agreed to by the company as a *sine qua non*. As to no. 1, the minority members of the committee feel that in justice to the citizens and to the council they would not be performing their duties in recommending this, for the simple reason that the whole purpose of the settling of

the lawsuit and entering into negotiations with the company was with a view to settling the outstanding difficulties between the city and the company and this would not be accomplished if matters were allowed to remain as they are and nothing be done. The council in instructing the committee to conduct these negotiations obviously had the question of these necessary extensions and improvements before it.

"As to no. 2, the undersigned feel that this cannot be recommended to the council for the simple reasons: That in the present condition of the city finances with a great deal of reconstruction work necessary on the streets and a large number of additions which the city should undertake in the performance of legitimate municipal undertakings, the city cannot spare \$2,500,000 and in the undersigned's opinion this money should be brought into the city from outside at the expense of a private undertaking for circulation within the city. It is not within the normal municipal functions of a council to finance private undertakings, even though they be in operation of public utilities. In the financing of the street railway company the city would also be financing a light and power utility which is in opposition to a municipally owned concern.

"As to no. 3, the undersigned do feel that this cannot be recommended for the reason:

"\$1,000,000 would not be sufficient to give the necessary relief and it would leave the most troublesome and longest-standing questions still unsettled. It would again be better for citizens at large to have the money introduced from outside at the expense of a private undertaking instead of impairing the credit of the city to that extent and hampering much needed legitimate municipal work which will have to be undertaken in the near future. This also is not within the usual scope of the work of a municipality.

As to no. 4, the undersigned agree with the report prepared by the chairman of the special committee in realizing that the company has satisfied the special committee that it cannot raise the money for necessary work without an extension of the time for the falling in of the franchise; and as we feel that the settlement of these matters is of very vital importance to the citizens at large and that it is very desirable that this \$2,500,000 should be spent and circulated within the city we recommend that the special committee be authorized to negotiate with the company for extending the time for the falling in of the franchise from 1927 to 1937 on terms to be negotiated between the committee and the company, and to be afterwards approved by the council. Among terms of the new agreement to be fixed definitely of a reduced fare for 1922, 1923, 1924 and 1925, as offered by the company as offered in the vice president's letter of June 29, 1922, the maximum fare to remain between 1925 and 1937 as set out in letter as follows: Cash fare, 6c. All adults' tickets, 5 for 25c, good all days, and all time. Children's tickets, 4 for 25c.

In connection with these reports of the committee the company in its Public Service News, stated that it offered the city in consideration of the postponement from 1927 to 1937 of the city's right to acquire the company's railway,

to put into effect Aug. 1, a revised schedule of fares which would give a 5c fare on the whole system during certain hours and provide for the reduction of all fares to 5c within three years, the several fare schedules being as follows: Aug. 1, 1922—Cash fare, 7c; white tickets, good at all times, 4 for 25c; red tickets, good from 6 to 8 a.m., and from 5 to 6.30 p.m., 5 for 25c; Sunday fare, 5c each; children's tickets, good at all times for those under 16, 8 for 25c. Aug. 1, 1923—Cash fare, 6c; white tickets, good at all times, 6 for 35c; red tickets, good from 6 to 8 a.m., and from 5 to 6.30 p.m., 5 for 25c; Sunday and children's fares as above. Aug. 1, 1924—Cash fare, 6c; white tickets, good at all times, 9 for 50c; red tickets, good from 6 to 8 a.m., and from 5 to 6.30 p.m., 5 for 25c; Sunday and children's fares as above. Aug. 1, 1925—Cash fare, 6c; all adult's tickets, 5 for 25c, good all days all times; children's tickets, 8 for 25c, good at all times for those under 16. In addition to these fare reductions the company proposed as part of its arrangement to pay all outstanding taxes, to pay amounts found to be due for damage by electrolysis, to complete work now on hand, to carry out recommendations for prevention of electrolysis, to do other work in connection with poles and lines, to instal motor bus services as may be agreed upon, and to make extensions of trade and car service as may be agreed upon.

The City Council gave consideration to the report on July 28, and at a special meeting Aug. 2, when the following resolution was adopted: "That the special committee appointed to negotiate with the street railway company be instructed to proceed with negotiations along the lines laid down in the minority report submitted and to report back to council for confirmation, and should a tentative agreement be reached as a result of such negotiations the committee to report on same and also on submission of such agreement to a referendum."

Ald. Douglas, who was chairman of the special committee from its inception, asked to be relieved from that position, at a meeting of the committee Aug. 10, and Ald. Sparling was appointed in his place.

Vancouver Harbor Railway Electrification.

In connection with the electrification of the Vancouver Harbor Commission's railway lines on Granville Island, reference to which was made in Canadian Railway and Marine World for July, pg. 374, we are officially advised that a contract was let to W. W. Fraser & Co., Vancouver, for the electrification of 2.4 miles of track, at an approximate cost of \$10,000. Some alterations have been made in the track to conform with the Railway Act's requirements as to clearance. The contract called for completion in August. The specifications provided for the construction ready for operation of a complete system of overhead trolley construction, carried on cedar poles with all connections, feeders, insulation, etc., the track bonding and all other necessary work.

The electrified lines will be operated by the British Columbia Electric Ry. on behalf of the Commission, on rates authorized for switching service by the Board of Railway Commissioners. Previously the switching on the island was done by motor truck.

The New Brunswick Power Co. and the City of St. John.

The question of the distribution of hydro-electric power in St. John, N.B., from the New Brunswick Government power plant at Musquash, which is approaching completion, is the subject of considerable discussion at present. It was thought that an arrangement would be made with the N.B. Power Co., for the distribution of the power, but the ratepayers voted in favor of its distribution by the city. For some time past investigations have been going on to ascertain the cost of a distribution plant. A draft contract for the distribution of power on behalf of the city was submitted by the company, and the City Solicitor presented a report on this in which he drew attention to a number of matters, and advised the calling in of an electrical expert for consultation.

It appears that J. J. Bodell, New York, N.Y., has secured an option on substantially all the N.B. Power Co.'s common stock, and he wrote the Mayor of St. John on July 20, that he and his associates were prepared to deliver to the city the company's common stock, to pay the principal of outstanding bank loans, to obtain the consent of the holders of 1st preferred stock to a reduction of dividend from 7% to 6%, to obtain the consent of holders of 2nd preferred stock to a reduction of dividend from 7% to 5%, and to obtain a release from the trustees of the mortgage of certain water power rights and lands owned by the company on the Lepreau and Magaguadavic Rivers. The consideration to be given by the city for the above to be a guarantee of the principal of the bonds with interest at 5% and sinking fund, the guaranteed of the 6% interest on the 1st preferred stock, and the 5% on the 2nd preferred stock, and for all the other properties including the Eastern Electric Co., together with capital expenditures made since 1917, against which no securities had been issued, the city to issue \$690,000 of 30-year 5½% bonds.

Under this plan the city will acquire control of all (operating) properties of the company, consisting of the electric light and power, gas and street railway and electric supply departments at total annual interest and dividend charge of \$208,900. The annual interest and dividends on the bonds and preferred stocks of the company guaranteed by the city amount to \$170,950—all surplus operating revenue in excess of \$170,950—will be available to meet the interest requirements on the bonds issued by the city to acquire control of the company. The surplus operating revenue of the company for the five months ended May 31, 1922, after deduction for depreciation, was \$137,027.94, or at an average monthly rate of \$27,405.58. If this rate is maintained through the balance of the year the net earnings for the calendar year will exceed \$320,000.

On Aug. 3, H. Phillips, made a lengthy report to the Mayor, of the company's property, in the course of which he said: "I am convinced that the most practical method to secure for the consumers the full benefit of the Musquash development and of the hydro policy, and at the same time promote the best interests of the city as a whole, is to take over the power company's operation if possible. He also made recommendations with regard to the company's electric railway, which would require an estimated expenditure of \$120,000 for new cars, and \$100,000 for track work.

Upon this offer the city Solicitor, on July 25, advised that it is not within the city council's power to make such an agreement as was suggested. He pointed out that the city has under the statutes of 1920, chap. 140, sec. 18 to expropriate the company's property on giving 12 months notice, and upon the expiration of such notice to take possession of the property and capital stock on payment of the appraised value and 10% in addition thereto. This opinion was concurred in by M. G. Tee, K.C.

The city council, in committee, on Aug. 16, considered the matter, and a proposal by the Mayor to submit it to a vote of the ratepayers. After discussion it was decided not to submit the matter to a public vote, and this recommendation was immediately reported to the council as a whole and approved.

*Reported Agreement for Sale of Hamilton, Grimsby and Beamsville Electric Railway.

A Hamilton press report states that a basis of agreement has been reached between the Hydro Electric Power Commission and the Dominion Power and Transmission Co., for the sale by the latter of the Hamilton, Grimsby and Beamsville Electric Ry. The purchase of this line by the Commission would do away with the necessity of building a considerable portion of the projected Toronto, Hamilton, St. Catharines and Niagara hydro electric railway on the section between Hamilton and St. Catharines.

The H.G. and B.E.Ry. has a total main line length of 22.6 miles. The operating statistics for the year ended Dec. 31, 1920 were—gross earnings, \$207,387; operating expenses \$224,256; taxes, funded debt, etc., \$17,860; net loss for year \$34,729. Total car mileage, 431,238; fare passengers carried, 936,846; tons of freight carried, 55,376.

Ottawa Electric Railway Co's Franchise Negotiations.

The Ottawa City Council appointed a special committee in January, to consider a renewal of the Ottawa Electric Ry. Co's franchise for a further period of 30 years, following a vote of the ratepayers on Jan. 1, when two other propositions, viz: to take over the railway upon the expiration of the present franchise, or to enter into a service at cost agreement were defeated by considerable majorities.

The committee engaged R. M. Fenstel, Fort Wayne, Ind., as an expert adviser, and has had a number of meetings to discuss the proposed new agreement. While there have been some statements in the daily press as to the progress of the matter, nothing official has been given out. The press report states it is expected to have the expert's reports on the company's business by the middle of September, and that a draft agreement will be ready for consideration in time to have it submitted to the ratepayers in November.

Winnipeg Electric Ry. has recently speeded up service on several of its lines by eliminating some stops, and the city council's public safety committee has declined to interfere to get the former stopping places restored.

Toronto - Hamilton - Niagara Falls Electric Railway.

The Toronto City Council on July 27, passed a resolution requesting the Hydro Electric Power Commission of Ontario to proceed with the construction, equipment and operation of a railway from Toronto to Port Credit, and directed the execution of an agreement for that purpose.

The agreement is to be made jointly with Mimico and New Toronto towns and Etobicoke Township in York County, and Toronto Township, and Mimico village in Peel County, to provide for the building of an electric railway from a passenger terminal at the foot of Yonge St., Toronto, westerly to Sunnyside, using Harbor Board and private right of way wherever possible, thence to the Humber River, parallel to the G.T.R., continuing parallel thereto across the Humber and Credit Rivers. The amount of debentures to be issued by the several municipalities in respect of the construction and equipment of the line is as follows: Toronto City, \$4,240,196; Etobicoke Tp., \$401,335; Mimico Town, \$111,200; New Toronto Town, \$82,250; Port Credit Village, \$54,050; Toronto Tp., \$220,542. Total \$5,109,573. The line is to be part of the projected Toronto-Hamilton-Niagara line, for the construction of which bylaws were passed some years ago. Several of the municipalities are now reviewing these bylaws and Oakville was the first to pass a confirmatory resolution on Aug. 21.

The Toronto Electric Light, Power and Railway Clean Up Deal.

What is known as the clean up of the Mackenzie interests, which has been in process of settlement since Dec. 1, 1920, was consummated Aug. 16, when the agreement for the purchase from the Toronto Ry. Co., by the Hydro Electric Power Commission of Ontario of the electric power production plant at Niagara Falls, the power line from there to Toronto, the distribution system in Toronto, and the Toronto and York Radial Ry. Co.'s electric railways was signed by Sir William Mackenzie, President, and J. G. Grace, Secretary, Toronto Ry. Co., Sir Adam Beck, Chairman, and W. W. Pope, Secretary, Hydro Electric Power Commission of Ontario. The preliminary agreement for the transfer of these properties was signed Dec. 3, 1920, the total consideration being \$22,540,000, which is to be paid by the assumption of obligations of the various companies amounting to \$22,775,177 and the issue of bonds amounting to \$9,958,823. The properties involved in the transaction are those of The Toronto Power Co., the Toronto and Niagara Power Co., the Electrical Development Co. of Ontario, the Toronto Electric Light Co., the Toronto and York Radial Ry. Co. and the Schomberg and Aurora Ry. Co. While the sale is made to the H.E.P.C. of Ontario, that commission is acting for the city of Toronto with respect to the purchase of the following properties: Toronto and Niagara Power Co.'s distribution system within the city for \$7,226,295; the portion of the Toronto and York Radial Ry.'s Metropolitan Division within the city, \$585,000; the Toronto and York Radial Ry.'s, and the Schomberg and Aurora Ry.'s, remaining lines, \$2,375,000. These properties are to be paid for by the city assuming bonds for \$840,000 and issuing 20-year 6% city bonds for \$6,971,295 for the

first properties named, and by the issue of \$2,375,000 of 6% bonds to be deposited with the H.E.P.C. of Ontario, as security for the Commission's bonds to be issued in payment of the property.

The purchase, so far as the city is concerned was ratified by the voters at the municipal elections Jan. 1, 1921. The time since then has been taken up with the examination of titles, discussions as to the adjustment of various properties, and of questions affecting the entrance of radicals into the city, the adjusting of matters affecting the bond issues of the various companies being taken over, and the securing of necessary legislation. The various negotiations were so far advanced that final legislation to permit the matter to be

Canadian Electric Railway Association.

Honorary President, E. A. Robert, President, Montreal Tramways Co., and Quebec Ry., Light, Heat & Power Co.

Honorary Vice President, Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co.

Honorary Council, Thos. Ahearn, President, Ottawa Electric Ry.; Wm. Barrett, Proprietor, Canadian Railway and Marine World; Geo. Kidd, General Manager, British Columbia Electric Ry.; Lt.-Col. J. E. Hughes, General Manager, Montreal Tramways Co., and director, Quebec Ry., Light, Heat & Power Co.

President, Major F. D. Burpee, Manager and director, Ottawa Electric Ry.

Vice President, H. H. Couzens, General Manager, Toronto Transportation Commission.

Executive Committee, The President, the Vice President, the immediate past President (G. Gordon Gale, Vice President and General Manager, Hull Electric Co.) and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, Vice President and General Manager, Essex & Lake Shore Rapid Ry.; D. W. Houston, Superintendent, Regina Municipal Ry.; A. W. McLintock, Vice President and General Manager, Winnipeg Electric Ry.; R. Mayne-Read, Superintendent, Quebec Railway, Light & Power Co.; J. E. Rogers, General Superintendent of Railways, Hydro-Electric Power Commission of Ontario; W. L. Weston, Manager, Nova Scotia Tramways & Power Co.; H. E. Weyman, Manager, Lewis County Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Treasurer, W. S. Hart, Managing Director, Three Rivers Traction Co.

Auditor, Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Ry.

Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry., Ottawa, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

carried through was passed at the Ontario Legislature's recent session. Bylaws to complete the transaction so far as the Toronto City Council is concerned were passed on July 27. In addition to the bylaws for the issue of debentures as required by the purchase agreement the council authorized the increasing of the H.E.P.C. of Ontario's bond issue by \$600,000 for making extensions or improvements on the Toronto and York Radial Ry., and the Schomberg and Aurora Ry. On Aug. 23, the Ontario Government passed an order in council, ratifying the agreement between the H.E.P.C. of Ontario and the Toronto Ry. Co. and agreeing to guarantee some \$16,000,000 of bonds in connection with the arrangement.

The Canadian Electric Railway Association's executive committee will meet in Chicago, Ill., on Oct. 4, at 10 a.m., in one of the meeting rooms on the Municipal Pier, during the American Electric Railway Association's annual convention.

Electric Railway Passenger Fares.

Calgary Municipal Ry.—At a conference between the Calgary, Alta. city commissioners and R. A. Brown, Superintendent, Municipal Ry., Aug. 2, it was agreed that there should not be any reduction in adult's fares this year, but it recommended that the council approve of a reduction of school children's fares, increasing the number of tickets sold for \$1 from 32 to 40. Superintendent Brown is reported to have stated that this reduction would not increase the traffic by more than one-half of 1%.

Kingston, Portsmouth and Cataract Electric Ry. Co.—Kingston, Ont., city council at a special meeting recently, authorized the amendment of the section as to fares in the company's charter. We are officially advised that the fares hitherto have been: cash 5c; tickets 4 for 25c; children's and workmen's tickets 8 for 25c; workmen's tickets being good between 6.30 and 7.59 a.m., and between 5 and 6 p.m. The increased fares authorized are—cash 7c; four tickets for 25c; workmen's tickets good during the same hours as heretofore, 6 for 25c; children's cash fare 5c, or 8 tickets for 25c, for children between 5 and 12 years. The new fares were expected to be put into effect early in September. Application will be made to the Ontario Legislature for confirmation of the agreement under the Railway Act, sec. 210.

United States Fares.—According to a compilation just made by the American Electric Railway Association, the average rate of fare charged by U.S. electric street railways, based on rates in effect in 275 cities of more than 25,000 population, was 7.37c on Mar. 1 of this year. Ten-cent cash fares are now charged in 140 cities, while 5c fares are charged in only 10 cities. The average fare in fares from 5 to 9c, with an additional charge for transfers. Incidentally it is noted that the public is now largely recognizing that an adequate fare is necessary to an adequate service. One U.S. paper remarks: "Human nature is somewhat queer. If the street car company had asked a 10c fare in this city and the council had granted it, there would have been a riot. The buses ask 10c and get it and the people seem glad of the opportunity of getting the transportation at almost any price. It is strange that we are unwilling to pay 10c for a street car ride and are quite willing to pay 10c for a bus ride. The street car has many advantages. It runs on schedule time. It runs all day during the slack hours as well as during the busy hours. It is established in the minds of the folks as a means of getting from one place to another. Yet we hold down the traction fare and grin over the bus fare. We wonder why the public takes this attitude. Is the feeling against traction companies so deep-seated that people will not give them a square deal? Up until recently, we thought that people would not pay a 10c fare. We are still unconvinced that they would pay it in such numbers as would make it profitable for a traction company. The fact, however, that they are now paying it and paying it without undue grumbling leads us to the conclusion that riders have never been altogether fair to a losing street car business."

The Montreal Trades and Labor Council authorized its executive recently to approach the street railway men's union with a view of inducing it to rejoin the council, from which it withdrew some months ago.

Electric Railway Projects, Construction, Betterments, Etc.

Mainly About Electric Railway People.

British Columbia Electric Ry.—The construction of the Broadway West line to Alma Road was, a press report states expected to be completed by Aug. 31, so as to permit operation on Sept. 1. (Aug. pg. 429).

Calgary Municipal Ry.—The Calgary Alta. city commissioners are considering the advisability of returning the municipal railway from the cost of building and keeping in repair the roadway inside the tracks, and for 18 in. on each side, to the outside. It was stated that this means that the cost of the street surface which is fixed generally. R. A. Brown, Superintendent, was authorized to obtain information as to the practise of other cities in regard to the matter.

Repairs on the paving between the tracks was reported to have been started Aug. 4, at the 17th Ave. and 1st St. West intersection, where a new street base is being put in, and new ties laid. Similar work is being done at several points on 17th Ave., and 4th St. West. (June, pg. 15).

Grand River Ry.—Extra gangs are reported to be ballasting the lines. (Aug. pg. 429).

Kingston, Portsmouth and Catarqui Electric Ry.—A press report states that in connection with the increase of fares granted, the company proposes to relay certain portions of its track in connection with the paving of streets by the city council. (May, pg. 256).

Kitchener and Waterloo St. Ry.—A press report states that Kitchener voters have approved of a bylaw to raise \$70,000 by debentures for the improvement of the railway, by laying a second track from Union to William St., Waterloo, Ont., and for the erection of car barns on Preston Road, Kitchener. (Aug. pg. 429).

London St. Ry.—A press report states that following a conference between B. Currie, President, and the Mayor on Aug. 8, paving on Dundas St. East was likely to be put in hand within a few days thereafter. The company desires to lay the track with new 80 lb. T rails, and to have the cost of the paving spread over several years. (May 1921, pg. 268).

Moncton Tramways, Electricity and Gas Co.—A press report states that tenders have been invited for the erection of a car barn to replace the one destroyed by fire Dec. 25, 1919. The new structure will it is said be of concrete, and will be of the most modern type of construction. Accommodation will be provided for 6 cars, and the building will be so erected that a repair strip can be added. J. W. Frase, Moncton N.B., is the architect. (Dec., 1921, pg. 660).

New Brunswick Power Co.—Rails for relaying tracks on Prince William St., St. John, were delivered recently, and the work is in progress. (Jan. pg. 42).

Ontario Hydro Electric Ry.—Essex Division.—Four spurs are reported to have been laid from the main line on Sandwich St., Windsor, to the Detroit River bank, to facilitate the shipping of beer to the United States. (Aug., pg. 429).

Ottawa Electric Ry.—The Hull, Que., City Council has under consideration the question of authorizing Ottawa Electric Ry. to lay a loop line, to permit it to use double track cars on its line entering the city. The company has endeavored to get permission for this work on several occasions but has hitherto been refused,

on the ground that it would be an infringement of the Hull Electric Co's franchise. The present suggestion is that the Ottawa Electric Ry. assume all liabilities and defend all actions that might result. The company's plans include the extension of the line so as to form a loop, the relaying of the present line, and the erection of a waiting room at Eddy Park. (Aug., pg. 429).

Quebec Ry., Light and Power Co.—A press report of Aug. 15, stated that E. A. Robert, President, had advised the Mayor of Quebec, that the company would start shortly, on certain extensions of lines and push them as rapidly as possible. One of the extensions to be constructed will it is stated, be a belt line running from St. Valliera St. along St. Charles Cemetery, through Bell's Hill to join the Sillary line. (Aug. pg. 429).

St. Thomas Municipal Ry.—The St. Thomas, Ont., city council is reported to have passed a bylaw authorizing the removal of the Y. at Elgin and Wellington Sts., and the construction of another at the south end of Pleasant St.

Sherbrooke Ry. and Power Co.—We are officially advised that the company is relaying its tracks on the following streets in Sherbrooke, Que., which are being paved:—Belvedere St., 12 ft.; Frontenac St., 1500 ft.; Alexander St., 1400 ft.; Bower Ave., 400 ft. (Nov. 1921, pg. 548).

Rule of the Road in Nova Scotia and New Brunswick.

The Nova Scotia and New Brunswick legislatures last session passed acts changing the rules of the road so as to conform to the uractice in the other Canadian provinces except Prince Edward Island. The new Brunswick act provided that the change comes in force on the proclamation, it being understood that it would be on Jan. 1, 1923, the same date as was named in the Nova Scotia act which was passed at a later date.

When the New Brunswick proclamation was issued the date fixed for making the change was Dec. 1, 1922. The Nova Scotia act changed a section of the Revised Statutes, chap. 81, and fixed the date for the change as Jan. 1, 1923, but in amending the Motor Vehicle Act of 1918, the legislature, while amending the section dealing with the rule of the road, did not fix any date for the change, although a provision was inserted that all motor vehicles should carry a plate with the words "Turn to the right," from Jan. 1, 1923, to July, 1923. It was held that the act amending the Motor Vehicle Act comes into operation immediately after assent had been given thereto. The rather contradictory state of affairs this brought about was considered by the Nova Scotia Government, with the result that on Aug. 3, application was made to the Dominion Government to disallow the N. S. legislation, and an order in council was passed, Aug. 5, granting the application, on the ground of certain misunderstandings concerning the date when the legislation should become effective. The matter will probably be dealt with at the Legislature's next session.

No action has been taken in the matter in New Brunswick since the issue of the proclamation fixing the coming into operation of the change of the rule in that province for Dec. 1.

A. T. Goward, who completed 25 years service as Local Manager, British Columbia Electric Ry., at Victoria on June 29 was presented by other officials there with a rose bowl. He first entered the service in 1890 with the National Electric Tramway and Lighting Co.

Fred R. Miller, one of the members of the Toronto Transportation Commission, underwent an operation, Aug. 6, and is reported to be progressing favorably.

G. E. Waller, General Superintendent of Railways, Dominion Power & Transmission Co., Hamilton, Ont., had his name forged to a cheque for \$31.60 recently, by Shelton Metoxer, who was arrested at Grimsby, Ont., and admitted the offence.

B. Whelan, Division Superintendent, International Ry., was arrested at Niagara Falls, Ont., recently, on a charge of violating the Canadian Customs law, by using a motor car in conveying passengers from the car barns to the upper bridge. A press report states that his car was held by the custom authorities pending the payment of a penalty of \$400. It is stated that the law referred to governs the operation in Canada of vehicles licensed in the U.S., under which the operator is permitted to carry passengers to and from Canada and U.S. points, but not from point to point in Canada.

Brandon Municipal Railway's Operating Results.

In connection with press reports suggesting the possibility of the Brandon, Man., Municipal Ry. ceasing operations, which were referred to in the Canadian Railway and Marine World recently, we are officially advised that when the civic estimates were being considered, the deficit on the railway had to be provided for, and some remarks were made by one or two aldermen which give rise to the report that the cessation of operation was possible, but that such a proposal was never discussed by the City Council. The deficit in operation for 1921 was the largest there ever had been, due to the extra maintenance of tracks and roadway, as the ties had been in over seven years, and had to be replaced in most parts of the track. During 1921, there was spent on track alone about \$5,000 extra, and in addition power charges were increased to 4½c per k.w. hour at the switchboard.

The Levis County Ry. has ordered 8 Birney safety cars, Canadian standard, from Canadian Brill Co., to be delivered in October, and 3 single truck double broom sweepers, one double truck rotary snowplough, and one double truck combination nose plough-ice cutter and leveller, to be also used as a construction car in summer. From Russell Car & Snowplough Co., Ridgway, Pennsylvania.

A motor bus service is reported to be in operation between Ottawa and Prescott, Ont., 62 miles. One round trip day is made, at the same fare as charged by the railway between the same points. The bus route is 20 miles longer than the railway line and goes through territory that is considerable distance from a railway station. H. A. White, Prescott, Ont., is operating the bus, and expects to put on another at an early date.

Toronto Transportation Commission's Work.

The Toronto Transportation Commission's progress in its work of track construction and rehabilitation has been detailed in preceding numbers of Canadian Railway and Marine World, and at the time of writing (Aug. 21) about three quarters of the work decided on for completion in 1922 has been finished. The undertakings remaining to be completed during this year are as follows: On Dundas St., between Roncesvalles Ave. and Keele St., the track is to be resurfaced and the joints welded; on Ossington Ave., between Bloor St. and Lansdowne Ave., the track joints are to be welded and built up; on Bloor St. between Spadina Ave. and Avenue Road, the track is to be completely rehabilitated; on Teraulay St. between Bloor St. and Davenport Rd. an extension is to be constructed; on Bloor St. between Yonge and Church Sts. the track is to be rehabilitated; on Dundas St. between Teraulay St. and McCaul St. the track is to be resurfaced and the joints built up; on Danforth Ave. between Hillingdon and Luttrell Sts. the track joints are to be welded; on Kingston Rd. between Columbine and Victoria Park Aves., an extension is to be built, and on Yonge St. between Farnham and Deloraine Aves., an extension is to be built to replace the Toronto and York Radial Ry's Metropolitan Division single track line.

All other work as set forth in preceding numbers of Canadian Railway and Marine World has under way, if not in the above list, has been completed. The double track extension on Yonge St. between Farnham and Deloraine Aves., has not been begun. While the Commission has been prepared for some time to proceed with this work, on being given authority to do so, that authority has been withheld pending the settling of details of the agreement by which the city and the Hydro Electric Power Commission of Ontario are taking over certain public utilities from the Toronto Ry. Co., and allied interests. When this extension on north Yonge St. is completed, all Yonge St. cars will not run as far north as Deloraine Ave., which is at the northern city limits. On account of traffic density decreasing as the city limits are approached, a majority of the cars will be turned short of the limits. The location for the turning loop has not been definitely decided on.

In addition to the straight track work specified above, a large number of pieces of special work remain to be installed during this year at the following locations: 1. Intersection, Howard Park and Roncesvalles Aves.; Davenport Rd. and Dovercourt Rd.; Bloor St. and Avenue Rd.; St. Clair Ave. and Yonge St.; Eglinton Ave. and Yonge St.; Glenview Ave. and Yonge St.; King and Bay Sts.; Front and York Sts.; Adelaide and Yonge Sts. 2. Other work, loop to be installed for turning north Yonge St. cars probably at Lawton Ave.; extension of tracks and other special work at Eglinton car house; loop at Deloraine Ave. and Yonge St.; northern city limits; special layouts at Russell car houses; Bingham St. and Park Ave. loop on Kingston Rd. extension.

Yonge St. and Eglinton Ave. Car house. As stated in Canadian Railway and Marine World for August, the Commission invited tenders for the construction of a car house on the property ac-

quired by it some time ago at Yonge St. and Eglinton Ave. Details of the proposed house were also given. We are officially advised that the contract has been let to Wells and Gray, Toronto, and that construction has commenced and is proceeding rapidly. The car house will be 306 x 136 ft., and of 3-bay construction. The contract also includes an office building. Both car house and office building will be of concrete construction.

Dundas St. Cross-Town Line. Representations having been made by business interests that the east and west cross town lines on Queen St. and College St. are so far apart that another cross-town line between the two is desirable, and it having been suggested that an extension of the line on Dundas St. West, to cross Yonge St. and continue to Dundas St. East would fill the need felt, the Commission agreed to lay tracks on the desired route if and when the city provided the necessary right of way. Accordingly, the city has undertaken the removal of buildings on the east side of Yonge St. in order that a line may be built through from Yonge St. to strike Dundas St. East near Victoria St. and construction of the new line will commence as soon as the buildings are removed and the right of way provided.

Canadian National Exhibition Loading Facilities. In past years the large crowds attending the Canadian National Exhibition, held annually at Toronto, have, on leaving the exhibition grounds, entered the street cars on the street and paid their fares on the cars in the usual manner, and on account of the large number of passengers to be handled, delay and confusion have invariably resulted. The Commission has arranged to obviate this delay by acquiring an area of land near Dufferin St. entrance to the exhibition grounds, upon which enclosures have been erected and arranged so that passengers will pay their fare on entering the enclosures, and embark without further delay on the waiting cars. Space has been provided for four cars to be loaded simultaneously.

General. The Commission's efforts to improve the operating efficiency of Toronto's street railway system are evident more and more as time passes in the better service given. The improvement would be more evident to a person who had been away from the city for some time and then returned than to those who have lived continuously in it and to whom the great improvement effected is not so evident because it has been brought about gradually. The city was visited recently by Peter Witt of Cleveland, Ohio, who is reported as saying, "When the rehabilitation undertaken by the Toronto Transportation Commission is complete, Toronto will have the best car service on the continent." He was also reported as stating that the Commission is using the largest surface cars in street railway operation in the world, and that its largest cars are 2 ft. longer than any others.

At the time of writing (Aug. 21) the Commission's forces of extra men engaged in construction and rehabilitation work number 1,700. In June, when the maximum number were employed, there were 3,800. During July the number kept above 3,000, but in early August it got down to 2,400 and has decreased steadily since then. When work is begun on the double-track on North Yonge St. and on Kingston Road, it is probable

that the number of employees will again increase, unless the greater part of the work now in hand is completed before these two large jobs are commenced.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.— 12 month to 12 month, to June 30, June 30, June 30, 1921 1922 1921

Gross	\$402,591	\$408,783	\$10,220,054	\$10,097,255
Expenses	622,697	620,291	7,449,025	7,323,689
Net	179,814	183,692	2,771,029	2,773,567

Cape Breton Electric Co.— 12 month to 12 month, to May 31, May 31, May 31, 1921 1922 1921

Gross	\$48,651	\$52,551	\$672,629	\$678,878
Expenses and taxes	42,354	41,164	518,128	581,491
Net	5,997	11,387	\$60,501	\$97,387

Montreal Tramways Co. has paid off the unredeemed balance of \$600,000 of Montreal St. Ry. 1st mortgage 4½% bonds, which were due in August, thus leaving the first and refunding mortgage 5% gold bonds, due July 1, 1941, as its only bonded indebtedness. At the commencement of this financial year, the company had among its liabilities, underlying bonds, less redeemed and cancelled up to June 30, 1920, amounting to \$3,273,153, and on May 1, the unredeemed balance of an issue of 1902, of \$1,500,000 4½% gold bonds, and \$2,238,666 4½% debentures, were paid off, the total redemption being \$2,700,000. In addition to these payments, the company has paid 1½% of dividend arrears, approximately \$550,000, and also about \$500,000 rental to the city.

Nova Scotia Tramways and Power Co.—A press report says that statistics of operation for the 6 months ended June 30, show a remarkable change in earnings, compared with the corresponding 6 months of 1921. The gross earnings were \$735,543, against \$757,628, but there was a big drop in the operating costs, they being \$512,752 this year in comparison with \$614,806 in 1921. Taxes were \$59,535 against \$63,027, and interest and sinking fund charges were \$103,570 against \$102,076. The surplus for the six months was \$59,686 in comparison with a deficit of \$22,381 to June 30, 1921. While there was a decrease of about \$22,000 in gross earnings, operating expenses were decreased about \$15,000, thus making the ratio of operating expenses 69.91% compared with 81.37% for the corresponding period 1921.

Quebec Ry., Light, Heat and Power Co.—At a meeting of directors, July 20, it was explained that it was the 25th anniversary of the replacing of the old horse car lines by the present electric railway. In 1897 there were only 4.5 miles of track being operated by the Quebec District Ry., the lines being entirely located in the lower town.

An operating committee consisting of E. A. Robert, President; Lt.-Col. J. E. Hutcheson, K. B. Thornton and Hon. L. C. Webster, has been appointed to transact business relative to the company's development and to make reports to the directors' meetings.

A report as to the company's finances for the six months ended June 30, was submitted by W. J. Lynch, General Manager. This showed:—Gross earnings, \$1,346,018.78; operating expenses \$1,230,666.28; net surplus, \$115,552.57 against a deficit of \$5,481.45 for the corresponding period of 1921.

Winnipeg Electric Railway.—

	6 mos. to June 30, 1921	6 mos. to June 30, 1922
Gross	\$1,774,541	\$1,416,209
Expenses	\$322,538	\$277,475
Net operating	\$1,451,993	\$1,138,734
Fixed charges	\$57,375	\$59,268
Net income	\$1,394,618	\$1,079,466

Electric Railway Notes.

Winnipeg Electric Railway's Oldtimers' Association held its 13th annual picnic at Sekirk, Man., Aug. 10.

Moncton Tramways, Electricity and Gas Co., is reported to be in the market for 2 new passenger cars, and a new super.

Toronto Transportation Commission has recently eliminated a number of stops on several of its lines, to speed up the service.

The London St. Ry. Co. is reported to be considering purchasing some motor busses for operation in conjunction with its electric railway.

The London St. Ry. Co., asked the London, Ont. City Council on Aug. 8, for permission to operate one-man cars in the city, and was authorized to place five on its lines as an experiment.

The special transportation commission appointed to study London, Ont. transportation needs consists of Mayor Wilson, chairman; Aldermen Childs and Drake; Sir Adam Beck and P. Pocote, the two latter being members of the London Railway Commission. The commission decided to engage the services of an engineer, and to obtain information regarding trackless trolleys, and other phases of electric transportation in cities. It expects to have its report ready in December.

The Port Arthur, Ont., Public Utilities Commission is reported to have decided, Aug. 10, that provided satisfactory arrangements could be made with the Port William public utilities committee and the Board of Railway Commissioners, the operation of one-man cars would be started Sept. 1. The delay in putting these cars in operation has been that the Board of Railway Commissioners had not authorized the cars to be operated across certain Canadian National Rys. tracks in Port Arthur, and the Port Arthur Public Utilities Commission will not take the responsibility of putting a man at the crossings, until the Board has ordered it. The Port William committee threatened, it was stated, to turn its cars over the city boundary rather than hold back their operation any longer.

The International Ry. Co.'s employees who went on strike in Buffalo, N.Y., early in July, taking with them the employees of the Niagara Falls Park and River Ry., the company's line in Canada, continue out. The lines are being operated by non-union men to an increasing extent. There have been a number of acts of violence, of various kinds in Buffalo. Jinney competition was extensive, and legal proceedings were taken to prevent its continuance. The Ontario Railway and Municipal Board was applied to in order to have the service on the company's Canadian division resumed, and in conformity with an order made July 19, the service was resumed July 25. Three cars are reported to have been put in operation at first, police protection being provided. The patronage was at first small, but in a few days public confidence was restored and traffic was reported to have become about normal.

Electric Railway Employees' Wages, Working Conditions, Etc.

Hull Electric Co.—The agreement made between the company and its employees, following the finding of a board of conciliation which sat early in the year, expired July 1. The wages payable under that agreement were 2c an hour less than the scale in operation prior to Dec. 1, 1921, when the company proposed a cut of 10% and were for motormen and conductors per hour as follows:—First 6 months, 39c; second 6 months, 42c; second year, 44c; third year and thereafter, 46c. Under the new agreement, which was signed recently after negotiations, motormen and conductors in the company's employ at July 1, will be paid 2c an hour less than the above rates, according to their standing, while men coming into the company's service after July 1, will receive as follows:—First year, 37c; second year, 39c; third year, 42c; fourth year and thereafter 44c. The rates for linemen are 50c for class 1 men; 47c for class 2 men; and 44c for class 3 men. Overtime after 10 hours will be paid at the rate of time and a quarter.

Ontario Hydro Electric Rys.—Essex Division. It was stated in Canadian Railway and Marine World for August, that, following a notification by the management that a reduction of 5c an hour would be made in the wages of motormen and conductors, on the expiry of the agreement on June 30, the men stated that they would walk out in protest. We are advised that this was incorrect, the negotiations between the management and the men having been most harmonious and no threat of striking having been made. We are also informed that operators of one-man cars and trackless trolleys are not being paid 3c an hour extra, but get the same as conductors and motormen of 2-men cars.

Motor Omnibus Notes.

The Quebec City police are reported to be endeavoring to put a stop to the soliciting of patronage by motor bus agents.

The Grey Bus line operating on the Fox Creek Road, Moncton, N.B., had one of its cars destroyed by fire, while making its return trip to Moncton, Aug. 8.

The London, Ont., city council is reported to have fixed \$100 as the license fee for each motor bus operating in the city. The buses are required to operate on regular routes and on regular schedules to be advertised.

A motor bus which is said to combine the comforts of a limousine with the capacity of a charabanc, is reported to be operating between Boston, Mass., and Montreal, Que. On a recent trip 16 passengers were taken to Montreal.

After having been adjourned on several occasions, the case against R. E. Warren, who operates a motor bus line between Woodstock and Ingersoll, Ont., was disposed of by the police magistrate who fined him \$10 because the buses were being operated without a license, in contravention of the Public Vehicles Act, 1920. Notice of appeal was given.

London, Ont., merchants are, a press report states, handling more than half of the freight and parcel business by motor truck and auto trailer. One merchant is stated as claiming to be saving 15% on his delivery cost in this way. Local freight and express shipments by railway are said to have been considerably reduced within the last few months.

R. E. Warren, Manager of bus lines operated between Woodstock and Ingersoll, in opposition to the Woodstock, Thames Valley and Ingersoll Rys., was fined \$10, or 30 days imprisonment, at Woodstock, Aug. 10, for operating a public vehicle contrary to the Public Vehicles Act 1920, and with failure to take out a license, to be conspicuously displayed on his buses.

The Ontario General Omnibus Co., Ltd. has been incorporated under the Ontario Companies Act, with authorized capital of \$600,000 and office at Toronto, to conduct a carrying and general forwarding business, as principal and agent, to act as storage warehousemen, and to carry on a transfer and express business, by motor trucks and motor busses. The company is authorized to acquire franchises from municipalities for the operation of such services in accordance with the provisions of any statutes affecting the operation of motor vehicles. The income taxes are nominal.

Hamilton, Ont., police magistrate on Aug. 21, fined a number of motor bus companies \$50 each for operating in the city without having taken out a municipal license as required by a bylaw passed by the city council July 27. The proceedings were instituted against the Guelph Bus Co., the Lake Shore Bus Co., Lishmann Bros., the Hamilton Binbrook Service, and the Ontario General Omnibus Co., formerly the Blue Bird Bus Co. The companies propose to appeal against the decision on the ground that the city's bylaw did not apply to the service given by these companies. The police magistrate refused to permit the buses to operate without a license pending the appeal.

British Columbia, Electric Ry. Co's Stave Falls Power Development.—The B.C.E.R.C. has under construction a large extension to its power development plant at Stave River Falls, 47 miles from Vancouver. The work immediately in hand according to a press report includes the raising of the present dam at the falls, sufficient to raise the level of water in the river by 27 ft.; the concreting of the present spillway, the construction of an additional spillway, and the enlargement of the present power house, which contains 3 generators, producing 22,000 h.p. A fourth generator is being added, and when the addition is built to the power house, a fifth generator set will be put in. The plans provide for the construction of a second dam, at Red Bridge, which it is said will submerge the whole valley, and give a fall of 22,000 acre feet of water. When the work is finally completed the plant will produce 72,000 h.p.

Quebec Railway, Light, Heat and Power Co. and Quebec City. In connection with the notarial protest served on the Quebec Ry. Light, Heat and Power Co. by the Quebec City Council, details of which were given in Canadian Railway and Marine World for Aug. 19, are as follows:—The company's directors with representatives of the City Council took place, July 20. A few days later K. B. Thornton, one of the directors, presented a letter from the President, E. A. Robert, to the Mayor stating that, without prejudice, and to bring about a temporary arrangement pending a final reference of the company would reduce the price of gas from \$1.75 to \$1.55 per 1000 cubic feet, with a minimum charge of 75c a month. This arrangement, it was stated would go into effect immediately upon its acceptance by the council.

Marine Department

Shipbuilding and Ship Repairing Throughout Canada.

Thos. Cantley, of New Glasgow, N.S., one of the Nova Scotia Steel & Coal Co.'s directors and formerly a Canadian National Rys. director, bought some little time since the German steel schooner *Alda*, which was ashore at Miramichi, N.B., and which is 103 ft. 7 in. long; 22½ ft. broad and 9¼ ft. deep, and which was built at Hammelwarden in 1889. He has had her cut in two at New Glasgow, and is lengthening her about 25 ft.

Collingwood Shipbuilding Co., Collingwood, Ont.—The s.s. *Charles Dick*, which has been built by this company for the National Sand and Materials Co., Welland, Ont., for securing and carrying sand and gravel, underwent her trial trips towards the end of July, after which she was taken over by her owners, and left Collingwood for Welland, Aug. 2. She was specially designed for the

work in the rivers and lakes, and has been specially built to supply materials for large contracts. She is said to be the first of this type of ship to be built in Canada.

Imperial Oil s.s. *Imperowal* cleared from the Collingwood Shipbuilding Co.'s yard, Aug. 2, after hull repairs necessitated by striking a rocky ledge.

Harbour Marine Co., Victoria, B.C.—The plant at this yard, which is owned by the Victoria Machinery Depot Co., is being offered for sale by tender. In addition to the shipbuilding plant, there is also for sale, a travelling crane, 2½, 7 and 10 tons capacity, situated on adjacent tracks. The plant was erected on the Songhees Indian Reserve, by Victoria Machinery Depot Co., to build two ships, Canadian Britisher and Canadian Scottish for Canadian Government Merchant Marine.

overboard to either port or starboard side. The unloading apparatus will be run by 5 motors, power to be furnished by a 156 k.w. steam turbine generating set. The ship will be built of steel, and classed to the highest requirements of the American Bureau of Shipping for lake service. A double bottom 3 ft. deep will be fitted, extending between peak bulkheads, with side tanks 8½ ft. deep for the full length of the cargo space. The crew's accommodation has been designed with consideration for convenience and ventilation. The after deckhouse will contain quarters for the engineer, firemen and deckhands, together with dining room, galley, pantry, etc., with cooks' quarters adjoining. The captain, officers, electrician and wireless operator will be located forward. The keel will be laid this autumn, when construction will be pushed so that the ship may be delivered for the re-opening of navigation in 1923.

Port Arthur Shipbuilding Co., Port Arthur, Ont. launched the s.s. *Mathewston*, Aug. 12, for Mathews Steamship Co., Toronto. The christening was performed by Mrs. A. E. Mathews, wife of the President and General Manager of the owning company, the builders presenting her with a wrist watch, and Mr. Mathews with a tie pin. After the launching, the company entertained about 200 people to luncheon at which, James Whalen, President, was chairman. The *Mathewston*, an illustration of which was given in our August issue, is being built for the grain trade on the Great Lakes. Her dimensions are,—length 550 ft., breadth 58 ft., depth 31 ft. The Canada Steamship Lines' s.s. *W. Grant Morden*, the largest Canadian bulk freight steamship on the Great Lakes, and built by the same builders, has the following dimensions—length 604 ft., breadth 59.2 ft., depth 27.8 ft. The contract for the *Mathewston's* construction was given at the end of 1921, and the keel was laid May 10 last. She is expected to be completed and ready for operation about the middle of September. Capt. John Moles, brother of Capt. F. G. Moles, master of the Northern Navigation Co.'s s.s. *Huronie*, has been appointed master.

United States Government Cannot Operate Ships Economically.

Chairman Lasker, of the U.S. Shipping Board, sent a letter to each member of Congress recently, in which he said in part. "The Shipping Board admits that it cannot operate its fleet remotely as economically as private owners operate their ships; the history of the prior boards shows that they were unable to put the operation of the Government fleet on a proper business basis. The Shipping Board believes that the fleet under its charge can never be profitably or successfully operated under Government control, because of the inherent and insurmountable handicaps incident to the Government ownership of ships. The reasons for these conclusions are elaborately covered in the statement enclosed."

May not what is sauce for the U.S. goose, be also sauce for the Canadian gander?

Sand and Gravel Dredging Steamship *Charles Dick*, built for National Sand & Material Co., Welland, Ont., by Collingwood Shipbuilding Co., Collingwood, Ont.,
This ship was fully described in Canadian Railway and Marine World for July, page 380.

work she is to undertake, the hold being divided into 2 large hoppers, each 60 ft. long, with carrying capacity of approximately 2,000 cub. yds. of sand and gravel. The hoisting and trawling machinery is in a space about 10 ft. long, between the two hoppers. The pump room is forward of the forward hopper, and the two pumps are each connected with an 18 in. suction direct connected to the shell. The suction pipes are removable and are to be removed when the cargo is loaded. The master and crew are accommodated forward, and the dining room, mess room, galley and engineers' quarters are in a deck house aft. The ship's dimensions are as follows: length over all 258 ft., beam 43 ft., depth 20 ft., total d.w. carrying capacity 3,000 tons. The main propelling machinery consists of triple expansion, surface condensing engines with cylinders 19, 32 and 56 in. diam. by 36 in. stroke, taking steam from 2 boilers, each 14 ft. 7 in. diam. by 10 ft. 8 in. long, at 180 lb. working pressure, under natural draft. She has been built under the British Corporation for the Survey and Registry of Shipping, and classed B.S. She will

Midland Shipbuilding Co., Midland, Ont.—The Great Lakes Transportation Co. has ordered from this company a canal size self-unloading ship of the single deck type, and following dimensions—length 259 ft.; breadth 43 ft.; of 2,000 tons on a 14 ft. draft. The depth, 25½ ft., with a carrying capacity of 2,000 tons. These conveyors will consist of a vertical triple expansion engine, with cylinders 17, 25 and 43 in. diam. by 30 stroke, steam to be supplied by 2 Scotch boilers 12½ ft. diam. by 11 ft. long, with a working pressure of 185 lb. The unloading gear will discharge 500 tons of coal an hour, the conveyor running at 300 ft. a minute. These conveyors will consist of 2 steel belts 4 ft. wide, running the full length of hold, and will be located about 7 ft. each side of the center line. The cargo will be carried to the forward end of the hold where it will pass into a hopper with a single outlet at bottom, allowing it to fall on to central belt which will convey it up through the deck and on to a boom. This boom will be of steel, 75 ft. long, with a rubber belt conveyor running its full length, and it will be arranged to swing

H.M.S. Raleigh, Wrecked at Belle Isle Strait.

H.M.S. Raleigh, which had been cruising off the Labrador coast, ran aground at Amour Point, Belle Isle Strait, Aug. 8. The crew, except 11, who lost their lives, were landed near by, at Forteau Bay, on the Quebec Labrador coast. H. M.S. Raleigh arrived in North American waters in May last as the flag ship of the North Atlantic squadron. She is one of four ships of the improved Birmingham class, and was built at Glasgow, Scotland, in 1919, the average cost being £1,671,000. Her dimensions are,—length b.p. 565 ft., length overall 605 ft., beam

in the German light cruiser type, and also for hunting enemy commerce raiders in the Atlantic, and for this purpose had extra large fuel capacity. As it was possible that oil fuel might not be obtainable at that time at different naval stations and ports, they were equipped with some coal and 4 small coal burning boilers, arranged to provide sufficient steam for cruising speeds. The hulls are armour plated 3 in.-2 in. side amidships, $2\frac{1}{2}$ in.-1 $\frac{1}{2}$ in. side bow, $2\frac{1}{2}$ in.-2 $\frac{1}{2}$ in. side stern, 1 in. upper deck amidships, 1 $\frac{1}{2}$ in.-1 in. deck over rudder and 3 in.

through Belle Isle Strait, may have deflected her from her course. She was in charge of Commander S. S. Spence, and was proceeding to Forteau Bay, to join H.M.S. Calcutta, on which Vice Admiral Sir William Pakenham had been cruising along the coast. The extent of the damage sustained had not been made public, but divers have been making an underwater survey, and at the time of writing, Aug. 20, it is not known what decision, if any, has been arrived at, as to the possibility of salvaging her. The Quebec Salvage and Wrecking Co's s.s. Lord Strathcona and barge G.T.D., were immediately dispatched to the scene, and Capt. Kjerland, who was in charge, is stated to have expressed his confidence that she could be salvaged. Three of the bodies of those drowned when the ship struck, were recovered, and buried ashore, and the crew, with the exception of about 100, retained in connection with the salvage operations, were picked up and returned to England, by the C.P.R. s.s. Montrose. The U.S. Navy offered whatever assistance was necessary, and was thanked by the Admiral, with the assurance that the help offered was not required. The U.S. cruiser Olympia, under Rear Admiral N. A. McCully, was however, stated to have visited the wreck, while other ships of the British North Atlantic squadron were standing by.

Amour Point, Que., on the north side of Belle Isle Strait, latitude 51° 27' 29" north, longitude 56° 50' 28" west, is about 2.8 miles southwestward of the point of Anse a loup Bay, in the narrowest part of the strait, which is there only 9 $\frac{1}{4}$ miles wide, the widest part between Belle Isle and Cape Bauld being 14 miles. The point is low, but rises in a series of terraces, faced by cliffs, to a hill 190 ft. high, at three quarters of a mile northward. There are several rocks within about a cable off the point. It has a white light, maintained by the Newfoundland Government, at an elevation of 152 ft. above high water, occulting 20 seconds from a circular white stone tower 104 ft. high, and visible 18 miles in clear weather. It has a diaphone for use during thick or foggy weather.

The Newfoundland and Labrador Pilot says that reliance should not be placed on hearing this signal, as sometimes, from unexplained causes, the sound cannot be heard, even from short distances. The illustration is by courtesy of the Toronto Globe.

What is a Subsidy?—During committee hearings at Washington, D.C., recently, on the Merchant Marine Act 1922, commonly called the Subsidy Bill, some objection was taken to the use of the word subsidy, it being pointed out that it is not used in the bill at all, the word "compensation" being used instead. A question was asked as to why compensation was to be paid to operators, and the questioner was informed that the strict legal meaning of the term meant the placing of persons on a parity, and not the payment of benefits in return for services performed. Others refer to the direct aid as provided for in the bill, as neither subsidy nor compensation, but as an acknowledgment to tide the merchant marine in foreign trade over its training period. What is provided for in the bill, is a grant from the Government to assist in the establishment of an enterprise deemed advantageous to the public, and that is a definition of a subsidy.

H.M.S. Raleigh, ashore at Amour Point, Belle Isle Strait.

on waterline 58 ft., extreme 65 ft., draft mean 17 $\frac{1}{4}$ ft., maximum 20 $\frac{1}{4}$ ft. She is equipped with Brown-Curtis turbines, with a designed shaft horse power of 65,000, and steam is supplied by 12 small tube Yarrow boilers, equipped for coal and oil burning. She is also equipped with seven 7.5 in., six 12 lb., four 3 in. AA, four 3 lb., two 2-lb. pom-pom, four M.G., and eight Lewis guns, and six 21-in. torpedo tubes, 4 above and 2 below water. The 4 ships of this class were begun under an emergency war programme, and were ordered December, 1915. They were planned to meet possible improvements

conning tower and are also fitted with anti-torpedo protection, the bulges being 5 ft. deep, and there are unpierced bulkheads below the lower deck. She is arranged for a complement of 730 men, but the crew is said to have been 800.

The ship's messages stated that she struck on a shoal and was lying easily about 200 yards from the shore, with her water line a few feet under water at the bow, and the same above, at the stern. At the time of the disaster, she was running at dead slow, on account of a thick fog, and it is suggested that the strong tide which ebbs and flows

Canadian Government Merchant Marine Ltd., Operation, Etc.

Officers of Steamships.—The following changes have been made in captains and chief engineers, since those mentioned in our last issue.—Canadian Beaver, chief engineer, R. G. R. Fairweather; Canadian Commander, Capt. D. H. MacLean, vice Capt. J. D. McKenzie, transferred to Canadian Cruiser; Canadian Cruiser, Capt. J. D. McKenzie, transferred from Canadian Commander, vice Capt. A. L. Starratt; Canadian Explorer, Capt. W. Wyman, vice Capt. P. J. Murphy, transferred to Canadian Spinner; Canadian Gunner, Capt. A. E. Seaman, chief engineer, J. S. Cann; Canadian Hunter, chief engineer. W. Fotheringham; Canadian Navigator, Capt. D. M. Dickson, vice Capt. A. J. Gilbert; Canadian Ranger, chief engineer, P. C. Bennett; Canadian Runner, Capt. W. H. Millar, vice Capt. D. O. Davies; Canadian Signaller, Capt. J. H. Hubley; chief engineer, S. Gruzelier; Canadian Spinner, Capt. P. J. Murphy, transferred from Canadian Explorer, vice Capt. R. V. Bennett; Canadian Warrior, Capt. A. Lintlop, chief engineer, J. H. Cumming.

The s.s. Canadian Commander, which ran ashore at Plate Point, Little Miquelon, July 3, sustaining considerable hull damage, is at Canadian Vickers' yard, Montreal, undergoing repairs, the cost of which will be it is said be in the neighborhood of \$100,000.

The steamships Canadian Gunner, Canadian Signaller, and Canadian Warrior, which have been laid up at Halifax, N.S., for some time, were ordered to be prepared for service, the first by July 29, the second by Aug. 8, and the third by Aug. 4. They have been chartered to Eaton-Nelligan Shipping Ltd., Montreal, to carry pulpwood between Cape Breton and the Great Lakes.

The s.s. Canadian Pioneer, which grounded near Dominion Point, Montreal, towards the end of July, was released the same day without damage, and after examination proceeded on her voyage to Liverpool, Eng. Three days later, she collided with an iceberg about 9 miles east of Belle Isle Strait, and put into North Sydney, N.S., with a hole in her starboard bow below the waterline, which had caused her fore peak to be flooded, but the water was kept under control by the ship's pumps. The forward bulkheads were intact and no damage was sustained by the cargo. It was stated that the collision occurred in a fog, that the iceberg was seen, and the ship veered, but that a spur of the iceberg, about 10 ft. below the waterline, caused the damage to the ship. A survey made by a diver at North Sydney, July 31, showed that her starboard bow plates were badly sprung and the forepeak frame work twisted. Temporary repairs, consisting of calking of seams and cementing the forepeak, were made and it was reported that permanent repairs will probably be made in England at a cost of from \$15,000 to \$20,000.

The s.s. Canadian Rover, ran ashore, during a heavy fog, in Portlier Pass, on the east shore of Vancouver Island, July 29. She was refloated on the rising tide without damage, and proceeded on her trip to Ladysmith, where she loaded coal.

The s.s. Canadian Victor, which passed through the Panama Canal towards the end of July, bound from Montreal to New Zealand and Australia, had amongst her general cargo of 5,911 tons, a number of motor cars weighing 2,470 tons.

Coal Shipments from Great Britain.—Five C.G.M.M. ships were scheduled to sail from British ports during August, with approximately 22,500 tons of British anthracite coal, as follows: Canadian Conqueror, from Swansea, Wales, Aug. 17, with 4,000 tons for Montreal; Canadian Otter, from Swansea, Aug. 26, with 2,500 tons, for Montreal; Canadian Pioneer, from the River Mersey, Aug. 26, with 7,000 tons for Montreal, Quebec or Three Rivers; Canadian Volunteer, from Swansea, Aug. 29, with 2,000 tons, for Montreal, and Canadian Mariner, from the River Mersey, Aug. 31, with 7,000 tons for Montreal, Quebec or Three Rivers. The date of the Canadian Pioneer's sailing may be interfered with, owing to repairs necessitated by a collision with an iceberg in Belle Isle Strait at the end of July.

Montreal Sailings.—Liverpool service.—Canadian Mariner, Sept. 9; Canadian Spinner, Sept. 23; Canadian Conqueror, Oct. 7; Canadian Pioneer, Oct. 21.

London service.—Canadian Cruiser, Sept. 7; Canadian Ranger, Sept. 21; Canadian Constructor, Oct. 5; Canadian Cruiser, Oct. 19.

Glasgow service.—Canadian Squatter, Aug. 18; Canadian Carrier, Sept. 15; Canadian Navigator, Oct. 13.

Cardiff and Swansea service.—Canadian Navigator, Sept. 2; Canadian Otter, Sept. 16; Canadian Squatter, Sept. 30; Canadian Runner, Oct. 13; Canadian Miller, Sept. 21; Canadian Mariner, Oct. 26.

Barbados, Trinidad and Demerara service.—Canadian Coaster, Aug. 30; Canadian Logger, Sept. 13; Canadian Beaver, Sept. 27; Canadian Harvester, Oct. 11; Canadian Coaster, Oct. 25.

Hamilton, Bermuda, Nassau, Kingston and Belize service.—Canadian Fisher, Sept. 14; Canadian Forester, Oct. 5; Canadian Fisher, Oct. 26.

Newfoundland service.—Canadian Sapper, Sept. 21.

Vancouver Sailings.—Australia and New Zealand service.—Canadian Scottish, Sept. 5; Canadian Freighter, Sept. 20; Canadian Highlander, Oct. 5; Canadian Britisher, Oct. 25; Canadian Skirmisher, Nov. 20; Canadian Traveller, Dec. 20.

Oriental service.—Canadian Inventor, Sept. 10; Canadian Prospector, Oct. 25.

Indian service.—Canadian Transporter, Aug. 30.

Contract Claim Appeal Dismissed.—The Supreme Court of Canada has dismissed the Canadian Government Merchant Marine appeal against the British Columbia Appeal Court's judgment on the Canadian Trading Co.'s claim for damages sustained for not carrying out a contract for shipment of lumber. It appears that the Canadian Trading Co. made contracts for shipment of 1,000,000 ft. of lumber to Australia, by the s.s. Canadian Inventor, and 250,000 ft., by the s.s. Canadian Prospector, in March 1920. Owing to delayed delivery of these steamships by the builders, the Canadian Trading Co. was put to certain expenses in rehandling the lumber, which was admitted. The C.G.M.M. denied liability on the ground that there was an implied condition in the freight contract, that it was entered into conditional on the continuation of the service and the sailing of the steamships between the ports named. In the original trial, a verdict was given in favor

of the C.G.M.M., but this was reversed by the B.C. Court of Appeal, and that court's judgment has been upheld, with costs. It was finally held that the wording of the contract applied to the continuance of the C.G.M.M. services between B.C. and Australian ports, and not the actual running on time of the two steamships named in the contract. The delay in the shipbuilding yards was beyond the C.G.M.M.'s control, and equally beyond the Canadian Trading Co.'s control, but the responsibility for the non-fulfillment of the contract rested with the C.G.M.M.

Navigation Aids by Radiotelegraph.

The Marine Department announces that messages appertaining to navigation of any ship are handled without charge between the captain of a ship and any government department, or other official, the officer in charge of any radiotelegraph station, and any person whatever, in connection with weather conditions and forecasts, tide and ice conditions and reports on aids to navigation from the following stations.—Red Head, St. John, N.B., Lurcher Lightship, Cape Sable, Barrington Passage, Halifax, Sable Island, and North Sydney, N.S., Cape Race, Belle Isle, Point Amour, Nfld., Heath Point lightship, Grand Stone Island, Cape Bear, P.E.I., Fame Point, Clarke City, Cape Point, Grosse Isle, Quebec, and Montreal, Que.; Kingston, Toronto, Port Burwell, Point Edward, Tobemory, Midland, Sault Ste. Marie and Port Arthur, Ont.

The following stations, in addition to the foregoing information, broadcast weather, ice and other reports, respecting dangers to navigation at routine periods. Beaufort, Quebec, Cape Sable, N.S., Cape Race, Belle Isle, Nfld., Fame Point, Father Point, Quebec, Que. Kingston, Toronto, Port Burwell, Point Edward, Midland, Sault Ste. Marie and Port Arthur, Ont.

These stations are owned by the Dominion Government and operated by Marconi Wireless Telegraph Co. of Canada, under contract to the Government, with the exception of the stations at Barrington Passage, N.S., and St. John, N.B., which are owned and operated by the Dominion Government. Especially urgent reports respecting dangers to navigation are transmitted by all the foregoing stations on 600 meters, immediately on receipt, in addition to the general routine transmission.

An Ottawa press dispatch of Aug. 1, stated that in carrying out the Government's policy to give up commercial radiotelegraphy, which was undertaken as a war emergency, the Barrington Passage, N.S. station will be closed shortly. This follows on similar action by the British Government with regard to the Admiralty medium power radio station at Bermuda which was closed on July 1. As a consequence the commercial service between Barrington and Bermuda has been suspended and as the Government has no other use for Barrington it will be closed. Both were war stations, having been erected in 1915 as part of the chain of naval radio stations extending from St. John's, Nfld., to Demerara, British Guiana, Barrington acting as the connecting link between St. John's and Bermuda. The closing of Bermuda and Barrington terminates the North Atlantic chain of naval radio stations.

etc. complete. The captain's rooms on the forecastle deck consist of sleeping room, office, bath room, etc. The navigating bridge is arranged over the captain's rooms and extends the full width of the ship, with a wheel house containing the steering wheel, compass, docking telegraph, telephone, speaking tube, engine room indicators, etc. with the standard steering compass on top. The dining room, engineers, stewards, pantry, refrigerating room, galley and engine room staff, including deck hands, are accommodated in a 60 ft. house aft on the quarter deck.

The propelling machinery consists of triple expansion engines, with cylinders 19, 32 and 56 in. diam. by 36 in. stroke, supplied with steam by 2 Scotch multitubular boilers, each 14 ft. 7 in. diam. by 10 ft. 8 in. long, at 180 lb. working pressure. The boilers are equipped for coal burning, and there is bunker accommodation for 150 tons. An ash ejector is provided in the stokehold for discharging ashes. There are the usual ballast pumps and auxiliaries, and extra large pipes are fitted to the ballast tanks for rapid filling and emptying. Powerful steam and hand steering gear is placed aft over the after peak, controlled from the wheel house forward, and top of the deckhouse aft. Three steam winches are provided for rapid handling of cargo, and there are 2 specially designed steam winches for warping purposes. A combined steam and hand windlass is placed on the forecastle deck, with one of the warping winches alongside, for warping. A patent snubbing wire compressor, and the George Hall Coal Co.'s special fair leads and bollards are supplied for the quick and efficient working of the ship in and out of docks and through canals. There are 2 pole masts, and 3 heavy derricks, for working the cargo. A complete system of electric lighting is provided, with large cluster lights, for use when the cargo is being handled, regulation signal lamps, etc. The equipment includes a refrigerat-

ing plant for making ice, and for keeping the refrigerating chamber cool, and providing cold water for the ship's use. The plumbing system includes water purifier, baths, w.c.s., lavatories, constant supply of running water, and hot water when necessary. There are 2 life-boats to each ship, with patent davits and disengaging gear, placed aft on top of the deckhouse. Each ship has been designed for a d.w. carrying capacity of 2,500 tons, on canal draft of 14 ft., with grain capacity of about 120,000 bush.

Great Lakes Transportation Co.'s Finances.

The Great Lakes Transportation Co. Ltd., Midland, Ont., has issued \$1,000,000 of 7% ten-year serial mortgage bonds, dated July 1, and maturing \$100,000 annually to July 1, 1932. They are issued in \$1,000 and \$500 coupon bonds, interest payable half-yearly, with privilege of registration as to principal only, and are callable in whole or in part, on any interest date, at the company's option, on three weeks notice, at par and accrued interest, plus a premium of $\frac{1}{2}$ % for each year or portion of the uncompleted term.

The Dominion was incorporated under the Companies Act in 1914, and through extensions and additions has become one of the largest Canadian transportation companies doing a general carrying business. Its steamships have a d.w. tonnage of 48,935, and in addition to the transportation business, it owns a modern grain elevator at Midland, Ont., with a capacity of 3,000,000 bush. It also has ample dock facilities and a coal dock with modern coal handling equipment there. During the 1921 navigation season, it moved on the Great Lakes, about 1,500,000 tons of grain, coal and package freight, all of which passed through Canadian ports.

The bonds are secured by a first mortgage on the following ships: Glenshee, 10,130 tons; Glenisla, 7,590 tons; Glenorchy, 6,575 tons; Glenmavis, 3,000 tons; Glenstrive, 3,370 tons; Glenbrae, 3,400 tons; Glenfinnan, 4,350 tons; Glenlyon, 4,425 tons; Glencairn, 3,120 tons; and Glenlivet, 2,975 tons; and also by a first mortgage on the coal dock property at Midland, and are further secured by the deposit of the entire capital stock issue, less directors' qualifying shares, of the Midland Elevator Co., Ltd., on which there is no mortgage, and on which none will be permitted while any of these bonds are outstanding. In addition to the foregoing security the bonds are secured by a floating charge on all of the company's other assets. The total issue of bonds is limited to \$1,500,000, of which \$1,000,000 have been sold to Richardson, Sheppard and Co., Toronto, and of the remainder, \$250,000 are retained in the treasury to be disposed of should the company require to do so, the balance of \$250,000 only being available for issue to the extent of 70% of the cost, or fair value, if the fair value be less than the cost, of additions to the company's fleet of steamships or other fixed assets, and then only if the net average earnings for the last preceding fiscal years have been at the rate of at least 2½ times the interest charges on bonds then outstanding and those proposed to be issued. The trust deed provides for the retirement annually of \$125,000 par value of the bonds.

In addition to its fixed assets, the company owns the Midland Elevator Co.'s entire capital stock and also substantial interests in other steamship companies, and coal companies, working in close co-operation, and which yield the company a very considerable tonnage. The steamships have been appraised by Hugh Calderwood, representing the American Bureau of Shipping, at \$2,726,528, after allowing for depreciation. This amounts to \$55 a ton. The Midland Elevator Co.'s

Ships Registered in Canada During April and May, 1922.

In compiling the following lists of ships registered, steamboats and motorboats operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

* Re-measured.

Ontario Paper Company's Steamships.

coal dock and fixed assets have been appraised by the Canadian Appraisal Co., the coal dock having a present depreciated value of \$208,521.18, and the elevator property a present depreciated value of \$861,024.84; the combined value of the assets on a strict appraisal basis, which are security for the bond issue, being \$3,856,078. The company's investments, exclusive of the elevator property, have a book value, which is said to be materially less than their actual value, of \$718,108.35.

The average net earnings for the past five years, derived from operations, eliminating all other sources of revenue, and after deducting depreciation, available for interest on these bonds, are stated to have been over five times the interest charges on the present issue.

The directors are: James Playfair, Midland, Ont., President and Managing Director; J. A. Richardson, Winnipeg; J. A. Paisley, Cleveland, Ohio; D. L. White Jr., Midland, Ont.; F. A. Magee, Hamilton, Ont.; W. J. Sheppard, Waukegan, Ont. and D. S. Pratt, Midland, Ont.

Canal Statistics for June.

The Dominion Bureau of Statistics Transportation Branch, reports traffic through Canadian canals during June as follows:—

Sault Ste. Marie, Canadian and U.S. Canals, traffic increased by 140% over May, due mainly to iron and ore shipments increasing from 1,379,850 to 6,617,660 tons. Grain shipments decreased about 50%, bituminous coal shipments continued light, and anthracite coal stopped altogether. Compared with June 1921, grain and ore shipments were considerably heavier, but these gains were offset by the reduction in coal, little change being shown in the aggregate.

Welland Canal traffic decreased 11% from June 1921, due to decrease in coal and corn shipments. Rye and oil also decreased, but wheat and oats increased. From the opening of navigation to June 30, wheat shipments were 1,980,000 bush, against 8,362,000 for the same period of 1921. Bituminous coal ship-

The steamships Chicago Tribune and New York News, which are illustrated on this page, and which arrived in Canada recently, were built at Wallsend-on-Tyne, England, and at Londonderry, Ireland, respectively, for the Ontario Paper Co.'s pulp service between Quebec ports and Thorold, Ont., and will be operated by the Ontario Transportation and Pulp Co. Their leading dimensions are: length b.p. 250 ft.; breadth, extreme, 43 ft.; depth, moulded, 19 ft. 4 in. They have each an approximate d.w. capacity of 2,300 tons on a 14 ft. mean draft. The hulls are built with straight stem and elliptical stern, of materials in accordance with the British Corporation's requirements for lake service and the

ficers' and seamen's quarters are in the fore end, and in the forward deck house there is an owner's suite. The engine and boiler space is arranged in the stern, and is separated from the after hold by a watertight bulkhead. The chart room, captain's day room, and sleeping quarters, are in a steel house on the forecastle deck, and above this is another steel house, containing the wheel compass, holding the steering standard, compass, telegraph to engine room, etc. The engines are of the ordinary marine reciprocating type, triple expansion, with 3 cranks, driving a single propeller, and supplied with steam by 2 cylindrical, multitubular, single ended boilers, with a working pressure of 180 lb. per sq. in.

Steamship New York News, 2,300 d.w. tons, built for Ontario Paper Co., Thorold, Ont.

Gulf of St. Lawrence. Each hull is divided into 2 large holds by a water-tight bulkhead, and each hold has 3 large cargo hatches. In order to have clear spaces in the holds, there are no pillars supporting the deck, but in place of them there is a heavy binding beam and web frame fitted between every hatch, and substantially fixed to the deck. A steel rubbing piece is fitted on each side of the ship above the load water line, for most of the length, and in addition there is a substantial oak fender round

The building of all machinery and boilers was supervised by British Corporation surveyors, and the owner was represented by Major H. Maitland Kersey, D.S.O., formerly Managing Director, Canadian Pacific Ocean Services Ltd., London, Eng.

Shipping Reprisals. It was announced in the British House of Commons recently, that the Customs Consolidation Act of 1853 empowers the Government to impose such duties on foreign ton-

Steamship Chicago Tribune, 2,300 d.w. tons, built for Ontario Paper Co., Thorold, Ont.

ments were 94,324 tons against 252,610 tons for the same period of 1921.

St. Lawrence Canals.—Compared with June 1921, coal shipments, hard and soft, decreased 35,286 and 70,862 tons respectively; corn decreased 51,026 tons; and oils 14,327 tons; barley, oats and wheat increased 14,674, 24,980 and 41,005 tons respectively, the decrease of all freight being 75,126 tons for June. Passenger traffic increased 2,604, or 37%.

the stern at the upper deck level, and another on each side of the bows about 12 ft. below the deck. The rudder is of the single plate balanced type, and is of large area, to facilitate quick maneuvering. There is a complete installation of electric light, including clusters of lights for the holds. The engineers and firemen are accommodated in a steel deck house aft on either side of the engine and boiler space, and the master's of-

nage or goods, as may be necessary to counteract any disadvantage British trade or shipping may suffer from preference granted by foreign Governments to their ships or goods.

Vancouver Shipping Statistics. The total tonnage of ships entering Vancouver B.C., during 6 months ended June 30, was 2,013,357 gross, and 1,221,118 net, compared with 1,884,042 gross, and 1,163,699 net, for same period of 1920.

Dominion Wreck Commissioner's Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties.—

Grounding of s.s. Canadian Commander.

Held at Montreal, July 27, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. J. B. Henry and A. Musgrave, as nautical assessors, into the grounding of Canadian Government Merchant Marine s.s. Canadian Commander at Plate Point, Little Miquelon, July 3, when she suffered considerable damage. She was bound from Chatham N.B. to England. The evidence, showed that every precaution had been taken. A departure was taken from Bird Rock and a course laid which would have brought the ship some 12 miles south of the St. Pierre Miquelon group. Fog came on, but the speed was maintained for about 3 hours after, when half speed was ordered. Three soundings were taken, the last one, 16 fathoms, indicating shoaling. The course was altered one point; which, under ordinary circumstances, would have proved sufficient allowance. A set from the southward was foreseen and allowed for, and when shaping the course by the last observation, the compass was free from any deviation on the course, and the log proved true. The master, Capt. D. H. Maclean, was about, though, not actually on the bridge when the ship grounded. Ships had been spoken to by wireless, to the northward, which gave confidence to the master that the ship was in a safe position. The mate, on noticing a small craft on his starboard, gave an order hard to port, and he then saw white ahead on the starboard bow, which he took for ice, and gave an order hard to starboard and stop engines. On the master coming on the bridge, it was found that the white seen was breakers and the order full speed astern was given and executed, but the ship grounded on a ledge. Every means which the situation demanded was executed to float the ship, without success, and then help was called. The court felt that the master should have communicated with the signal stations and obtained his position by the direction finding apparatus, but he stated that he was not under any apprehension as to his position, beside which, the wireless stations were far apart and his instruments had not power enough to obtain reliable information. The order to starboard order would have been a wrong maneuver if the white seen on the starboard bow had been ascertained as breakers, but being thought to be ice, no criticism can be made of the order and the movement. The court therefore exonerated the master, and the first officer, C. Beavers, and stated that the grounding was due to a stronger set for a current from the south, not anticipated, in view of the climatic conditions existing. In returning the officers' certificates, the court hoped that the seriousness of the casualty would prove a sufficient caution to both, to beware of currents which are known to vary in direction and velocity.

Cairndhu-Spray Collision.

Held at Montreal, July 6, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. J. B. Henry and J. Lapierre, as nautical assessors, into the collision between the Cairndhu s.s. Cairndhu and the Sincennes-McNaughton Line's steam tug Spray, with tow, near Isle St. Ours, in the River St. Lawrence, July 1, when 6 lives were lost.

The evidence showed that the master of the tug Spray, N. Mongeau, was below, and came on deck a moment before the collision took place, so could give no information as to the previous movements and position of his ship, but confirmed the evidence that the two-blast signal was given by the Spray, which awakened him. The court attached much significance to his statement that he always used the north side during the eight trips he had made this season, and also considered that his admission that it was contrary to existing rules, was of great import. He left his ship in charge of a man, M. Houde, who is termed a pilot, with the one instruction to be called if needed. This man, had been with the tug on each trip this season, on each of which, the wrong side of the channel was used, violating article 25. The regulations do not call for more than one certified man for a tug, consequently when the master retires, he must necessarily leave control to a man who does not possess officially known qualifications, therefore it would seem imperative for the master to give explicit instructions, other than to be called when needed. The court expressed the opinion that the master, being the only certificated man on board, was not justified in being in his room asleep, especially when he had left Montreal at 8 p.m. and would have been in Sorel about 3 a.m., and that he should have been in the wheelhouse close at hand, to instruct and direct. Marsden, in referring to article 25, holds that a master navigating on the wrong side of the channel, is guilty of a misdemeanor, which will almost subject himself and his owners to liability for any collision occurring when he is on his wrong side, unless it is proved that his being on the wrong side is unavoidable. The evidence of the second officer of the s.s. Cairndhu would indicate that the Spray was not in the outer line of the channel, and would be in that position to slightly counteract the effect of the current, which has a tendency to set toward the south. Had the Spray maintained that position to within a reasonable distance, and then ported, no collision would have occurred. Instead, two 2-blast signals were given, and evidently a hard to starboard order corresponding to the signal. This action was indefensible and unwarranted and consequently the tug flagrantly violated article 25, the onus of the collision resting with her.

The s.s. Cairndhu's second officer, T. D. Healy, was on duty, having received instructions to call the master if needed, and as there was the risk of collision, the court expressed the opinion that in failing to call the master, he was guilty of a breach of discipline. In the court's opinion the risk of collision occurred when the 2-blast signals were heard from the Spray, and the second officer should have immediately summoned the master by a hurried and rush call. Further he should at once have suggested to the pilot, E. A. Paquin, what action to take, or have taken upon himself the responsibility to meet the requirements of article 23 and 29. The second officer stated that when the persistence of the tug was seen, he took a survey of the situation, and a doubt had arisen in his mind. It was time for action, but instead, he left it to the pilot, and thus failed to measure up to his responsibilities. He also stated that he could not give a signal without using the helm, which the court considered a most absurd reply.

Five minutes elapsed between the 2-blast signals and the collision, and there was ample time to stop the ship and reverse, and call the master, as well as perform many other evolutions. His attempt to avoid collision was considered an extremely tardy movement. He stated that he found it strange to hear 2-blasts, but kept at full speed. As soon as he saw a collision was inevitable he put the engines full speed astern, which performance, the court considered unworthy of a seaman. He admitted that the only possibility to avoid a collision was to go full speed astern, which admission, condemned his conduct. In face of article 25, he stated that the Spray was the one to keep out of the road, and not the Cairndhu, and that it was for the tug to find out that it could not get across the Cairndhu, an absolutely wrong interpretation of his duties. On this evidence, the court felt justified, without any possibility of erring, in finding that the second officer was wilfully disobedient to the master's orders and that he failed to measure up to his responsibilities.

The pilot, E. A. Paquin, in his evidence, did not agree with the second officer as to the sighting of the Spray's green light, but this was considered unimportant. The condition of his eyesight was questioned, and though he passed a satisfactory examination at the commencement of the season, the court thought it advisable to have a further examination before the court, with the result that it was found to be normal. He stated that when a quarter of a mile from the tug, he ported the helm 1½ points. If the second officer's version was to be accepted, which it was, the slight porting of the helm was wrong; it should have been hard-ported, with a full speed astern order simultaneously. The pilot knew that it was a top approaching, and the probable length was indicated by the extra mast-head lights. Marsden's 5th edition could have been cited ad infinitum in support of the court's contention that the Cairndhu, through the agency of the pilot, violated article 29. There was a special circumstance arising when the two blasts were heard, to obligate an immediate reversing of engines, and it was inevitable that this should have been done. The explanation offered by the pilot that he did not see the Spray's green light until at 2 ship's lengths, due to it being dimmed by the Cairndhu's bright lights, was rejected, in view of the second officer's evidence that it was seen timely, and indicates an improper or an indifferent lookout on the pilot's part. In a previous case the court expressed sympathy with those who are in charge of deep draft ships, for the mystifying behavior of tugs and other small craft whose masters are responsible parties, either through ignorance of the proper application or execution of the rules of the road, or perhaps through indifference, which places these valuable ships in jeopardy. In this case the Spray's action was unwarranted and inexcusable, but there was time for those on the Cairndhu to reflect and act, and hence the court felt justified in finding the pilot in default, equally with the second officer. With respect to signals by means of the steam whistle, article 28 was neglected by the Cairndhu, as the whistle is obligatory, and the whistle must be given on giving an authorized course. A 1-blast signal should have been given when

the Spray's unauthorized 2-blast signals were heard.

The court found that the steam tug Spray, was chiefly to blame, through inviting collision by an inexcusable manoeuvre, and the master, Capt. N. Monneau, was guilty of culpable negligence, his certificate 5,018 being suspended for 12 months from July 18. Capt. W. Whitehead of the s.s. Cairndhu was exonerated from blame. T. D. Healy, second officer of the s.s. Cairndhu, was found in default, and his certificate was suspended for 6 months. As his certificate was returned to him principally in order not to cause delay in the departure of the Cairndhu, and in view of the indefinite adjournment of the case, then in contemplation, the court ordered that the agents or owners take steps to have his certificate, No. 0011471, returned to the court, the suspension to date from the time it is delivered to the agents or owners, when it is to be sent by registered mail to the Dominion Wreck Commissioner at Ottawa. The pilot, E. A. Paquin, of the Cairndhu, was found in default, and his license was suspended for 6 months from July 18. In meting out such light penalties, considering the gravity of the casualty, the court bore in mind the Spray's peculiar and inexcusable action and expressed itself as feeling keenly the loss of life, and extended its sympathy to the relatives of those lost.

Airedale-Orithia Collision.

Held at Quebec, Que., July 21, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Cts. J. E. Henry and W. H. Miller, as nautical assessors, into the collision between the s.s. Airedale, owned by C. A. Stuart and Co., London, Eng., and the Donaldson Line s.s. Orithia, 2 miles northwesterly of White Island Reef lightship, in the River St. Lawrence, July 4. The master of the s.s. Airedale, Capt. J.N.S. Butcher, stated that he was on deck, the vessel proceeding at slow speed, when the Orithia's whistle was heard slightly on the port side or nearly ahead, and the speed was reduced to dead slow. When at 150 ft. distance, he saw the masthead lights, 3 short blasts were given and the engines put full speed astern, the collision ensuing. The master of the s.s. Orithia, Capt. G. Pearson, stated that the Orithia was going slow, having the tide with her, the speed at the time of the collision being about 5½ knots. He heard 2 blasts of the whistle, and gave 2 blasts in answer, the helm then being ordered hard to starboard, which order had scarcely been put into effect, when a hard to port was given, the collision ensuing. The Airedale's masthead lights were seen 2 or 3 points on the starboard bow, the red light being first seen, then the green, and the helm was hard to port at the time of the collision. The evidence, in both cases, was practically corroborated by all other witnesses. In summarizing it, the court expressed the opinion that the force of the wind was sufficient to cause the sound of the whistles to be carried broader to port, hence, if the signals were heard nearly ahead, it is possible that the Orithia was slightly on the starboard of the Airedale. The Airedale's speed had been reduced from slow to dead slow, 7 minutes before the collision, with the flood of 2½ knots almost directly ahead, and her speed over the ground could not have been more than one knot, under the circumstances permissible. Having the Orithia on her port bow, she complied with articles 16, 21, 23, 27 and 29, article 25 not being considered in this

casualty. On the appearance of the Orithia's green light, engines were put full speed astern, and the requisite 3-blast signal given. The Airedale's position with respect to the Orithia is indicated by the damage done, an oblique angle from the bow pressing the forward part of the wound inward, and the withdrawal bringing outward the plates of the after part of the wound. While the damage was considerable, the penetration was slight, and her immediate withdrawal indicated that her speed was practically nil at the moment of impact. The tearing of the lower part, and the bending to starboard was due to the Orithia's speed. Whether the Orithia heard the sound of the Airedale on the port or starboard bow, of which, by the way, there was no mention in the log, it was her duty to have reduced her speed of 5½ knots, which, having the tide with her, was, so dense the Orithia's pilot, L. Thivierge, stated that he thought that the ship, which proved to be the Airedale, was bound for the Saguenay. On a point of this kind, it is not permissible to presume, there was a doubt, and article 16 should have been followed. Regarding the Orithia's speed, cognizance was taken of the fact that the tide was with her, and that it was necessary to permit some speed in order to permit evolution, but it was considered that the engines should have been stopped until the speed had been reduced, then restarted to enable the ship to be controlled. The Orithia failed to obey article 19. In the first instance she had the Airedale on her starboard, and it was her duty to take such precautions as to ensure her safety as well as that of the on-coming ship. The evidence as to the wind's direction was contradictory, but consideration of the effect was taken and dealt with in the evidence, and there was nothing in the log to indicate the wind's direction prior to the collision. The Orithia had the wind behind her, on her quarter, while the Airedale in fact, it felt the exact force of it. Respecting the starboard order, and the replying to the Airedale's 3-blast signal, with 2 blasts, the court felt the Orithia was excusable under the circumstances, and since the Orithia did not alter her course under that order, which was immediately followed by a hard to port, the signals did not contribute to the collision, and hence a violation of article 23 was not brought against her. In viewing the contradictory evidence the court was of the opinion that the Orithia failed to observe the letter and spirit of articles 16, 19, 27 and 29. It therefore found that the Orithia was alone to blame for the collision, but in view of the conditions of weather and tide, as well as the locality, it did not deal with the master's or the pilot's certificates, but reprimanded

them both severely, especially for failure to observe articles 16 and 19, and cautioned them against surmising what the other ship was doing when not in sight, or what she would do when seen. The duty of masters, officers and pilots is to exercise proper judgment; extraordinary judgment and skill are not demanded; and to have constantly in mind that the rules of the road have been framed with a view to their observance. The Airedale's master and pilot were exonerated from any blame for the casualty. The Airedale offered and rendered the assistance expected by law.

Great Lakes Grain Ship Chartering.

Cleveland, Ohio, press dispatch, Aug. 18.—The grain trade was a little more active today and some chartering was done for prompt and future loading. A big steamship was placed to load at South Chicago, Ill., for Buffalo at 2½c. A medium size ship will take a cargo from Duluth to Buffalo next week at 2½c, and one of the same class will load at Duluth the last 10 days of Aug. at 2½c to Buffalo, or 2½c to Georgian Bay. A small steamship will take a jag of flax from Fort William to Duluth at 4c. Two big carriers were chartered to load at Duluth for Fort William the last half of September for Buffalo at 3c. Shippers were bidding 4c from head of Lake Superior to Buffalo for the last half of November, but ship owners want a dispatch guarantee for that loading period.

Atlantic Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with capital stock consisting of 2,000 shares without nominal or par value, provided that business be commenced with a capital of \$10,000, and office at Toronto, to conduct a general business of transportation of passengers, mail and freight, and to own and operate ships, steamship and railway terminals, wrecking outfits, wharves, dock yards, etc. The incorporators are,—G. M. Jarvis, G. S. O'Brien, E. R. Lynch, H. Dennis, and B. Cameron, Toronto.

Canada Steamship Lines' Finances.—The Prudential Trust Co. received Aug. 15, proposals to sell first mortgage debenture stock and bonds of Canada Steamship Lines, Ltd., to be purchased by approximately \$255,000 paid by the company to the trustees for the purpose of the sinking funds under the terms of the trust deeds. The company has given notice that it will redeem, Sept. 1, series 2 to 10, and series 2 to 9 of the 10-year serial first mortgage collateral bonds, each for an aggregate principal amount of \$500,000 and series 10 for an aggregate principal amount of \$1,500,000, at 105½ and accrued interest.

Ships Added to and Deducted From the Canadian Register During April and May, 1922.

American Association of Port Authorities' Toronto Meeting.

The American Association of Port Authorities will hold its annual meeting in Toronto Sept. 14-16, the following being the programme:—

Sept. 14.—9.30 a.m. Registration of delegates. 10.30 a.m. Address of welcome by Mayor of Toronto and Chairman, Toronto Harbor Commission. Reply by Association's president. 10.30 a.m. President's report. 10.45 a.m. secretary's report and treasurer's report. 11 a.m. Appointment of committees. 11.15 a.m. Report of fire protection committee. 12.15 p.m. Address by E. H. Outbridge on The Port of New York. 1 p.m. Luncheon tendered delegates. 2.30 p.m. Address by B. F. Cresson, Jr., on What are the factors at a port which will determine the kind and amount of freight handling machinery and equipment that is justified? 3.30 p.m. Address by Brancor Hill on control of waste fuel oil in harbors. 4 p.m. Address by R. E. Lambort, on teaching port facts in university schools of commerce, business colleges and high schools of commerce. 4.30 p.m. Address by J. H. Walsh on the navigation or industrial canal of the port of New Orleans. 5.30 p.m. Address by J. Meigs on the proper ratio of berthing space to the cargo tonnage requirements of ports. 7.30 p.m. Informal dinner.

Sept. 15, 9 a.m. Address by J. B. Strauss on the present and future port of Chicago. 9.45 a.m. Address by Capt. F. T. Chambers on free ports. 10.30 a.m. Address by J. H. McCallum on the port of San Francisco. 11.15 a.m. Address by S. McCloy on port organization and term of office. 12. Address by F. W. Cowie on the port and its relation to production of port and city. 2.30 p.m. Inspection by Dr. H. Von Schrenk on destructive action of marine borers. 9 p.m. Address by W. H. Adams on rail freight rates and development of lake ports. 10 p.m. Address by C. Kehr on seaports in nation and world planning.

Sept. 16, 9 a.m. Address by Dr. Bryson Cunningham on British port methods. Reports of committees, election of officers.

The present officers are:—president, B. Thompson, Tampa, Fla.; secretary, M. P. Fennell, Jr., Montreal; treasurer, V. Gelineau, Jersey City, N.J.; vice presidents, 1st, J. S. Smith, Jersey City, N.J.; 2nd, J. H. McCallum, San Francisco, Cal.; 3rd, Lt.-Col. G. H. Kirkpatrick, Vancouver, B.C.; directors, Maj.-Gen. L. H. Beach, Washington, D.C.; J. N. Cole, Boston, Mass.; Dr. W. T. Christensen, Seattle, Wash.; W. G. Ross, Montreal; A. G. King, Norfolk, Va.; T. S. McClesney, New Orleans, La.; E. L. Cousins, Toronto; executive committee, Brig.-Gen. A. E. Labelle, Montreal; M. H. Bronsdon, Providence, R.I.; M. F. Steinhager, Baltimore, Md.

U.S. War Claims against British Government.—The U.S. Shipping Board Chairman announced recently that a settlement of claims against the British Ministry of Shipping, arising out of transactions during and after the war, has been made, by the payment to the Board of \$12,000,000.

Prospect Shipping and Towing Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$60,000 authorized capital, and office at Vancouver, to carry on business as tugboat owner, steamship and scow operator, etc.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

32. June 14.—92, Newfoundland, Quebec and Prince Edward Island, radiotelegraph stations to be closed. 93, New Brunswick, Northumberland Strait, Richibucto harbor entrance, change in position of front light of Bar range.

33. June 16.—94, Ontario, Lake Huron, Georgian Bay, Sawlog Point, character of buoy to be changed; Gin Rocks, buoy to be established. 95, United States, Lake St. Clair, wreck buoy removed. 96, United States, Lake Huron, Detour Point, radio compass station established. 97, United States, Lake Superior, radio compass stations established.

34. June 25.—98, British Columbia, Vancouver Island, West Coast, Quatsino Sound, hydrographic information.

35. June 26.—99, Ontario, Lake Superior, sailing directions for Canadian shores issued. 100, Ontario, Lake Superior, River entrance, shoal, buoy established.

36. June 27.—101, British Columbia, Vancouver Island, Esquimalt Harbor, air harbor established, caution. 102, British Columbia, Queen Charlotte Sound, Tribune Channel, Humphrey Rock, depth. 103, British Columbia, Queen Charlotte Sound, Blunden Harbor, uncharted shoal. 104, British Columbia, Queen Charlotte Sound, Christie Passage, uncharted rock.

37. June 29.—105, Ontario, Lake Erie, southwest of Long Point, obstruction reported. 106, Ontario-Michigan, Detroit River, Livingstone Channel, light to be established, gas buoy to be discontinued. 107, United States, Lake Superior, White Fish Bay, Point Iroquois light station, characteristic of light to be changed.

38. July 3.—108, Nova Scotia, Bay of Fundy, Walton harbor, buoy established. 109, Nova Scotia, southeast coast, north entrance to Canso harbor, uncharted shoal. 110, Quebec, Gulf of St. Lawrence, Magdalen Islands, Etang du Nord, hand fog horn to be moved.

39. July 8.—111, Quebec, St. Lawrence River, Lake St. Francis, entrance to Soulanges Canal, light to be established, gas buoy to be discontinued. 112, Ontario, Lake Erie, east of Point Abino, buoys placed by private parties. 113, United States, St. Clair River, gas buoy moved.

40. July 8.—114, New Brunswick, north coast, Miramichi Bay, Newcastle, chan-

nel partially closed. 115, Quebec, St. Lawrence River, between Quebec and Montreal, below Lanoraie, wreck, buoy placed temporarily.

42. July 14.—117, Nova Scotia, Bay of Fundy, Lurcher shoal, lightship to be removed from her station temporarily for repairs. 118, Nova Scotia, Bay of Fundy, Lurcher shoal lightship, radiotelegraph hours of service. 119, New Brunswick, Northumberland Strait, Kouchibouguac Bay, Kouchibouguac bar, buck range light re-established.

43. July 14.—120, Ontario, Lake Ontario, Toronto, buoys placed by private parties. 121, Ontario, Lake Huron, Cape Hurd Channel, off southwest bank, character of buoy to be changed. 122, Ontario, Lake Huron, North Channel, Little Current, depth in eastern entrance of channel.

44. July 27.—123, Ontario, St. Lawrence River, above Brockville, buoy placed by private parties. 124, Ontario, Lake Ontario, Toronto harbor, western entrance, additional lights in range light-houses. 125, Ontario, Lake Superior, Lamb Island to Thunder Cape, new edition of chart.

45. July 27.—126, Nova Scotia, Bay of Fundy, Cape d'Or, light established. 127, Quebec, Lower St. Lawrence River, Cape Magdalen to Pointe des Monts, new chart issued. 128, Quebec, St. Lawrence River between Quebec and Montreal, new editions of charts.

Esquimalt Drydock Construction.—We were officially advised Aug. 8, that work on construction of the drydock in Skinner Cove, Esquimalt Harbor, B.C., had been resumed by the contractors, P. Lyall and Sons Construction Co., in accordance with the original plan. Most of the excavation inside the inner cofferdam was completed, and the building of the outer cofferdam was well under way, and was expected to be completed early in September. This will allow of the removal of a portion of the inner cofferdam, and the completion of the excavation for the main basin. The concreting in the inner portion of the main basin was commenced about the middle of August and was expected to be carried to completion without interruption. Three of the 100 ft. cribs for the landing stage had been sunk in position and the remainder were expected to be placed before the end of August, when the building of the parapet wall on the outer side of the cribs and the completion of the fill between the landing stage would be proceeded with. About 250 men are at work.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during July, 1922:

Articles	Canadian Canal	U.S. Canal	Total
Lumber	1,552	40,924	42,476
Flour	839,293	332,900	865,193
Wheat	1,776,890	10,431,952	12,208,842
Grain, other than wheat	2,169,629	4,817,835	6,987,464

Total Freight	289,843	9,945,247	10,235,090

Sea Sled Built in Canada.

The accompanying illustration shows a sea sled, which has been built for demonstration purposes by Canadian Vickers Ltd., Montreal:

The dimensions are, length, moulded, 38½ ft.; length overall 41 ft. 2 in.; breadth, moulded 7½ ft.; breadth, extreme over guards, 8 ft. 1 in. Features of the hull design are the inverted "V" shaped bottom, and the straight vertical sides, with the chines curving up forward like sleigh runners. It is claimed that these give the hull great strength, stability in rough water, freedom from pounding and shipping spray, and planing ability at high speed.

There are 2 large cockpits, the forward one being particularly roomy and well appointed, the upholstery and finish being on a par with the highest class of automobile and motor boat work. The remainder of the hull is decked over, and divided by transverse bulkheads, forming, together with the engine space,

on outside of transom, and a line shaft with steering column, and wheel at helmsman's position. It is claimed that by means of this apparatus, the sea sled can be steered with the ease and efficiency of an automobile.

The deck equipment comprises running lights and searchlights, glass windshields flagpoles and cleats and fairleads. The bottom is painted in bronze, the topsides and deck and superstructure are of polished mahogany, and this, with polished brass fittings and high class workmanship throughout, gives a very pleasing and highly finished result.

The sea sled described was taken from Montreal to Toronto in August, stopping at several places en route, and giving demonstrations. Owing, it is said, to a local pilot's error, the sled ran on a shoal, about 7 miles west of Brockville, and had to be towed back to Brockville, where new propellers were fitted. The hull was not damaged.

During the war she was attached to the Ninth Cruiser Squadron, patrolling in the neighborhood of the Canary Islands and along the West African coast to Sierra Leone. During the later stages of the war, she was attached to the Tenth Cruiser Squadron, on patrol work in the North Sea, and, in the closing period, acted as convoy for ships proceeding to and from Australia.

Two cruises will be run from New York during the forthcoming winter, by the s.s. *Empress of Britain*, to the West Indies, Panama, Venezuela, Nassau and Bermuda. The first trip will commence on Jan. 20 and the second on Feb. 20, the fares ranging from \$250 to \$2,500, the latter being for 2-berth cabin with bathroom, etc., en suite. The s.s. *Empress of Britain*, which was completely overhauled and equipped with oil burning furnaces recently, has large promenade deck, swimming pool, gymnasium, etc., and carries an orchestra.

Northern Tug and Barge Co. Ltd. has been incorporated under the British Columbia Companies Act with \$10,000 authorized capital, and offices at Victoria, to own and operate ships and carry on a general navigation business.

The United Fruit Co., New York, has ordered 3 motorships, driven by electric motors, with current generated by Cammellaird-Fullagar-Diesel engines, from Cammel Laird and Co., Birkenhead, Eng. The ships will be classified by the British Corporation.

The icebreaking steamship **J. D. Hazen**, built for service in the St. Lawrence River, sold to the Russian Imperial Government in the early stages of the war, for White Sea service, and repurchased by the Dominion Government, as mentioned in our last issue, was acquired from the French Government, through the Anderson Co. of Canada, and arrived at Quebec, Que., Aug. 6, from Cherbourg, France, under command of Capt. Jno. Hearsh. Before being put into service by the Dominion Government, she was thoroughly examined and overhauled, and classed 100 A1 at Lloyd's. She left Quebec, Aug. 17, for Sorel, where she is to be berthed until required for service in the ice in the St. Lawrence River. So far as is known at present, no repairs are necessary, with the exception of small running repairs and a few minor alterations, which will be done by the Marine Department's employees. Her headquarters will be at Quebec.

Newfoundland-West Indies Service.—The Newfoundland Government received tenders to August 21, for supplying two steamships for operation between St. John's and the West Indies. Under the proposed service, a steamship will leave St. John's every three weeks, calling at Havana, Jamaica, Porto Rico, Martinique, Barbados, Trinidad and other islands in the West Indies, making one call each trip at these ports. The service is intended to be continuous throughout the year, and the contract is to be for five years.

It is proposed to commence the service in October or November, with one steamship, and to place the second steamship in operation about Oct. 1923. The steamships for the service must be classed X 100 A1 at Lloyd's, and have a speed of at least 12 knots an hour, and a d.w. capacity of about 2,000 tons. They must be equipped with all modern improvements, and have accommodations for 20 first class passengers. Tenders were to state the rate per round trip for the performance of the service, which is also to include carrying mails.

Sea Sled, built by Canadian Vickers, Ltd., Montreal.

separate watertight compartments, thereby adding considerably to safety in case of damage. The hull construction is entirely in wood. The framework, including the keel and chines, are mostly of white oak, specially designed for lightness and strength combined. The planking of the bottom, sides and deck is mahogany, with a double inner skin, on the bottom, of cedar, worked diagonally. The fastenings are brass screws to the framing, and copper rivets in the fore and aft seamstraps, there being about 36 fastenings per sq. ft. of surface.

The propelling machinery consists of two 6-cylinder model G.R.S. Stirling marine motors, fitted with electric starting system, and fuel tank air pressure pump. The propeller shafts are of Tobin bronze 2½ in. in. dia. and run out through a heavy shaft log built into the transom at stern, with specially designed heavy bronze bearing and stuffing box on inside and force feed lubrication to all bearings. The two propellers are of manganese bronze 32 in. dia. of special pattern, in accordance with the Sea Sled Co's surface propeller system of propulsion, in which there are no outboard fittings of any description on the boat's bottom, and only half the propeller blades are immersed. The principal advantages of this system are claimed to be freedom from fouling; shallow draft; shaft protected and lubricated; freedom from cavitation; greater mechanical efficiency than in any other speed boat design.

The steering gear is of special design, and consists of bronze rudder plates, one on each side of the drawn-in stern, controlled by rack and pinion gear, fitted

Canadian Pacific Railway Ocean Steamship Services.

The s.s. *Empress of Canada*, which completed her first trans-Pacific voyage recently averaged 19.75 knots, the engines developing 21,000 h.p. She beat previous records on the eastbound trip by 8½ hours. She is the largest steamship on the Pacific Ocean, and on this trip, exceeded her contract speed and completed her voyage, without a hitch.

The s.s. *Montclare*, a sister ship of the *Montreal* and *Montcalm*, sailed from Liverpool, England, Aug. 18, for Montreal, on her maiden trip. During the winter she will sail into St. John, N.B. She is about 16,400 tons, and has accommodation for 500 cabin and 1,250 third class passengers. Her dimensions are: Length, 566 ft.; breadth, 70 ft.; depth, 51 ft.

The motion picture programmes which were adopted on the company's trans-Atlantic steamships last year, having proved popular, it has been decided to extend the service to all the passenger steamships on the Atlantic and Pacific Oceans. The films are of an educational nature, depicting Canadian scenery and industry, and are of Canadian manufacture throughout. They are supplied by the company's Colonization and Development Department.

The s.s. *Victorian* arrived at Montreal, during August, her first appearance in the St. Lawrence this year, following the completion of her charter to the British Government, for the transport of British civil servants to and from India.

United States Merchant Marine Affairs.

The U.S. Shipping Board Emergency Fleet Corporation, has appointed T. V. O'Connor, J. B. Smull, E. P. Farley and J. E. Sheedy, to make a survey of the Board's tonnage, particularly the part of the fleet which is laid up, and to recommend what repairs and reconditioning should be undertaken.

At a recent auction of 102 triple expansion vertical type marine engines, ranging from 500 to 2,800 h.p. located at various points in the U.S., \$155,850 was realized. Among the purchasers was David Dick, President, National Sand and Material Co., Welland, Ont., which company has just had a ship of a special type built by Collingwood Shipbuilding Co., Collingwood, Ont.

The U.S. Shipping Board announced during July that 46 of its ships of approximately 300,000 tons, had been chartered to carry coal from Wales and the English east coast. It was stated that if carrying coal westward appeared likely to delay sailings on the regular lines, some of the reserve ships would be utilized, but no additional ships were required for July, as the board stated that the situation had been held out by the fixing of 31 British steamships to carry approximately 200,000 tons.

A. D. Lasker, Chairman, U.S. Shipping Board, has announced the following changes in the Emergency Fleet Corporation: Col. J. W. McIntosh, formerly Chief of Subsistence, U.S. Army, Chicago, Ill., appointed Vice President in charge of finance; vice U.S. King, New York, resigned to become Fiscal Agent of the corporation; S. Henry, formerly Vice President, Baltimore Dry Docks and Shipbuilding Co., Baltimore, Md., appointed Vice President in charge of sales; vice E. P. Farley, resigned to re-enter private business; J. B. Smull, formerly Vice President in charge of alterations and alterations, appointed Vice President; W. J. Long, formerly Vice President in charge of traffic, appointed Vice President and General Manager. A. F. Mack, District Manager, New York District, has severed his connection with the corporation.

The total expenses incurred by the U.S. Shipping Board in excess of income for June, from ship operations, including overhead, repairs and insurance and layup expenses, were \$2,783,216.29. The corresponding excess of expenses over income for May was \$2,660,486.81. In June, 198 total voyages were completed, and in May, 205. The net excess of outlay over income on voyage operations for May, excluding overhead, repairs and insurance, was \$376,445.84. In June, for the first time, outlay exceeded outlay to the extent of \$204,531.75. This was partly due to an increase in passenger revenue, in which there was an excess of income over outlay, excluding overhead, repairs and insurance, of \$354,630.78, an improvement of \$137,261.65 over May. There was an improvement in the option of cargo ships, in June. The excess of outlay over income in May was \$863,320.47, against \$317,816.78 in June. Tanker voyages decreased from 40 in May, to 22 in June. The excess of income over outlay on these voyages for June, was \$153,310.74, a decrease of \$114,234.67 from May. Charter hire receipts for May were \$79,829.27, against \$70,634.99 in June. The outlay for repairs in May was \$1,019,232.65, and in June \$1,461,016.71. Insurance premiums were \$329,839.88; June \$418,873.40. Layup expenses, May \$365,452.51; June

\$365,572.61. Salaries and wages, May \$477,209; June \$471,396.80. General expenses, May \$172,136.20; June \$282,523.51.

The U.S. Shipping Board is putting into effect a new freight bill of lading covering shipments on its ships. It is stated that there are a number of general clauses, which, it is believed, should be common to all bills of lading, and that in most services, the new bill can be used, with the addition of a few special clauses necessary in the particular trade, or route. The valuation per package has been increased from \$100 to \$250, and claims may be filed within six months after written notice has been given to the carrier. All references to theft and pilferage have been omitted. It consists of 11 short sections, in addition to the general exception clause, and the provisions for payment of general average. The subrogation clauses, by which a carrier became entitled to insurance placed on the goods by the shipper, have been eliminated. Bills of lading have, of late, become so complicated and lengthy that neither shipper nor carrier could be sure of his rights until after a long suit.

The Merchant Marine Bill 1922, which, among other things, proposed to provide a number of aids to shipping, in the form of subsidies for U.S. ships operated in the foreign trade, and restrictions against foreign ships engaged in trade with the U.S., will not, according to a Washington, D.C., press dispatch of Aug. 19, be proceeded with during the present session of congress. It is stated that a conference which Republican leaders have had with President Harding, has resulted in the abandonment of the measure, so far as the subsidies are concerned, for the present, as the political issues are already so many, that it is thought they should not be further complicated by the injection of a controversy over the policy of ship subsidies. The main subsidies were to be granted ships of 1,500 tons gross and upward, classified according to speed from 13 knots upward and were to range from 2-10 of 1c upward, to 2-1-10c for over 23 knots, for each 100 nautical miles travelled. It has been estimated that on the present basis, the annual subsidy would amount to \$50,000,000. Fuller details of the bill's provisions have been given in previous issues.

The U.S. Shipping Board has chartered 65 of its ships for transportation of coal from Wales and the east coast of England to U.S. ports.

At the time of writing (Aug. 19), no decision had been reached in the American Steamship Owners Association's request that government ships be withdrawn from intercoastal and coastwise service. It was agreed that a questionnaire be sent to each of the privately owned lines in the intercoastal trade, requesting information as to the number of ships operated, tonnage carried east and west, and whether they will guarantee to maintain regular schedules and visit ports designated by the U.S. Shipping Board, if government ships are withdrawn. The only government operated line affected by this, would be the North Atlantic and Western Steamship Co., known as the Nawaco Line, operating 4 ships from Portland, Me., to Puget Sound and intermediate ports, and the only line serving Portland in this trade, between U.S. ports on the Atlantic and Pacific Oceans, via the Panama Canal.

Montreal Harbor Improvements.

The Montreal Harbor Commissioners have announced their plans for further harbor improvements, involving an estimated expenditure of \$4,500,000, or thereabouts, which have been approved by the Marine Department, following an inspection of the harbor, by Hon. E. Lapointe, Minister of Marine. The plans cover the erection of an additional grain elevator, with an initial capacity of 2,000,000 bush., with the intention of increasing the capacity, ultimately, to 8,000,000 bush., at an approximate cost of \$2,347,000; the first unit to be built; preparations for plans, etc., for a new bridge to be built across the harbor, \$50,000; extension of the high level quay walls, between sections 25 and 35, \$475,000; extension of wharfage by 500 ft., \$250,000; extension of Jacques Cartier pier, \$200,000; extension of Alexandra pier, \$400,000; extension of King Edward pier, \$450,000; improvement of channel approach to Bickerdike pier, \$97,849.65; and paving and extension of the harbor railway terminals to the new wharf levels east of section 25, \$50,000. These amounts will be provided out of the recent Government loan of \$5,000,000.

It is expected that work on the various projects will be commenced immediately, and the first unit of the grain elevator, is expected to be ready for operation by the autumn of 1923. In connection with this unit, conveyor galleries will be provided to serve 7 berths, 4 on the Tarte pier, 2 on the upper bulkhead wharf, and 1 on the lower bulkhead wharf. The elevator will be able to take grain from lake ships, by the travelling marine legs, at the rate of 40,000 bush. an hour, and at the same time will unload 48,000 bush. from railway cars, these being emptied by car dumpers, 4 at a time. Grain will be shipped to ocean steamships at the rate of 90,000 bush. an hour, to seven berths, each of which will be provided with two conveyors. The construction of the proposed bridge across the harbor may be commenced as soon as the engineers have completed tests and designs, the preliminary work being done by the commissioners' own staff. It is stated that the commissioners expect to secure from the Government about \$10,000,000 for the construction of the bridge, which will connect with the south shore by way of St. Helene Island, and that the bridge will carry two electric railway lines, to be operated as part of the commissioners' terminal and radial lines, two street railway lines, two roadways and sidewalks. The extensions to the Jacques Cartier, Alexandra and King Edward piers, will add 300 ft. to their present length of 1,000 ft., and provide suitable accommodation for the larger type of ships now coming to the port. The present sheds will also be extended to cover the additions. The wharfage of 1,687 ft., between sec. 25 and 35, is to be brought up to high level for the accommodation of ocean steamships, the remainder remaining at low level for the use of river steamships.

Newfoundland Iron Ore Shipments. It is reported that approximately 750,000 tons of ore will be shipped to Rotterdam, Germany, from Wabana, Bell Island, Nfld., for transshipment by canals to German manufacturing centers, the twelve steamships of the company are to sail for Rotterdam between August and December, with ore. Since 1914, overseas shipment of iron ore from Wabana has been practically nothing.

Mainly About Marine People.

John Allison, formerly General Agent, for Canada, Royal Mail Steam Packet Co., Halifax, N.S., who left for England in June, to take up new duties, in the company's head office in London, has we are officially advised, been appointed an Assistant Manager of the company with office at Atlantic House, Moorgate, London.

Sir Aubrey Brocklebank, head of the Brocklebank Line, and a director of the Cunard Steamship Co., has been elected a director of the Suez Canal Co., vice the late Sir Thomas Sutherland.

Hon. Jacques Bureau, Minister of Customs & Excise, is acting as Minister of Marine and Fisheries, during Hon. E. Lapointe's absence in Europe, attending the Genoa conference.

K. J. Burns, formerly General Agent, Great Northern Ry., Vancouver, B.C., and latterly Manager, Canadian Robert Dollar Co., is reported to have been appointed Managing Director of the latter company, vice A. Melville Dollar resigned.

A. Melville Dollar is reported to have resigned as Managing Director, Canadian Robert Dollar Steamship Co., and also as Treasurer, Pacific Steamship Co.

Sir Thomas Fisher, General Manager, Canadian Pacific Steamships, Ltd., London, England, lectured under the auspices of the British Legion, at Albert Hall, Portsmouth, Eng., recently, on "Canada's Land" pictures illustrating a journey through the Dominion were shown.

F. W. Fowler, Assistant Dock Superintendent, C.P.R., Quebec, was married there recently, and sailed for England on the s.s. Empress of France, Aug. 8, when he was presented with a silver tea set, by his staff.

F. G. Frieser, at one time Export Freight Agent, C.P.R., Montreal, and later Export Freight Agent, C.P.R., and General Agent, Freight Department, Canadian Pacific Ocean Services, New York, has been appointed Special Assistant to Traffic Manager, U.S. Shipping Board Emergency Fleet Corporation, with supervision of homeward rates and traffic. Since leaving C.P.R. service, he has been in charge of the Emergency Fleet Corporation's European Division at New York.

Hugh D. Gillis, of Port Hawkesbury, N.S., heretofore engineer s.s. Chignecto, has been appointed by the Civil Service Commission, as Inspector of Dredges, Public Works Department, for the Maritime Provinces, at an initial salary of \$1,800 a year. Full particulars of his duties were given in Canadian Railway and Marine World for July pg. 381.

J. H. G. Hagarty, a former director of the St. Lawrence and Chicago Steam Navigation Co., now one of the constituent companies of Canada Steamship Lines Ltd., died at Toronto, July 26, aged 76. He was a son of the late Chief Justice Sir John Hagarty, and lived in Toronto, where he was born, nearly all his life. He was a member of the Royal Canadian Yacht Club from its infancy, and for several years had been a member.

E. Hawken, Assistant Deputy Minister of Marine and Frank Macdonell, Chairman of the Board of Steamship Inspection, Ottawa, who went to Europe in March, in connection with the purchase of the icebreaking steamship J.D. Hazen, by the Marine Department, returned to Ottawa, Aug. 4.

James H. Holley who has been appointed Travelling Passenger Agent, Ocean Traffic, C.P.R., Winnipeg, was born at Holyoke, Mass., March 17, 1894, and entered transportation service in Nov. 1917, since when he has been to March 1912, junior clerk, report clerk, sleeping car clerk and ticket clerk, station ticket office, etc., R.R., Winnipeg; March 1912 to Feb. 1916, Assistant City Passenger Agent, Grand Trunk Pacific Ry., Winnipeg; Feb. 1916 to April 1919, overseas as pilot, R.N.A.S., and from April 1919 to July, 1922, in T. Eaton Co's service, in Winnipeg.

Alex. Johnston, Deputy Minister of Marine, spent a few weeks holiday, during August, visiting relatives in Nova Scotia.

H. E. Kane, formerly Port Agent, Canadian Government Merchant Marine, St. John, N.B., was presented with a set of military hair brushes by the staff recently, on leaving to take up his new duties with Nagle and Wignore.

Richard Knox, heretofore acting Superintendent Engineer, Canadian National Ry., and Grand Trunk Pacific Coast Steamship Co.'s coastal steamship services, Vancouver, B.C., has been appointed Superintendent Engineer, vice A. L. Brownlie, resigned.

Dr. W. L. McDougald, President, Montreal Harbor Commissioners, entertained Prime Minister W. L. M. King; Hon. E. Lapointe, Minister of Marine and Fisheries, and M. P. Fennell, Jr., General Manager and Secretary, Montreal Harbor Commissioners, at his camp at Lake Osgood, N.Y., recently.

L. H. McMaster, heretofore Superintendent, Montreal Transportation Co., and Canada Steamship Lines, who resigned recently, has opened a syndicated marine service office in Montreal, as appraiser, arbitrator, consulting master mariner, insurance and ship broker and marine surveyor.

C. H. Neroutos, son of Capt. C. D. Neroutos, Marine Superintendent, British Columbia Coast Service, Victoria, B.C., has been awarded one of the C.P.R. scholarships in connection with the recent June matriculation examinations, entitling him to four years tuition in the Faculty of Applied Science, McGill University, Montreal.

Capt. John Ross, who handled the steamboat Maid of the Mist, below the Niagara Falls, for 33 years, died at Niagara Falls, N.Y., Aug. 5, aged 73.

F. Sutherland, General Passenger Agent, Ocean Traffic, C.P.R., Hong Kong, China, who visited Montreal during July, returned to Hong Kong, July 27, from Vancouver, on the C.P.R. s.s. Empress of Australia's first trip to the Orient.

British Columbia Pilotage.—The B.C. Pilotage Association is reported to have decided to amalgamate with Vancouver Pilots Ltd., the new service to be under the management of a committee of seven, one from each of the Victoria, Vancouver and Nanaimo Boards of Trade, who shall be owner, manager or agent of an ocean steamship line, three pilots, one of whom shall be from Vancouver Pilots Ltd. and two from the B.C. Pilotage Association, the seventh to be under the President of the Canadian Merchant Service Guild, providing he is not a pilot, in which case, the Vice President shall act. The committee will be known as the Pilotage Management Board. It is expected that the formal amalgamation will be effective Oct. 1.

Steamship Rapids Prince Aground in Lachine Rapids.

Canada Steamship Lines s.s. Rapids Prince, bound from Prescott to Montreal, went ashore, off Heron Island, below the Lachine Rapids, July 30, through the breaking of a rude shoal, which made attempts to reach the ship from the shore, with two motor boats, were abandoned, on account of the strong current, and the 400 passengers remained aboard for the night. The ship was well equipped, and everything possible was done for their comfort. On the following morning the transfer of passengers to the shore was commenced, and all of them were landed safely between 10 a.m. and 5 p.m., exceptional service being rendered by H. Guerin, Mayor of La Tortue, who steered the lifeboat 10 times, through the heavy current, between Heron Island, where the passengers were landed, and La Tortue, where automobiles were provided by the company, to convey them to Montreal. Only one accident occurred in the course of landing the passengers. One of the stewards, in returning to the ship, fell from the lifeboat and was drowned. The conduct of the officers and crew in a very trying situation, was highly spoken of. A contract for salvaging the ship was let to the Donnelly Salvage and Wrecking Co., Kingston, and preparations were immediately made for carrying out the work, which is admitted to be one of considerable difficulty. It is stated that a hauling engine will be placed on a small island about 1,800 ft. farther up the river, and a cable laid from the engine to the stern of the ship, and she will be hauled round, until she turns straight, heading down the stream. She will then be hauled straight across a whirlpool into the channel.

Atlantic and Pacific Oceans.

Manchester Liners' s.s. Manchester Corporation arrived at Quebec, Aug. 10, with a large hole in her bows, through having struck an iceberg in Belle Isle Strait. She was drydocked at Lauzon.

The White Star Line s.s. Megantic will make three cruises this winter to the West Indies and Panama Canal region, the first being Jan. 15, the second Feb. 17, and the third March 22, all from New York, and taking 28 days each.

The White Star Line s.s. Doric, 16,600 tons, for the St. Lawrence route, was launched at Belfast, Ireland, Aug. 9. She is a sister ship of the s.s. Regina, already on the route, and it is expected that she will be placed in the Montreal service next spring.

The Royal Mail Steam Packet Co. is operating a fast freight service between British Columbia points, the U.S. west coast, and Great Britain, via the Panama Canal. The service is given by both steam and motor ships, each steamship having accommodation for 12 first class passengers. No other class of passenger is carried.

The Hudson's Bay Co.'s s.s. Baychino, which sailed from Montreal, recently, on her annual trip to Hudson Bay ports, is reported to have gone ashore near the Gulf of Objorka, early in July. It is stated that she was refloated after a portion of her cargo had been jettisoned. She sustained some bottom damage, but not so much as to prevent her from continuing her voyage.

The Thomson Line, through its agents, Robert Reford Co., announces the re-

sumption of its service between Montreal and Mediterranean ports, originally established in the 60's and interrupted during the war. The s.s. Nordkyn will load in the Mediterranean, calling at Italian ports, Smyrna and Patras, for Montreal, during the latter part of September and October.

The Donaldson Line s.s. Orithia, which was held responsible, by the Dominion Wreck Commissioner, for the recent collision with the s.s. Aircelle, near White Island, St. Lawrence River, was sold, during August, as she lay, in a wrecked condition, at Quebec, Que., to the Quebec Iron and Metal Co., Quebec, for breaking up. She was built at Sunderland, England, in 1896, and was screw driven by engine of 400 h.p., classed 100 A1 at Lloyd's, and had the following dimensions,—length 367 ft., breadth 46.6 ft., depth 6.9 ft., tonnage 4,225 gross, 2,694 net.

The Canadian-Australian Line's s.s. Waitemata, was towed into Victoria, towards the end of July, by the steam tug, Tyce, 31 members of the crew having deserted at Anacortes, Wash., when a sympathetic strike had been declared by the firemen, following a strike of longshoremen, who declined to work what they termed unfair cargo. On the arrival of the ship at Victoria, there was only one deck hand on board, in addition to the ship's officers. The deserters were detained at Anacortes by the U.S. immigration authorities, and deported to Canada, where they reshipped on the Waitemata after signing articles afresh.

The French s.s. Indo-Chine and the Danish s.s. Sarmatia collided Aug. 11, in the St. Lawrence River, near Three Rivers, both ships grounding on a sandbank near by. It is stated that the collision was due to heavy smoke along the river. After uncoaling both ships, steam was got up and high tide awaited, and the s.s. Sarmatia cleared herself during the evening of the same day, and proceeded to Quebec, without aid, though she had a large hole in her port side. The s.s. Indo-Chine had more difficulty in extricating herself, but she was assisted by the wash from the s.s. Megantic, which passed at a good rate of speed, and she afterwards proceeded to Montreal, without apparent damage.

Maritime Provinces and Newfoundland.

The Dominion Public Works Department received tenders, Aug. 29, for building a pile wharf at Canso, N.S.

The Dominion Public Works Department has received tenders for the extension of, and repairs to the breakwater at Friars Head, and for the rebuilding of a cribwork head to the public wharf, at Port Hood, N.S.

The lights on maintained on Lurcher shoal, off Yarmouth, N.S., will be removed from her station about Sept. 15, to undergo repairs, during which, her station will be marked with a gas buoy, painted red, and showing an occulting white light. She will be off her station about a month.

The steam yacht Pawnee, which has been operated by Colony Steamship Co. in the Conception Bay service, between Carbonear and Portugal Cove, calling at Harbor Grace and Bell Island, is reported to have been sold to the Bell Island Steamship Co., for \$15,000, and it is said that she is to be continued in the same service, in conjunction with other of the latter company's ships. She was

at one time owned by G. Dexter, Boston, Mass. and later by F. J. Reed, who offered her to the Newfoundland Government for mail carrying purposes. During the war she acted as a patrol boat in the neighborhood of Cape Cod. Her dimensions are,—length 115 ft., breadth 15 ft., depth 8 ft. She is equipped with triple expansion engine of 400 h.p., for a speed of 15 knots an hour.

Province of Quebec.

The name of the s.s. Yicco, owned by Magor & Newport Steam Navigation Co., Montreal, has been changed to Mountain Maid.

The French steam trawler Andre Pierre ran ashore on Miquelon Island, Aug. 9, and became a total loss. Her crew was saved.

The Dominion Public Works Department received tenders Aug. 23, for the construction of a wharf at La Malbaie (St. Etienne de Malbaie).

Quebec harbor improvements are reported to be well under way. The dredging at the mouth of the St. Charles River was commenced early in July, and is being proceeded with. The facing of the old breakerwater pier, in line with shed 18, and the south end of Pointe a Carcy Wharf, at the end of shed 17, is being renewed, and a concrete floor is being laid in shed 17, replacing a wooden one.

Dr. W. L. McDougald, President, Montreal Harbor Commissioners, was host to about 175 representatives of the dairy industry from Glengarry, Stormont and Dundas Counties, Ont., Aug. 15, on a visit of inspection to the cold storage plant at the port. The party were taken round the harbor on the s.s. Sir Hugh Allan and inspected the coal wharves, grain elevators, and especially the cold storage plant with which their business is chiefly concerned.

Differences between shipowners and their employees, members of the Ship-liners' Union, at Montreal, which have been under discussion since the early part of the navigation season, are reported to have been settled, the employees agreeing to accept the reduction in wages made in April. This new rate is 50c an hour for day work, and 60c for night work, or 5c less than the amount recommended by a conciliation board, appointed to enquire into the matter at the men's request.

An action is reported to have entered at Quebec, Que., against Canada Steamship Lines Ltd., by Municipal Debentures Co., claiming \$101,000 damages, for alleged breach of agreement. It is claimed that some time ago the plaintiff was given the handling of an issue of bonds for Canada Steamship Lines, and was given to understand that it would handle future issues. Early this year, Canada Steamship Lines sold \$6,000,000 of bonds, which plaintiff claims were not handled by it, contrary to agreement.

The Montreal Harbor Commissioners have issued a notice to masters, pilots and other persons in charge of ships arriving at Montreal on any Saturday, to arrange their arrival so as not to enter the harbor above Longue Pointe between 10 a.m. and noon, local time, and notifying them that any infringement of this rule will be considered a violation of the harbor bylaws. It was stated that latterly the sailing of large passenger steamships has been interfered with by the arrival of coal carrying steamships at the time set for their departure, and accidents have been narrowly averted.

The Gaspe Cotier Co.'s s.s. Brumath sank at Port Daniel, Chaleur Bay, Aug. 1, after a fire on board. She was operated between Montreal and Paspebiac, and sailed from Montreal with a full cargo, July 24. She was built in 1920, by National Shipbuilding Corporation, Three Rivers, Que., under a contract, for the French Government, and was bought by the present owner about a year ago, for Gaspe coast service. She is screw driven by engine of 48 h.p., and her dimensions are,—length 195.5 ft., breadth 40.1 ft., depth 15.3 ft., tonnage 1,141 gross, 662 net.

Ontario and the Great Lakes.

A. B. McLean and Sons are reported to have made arrangements for the building, by day labor, of a dock for unloading sand and gravel, at a cost of about \$60,000, at Sault Ste. Marie, Ont.

A strike of freight handlers at Port Arthur, Ont., Aug. 21, caused some inconvenience in loading and unloading ships the men demanding an increase of 5c an hour, from 35 and 37c to 40 and 42c.

The Dominion Public Works Department received tenders, Aug. 29, for rebuilding of 200 lin. ft. at the easterly end of the south section of the temporary pile protection breakerwater in the main harbor north, at Port Arthur.

The George Hall Coal Co.'s s.s. Senator Derbyshire ran aground at Goose Neck Island in the St. Lawrence River, near Ogdensburg, N.Y., Aug. 15. She was not considered in any danger, and a wrecking crew was dispatched from Kingston to release her.

Sault Ste. Marie city council, has been considering steps to be taken to prevent ships from discharging water ballast above the locks and contaminating the city's water supply. The matter is being further dealt with by the city's board of health.

The Minister of Public Works is reported to have stated to L. O. Clifford, M.P. for South Ontario, at Oshawa, Aug. 13, that among the first new works to be undertaken by his department will be harbor accommodation at Oshawa for Great Lakes ships, at an estimated cost of \$500,000.

Charges have been entered in the U.S. District Court, at Detroit, Mich., against 2 U.S. steamships for dumping ashes in Neebish Channel, against 2 for passing a steamship and barge between Big Point and Brush Point, and against 1 for passing up through Neebish Channel, a violation of the rules governing navigation on the St. Marys River.

A Kingston press dispatch of Aug. 22 said it was rumored that J. E. Russell, of Toronto, salvaging, towing and lighting contractor, etc., might take over the Montreal Transportation Co.'s plant there, and be advised that Mr. Russell is not contemplating doing so. The plant referred to comprises wharves and elevator.

The s.s. Glenclough, which was built for Great Lakes Transportation Co. and operated subsequently by Glen Transportation Co., has been re-transferred to the Great Lakes Transportation Co., which company has also the Canadian Government Merchant Marine steamships J. A. McKee and Thomas J. Drummond under charter.

The Northern Navigation Co., on account of the retirement of Capt. A. M. Wright, as master of the s.s. Noronic, has made the following changes,—Capt.

H. J. Aikins transferred from s.s. Harmonic to s.s. Noronic; Capt. W. Montgomery transferred from s.s. Harmonic to s.s. Harmonic; Capt. G. J. Moles, transferred from s.s. Rapids King to s.s. Huronic.

The U.S. Lake Survey reports the stages of the Great Lakes in feet above mean sea level, for July, as follows:—Superior 602.49; Michigan and Huron 580.77; St. Clair 575.42; Erie, 572.76; Ontario 246.92. Compared with the average July stages for the past 10 years, Superior was 0.14 ft. below; Michigan and Huron 0.35 ft. below; Erie 0.20 ft. below, and Ontario 0.04 ft. above.

The Kirkwood Line commenced a freight steamship service between Quebec, Three Rivers, Montreal and Toronto, during August, with the s.s. Greypoint, bought recently in Europe. The Greypoint is a steel steamship, built in Sweden, 1,100 d.w. tons. She was operated during the war, between British and Continental ports, in the North Sea. She arrived in Canada recently from Belfast, Ireland, and loaded sugar at St. John, N.B., for Toronto. She sailed from Toronto, Aug. 16, with cargo for St. Lawrence ports.

Imperial Oil s.s. Talaralie, which was ordered from the Pacific coast, where she had been operated for some time, to the Great Lakes, for the company's service, arrived at Montreal recently, considerably damaged in the bows by contact with ice. She passed through a heavy four days storm off Cape Hatteras, and later had five days in the ice at the mouth of the St. Lawrence River. Her port hamper was swept away at Cape Hatteras, and 22 forward plates were damaged in the ice.

W. Smith, Port Huron, Mich., is proceeding against the Port Huron and Sarnia Ferry Co., for \$2,500 for damage sustained following the boiler explosion on the ferry steambot Omar D. Conger, March 26, when a portion of the boiler exploded on the top of his house and crashed through to the cellar. The company claims that it was a marine accident, and under the U.S. marine law, persons sustaining damages through a marine accident, can only claim against the ship, and not against the owners.

A number of men engaged on steam shovel work on Welland Ship Canal contracts, struck work, Aug. 14, on the question of being paid by the month, instead of by the hour as hitherto. The men of the strike claimed that they lose a lot of time through wet weather, and that that time could be usefully employed in cleaning machinery, etc. Several of the sub-contractors agreed to the monthly rate, and a number of the men resumed work the same day, it was reported as likely that the other sub-contractors would eventually fall in line.

It was announced Aug. 14, that dredging would commence shortly in the lower approach to the Sault Ste. Marie ship canal, where a shoal had formed in the center of the channel as a result of the waste carried through from the power canal. Though no trouble has, as yet, arisen from this shoal, it is considered advisable that it be removed before any trouble develops. A depth of 18 ft. was shown over the shoal recently. The depth of the shoal is given as about 2 ft., and it is stated that the channel is about 200 ft. wide, whereas it should be 360 ft.

The s.s. T. P. Phelan, owned formerly by Canada Steamship Lines Ltd., and the s.s. Jed owned formerly by F. E. Sowards, Kingston, which were wrecked

some time ago, and both of which were abandoned to the underwriters as constructive total losses, have been sold as they are, the former at Toronto, and the latter at Kingston, by R. Parry Jones, representing the underwriters, through Capt. J. B. Foote, of the Toronto Insurance and Vessel Agency, to E. A. Woodward, grain dealer, Winnipeg, and associates. They will be taken to Fort William, where they will be overhauled and fitted for use in grain transfer in the harbor.

British Columbia and Pacific Coast.

Grain shipments through Vancouver, during this season, will, it is expected, at least equal those of 1921. Enquiries from Chinese and Japanese buyers are already numerous.

The Canadian Naval College at Esquimalt which closed on the completion of the term in June, will, it is reported, not be reopened in the autumn, and it is said to be the Dominion Government's intention to close the college indefinitely.

The C.P.R. s.s. Princess Beatrice resumed her service between Vancouver and Prince Rupert, Aug. 16, after having her tail shaft repaired by Yarrows Ltd., Esquimalt. The damage was done during her trip to the north, while near Swanson Bay.

The Norwegian s.s. Bjørnsterne Bjørson, which loaded lumber at Victoria recently, is said to be the largest steel steamship to take cargo in the inner harbor. She is 410 ft. long, and has capacity of about 5,000,000 ft. b.m. About half of her cargo was taken at Victoria, the balance being received at Vancouver, Nanoshe and Genoa Bay. She was consigned to New York, and was expected to reach there, via the Panama Canal in 35 days.

The Dominion Government docks at Ogden Point, Victoria, which were built at a cost of about \$2,500,000, were opened for general shipping business Aug. 1. James McArthur is in charge as Superintendent. A portion of the dock property has been used for some time by the Admiral Line's steamships on the outward trips, between Seattle, Victoria, and the Orient, and some Blue Funnel Line ships have also made calls there taking outward freight.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:—
Canadian Association of Port Authorities—Canadian Counsel, W. D. Lighthill, K.C., Montreal.
Canadian Automobile Bureau—W. Collins, Manager, 401 St. Nicholas Building, Montreal.
Canadian Electric Railway Association—D. N. G. Comptroller, Ottawa Electric Ry., Ottawa, Ont.
Canadian Freight Association (Eastern Lines)—G. C. Hanson, Chairman, 909 Shaughnessy Bldg., Montreal.
Canadian Freight Association (Western Lines)—P. W. Thompson, acting Chairman, 805 Boyd Bldg., Winnipeg.
Canadian Passenger Association—Eastern Lines, G. H. Webster, 54 Beaver Hall Hill, Montreal; Western Lines, E. J. Stone, 306 Union Station, Winnipeg.

Canadian Railway Board of Adjustment No. 1—R. C. Chaplin, 263 St. James Street, Montreal.
Canadian Railway Club—W. A. Booth, 63 Rushbrooke St., Montreal. Meetings at Montreal 2nd and 4th months, 8.30 p.m., except June, July and August.
Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.
Canadian Traffic League—R. J. Fitzgerald, 98 Wright Ave., Toronto.
Canadian Marine Association—F. King, K.C., Counsel, Kingston, Ont.
Engineers' Club of Montreal—C. M. Strang, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 84 King Street West, Toronto.
Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.
Express Traffic Association of Canada—C. N. Ham, 450 Hastings St. West, Vancouver, B.C.
Great Lakes and St. Lawrence River Rate Committee—A. E. Storey, 310 G.T.R. General Office, Montreal.
Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.
International Cleveland Ohio Passenger Association—M. R. Nelson, Des Moines, Iowa.
Niagara Frontier Summer Rate Committee—James Morrison, Canadian National Ry., Montreal.

Quebec Transportation Club—A. F. Dion, Harbor Commissioner's Office, Quebec, Que.
Railway Association of Canada—F. Riddell, General Secretary, 263 St. James Street, Montreal; Western Operating Committee, E. J. Stone, 306 Union Station, Winnipeg, Man.
Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.
Transportation Club of Toronto—W. J. Houtum, 585 Runnymede Road, Toronto.
Transportation Club of Vancouver—C. A. Dorrill, 450 Hastings St. West, Vancouver, B.C.
Winnipeg Traffic Club—A. J. Barber, 114 Cadomin Bldg., Winnipeg, Man.

Transportation Conventions in 1922.

Sept. 12 to 15.—Traveling Engineers Association, Chicago, Ill.; W. O. Thompson, 1177 East 88th St., Cleveland, Ohio.
Sept. 19 to 21.—Roadmasters and Maintenance of Way Association, Cleveland, Ohio; P. J. McAndrews, Chicago and Northwestern Ry., Chicago, Ill.

TENDER FOR TIES.

Sealed Tenders addressed to the undersigned and endorsed "Tender for Ties" will be received at the office of the General Tie Agent, Room 231, New Union Station, Toronto, until twelve o'clock noon, Saturday 16th day of September, 1922, for 7,500,000 railway ties to be manufactured from timber cut between October 1st, 1922 and May 1st, 1923 and delivered between December 1st, 1922 and September 30th, 1923, F.O.B. cars Canadian National Lines, in accordance with Tie Specification No. 3856, dated March 18th, 1919.

1,500,000 to be delivered on Canadian National Lines South of the St. Lawrence River.

1,500,000 to be delivered on Canadian National Lines North of the St. Lawrence River, and East of Armstrong and Port Arthur.

2,300,000 to be delivered on Canadian National Lines in Ontario, Manitoba, Saskatchewan and Alberta, West of Armstrong and Port Arthur.

2,100,000 to be delivered on Canadian National Lines in British Columbia.

100,000 to be delivered on Canadian National Lines in Minnesota.

Tender forms and Specifications can be obtained at the office of the General Tie Agent, Toronto.

Tenders will not be considered unless made on forms supplied by the Railway Company.

No tenders for quantities less than 5,000 ties will be considered.

The lowest, or any tender not necessarily accepted.

W. H. GRANT,

General Tie Agent,

Canadian National Railways, Toronto, August 9, 1922.

For Sale

"We are now prepared and glad to furnish Stucki Side Bearings per Canadian Patents Nos. 187819 and 17080 upon request. Please call—The Holden Co., Ltd., Montreal, Canada."

CANADIAN PACIFIC RAILWAY COMPANY

Dividend Notice

At a meeting of the Board of Directors held today the following dividends were declared:

On the Preference Stock, two per cent. for the half-year ended 30th June last:

On the Common Stock, two and one-half per cent. for the quarter ended 30th June last, being at the rate of seven per cent. per annum and in addition three per cent. per annum from Special Income Account.

Both dividends are payable 30th September next to Shareholders of record at 3 p.m. on 1st September next.

By order of the Board,

MONTREAL, 14th August, 1922. ERNEST ALEXANDER, Secretary.

CANADIAN BRONZE LIMITED

Brass Wearing Parts for Locomotives. Journal Bearings for Freight and Passenger Service. BABBITTS. Miscellaneous Brass Castings for Railroads.

Works and Office: 69 Delorimier Avenue, MONTREAL, QUE.

Lagonda Arch Tube Cleaner

Lagonda Cleaner Removing Scale from Arch Tubes

Lagonda Arch Tube Cleaners

Scale forms in the Water Arch Tubes of locomotives, and it must be removed, as Government Inspection requires that these tubes be absolutely clean.

The Lagonda Arch Tube Cleaner will remove these scale deposits easily and quickly. They are built for all sizes of tubes and can be driven by either water, air or steam. Send for Catalogue W-1 describing the construction and operation of these Cleaners.

Other Lagonda Boiler Room Specialties are described in our General Catalogue L. Send for Copy.

October, 1922

Improved Mikado Locomotive, Michigan Central Railroad.

An important development in locomotive design and construction has taken place recently, as represented by locomotive 8000, which was placed in freight service a short time ago on the Michigan Central Rd., between Detroit, Mich., and Toledo, Ohio. Side and front-end views are given in the accompanying illustrations. The locomotive was designed and constructed under the personal direction of A. H. Smith, President, New York Central Rd., and built by Lima Locomotive Works, Lima, Ohio. It is claimed for this locomotive that it is representative of the greatest efficiency and economy yet developed in freight motive power, in that it will deliver more power in proportion to its weight than any other locomotive yet built, exert more tractive effort per ton of coal consumed, and prove easier to operate, and more economical to maintain, making for quick turn-arounds, safety, and low proportional maintenance cost. The chief dimensions are as follows:—

Weight of engine.....	334,000 lb.
Weight of tender.....	199,700 lb.
Tractive effort with booster.....	74,500 lb.
Engine wheel base.....	37 ft.
Driving wheel base.....	16 ft. 6 in.
Total wheel base.....	71 ft. 6 in.
Length, coupler to coupler.....	82 ft.
Engine height from top of rail.....	15 ft. 4 in.
Engine width at cylinders.....	10 ft. 4 in.
Cylinders, diam. and stroke.....	28 x 30 in.
Steam pressure.....	200 lb. per sq. in.
Driving wheel diam.....	83 in.
Main driving journals.....	11 1/2 x 14 in.
Other driving journals.....	11 x 13 in.
Engine truck wheels journals.....	6 1/2 x 12 in.
Trailer truck wheel journals.....	9 x 14 in.
Valves, kind and size.....	14 in. piston
" greatest travel.....	3 in.
" lap.....	1 1/4 in.
" exhaust clearance.....	1 1/8 in.
" lead in full gear.....	1 1/8 in.
Boiler, type.....	Straight top
" diam, outside first ring.....	86 in.
Firebox, length and width.....	114 1/4 x 84 1/4 in.
Grate area.....	66.4 sq. ft.
Tubes, no. and diam.....	253—3 in.
" length.....	20 ft.

feature of superheating the steam before it reaches the main throttle, the steam passing through the dome into the dry pipe, thence to the superheater units, the dry pipe being outside the boiler as shown, and connected at the forward end

Michigan Central Railroad Mikado Locomotive, showing feed water heater in front of throttle and stack.

direct to the superheater. Also, probably for the first time in the history of locomotive operation on this continent, superheated steam is used for the operation of the auxiliaries, including the elec-

trical generator, air compressor, feed water pump and booster engine, while the piping is so arranged that saturated steam may also be used. Instead of the usual injector, the feed water for the boiler is taken from the tender by a feed water pump which forces it through an exhaust steam heater, the condensate from the exhaust steam being filtered before return to the tender to get rid of any oil from the cylinders.

trical generator, air compressor, feed water pump and booster engine, while the piping is so arranged that saturated steam may also be used. Instead of the usual injector, the feed water for the boiler is taken from the tender by a feed water pump which forces it through an exhaust steam heater, the condensate from the exhaust steam being filtered before return to the tender to get rid of any oil from the cylinders.

Before the steam leaves the dome, it is passed through a separator which col-

lects any water that may be in the steam, the water being automatically returned to the boiler. This, together with the fact that the steam is taken from the highest point of the boiler, ensures that the steam when it gets behind the pistons is dry and of high superheat. From the superheater steam passages in the header, the superheated steam is conveyed to the throttle, located on top of the smoke box immediately ahead of the stack, so that from throttle valve to cylinders the steam takes a short and direct course. The feed water heater is located in front, above the headlight and is carried on brackets secured to a permanent section of the smoke-box front, so that the main front can be removed without disturbing the heater. The feed water pump is mounted on the left side of the boiler, immediately back of the smoke-box, and a little higher than the air compressor.

The operating devices used by the crew are such that the locomotive may be operated with the minimum of physical labor. The locomotive is equipped with power reverse gear, mechanical stoker, and an automatic grate shaker. The interior arrangement of the cab is such that all valves are situated conveniently to the member of the crew who has to operate them, obviating the necessity of much movement from his position. The locomotive is equipped with a scoop for taking water on the fly, and even the whistle is blown pneumatically, by the simple turning of a valve, and the bell ringer is put to work by pushing a button.

Among other improvements is a double refractory brick arch in the firebox, designed to ensure as complete combustion as can be obtained. A booster application is responsible for 11,000 lb. tractive

Mikado Locomotive 8000, Michigan Central Railroad.

Heating surface, firebox.....	223 sq. ft.
" arch tubes.....	68 sq. ft.
" tubes.....	253 sq. ft.
Distribution of weight, in working order:	
on drivers.....	245,500 lb.
on leading truck.....	30,800 lb.
on trailing truck.....	68,500 lb.
Tender, water capacity.....	10,000 gall.
" coal.....	16 tons

The new locomotive presents large departures from the familiar features of ordinary designs, and the improvements introduced are fully as notable as the appearance is striking. An important departure from standard practice is the

effort, applicable on lifting trains and at slow speeds. The booster is of the latest type, the improvements being secured by the changes in booster design described in Canadian Railway and Marine World for September, pp. 451.

The locomotive designers were confronted with the problem of obtaining a significant increase in capacity, without exceeding the weight on drivers of the railway's class H 7 E mikado locomotives, these being near to track and bridge capacity. The problem was solved

Railways Department's Estimates.

The further supplementary estimates for the year ended March 31, 1922, passed at the Dominion Parliament's last session, contained the following items, chargeable to income:

Governor General's cars, attendance, repairs and alterations, further amount required, \$6,600.

To provide for expenditure for rails, accessories and repairs to equipment to Dec. 31, 1921, Governor General's warrant, Dec. 21, 1921, \$735,000.

The estimates for the year ended March 31, 1923, passed at the Dominion Parliament's last session, contain the following items:

Canadian Government Railways, chargeable to capital:

Construction and betterments (to be expended under the direction of and upon such terms and conditions as the Governor in council may from time to time determine, \$2,700,000.

To pay claims for right of way, \$30,000.

To provide for the purchase, at prices not exceeding the amounts herein specified, of the following railways (the debt of each railway to the Canadian Government Ry. to be cancelled); interest on the purchase price to be payable at the rate of five per centum per annum from the date of taking possession to the date of transfer of title; (such of the said railways as are within the jurisdiction of the Parliament of Canada are hereby authorized to sell their respective assets and undertakings accordingly):

Moncton and Buctouche Ry., revote, \$70,000.

Caraqueet & Gulf Shore Rys., revote, \$50,000.

Interest estimated—from date of taking possession to March 31, 1923, not exceeding (including revote—\$24,000), \$30,000.

For railway equipment and materials, for improvements to existing equipment, and for the purchase of new equipment for the purposes and upon the same terms (save as herein varied) mentioned in the Statutes of 1918, chap. 38. The assistance herein provided may be by way of advances to the Canadian National Rolling Stock, Ltd., or to any company comprised in the Canadian Northern Ry. System, or the Grand Trunk Pacific Ry. System, or by way of equipment or materials acquired by the Minister, \$2,800,000.

Hudson Bay Ry.: Port Nelson Terminals, \$40,000.

Chargeable to Income.

To supplement pensions allowances payable under the provisions of the Intercolonial and Prince Edward Island Ry. Employees' Provident Fund Act, so as to make the minimum payment, during the current fiscal year, \$30 a month instead of \$20, as fixed by the act, \$50,000.

Arbitrations and awards and cost of litigation, \$2,000.

Board of Railway Commissioners for Canada: maintenance and operation of, \$221,635.

Commissioner of Highways: To provide for the organization and payment of staff of Commissioner of Highways, including A. W. Campbell, C.E., as Chief Commissioner of Highways, at \$5,000 a year, and W. R. Smythe, as Commissioner of Highways at \$4,000 a year, \$71,000.

Governor General's cars, attendance, repairs and alterations, \$10,000.

Amount not exceeding \$42,800,000 to meet expenditures made, or indebtedness

incurred (where amount available from net operating earnings may be insufficient) by or on behalf of the Canadian National Ry. Co., the Canadian Northern Ry. Co., or any company comprised in the Canadian Northern System, or any one or more of them, on any of the following accounts: Operating deficits; acquisition of property, materials and supplies; interest and sinking funds on notes, securities or obligations; principal and interest of maturing or matured loans secured or unsecured; construction and betterments; co-ordination or consolidation of railway lines and facilities, \$42,800,000.

Amount not exceeding \$25,750,000 to meet expenditures made or indebtedness incurred (where amounts available from net operating earnings may be insufficient) by or on behalf of the Grand Trunk Ry. Co. of Canada, or any company comprised in the G.T.R. System or any one or more of them (excluding herefrom however expenditures or indebtedness incurred by or on behalf of the Grand Trunk Pacific Ry. Co., except as specifically provided in item (g) hereof) on any of the following accounts: (a) Operating deficits. (b) Acquisition of property, materials and supplies. (c) Interest and sinking fund on notes, securities or obligations. (d) Principal and interest of maturing or matured loans secured or unsecured. (e) Construction and betterments. (f) Co-ordination or consolidation of railway lines and facilities. (g) Guarantees by the Grand Trunk Ry. Co. of securities of the Grand Trunk Pacific Ry. Co., \$27,750,000.

Amount not exceeding \$15,900,000 to meet expenditure made or indebtedness incurred (where amounts available from net operating earnings may be insufficient) by or on behalf of the Grand Trunk Pacific Ry. Co., or any company comprised in the G.T.P.R. System or any one or more of them (excluding herefrom however guarantees by the Grand Trunk Ry. Co. which are provided for in item (g) of the next preceding item) on any of the following accounts: (a) Operating deficits. (b) Acquisition of property, materials and supplies. (c) Interest and sinking funds on notes, securities or obligations. (d) Principal and interest of maturing or matured loans secured or unsecured. (e) Construction and betterments. (f) Co-ordination or consolidation of railway lines and facilities, \$15,900,000. This was increased by \$800,000 in the supplementary estimates.

Chargeable to Collection of Revenue.

Canadian Government Railways—To ward any deficiency in receipts and revenues necessary to meet working expenditures for the 12 months ended Dec. 31, 1922, the management of the railway being hereby authorized to appropriate and revenues toward payment of the said working expenditures, \$7,000,000.

Chargeable to Income.

To provide for allowance of full railway pay, including their military pay and field allowance, on and after May 1, 1915, to certain employees of Lake Superior Branch, Transcontinental Ry., who enlisted prior to May 1, 1915 (revote), \$60,000.

Chateau Laurier First Aid Training.

The housekeeper and 10 of the other female staff of the G.T.R.'s Chateau Laurier Hotel, Ottawa, have passed examinations in first aid, conducted by the St. John's Ambulance Association's Canadian Branch.

Radio Experiments on Canadian National Railways' Trains.

The utility of radio for entertainment on passenger trains was demonstrated by the Canadian National Rys. between Montreal and Toronto, via Ottawa, recently. The messages were received in volume sufficient to use a loud "speaker," making it possible for the entire car to hear the performance. An interesting feature of tests on the C.N.R. is that radio functioned perfectly while the train was passing through the 3½-mile tunnel under Mount Royal. The high tension wires running through the tunnel did not appear to retard the waves of sound. Crossing the Ottawa River by the Hawkesbury bridge, between Montreal and Ottawa, the waves of sound were strong at the entrance of the bridge, weaker towards the centre, and powerful again towards the end.

Toronto was picked up near Trenton, approximately 100 miles away. The messages were heard distinctly by receivers worn over the head, but they did not come with sufficient power for the loud "speakers" to be used farther than 75 miles from Toronto. From that point, musical numbers, sporting events, financial and commercial news, lectures and other matter usually transmitted by radio were heard clearly. The results of the various baseball games were heard when the train was 50 miles from Toronto. On several occasions, the "loud" speaker had to be toned down, as the volume of sound was too great. Rochester, Buffalo, and Schenectady, N.Y., and Pittsburg, Pa., were picked up beyond Port Hope.

In these tests, the Northern Electric Co. and Canadian National Telegraphs have been adapting equipment to meet the difficulties attending the transmission of radio to steel trains in rapid motion. It has been proved that the steel car offers no insurmountable obstacles to radio transmission.

Election of Canadian Officers, B. of L. F. & E.

W. L. Best, Ottawa, was, for the tenth time, elected Chairman of the Brotherhood of Locomotive Firemen and Engineers' Canadian Legislative Board, at the concluding meeting of the series held by the Brotherhood's Canadian officers at Ottawa, recently. At this meeting, as on all previous occasions, Mr. Best was elected unanimously. Jas. Pratt, Toronto, who has been connected with the organization for over 40 years, was re-elected Secretary-Treasurer. The following were elected vice chairmen: British Columbia, T. L. Bloomer, Nelson; Alberta, G. W. Yates, Calgary; Saskatchewan, G. A. Hall, Moose Jaw; Manitoba, F. W. Nicks, Winnipeg; Ontario, H. B. Crawford, Toronto; Quebec, S. Daler, Montreal; New Brunswick, F. W. Henderson, St. John; Nova Scotia, J. R. Stewart, New Glasgow; Prince Edward Island, P. A. Smith, Charlottetown. The board of directors was elected as follows: W. G. Graham, Lindsay, Ont., chairman; E. Hutchinson, Kenora, Ont., secretary; J. A. Killingsworth, St. Thomas, Ont.

The Edmonton, Dunvegan & British Columbia Ry. is reported to have hauled a train of 36 cars of live stock from the Peace River district to Edmonton, Alta., recently, in 30 hours. This is said to be not only the heaviest shipment of cattle from the district, but the fastest run for a freight train over the line.

Railway Exhibits at Canadian National Exhibition.

The larger Canadian railways had most interesting and instructive exhibits at the Canadian National Exhibition, Toronto, Aug. 26 to Sept. 9. In addition to displays by the passenger departments, illustrating points of interest on various routes of travel, the railways had exhibits of the devices and equipment with which modern railroading is carried on, and that the public was interested was evident by the manner in which the exhibits were studied by large numbers.

The Canadian National Rys. had a complete, up-to-date passenger train on a track on the north side of the grounds, consisting of Pacific type locomotive, 5,000; baggage car, 8,631; colonist car, 2,810; first class car, 5,010; tourist sleeping car, 2,241; dining car, 1,248; sleeping car, Chaudiere; compartment observation car, Fort William, and mountain observation car, 15,100. The Canadian Pacific Ry. had on the same track some of its most modern passenger train equipment, including dining car, Volvo; tourist sleeping car, 6,204; sleeping car, Nosbonsing; and compartment car, Glenage. Attendees in charge of the equipment were on hand to explain the many points of interest.

The 4 self-propelled cars exhibited by the Canadian National Rys. on the grounds attracted a great deal of attention. These cars are described elsewhere in this issue, under "Self-Propelled Cars for Steam Railways."

In the transportation building the C. P.R. showed features of its Atlantic and Pacific steamship service, including a most striking reproduction of a scene at Yokohama, and Tokio Bay, Japan. The land and buildings formed a fitting background for the harbor scene, and miniatures of ships, ranging from C.P.R. trans-Pacific ones down to small tugs, which were propelled across the foreground by an electric motor and chain drive arrangement, made the reproduction very realistic. Numerous pictures of points of interest in Japan and of various aspects of Japanese life, were also shown, all of these being executed in water colors by a Japanese artist. They were brought from Japan by E. R. Bruce, Director of Exhibits, C.P.R. Another notable C.P.R. exhibit was one showing points of interest on the St. Lawrence route, including the Chateau Frontenac, Quebec, as it will appear when the additions now under construction are completed. A large number of hand painted pictures illustrating various points on the route were also shown. Another exhibit was a West Indian scene, realistically shown as it would appear from the stern of the Empress of Britain on one of her cruises. The company also had a large number of colored transparencies, showing points of interest on its land and water routes, and ships belonging to its Atlantic and Pacific fleets. The National Resources Department was represented by C. A. Dué Norwood, Land Agent, Montreal, and booklets dealing with C.P.R. lands in Western Canada were distributed to interested parties.

The Canadian National-Grand Trunk Rys. had three sets of colored transparencies, the first showing cities and other points of interest east of Montreal, the second covering the territory between Montreal and Winnipeg, and the third that west of Winnipeg. A large case of birds and animals common to Northern Ontario, with a chart describing them, was also shown. A model of

the Highland Inn, Algonquin Park, and dancing pavilion, arranged with lights to give a very realistic effect, attracted a great deal of attention, and this was supplemented by a series of transparencies showing interior views. A large map showing the Canadian National-Grand Trunk railway lines, with cities marked by colored lights, showed the system's extent, and arranged horizontally across the map, which covered one side of the large exhibit room, was a model of a transcontinental passenger train, with the wheels made to revolve by a concealed motor and chain drive arrangement. At 15-minute intervals, moving pictures were shown, the subjects being as follows: Eastern Canadian cities; winter life and sports in Algonquin Park and at the Highland Inn; views of resort at Minaki, Ont.; views of Jasper Park, and Pacific Coast; shipment of 315 automobiles in 61 cars from Oshawa, Ont., to St. John, N.B., and loading them on C.G.M.M. s.s. Canadian Conveyor for export. In addition to the foregoing, the Canadian National Rys. showed a large panel with views of railway hotels, C.G.M.M. ships and scenes at ports, a model of the telephone train dispatching system, and automatic telegraphic communication machines in operation. The C.N.R. had also in the transportation building and on its passenger train, a radio station, by means of which comes could be heard from the Toronto and Port Dalhousie broadcasting stations.

Of great interest to the general public, but more particularly to the mechanically inclined, was the G.T.R. Stratford shops exhibit in the arena, in charge of H. Dower, welding specialist at the shops. The most notable feature of this exhibit was a model of a mikado locomotive back head, full size, showing all equipment and cab fittings in place. The exhibit included also a complete model of the G.T.R. Stratford station, made in the pattern shop, and a quarter-size model of a mikado locomotive, also made in the pattern shop. Other exhibits were working models of locomotive valve gear, full-size locomotive piston and piston valve, complete cross head, main rod and side rod equipment for one side of a locomotive, with all brasses, a complete set of Westinghouse 6 E.T. brake equipment, a Pyle-National electrical generator, type K2, with complete locomotive lighting equipment, a model cross-section of a locomotive boiler, section of a tube sheet showing the tubes welded in, a complete welding outfit, a welded copper without hose nipple, various tools made by the tools department, numerous articles making up a brass shop exhibit, and turnings from the wheels turned up in the test of the driving wheel lathe described in Canadian Railway and Marine World for August. An exhibit showing the development of the welder's art was a quarter-section made up of welded metals, these being bronze, cast iron, copper and steel. Other features included the trophies won by the Stratford shops' first aid team, gauges and other work turned out by apprentices, apprentices' prize drawings, and text-books used in apprentice instruction.

For the three months ended July 1, 13,513 cattle were shipped from Montreal for trans-Atlantic ports, an increase of approximately 33% over the corresponding period of 1921.

Special Instruction E in Railway Working Timetables.

The Board of Railway Commissioners, on Dec. 10, 1920, issued general order 322, requiring the chief Canadian railways to remove from their working time tables special instruction E, providing for train movements at passing tracks, and to operate in accordance with the standard rules as contained in the general train and interlocking rules. The order was made as the result of an application by the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Engineers, and it was provided that the railways' employes should be instructed that the change in operating conditions would take effect on June 1, 1921. The granting of the order had been opposed by the Railway Association of Canada and member railways, and on representations from the Railway Association, general order 340, was issued May 19, 1921, extending the time at which the change in operating methods was to take place until June 15, 1921.

Before the latter date, the Railway Association applied to the Board for an order to bring about changes in the General Train and Interlocking Rules, Nos. 93 and 99 so that operations would continue to be carried on as if special instruction E remained in force. The matter was heard on June 15 and 16, 1921, and the Board issued on June 17, 1921, general order 343, further extending the time for the withdrawal of rule E until Sept. 1, 1921, or until further notice.

No further action was taken until March 9, 1922, when railway representatives, with railway train service brotherhoods' representatives met the Board's chief operating officer at Ottawa and discussed the matter. The following draft order was filed with the Chief Operating Officer by the locomotive men's brotherhoods' representatives with a request that it be passed:—

"General order — Board of Railway Commissioners for Canada.

The complaint of the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Engineers against special instruction E in the C.P.R. Co's timetable; and re application of the Railway Association of Canada for certain amendments to the General Train and Interlocking Rules, Nos. 93 and 99 in order to provide for the method of operation now employed by certain of its member railways under so-called special instruction E.

Upon hearing the matter in Ottawa, June 15 and 16, 1921, the Railway Association of Canada, the Canadian Pacific, Grand Trunk, Toronto, Hamilton and Buffalo, Michigan Central and Canadian National Railways, the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Engineers, the Order of Railway Conductors and the Brotherhood of Railroad Trainmen being represented at the hearing, and what was alleged; and upon the report and recommendation of the Chief Operating Officer of the Board, after conference on March 9, 1922, with the representatives of the railways and of the employes concerned, and in pursuance with the powers conferred upon the Board by the Railway Act—it is ordered as follows:

"1. Railway companies subject to the Board's jurisdiction are hereby required to withdraw special instruction E from

their respective working timetables, and hereafter observe the Uniform Code of Operating Rules for Canadian railways, approved by the Board's general order 42, July 12, 1909; the necessary changes and instructions to employees to become effective on May 1, 1922.

"2. The said railway companies shall file with the Board on or before May 1, 1922, a statement showing: (a) The names of its yards, limits of which are indicated by yard limit boards, and the distance that these boards are located from the outer main track switches of such yards; (b) The names and location of stations, junctions, yards, watering and fuel points where station protection signals are erected and operative, and (c) The names of such stations, junctions, yards, watering or fueling points, not having station protection signals, but where the said railway companies consider such signals should be erected and maintained.

"3. Before any such company shall proceed to erect any yard limit board upon its right of way, after the date of this order, it must first obtain the Board's approval to the location of such yard limit board.

"4. After August 1, 1922, rule 93 of the approved Uniform Rules for the operation of Canadian railways shall apply only to yards where locations of yard limit boards have been approved by the Board.

"5. The right to use the main track within such yard limits, pursuant to rule 93 does not relieve employees from protecting their trains as prescribed by rule 99.

"And it is further ordered that the Railway Association of Canada's application for certain amendments to rules 93 and 99 is hereby dismissed."

The Board had not announced its decision at the time of writing.

The International and Great Northern Ry.—A small railway in the Southern States, was announced to be offered for sale at auction at Houston, Tex., recently, to satisfy bondholders' claims amounting to between \$18,000,000 and \$19,000,000. The railway has been in the receiver's hands for some time. The only interest in this line, beyond its immediate locality, is that prior to 1914, it was the central part of an ambitious project for an international line to extend from the Gulf or Mexico to Winnipeg, northerly, and to connect with lines in Mexico to the south.

North Bay Canadian Pacific Employees' Club, Ltd., has been incorporated under the Ontario Companies Act, with a capital of \$40,000, in \$5 shares, and office at North Bay, Ont., for the furtherance of recreation, sport and social life and to maintain a clubhouse and park there, and for other allied purposes. The provisional directors are: R. Tyner, R. V. Carleton, J. Jarrett, P. King, A. Beattie, W. O. Cudworth, S. Frost, J. E. Hughes, J. P. Leblanc, C. St. Germain, and J. C. O'Neill, all railway employees at North Bay.

Railway Accidents Throughout Canada.—The total number of railway casualties reported to the Board of Railway Commissioners during August, was 213, resulting in 1 passenger, 5 employees and 12 others being killed, and 40 passengers, 152 employees and 29 others being injured. Under "others" are included 4 persons killed and 15 injured in 15 highway crossing accidents. Of these accidents, automobiles were concerned in 6, other vehicles in 4, and pedestrians in 5.

Canadian Pacific and Canadian National Railways' July Earnings and Expenses.

C.P.R. gross earnings for July were \$14,463,855, a decrease from July, 1921, of \$1,309,094. Operating expenses were \$12,501,926, a decrease of \$1,216,687. This left the net earnings for the month at \$1,961,909, a decrease from July, 1921, of \$92,407. The July results were a great deal more favorable than those secured for some months past, and, if we confine our enquiry to the immediate past, are distinctly encouraging from several points of view. In the first place, the increased gross earnings reflect a growing traffic, and a substantial improvement in business conditions. The July gross was the best for any of the first seven months of this year, and was but \$1,319,095 less than for July, 1921, a creditable showing when the rate reductions are given due consideration. Gross earnings in July were \$653,387 larger than in June, the next best month in 1922. Another most favorable feature of the July figures is in the road's resumption of its reduction in operating expenses. For the first four months of 1922, operating expenses decreased from those for corresponding months in 1921, but in May they increased over May, 1921, and in June they were greater than in June, 1921. In July, however, operating expenses declined from July, 1921, and this showing is all the more creditable as the 1921 wage reduction took effect on July 1, of that year. Prospects were distinctly discouraging in May and June of this year, when the decline in gross earnings was not accompanied by a corresponding decline in comparative operating expenses, but by an increase, but the July results improved matters considerably. The gross earnings in July being accompanied by a drop in operating expenses, net earnings were only \$92,407 less than in July, 1921. For the first seven months of this year, however, results were considerably behind those of 1921. Gross earnings to the end of July, 1922, were \$9,069,407 less than in the corresponding period of 1921, and operating expenses were but \$5,840,905 less, which reduced net earnings for the period by \$3,228,502. While the gross for the first seven months of 1922 was smaller, by the amount stated than for the first seven months of 1921, it is worthy of note that reduced rates have been the cause of this, and also that on only three occasions in the road's history have the gross earnings for the seven months period been larger than in 1922. This was in 1921, 1920 and 1919, when inflation, rampant, and prices and rates increased, and it may be stated with assurance that the reduction in gross suffered by the C.P.R. this year is no reflection on its ability to derive gross earnings, but is rather a direct result of the deflation which the country has undergone, translated into terms of reduced railway rates.

In the Canadian National Railways' gross earnings in July were \$8,877,776, a decrease from July, 1921, of \$248,593; and operating expenses were \$10,510,778, an increase of \$49,480, which resulted in increasing the operating deficit by \$298,433 to \$1,633,002. It is probable that the work of preparing the road and equipment for the heavy fall traffic contributed materially to operating expenses, as similar work added to C.P.R. expense in June, but at all events, the results secured by the National Railways in July were not by any means as en-

couraging as those secured by the C.P.R.

It is both interesting and instructive to compare the trend of railway earnings in Canada at present with those of several years ago, and it may be said at once that when a comparison with results secured in years gone by is instituted, the July, 1922, results, and those for the first seven months of this year, are by no means encouraging. The C.P.R. results must form the basis of comparison. In the first seven months of 1917, the C.P.R. net earnings were \$24,757,455, and in the first seven months of 1916, they were \$23,618,825. In the first seven months of 1913 they were \$23,231,516, and in the first seven months of 1912 they were \$23,276,171. For the first seven months of 1922 they were but \$11,775,979. The difference is large, and as large a difference is evident on comparing the net for individual months. For July, 1917, the net was \$3,760,007; for July, 1916, \$4,017,094; for July, 1913, \$4,116,793; and for July, 1912, \$4,444,777. The net for July, 1922, was but \$1,961,908. Therefore, while the C.P.R. July results this year were considerably better than those of the months immediately preceding, they were not at all comparable with those of former years. The same applies to the seven months period. Recent Government action in connection with railway rates and wages, resulting in the railways being compelled to operate at greatly reduced rates, while proposed wage reductions hang fire, indicates that the people running the country do not seem to be concerned as to whether railway operation ever gets back on a proper basis or not. If the country is to grow and prosper, its railways will need large amounts of new capital to provide necessary new facilities, and in the long run the capital will be obtained at least cost to the public if the railways are allowed to earn a fair return. We have spoken of the Canadian National Ry's. results for July as being unfavorable, but it must be evident to all that if the C.P.R. is so regulated by Government authority that its earnings are so limited in comparison to those of 10 years ago, it is no wonder the Canadian National returns are disappointing, and, on that basis, the chances of the National Railways, with their large new mileage of light traffic density line, for attaining a position wherein they will earn operating expenses, will be indeed limited for some time to come.

American Transit Co.-Canadian Transit Co.—The Michigan Public Utilities Commission is reported to have issued an order suspending the sale of the securities of the American Transit Co., which is financing the construction of the proposed new bridge between Detroit, Mich., and Windsor, Ont. The sale of the securities of the Canadian Transit Co., which is the Canadian end of the project, was the subject of debate in the House of Commons recently.

Grand Trunk Railway Stock Prices.—A London, Eng., press dispatch speaks of a precipitate fall in G.T.R. securities, and says: "G.T.R. ordinary stock, worth 12½ in pre-war days, has dropped to one-half point. G.T.R. first preference is 7, compared with 9½; second preference is 2½, compared with 7½; and the third preference is 1½, compared with 30. The fall represents a depreciation of over \$50,000,000 in eight years."

Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine Water has published in each issue summaries of orders passed by the Board of Railway Commissioners, and that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Constantant train order material is also provided are given in full on another page of this issue.

32,549, 32,550. June 27.—Approving Bell Telephone Co. agreement with the Board of Railway Commissioners. Lanark County, Ont., and Tiny Municipal Telephone System, Simcoe County, Ont.

32,551. June 27.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur through Barton Lake & Supper's long to the Toronto & Hamilton Ry.

32,552. June 27.—Ordering that plan showing relocation of interlocker signal at crossing of T.R. & Kitchener & Waterloo Rys. at King St., Waterloo, be substituted for plan approved by order 32,550, May 2.

32,553. June 27.—Amending order 32,453, May 23, requiring that Canadian National Ry. station building at Ste. Dorothee, Que., be removed to mile 15.21, Cadastral Lot 81, by changing Cadastral Lot 81, to 82.

32,554. June 29.—Authorizing G.T.R. to install automatic bells and wague signals in lieu of watchman at crossing mile 32,554, May 23, Ont.

32,555. June 30.—Amending order 32,554, May 3, relieving Canadian Northern Ry. and C.P.R. from maintaining signalman at night and on Sundays, to operate crossing near Emerson, Man.

32,556. June 30.—Authorizing Canadian Northern Ry. to build pedestrian subway under the street in Elderton Ave., Forty Garry, Man.

32,557. June 30.—Authorizing Canadian Northern Ry. to cross at grade the Forced Road in Lot 16, Range 5, South, Fabre Tp., Ont.

32,558. June 30.—Approving Canadian National Ry. station at Eldersley, Sask.

32,559. June 29.—Authorizing Grand Trunk Pacific Ry. to build spur for Eldersley, Sask. n.w. 1/4 Sec. 16, Tp. 47, Range 19, West 5th Meridian, Alta.

32,560. June 30.—Authorizing C.P.R. to build spur for Arabel Mfg. Co., Brampton, Ont.

32,561. June 30.—Authorizing C.P.R. to rebuild bridge at 4, Elora subdivision, Ontario.

32,562. June 24.—Amending order 9,474, Feb. 1, 1910, to provide that cost of maintaining C.P.R. crossing at Mine St., Galt, Ont., be paid by and paid by municipality, the C.P.R. being senior at that point.

32,563. June 24.—Declaring that for the present the G.T.R. crossing east of Grasshill, Ont., is protected to Board's satisfaction.

32,564. June 24.—Authorizing Canadian Northern Ry. to divert main track, Kashabew Subdivision, and use same as eastbound track along side of the Mount York & Grand River Rys. at William, Ont., and to build branch crossing, Vickers St. De Nevan and Riverview Aves., Neesham, Ont.

32,565. July 4.—Approving Kettle Valley Ry. location from mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,566. July 4.—Approving agreement between Bell Telephone Co. and Sts. Sabine Rural Telephone Co., Mississquoi and Ierville Counties, Que.

32,567. July 6.—Authorizing C.P.R. to build spur for Imperial Oil, Ltd., North York, Ont.

32,568. July 6.—Authorizing Starland Municipal District 307, Alta., to divert highway to cross Canadian National Ry. Veinerville Branch, between Secs. 27 and 28, Tp. 31, Range 20, West 4th Meridian, Alta.

32,569. July 6.—Authorizing C.P.R. to build spur for Imperial Oil, Ltd., North York, Ont.

32,570. July 6.—Approving agreement between Bell Telephone Co. and Port Hope, Ont. Telephone Co., Lanark County, Ont.

32,571. July 6.—Approving relocation of portion of C.P.R., Rosestown Subdivision, between mile 0 to 18.66, in Sec. 26, Tp. 27, Range 16, West 5th Meridian, Sask., and authorizing crossing of highways.

32,572. July 6.—Relieving Canadian Northern Ry. & C.P.R. from maintaining signalman between midnight and 8 a.m. at crossing at Camrose, Alta., so long as present character of movements there exists.

32,573. July 6.—Authorizing Canadian National Ry. to build spur over Sec. 8, Tp. 29, Range 20, North Meridian, Alta., and authorizing North American Collieries, Ltd., to work all minerals lying under railway.

32,574. 32,575. July 5.—Dismissing application of City of Port Hope for an order authorizing to provide highway crossing at intersection of Joseph Janine Ave. and railway, and authorizing the City to build crossing at intersection of the present Road and G.T.R.

32,576. July 5.—Relieving Canadian National Ry. from maintaining signalman between midnight and 8 a.m. at crossing at Camrose, Alta., so long as present character of movements there exists.

32,577. July 5.—Extending to July 1, 1923, the order which C.P.R. may build spur for Milverton Farmhouse, Ont., authorized by order 30,370, Nov. 29, 1920.

32,578. July 7.—Approving location and details of Canadian National Ry. proposed station at Red Deer, Alta.

32,579. July 6.—Ordering Canadian National Ry. to appoint station agent at Makarof, Man.

32,580. July 7.—Relieving G.T.R. from maintaining fences, gates and cattle guards on certain portions of line along the St. Francis River, on District 2, Portland Division, Que.

32,581. July 8.—Ordering Canadian National Ry. to maintain class stations at Quebec, Man. by Oct. 31.

32,582. July 10.—Authorizing Michigan Central Ry. to divert 10 line through Queen Victoria Park, Niagara Falls, Ont.

32,583. July 10.—Authorizing British Columbia Public Works Department to build highway crossing over C.P.R. at mile 75 west of Revelstoke, B.C.

32,584. July 7.—Relieving G.T.R. from maintaining fences and cattle guards on its District 3, Montreal Division, between miles 137 and 128, Nelson Tp., Que.

32,585. July 10.—Authorizing Canadian National Ry. to use bridge over the Rouge River, at mile 8.3, Ching Clay spur, Arundel Tp., Que.

32,586. July 10.—Amending order 32,443, authorizing G.T.R. to enter Mrs. Hanley's lands near Calneville, Ont., to remove obstructions to view.

32,587. July 8.—Ordering G.T.R. to stop train 53 on flag, westbound, at Moose Creek, Ont.

32,588. July 11.—Approving Canadian National Ry. to appoint station agent at Pathlow, Sask., by Aug. 15.

32,589. July 8.—Approving agreement between Bell Telephone Co. and Farmers Telephone Co., Chateaucan, Huntingdon, Beauharnois and St. Jean, Que.

32,590. July 10.—Authorizing Canadian Northern Ontario Ry. to cross highway in Mara Ballast Station, Ont.

32,591. July 8.—Authorizing C.P.R. to build spur for E. H. Hasbarg, Winnipeg.

32,592. July 11.—Approving Canadian National Ry. standard specifications for steel railway bridges (fixed spans).

32,593. July 10.—Approving plan and specifications showing work to be done on Bornaia Drain under Michigan Central Rd., in Lot 21, Con. 4, Marysville, Ont.

32,594. July 8.—Ordering Canadian National Ry. to erect 4th class station at Demaine, Sask., by Oct. 31.

32,595. July 11.—Ordering Canadian National Ry. to alter permanent 4th der. curve, just west of Lacheterville, Ont.

32,596. July 12.—Relieving Canadian National Ry. from maintaining fences, gates and cattle guards on its District 12, between miles 152 and 151 to 173.6, Brazeau Subdivision, Edmonton Division, Alta.

32,597. July 12.—Authorizing G.T.R. to build extension of siding for Western Fair Association, London, Ont.

32,598. July 12.—Authorizing G.T.R. to build spur and two spurs therefrom for Ontario Stone Corporation, near Uthoff station, Ont.

32,599. July 12.—Relieving G.T.R. from lighting interlocker at crossing of Louisa St., Kitchener, Ont., provided interlocker is not in use between sunset and sunrise.

32,600. July 12.—Authorizing C.P.R. to build spur for Bishopric & Lent Co., in Sec. 21, Tp. 12, Range 24, West 2nd Meridian, Canadian National Ry. Public Works Department to build highway crossing over C.P.R. at mile 9.7, south of Revelstoke.

32,601. July 12.—Declaring that for the present, G.T.R. crossing near milepost 137, just west of Revelstoke, B.C., is protected to Board's satisfaction.

32,602. July 12.—Approving clearances at G.T.R. crossing for London Shipments, Ont.

32,603. July 12.—Authorizing British Columbia Public Works Department to build highway crossing over C.P.R. at mile 9, south of Revelstoke.

32,604. July 12.—Authorizing G.T.R. to build spur for Imperial Oil, Ltd., Port Hope, Ont., and for British American Oil Co., Port Hope, Ont.

32,605. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,606. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,607. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,608. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,609. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,610. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,611. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,612. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,613. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,614. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,615. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,616. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,617. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,618. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,619. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,620. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,621. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,622. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,623. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,624. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,625. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,626. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,627. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,628. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,629. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,630. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,631. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,632. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,633. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,634. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,635. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,636. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,637. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,638. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,639. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,640. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,641. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,642. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,643. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,644. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,645. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,646. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,647. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,648. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,649. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,650. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,651. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,652. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,653. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,654. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,655. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,656. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,657. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,658. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,659. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,660. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,661. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,662. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,663. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,664. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,665. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,666. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

32,667. July 13.—Approving Canadian Northern Pacific Ry. revised location through fractional section 12, between mile 10.28, near Okanagan Falls, B.C. to 39.33, at International Boundary, Vale District, B.C.

Steam Railway Operating Revenues, Expenses and Other Statistics for June.

The following comparative table for June, 1922 and 1921, has been arranged in Canadian Railway and Marine World's office from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There is a slight increase in the number of roads included under this heading, so that the data for 1922 and 1921 is not directly comparable with previous reports. As the Canadian Government, Canadian Northern and Grand Trunk Pacific Railways are under one management, and operated as one system, the monthly operating reports for 1922 contain a consolidated report for these railways, under the heading "Canadian National Rys.," which includes the old Canadian Government Rys., viz., Intercolonial, Prince Edward Island, National Trans-

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.; the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government; and the Grand Trunk Pacific Ry.

The column headed "Canadian Pacific" includes also the Montreal and Atlantic and Esquimalt and Nanaimo Rys.

The column headed "Grand Trunk" includes all the C.T.R. Co. of Canada lines, including 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Provincial Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair rivers.

Items 1 to 6 in the table include rail

lines revenues only. Previous to this year they included water lines. Operating income items have been added. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. In former years the total of mixed train miles were added to both freight and passenger train miles when computing averages. Total train miles include freight, passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, excess baggage, parlor cars, etc., whereas previous reports gave an average per train mile of passenger receipts only. The number of employees is also a new feature of this year's reports.

The Railways' Operating Results for June.

Canadian railways' operating revenues for June decreased from those of May by \$449,058, and from those of June 1921, by \$1,026,711, or 3%. The increase in freight revenue over June 1921, was \$865,684, or 3.1%, but this was more than offset by the decrease in passenger revenue, \$927,066, or 1.4%, which combined with decreases in revenue received for auxiliary services to produce the total decrease noted above. In order to earn the additional 3.1% freight revenue, the railways had to render over 14,000,000 more freight miles of freight service than in June 1921, and although passenger revenues decreased 11.4%, 927,066 more passenger miles were recorded in June 1922, than in June 1921. The reason is to be found in a comparison of the average receipt per passenger mile and per revenue ton mile, the decrease in each revenue unit being noted in June 1922, as compared with June 1921.

The most outstanding feature of the June report is the fact that the railways provided the public with a great deal more transportation service than in June 1921, but got paid much less for doing it, and at the same time were able to reduce operating expenses to such a degree that they were able to assume the cost of moving the additional traffic and still show a more favorable operating ratio than in June 1921. Examination of the classified operating expenses shows that while maintenance of way and maintenance of equipment were, judging by costs, kept above the 1921 standards, transportation expenses were reduced materially. The decrease in transportation expenses for the railways as a whole was \$1,605,704, and it may be said with assurance, in view of the increased traffic handled, that this decrease in transportation expenses is indicative of the efficiency with which the properties are operated. In this connection, it is evident that the reduction in operating expenses was secured at the proper points. A reduction in maintenance of way, or maintenance of equipment expense, is altogether too liable to represent the withholding of an expenditure that should have been made, rather than the securing of a true economy, but a reduction in transportation expense may generally be taken to mean that true economy in operation has been secured.

Since about the same amounts were spent on maintenance of way, and maintenance of equipment, in June 1922, as in June 1921, it is evident, on taking into consideration the wage reduction which took effect on July 16, 1921, that more actual maintenance work was done on the properties and their equipment than in June 1921. While the decrease in transportation costs was, of course, primarily due to wage reduction, it is also evident, on examining the operating statistics, that efficient operation played a small part in securing this decrease. Both freight and passenger train mileage, while showing increases, did not increase disproportionately to the additional business handled, and the increase in the average number of tons of revenue freight per freight train mile is notable. While the average number of tons per loaded freight car decreased from 23.2 to 22.5, producing a tendency for lighter train loading, this was overcome by the increased number of loaded cars per train, with the result above noted.

To the casual observer, a decrease in the average receipt per revenue ton mile

of from 1.392c to 1.275c may seem trivial, but when it is considered that the number of ton miles handled in a short time by the railways quickly reaches the billion mark, the decrease in gross revenue suffered may be realized. A still better realization of the decrease in revenue caused by this small unit reduction may be had when it is observed that, despite the fact that the railways transported 34.7 more tons of revenue freight in each freight train operated in June 1922, than in June 1921, the revenue per freight train mile was 4c. less than in June 1921. In the same way, the reduction in the average rate per passenger mile of from 3.166 to 2.796c. does not seem great, but, as we have pointed out, it was great enough to bring about an 11.4% decrease in gross passenger revenue, despite the fact that passenger traffic increased.

The figures showing the averages per mile of road operated, express better than any others, perhaps, the change which has taken place in the railway industry as between June 1922, and 1921. It is evident, from inspection of these, that while greater traffic was handled, it was done at less cost to the railways and at less cost to the public. The reductions in wages and other expenses, and the reductions in rates, which took place in the one year interval, are shown in their true perspective by the figures presented. From the public viewpoint, the June results are gratifying, because they are representative of greater service at less cost; from the railway viewpoint, while the operating ratio secured is not what may be described as one representative of financially successful operation, some gratification may be derived from the fact that an improvement over June 1921 was secured.

Examining the results secured by the individual roads, it may be noted that Canadian National Express freight showed a sharp decline from that of May, with freight revenue decreased 23%. Passenger traffic and revenue increased to offset this in a degree, but total revenue decreased 15%. Operating expenses increased, causing the operating deficit to increase to \$1,963,988, and the operating ratio to 123.85%. This, however, was an improvement over June 1921, when the deficit was \$2,595,256, and the operating ratio 131.32. Compared with June 1921, freight traffic increased 44,179,105 ton miles, or 9.8%, but the revenue was only 3.5% greater. Passenger traffic decreased 2.9%, with a decrease in passenger revenue of 9.2%. Freight train loading increased from 44.4 to 45.6 net tons, but average car loading decreased by 0.3 ton.

C.P.R. freight revenue showed little change from June 1921, although revenue ton mileage increased 7.5%. Passenger miles decreased 4.6% and passenger revenue 13%. Total revenue decreased 4.8%, and operating revenues increased 1.7%, increasing the operating ratio from 78.8 to 82.91. Both train loading and car loading decreased, compared with June 1921 and with May. Compared with May the decrease of 8% in freight revenues was more than offset by the increase in passenger revenue, while the expenses increased about 1.4%.

The G.T.R. increased its freight revenue to \$405,668, or 10.8% over June 1921, but the decrease in passenger revenue caused total revenue to decrease 2.8%. However, operating expenses were reduced 7.7%, giving an operating ratio

of 84.86, compared with 89.36 for June 1921. Train loading showed a marked improvement, averaging 111.7 net tons per train more than in June 1921, and car loading also increased 2.4 tons a car.

For the first six months of 1922 gross operating revenues for the railways as a whole were \$187,831,184, compared with \$206,595,357 for the first six months of 1921. Operating expenses were \$177,540,752, compared with \$204,074,084. Freight traffic increased 4.8% over the same period of 1921, but freight traffic revenue decreased by 5.6%. Passenger traffic decreased 13.6% and passenger traffic revenue decreased 20.5%. The total pay roll was reduced 12.7%, and the average number of employees was 3% smaller than in the first half of 1921. While freight traffic increased 4.8%, freight train mileage decreased 2.7%, due to heavier train loading, though average car loading decreased one ton per car. The average receipt per revenue ton mile for the first six months of 1922 was 1.144c., compared with 1.270c. for the first six months of 1921, and the average receipt per passenger mile was 2.918c., compared with 3.172c. for the first half of 1921. The operating ratio was 94.52, compared with 98.74 for the first half of 1921.

From this short summary for the first half of the year, it is at once evident that what applied to June, as compared with June 1921, applies equally to the first half year as compared with the first half of 1921, viz., that the railways provided more transportation service in the first six months of 1922 than in the same period of 1921, and were paid less for doing it, but at the same time were able to reduce operating expenses to such a degree that a more favorable operating ratio was the result. Relatively, as compared with 1921, the operating ratio of 94.52 is favorable; absolutely, it is not. In 1921 the railways were but a short distance ahead of the ever pursuing public demand for low rates; the distance was increased by a small amount in the first six months of 1922, but the point worthy of note is that the operating ratio is not sufficiently great. An operating ratio of 94.52 means that too much of the country's bill for railway operation has to be paid from the proceeds from taxation, which is not good, in the final analysis, for either the railways or the country. The demand for low rates for the present, with no thought of the future, is representative of a natural human tendency, however, and judging from the great agitation for rate reductions in the early part of this century, the railways may be complimented for being able to show a lower operating ratio in the first half of 1922 than in the first half of 1921.

Railway Wages and Cost of Living.—The United States Chamber of Commerce, Transportation and Communication Department, Railroad Bureau, has issued the following to its members: "Figures given by the Railroad Labor Board in its three recent decisions show that, applying the wages fixed by these decisions to the present cost of living, the purchasing power of the hourly wage of the respective classes named has increased over the present cost of living. The hourly wage of Dec., 1917 (prior to Federal control), as follows: Machinists, 18.8%; carmen, 45.7%; maintenance of way, 44.5%; clerks, 44.7% common labor around stations, 51.5%."

Switching Locomotives, Grand Trunk Railway.

The G.T.R. has built recently, at its Montreal shops, ten 6-wheel switching locomotives, an illustration of one of which is given herewith. These locomotives, and five transfer locomotives which will be built in the near future at the Montreal shops, were described in Canadian Railway and Marine World for May, pg. 230. The switching locomotives' specifications are as follows:

Gauge	4 ft. 8½ in.
Fuel	Bituminous coal
Boiler, flues, number	34,281 sq. ft.
Weight in working order	174,000 lb.
Weight on drivers	174,000 lb.
Weight of engine and tender in working order	304,000 lb.
Wheel base, driving	11 ft. 6 in.
Wheel base, total	11 ft. 6 in.
Wheel base, engine and tender	45 ft. 9½ in.
Length, overall	62 ft. 6½ in.
Weight on drivers—tractive effort	5.06
Total weight—tractive effort	5.06
Heating surface—grate area	38.4
Cylinders, diam. and stroke	22 x 26 in.
Valves	Piston 14 in.
Driving wheels, diam. over tires	56 in.
Driving wheels, thickness of tires	3½ in.
Driving journals, main, diam. and length	9½ x 12 in.
Driving journals, others, diam. and length	8½ x 12 in.
Boiler, style	Extended wagon top
Boiler, working pressure	150 lb.
Boiler, outside diam., of first ring	5 ft. 8 1/16 in.
Boiler, firebox, length and width	96½ x 75½ in.
Boiler, firebox, thickness and	
½ in. tube, ½ in. crown, sides and back	
Boiler, firebox, water spaces	
Front ½ in.; sides and back, 4½ in.	
Boiler, tubes, number	178

Switching Locomotive, Grand Trunk Ry.

Boiler, tubes, outside diam.	2 in.
Boiler, flues, number	28
Boiler, flues, outside diam.	5½ in.
Boiler, tubes and flues, length 12 ft. 4 in. over sheet	
Boiler, heating surface, tubes and	
flues	1,777 sq. ft.
Boiler, heating surface, firebox and arch	
tubes	368 sq. ft.
Boiler, heating surface, total	1,945 sq. ft.
Grate area	50.62 sq. ft.
Tender, tank	Water bottom
Tender, frame	Built up type
Tender, weight	130,000 lb.
Tender, wheels, diam.	38 in.
Tender, wheels, material	Cast iron
Tender, journals, diam. and length	6½ x 10 in.
Tender, water capacity	6,000 gall.
Tender, coal capacity	9 tons

These locomotives, designated class F13, are thoroughly modern in design, are equipped with many economy devices, and having a tractive effort of 34,000 lb., are efficient power units for switching service. A number of existing G.T.R. standards were embodied in the design and construction. The frames are of cast steel, 4 in. wide, and provided with heavy cast steel deck castings and cast steel bumpers at the front. Cross ties of ample section are employed, and the back ends of frames are fitted with cast steel foot plates.

The boiler courses are fitted with sextuple riveted joints, and the firebox is equipped with two special blow-off cocks applied to the throat sheet. The locomotives are superheated and equipped with brick arch, the arch bricks being supported on four 3-in. tubes. Boiler accessories include air-operated firebox door, double turret valves, inspirators of modern type, and a five-feed lubricator.

Smoke boxes are equipped with A.R.M.M. front ends.

The cylinder castings have been designed with steam and exhaust passages of ample area and with easy bends. Cylinder and steam chest bushings, and packing rings in the pistons and piston valves, are of Hunt-Spiller gun iron. Baker valve gear is applied, controlled by power reverse gear, greatly facilitating handling in switching service.

Driving wheel centers are of cast steel, with all tires flanged 3½ in. thick and shrunk on. Franklin adjustable driving box wedges are applied. The cab is large and spaced well back, providing ample deck space for the fireman, and special attention has been given to placing all cab fittings, such as brake valves, throttle lever, reverse lever, valves, etc., within easy reach of the crew, with all gauges in a convenient position for easy reading.

The tender is carried on two 4-wheel trucks of the equalizer design, with pedestals, and McCord boxes for 5½ x 10 in. journals. The tender wheels are cast iron, 33 in. diam., with inside hump brake beams. The tender frame is of channel steel, fitted with heavy cast steel bumpers at front and back ends, and stub casting for use with M.C.B. coupler. Equipment includes the radial buffer. The tender tank is of the water bottom type,

with capacity of 6,000 U.S. gall., and the coal capacity is 9 tons. The coal is carried in a special hopper, located so that both locomotive man and fireman have an unobstructed view to the rear over the top of the tank.

As stated above, it is expected that construction of the 5 transfer locomotives, or 8-wheel switchers, which were ordered at the same time as the 6-wheel switchers, will be proceeded with in the near future.

New Railway for London, England.

A press report says that important proposals are being formulated for the construction of an east to west railway, 20 miles long, in the London area. The object is to give direct connection between the Great Northern, Great Eastern and Great Central Railway systems, as well as between them and that of the Great Western. It is proposed to connect the railway of the Great Western and Great Central companies near Denham, with the Great Northern main line near at the adjoining Palace Gates terminus. Trains could then proceed from the north to the south of England, and vice versa, and there would be direct communication between the northern and northwestern suburbs.

Machine Tools Order.—The Canadian National Rys. management approved recently a list of machine tools for the St. Malo, Que., shops.

Grain in Store at Elevators.

The Dominion Bureau of Statistics, Internal Trade Branch, reports that for the week ended Sept. 8, the quantity of grain in store in the different elevators showed a net increase of 3,123,256 bush. The bulk of this was in wheat, which showed an increase of 2,848,254 bush., barley 360,256, and rye 485,167. There were decreases in oats, of 924,180 bush., and flax, of 6,251.

The western country elevators showed increases in wheat 1,315,401 bush., barley 97,023, and rye 197,396, while there were decreases in oats 168,159 bush., and flax 2,295. The total quantity in store was 7,729,812 bush., compared with 6,293,476 at the same period in 1921. The total receipts of all grains were 4,488,193 bush., and the shipments were 3,049,411. Interior terminal elevators showed small decreases in wheat 29,409 bush., oats 8,143, and barley 306, a total of 37,858.

Public and private terminal elevators at Fort William and Port Arthur, showed increases, wheat 994,633 bush., barley 142,897, flax 2,044, and rye 370,345. The only decrease was in oats, of 230,821 bush. The net increase for all grains was 1,279,098 bush. Receipts were 5,185,371 bush., and shipments, by ship, were 3,565,010, and by rail, 205,449.

Winnipeg private terminal elevators showed increases, wheat 5,747 bush., and barley 387, and there was a decrease in oats of 6,467 bush., a net decrease of all grains of 333 bush.

Public elevators in the east showed increases, wheat 187,064 bush., barley 115,898 bush., and rye 252,420 bush., and there were decreases in oats 428,976 bush., and flax 3,000. The total receipts of all grains were 2,399,108 bush., and the shipments were, by ship 545,877, and by rail 932,055.

The quantity of U.S. grain in store at eastern public elevators was 6,419,550 bush., compared with 1,947,300 at the same period in 1921. The bulk of the former amount consisted of, wheat 2,819,141 bush., corn 1,920,722, and rye 1,419,678.

U.S. lake ports, Buffalo and Duluth, showed an increased storage of Canadian grains, wheat 215,057 bush., and barley 930.

At the U.S. Atlantic seaboard ports there was a net increase in all grains of 106,014 bush.

Unemployment and the Canadian National Railways.

The following resolution was adopted at the conference between Dominion and provincial representatives in Ottawa, recently: "Whereas, in departments of Government, both federal and local, there are avenues open for employment, and whereas, the Canadian National Rys. Board is the manager and operator of the Canadian National Rys. and the Canadian Government System; and whereas, there are boards administering—under legislative authority—special departments of public works in the various provinces; and whereas, there are recurring periods of unemployment, therefore, this conference recommends that the respective governments, the National Railways Board and the boards administering the special departments of public works in the various provinces should regulate and carry on their public work and railway operation so as to distribute the work in such a manner as to relieve unemployment to the greatest possible extent."

Mainly About Railway People Throughout Canada.

Richard Bladworth Angus, one of the C.P.R. directors, died at his country home Senneville, near Montreal, Sept. 17. He was born at Bathgate, Linlithgowshire, Scotland, May 28, 1831, and was for some years in the Manchester and Liverpool Bank, in England. He came to Canada in 1857, and entered the Bank of Montreal's service, and subsequently served as agent at Chicago and New York. In 1863 he was appointed Local Manager at Montreal, and in 1869 General Manager there, retiring from its service in 1879. He was afterwards elected a director of the Bank, and in July 1910, President. In 1879 he took part in the management of the St. Paul, Minneapolis and Manitoba Ry., with the late Lord Mount Stephen and the late Lord Strathcona, and was a member of the syndicate which, in 1881, undertook the construction of the C.P.R., and was the last of the original directors of that company. He was associated with a number of industrial and financial companies, and with numerous charitable organizations. On Sept. 19, the day of his funeral all work on the C.P.R. was suspended and all trains stopped for 2 minutes, commencing at 1.45 p.m.

A. B. Atwater, Assistant to President, G.T.R., Detroit, Mich., after 48 years with the company, has asked to be relieved from active service, and will be placed on the pension fund, Oct. 1. The directors have placed on the company's records, their appreciation of his long and faithful service. He was born at Sheffield, Ohio, in Nov. 1845, and entered railway service in 1864, as telegraph operator, Cleveland, and Erie Ry. He was, from Oct. 1865 to June 1885, in engineering service, Jamestown Division, same road; Resident Engineer of Construction, Canada Southern Ry.; Assistant Engineer, Port Dover and Lake Huron Ry.; Chief Engineer, Stratford and Huron Ry.; Superintendent, Port Dover and Lake Huron Ry.; General Superintendent, Georgian Bay and Lake Huron Division, G.T.R., and Chief Engineer, Chicago and Grand Trunk Ry.; June 1885 to July 1898, Superintendent, G.T.R. lines, west of Detroit, Mich.; July 1898 to July 1902, Assistant General Superintendent, Michigan Central Rd., Detroit, Mich.; July 1902 to Sept. 30, 1922, Assistant to President, G.T.R. lines, west of Detroit, and St. Clair Rivers, Detroit, Mich. He will continue to live in Detroit, spending the winters either in California or abroad.

E. W. Beatty, K.C., President, C.P.R., left Montreal Sept. 11, by special train, to inspect the line to the Pacific coast. He was accompanied by Sir Augustus Nanton, another of the directors, and Brigadier-General Nanton, London, Eng., as far as Winnipeg, and by A. D. MacTavish, Vice President, Eastern Lines, as far as Fort William; D. C. Coleman, Vice President Western Lines, accompanying him over them. The special was routed via Toronto and Fort William, the first stop-over being at Winnipeg. Leaving Winnipeg Sept. 17, Vancouver was reached Sept. 25, and Mr. Beatty went on to Victoria. He will make several stops on his return journey and is expected back in Montreal early in October.

F. P. Brady, Assistant to the Executive, Canadian National Ry., with office at Toronto, has been at his house in Winnipeg for several weeks, owing to serious illness.

H. W. Brodie, who has been appointed

Assistant Passenger Traffic Manager, C.P.R., Montreal, was born at Fredericton, N.B., June 8, 1874, and entered railway service, Jan. 1, 1895, since when he has been, to July 1895, junior clerk and stenographer, C.P.R. Passenger Department, St. John, N.B.; July to Aug. 1895, in similar capacity at Boston, Mass.; Aug. to Feb. 1898, stenographer to Assistant General Passenger Agent, C.P.R., Toronto; Feb. 1898 to Oct. 1899, chief clerk in same office; Oct. 1899 to Feb. 1903, chief clerk to General Passenger Agent, Western Lines, C.P.R., Winnipeg; Feb. 1903 to Oct. 26, 1910, Assistant General Passenger Agent, Western Lines C.P.R., Winnipeg; Oct. 26, 1910 to Sept. 1, 1922, General Passenger Agent, lines west of Revelstoke, B.C., C.P.R., Vancouver.

Adam Brown for many years M.P. for Hamilton, Ont., and afterwards post-master there, from which position he retired on reaching 90 years of age, and

W. B. Howard,
Assistant General Passenger Agent, Eastern
Lines, C.P.R.

who is the father of Sir George McLaren Brown, European General Manager, C.P.R., London, England, has been elected a member of the Canadian Chamber of Commerce, London, of which, Sir George is President.

B. D. Caldwell, President, Wells Fargo & Co., and Chairman of the Board, American Railway Express Co., while on his way home from a fishing trip in Canada, on Sept. 24, died in a sleeping car stateroom shortly before reaching Burlington, Vermont.

Allan Cameron, appointed recently as Oriental Manager, Canadian Pacific Ry. and Canadian Pacific Steamship Line, Hong Kong, China, sailed from Victoria, B.C., on the C.P.R. s.s. Empress of Russia, to take of his new duties. In referring to his appointment in our last issue, he was incorrectly mentioned as Oriental Manager, Canadian Pacific Steamship Lines.

James Clark, Locomotive Foreman, Canadian National Ry., Parent, Que., was killed by the explosion of a kalsome tank there, Sept. 15. He was for about 20 years Master Mechanic, Quebec and Lake St. John Ry.

James T. Clark, President, Chicago, St. Paul, Minneapolis and Omaha Ry., died suddenly at St. Paul, Minn., Sept. 8. He was born at Auburn, N.Y., Nov. 20, 1852, and entered railway service in 1870 as a messenger boy on the Illinois Central Rd.

W. C. Clark, at one time Auditor of Freight Accounts, G.T.R., now of Delhi, Ont., but who retired on pension in 1909, and is now aged 80, was married Sept. 12, to Mrs. Davis, who is about the same age.

Normand R. DesBrisay, who has been appointed Assistant General Passenger Agent, C.P.R., Winnipeg, was born at Minneapolis, Minn., May 18, 1888, and entered C.P.R. service, June 14, 1904, since when he has been, to May 31, 1905, clerk in District Passenger Agent's office, St. John, N.B.; June 1, 1905 to June 7, 1907, ticket clerk, City Ticket Office, St. John, N.B.; June 14, 1907 to Dec. 5, 1908, ticket clerk, s.s. Empress of Ireland; Dec. 5, 1908 to May 24, 1909, exchange ticket clerk, Halifax, N.S.; May 27, to Nov. 19, 1909, exchange ticket clerk, Quebec; Nov. 19, 1909, to May 4, 1910, exchange ticket clerk, Halifax, N.S.; May 5, to July 15, 1910, exchange agent, Quebec; July 15, 1910, to Nov. 1912, Traveling Passenger Agent, St. John, N.B.; he resigned that position to enter private business for a short time, resumed his duties in the early part of 1913, and continued as Traveling Passenger Agent, St. John, N.B., until July 1914; July 1914 to Sept. 1916, General Traveling Passenger Agent, Montreal, and later Chief Clerk, Passenger Department, New York; Sept. 1916 to Sept. 1, 1922, District Passenger Agent, St. John, N.B.

W. Fitzpatrick, Chief Dispatcher, Reid Newfoundland Co., St. John's, Nfld., resumed his duties Sept. 11, after a short holiday.

H. G. Foreman is Treasurer, Canadian Northern Ry. System and Grand Trunk Pacific Ry., not Assistant Treasurer, as stated under "Birthdays of Transportation Men in September" in Canadian Railway and Marine World, for September.

W. Fulton, who has been appointed District Passenger Agent, Ontario District, C.P.R., Toronto, was born at Ballinderry, County Antrim, Ireland, Nov. 13, 1870, and entered C.P.R. service in Jan. 1891, since when he has been, to Jan. 1895, ticket clerk, Toronto; Jan. 1895 to June 1900, ticket agent, and telegraph and Dominion Express Co. agent, Galt, Ont.; June 1900 to Apr. 1915, city passenger agent, London, Ont.; Apr. 1915 to Oct. 1, 1922, Assistant District Passenger Agent, Ontario District, Toronto.

Hon. G. P. Graham, Minister of Militia & Defence, is also acting as Minister of Railways and Canals, during the absence of Hon. W. C. Kennedy, who underwent an operation in the Royal Victoria Hospital, Montreal, Aug. 25, and a second operation Sept. 20.

Lieut.-Col. F. B. Hawkes, O.B.E., District Traffic Superintendent, Northwestern Ry. of India, and one of the trustees for the administration of the port of

Karachi, India, visited Canada during September, and investigated the port handling facilities at Montreal with regard to grain elevators, etc., no facilities of this kind being utilized in India, although the port of Karachi handles some 37,000,000 bush. of grain annually.

William Horder, who has been appointed Assistant District Passenger Agent, Ontario District, C.P.R., Toronto, was born at Montreal, Nov. 10, 1882, and entered C.P.R. service, June 1, 1900, since when he has been, to Nov. 1, 1912, clerk; Nov. 1, 1912, to Dec. 1, 1913, excursion clerk; Dec. 1, 1913 to Sept. 1, 1922, chief clerk, Passenger Department, all at Montreal.

William Brunswick Howard, who has been appointed Assistant General Passenger Agent, Eastern Lines, C.P.R., Montreal, was born at Chatham, N.B., Sept. 15, 1877, and entered C.P.R. service in Aug. 1897, since when he has been, to Aug. 1899, junior clerk, District Passenger Department, C.P.R.; Sept. 1, 1899, to Aug. 1899 to Feb. 1902, Travelling Passenger Agent, Maritime Provinces, St. John, N.B.; Feb. 1902 to June 1906, chief clerk, Passenger Department, St. John, N.B.; June 1906 to Feb. 1916, District Passenger Agent, St. John, N.B.; Feb. 1, 1916 to Sept. 12, 1922, District Passenger Agent, Toronto.

Hon. W. C. Kennedy, Minister of Railways and Canals, who was operated on at the Royal Victoria Hospital, Montreal, August 26, for gall stones, had to have a second operation there on Sept. 20. The latest reports say that his condition is not satisfactory, and that, at the best, it will probably be some time before he can resume his official duties.

A. E. Killam, for several years Inspector of Bridges and Buildings, Intercolorial Ry., Montreal, N.B., and who was Vice President of the American Railway Bridge and Building Association for 1911-12 and President for 1912-13, died at Montreal, N.B., recently, aged 88.

R. S. Logan, Vice President, Land, Tax and Claims Department, G.T.R., Montreal, after 27 years service with the company, has asked to be relieved from active service, and will be placed on the superannuation fund, Oct. 1. The directors have placed on the company's records, their appreciation of his long and faithful service. He was born at St. Louis, Mo., Feb. 13, 1864, and entered railway service in 1885, since when he has been, to Dec. 1, 1890, clerk in General Manager's office, Wabash, St. Louis and Pacific Ry.; Dec. 1, 1890, to July 1896, secretary to General Manager, Wabash, St. Louis and Pacific Ry.; July 1, 1896, to Jan. 1, 1901, secretary to General Manager, G.T.R.; Jan. 1, to Mar. 15, 1901, Assistant to General Manager, G.T.R.; Mar. 15, 1901, to Mar. 17, 1902, Vice President and General Manager, Central Vermont Ry.; Mar. 17, 1902, to Jan. 7, 1910, Assistant to Second Vice President and General Manager, G.T.R.; Jan. 7, 1910, to Oct. 2, 1911, Assistant to the President, G.T.R. and G.T.P.R., and from Oct. 2, 1911, to Sept. 30, 1922, Vice President, Land, Tax and Claims Department, G.T.R., Montreal. He will continue to live in Montreal and will carry on business in real estate, with office in the Transportation Building.

Sir William Mackenzie, ex-President, Canadian Northern Ry., sailed from Quebec, Sept. 12, on the s.s. Empress of Britain, for England.

R. C. Morgan, General Manager Reid Newfoundland Co., St. John's, Nfld., whose portrait appears in this issue, was born at Missisquoi Bay, Que., Nov. 12,

1864, and entered transportation service in 1884, since when he has been as follows:—1884 to 1895, stenographer and clerk, Northern Pacific Ry., St. Paul, Minn.; 1895 to 1900, clerk in President's office, Great Northern Rd., St. Paul, Minn.; 1900 to 1901 Assistant Superintendent, Great Northern Ry., Larimore, N.D.; 1901 to 1904, Superintendent El Paso & Southwestern Rd., Bisbee, Ariz.; 1904 to 1905, Assistant Superintendent, Great Northern Ry., Everett, Wash.; 1905 to 1911, Superintendent, Great Northern Ry., Spokane, Wash.; 1912 to Feb. 1917, Superintendent C.P.R., Port William, Ont.; Feb. 1917 to date, Superintendent Winnipeg Terminals, C.P.R., from which position he has been on leave of absence since Aug. 21, 1921.

H. Morris, R. J. Carter, Pens. Marquette Rd., Walkerville, Ont., who died there, Sept. 15, aged 65, had been in the service for over 30 years.

H. J. Russell, Assistant to General Manager, Reid Newfoundland Co., St. John's Nfld., visited Montreal, in September.

R. C. Morgan,
General Manager, Reid Newfoundland Co.

W. J. K. Skillicorn, Rates Assistant to General Manager, South African Railways and Harbours, Johannesburg, visited Canada during September, to examine the system of grain handling at Montreal and other ports.

William H. Snell, who has been appointed General Passenger Agent, Western Lines, east of Revelstoke, B.C., C.P.R., Winnipeg, was born at Palmyra, Neb., May 23, 1872, and entered railway service in July, 1890, and served in the Treasurer's Department, C.P.R., Montreal, until 1896, when he resigned on his appointment as Travelling Agent, Atlantic Advertising Co., Boston, Mass. He re-entered C.P.R. service Feb. 1, 1902, since when he has been, to Feb. 1, 1906, chief clerk, Boston, Mass.; Feb. 1, 1904 to July 17, 1910, Travelling Passenger Agent, Boston, Mass.; July 17, 1910 to March 1, 1912, Eastern Passenger Agent, New York, N.Y.; March 1, 1912 to April 1, 1915, General Agent, Passenger Department, New York, N.Y.; April 1, 1915, to Sept., 1922, General Passenger Agent,

Eastern Lines, Montreal.

C. W. Spencer, who died at Winnipeg, Sept. 13, aged 84, was engaged on the construction of the first 100 miles of the C.P.R. west of Port Arthur, Ont. He lived in Winnipeg since 1882, and was, for several years a foreman of road construction for the city.

Hon. J. A. Stewart M.P. for Lanark, Ont., who was Minister of Railways and Canals in the Meighen Government, has been in the Royal Victoria Hospital, Montreal, for several weeks, suffering from pernicious anaemia, and was reported on Sept. 25 to be in a very critical condition.

Walter S. Thompson, who has been appointed Publicity Agent, G.T.R., Montreal, was born at Newcastle-upon-Tyne, England, Oct. 22, 1886, and educated at Rutherford College there. He began newspaper work on the St. James Gazette, London, England, and served subsequently on the Evening Standard, Daily Express and Observer, in London, and from 1909 to 1911 was in newspaper work in Australia and New Zealand. In 1912 he was city editor of the Daily Witness and Daily Telegraph, Montreal; 1913 to 1914, city editor, Montreal Herald, and on March 29, 1914, was appointed editor of Press Bureau, General Advertising Department, G.T.R., Montreal, which position he held at the time of his present appointment.

W. N. Tilley, K.C., one of the C.P.R. directors, returned to Toronto early in September, from England, where he went to represent the Dominion Government, on the G.T.R. shareholders' appeal to the Imperial Privy Council, against the arbitrators' decision that certain G.T.R. stocks had no value.

George Arthur Walton who has been appointed General Passenger Agent, Eastern Lines, C.P.R., Montreal, was born there, July 17, 1881, and entered C.P.R. service in Sept. 1901, since when he has been, to June 1903, rate clerk, Passenger Department, Winnipeg; June 1903 to Jan. 31, 1906, chief clerk, same department, Winnipeg; Feb. 1906 to Sept. 30, 1907, station ticket agent, Winnipeg; Nov. 1, 1907 to March 31, 1910, District Passenger Agent, Brandon, Man.; April 1, 1910 to Aug. 31, 1911, General Agent, Passenger Department, Spokane, Wash.; Sept. 1, 1911 to Dec. 31, 1915, General Agent, Passenger Department, Chicago, Ill.; Jan. 1, 1916 to Sept. 11, 1922, General Passenger Agent, Western Lines, Winnipeg.

Maintenance of Way Workers' Families.—The Association of Railway Executives, New York, has issued the following: "Representatives of maintenance of way employees, in seeking, before the U.S. Railroad Labor Board, an increase of wages to a minimum of 48¢ an hour in all localities, based part of their argument on the supposition that 5 persons (a man, his wife, and 3 dependent children) is the 'normal' family in the United States." J. G. Weller, representing eastern railways, in examining this argument before the Labor Board, said in part: "The census of 1920 shows that for each family there are 1.36 male workers, or a total of 33,059,793, compared with the 24,351,678 families. If we should each of these male workers receive wages based upon the family of 5 when for each average family there is more than one male worker, an average excess of 0.36 male workers per family? If each individual worker is supposed to support a 'normal' family of five, 1.35 workers per family would be supporting 6.8 persons per family, and not a so-called normal family of 5."

Rates of Pay and Regulations for Transportation of Mails by Steam Railways.

The following report was adopted and passed as order in council 1886, by the Dominion Government on Sept. 13:—The committee of the Privy Council, on the recommendation of the Postmaster General, advise that on and from June, 1, 1922, all railways in Canada, operated by steam, shall be paid at the following rates for the transportation of mails, and furnishing the necessary car space for the purpose.

1. For a full postal car, which shall not be less than 60 ft. in length, unless otherwise agreed to by the Postmaster General, equipped for the sortation and handling of mails, including parcels, and the transportation and accommodation of post office officials on duty, the rate of payment shall be 35c. a car mile. Pending the building of standard 60 ft. railway post office cars which the railways will place on their regular through passenger trains at some future date, all railway post office cars less than 60 ft., used exclusively for post office business, with a mail clerk in charge, irrespective of length, will be paid for by the Post Office Department at the rate of 35c. a car mile when such cars meet the requirements of the Department, but no additional payment will be made for overflow mail from undersized postal cars until the total space occupied shall exceed the space that would be provided by a 60 ft. car. If postal cars of greater length than 60 ft. are furnished by the railway, the Department will pay only the rate of 35c. a car mile. The railway may provide the car with a substantial partition, cutting off 60 ft. of space according to the standard car plan for mail. In the event of the remaining space, or part of it, being needed for storage space for the mail, the Department will pay additional for this on the basis of the storage space rates hereafter mentioned.

2. Full storage cars carrying mail material exclusively, with or without a mail clerk in charge, will be paid for at the rate of 30c. a car mile for 60 ft. cars. When such cars are less than 60 ft. in length payment will be made pro rata.

3. For a half car, or section of a car, which shall not be less than 30 ft. in length by the full width of the car, completely equipped in the same manner as a full postal car and the transportation of post office officials on duty, the rate shall be 20c. a car mile. If the space provided is less than 30 ft. in length and the full width of the car, payment will be made at the rate of seven-tenths of a cent per linear foot. When the mail space is reduced by a side passage, payment will be made on the basis of 20c. for 270 square ft. of floor area.

4. Closed pouch mails, storage or overflow mails carried in baggage cars in charge of baggage-man and without a mail clerk in charge, will be paid for at the following rates:—For each mile of service by a 5 ft. unit space, 4c.; for each mile of service by a 7 ft. unit space, 6.5c.; for each mile of service by a 15 ft. unit space, 13c.; for each mile of service by a 40 ft. unit space, 20c. All mail service in baggage cars shall be authorized according to the above described units.

5. The foregoing rates shall apply to railway post office cars or cars transporting mail matter in whole or in part, attached to regular trains, or on special trains not ordered by the Post Office Department. The railway shall not be required to haul more than one mail car

on any special train run by them, unless they find it practicable to do so without interfering with the schedule speed of such train.

6. For special trains ordered by the Post Office Department, the railways shall be compensated at the rate of \$2.70 a train mile. When one or more cars for the conveyance of passengers, baggage or express, are attached to such trains by the railway company, this compensation shall be at the rate of \$2.15 a train mile.

7. All railway companies shall provide, without extra charge to the Post Office Department, for the care and storage of mails and railway clerks' equipment at stations, including junction and transfer points, when such mails and equipment have to be held for transfer, dispatch or delivery. The work of transferring mails between trains, when such trains use the same station, shall be performed by the railway companies, except at points where the Department has already provided transfer agents or employees of the Department not under contract, the delivering carrier to be held responsible for the transfer.

8. Authorized service is service authorized by formal orders issued by the Post Office Dept., previous to its being performed. All authorization for full postal cars and apartment railway post office cars shall be in both directions and shall begin and may be discontinued in accordance with the needs of the service.

9. Regular baggage car authorizations, not including overflow mail, shall be based upon the maximum requirements, and such authorizations shall correspond with the routes as laid down in the schedule of mail trains as published by the Post Office Department from time to time. Wherever a regular authorization is exceeded on 50% or more trips during 30 consecutive days, the appropriate higher unit shall be authorized. This will not apply to the month of December. Conversely when it is found that the regular authorization exceeds the requirements of any baggage car service, the authorization may be changed to a lower unit.

10. In baggage car service the space required for the mails will be determined by the number of sacks as follows:—In determining the number of linear feet both sides of the car needed for carrying the mails in closed pouch or storage units of 3 ft., 7 ft., 15 ft and 30 ft. respectively in baggage cars, a test shall be made by representatives of the Post Office Department and representatives of the railways to establish the number of sacks of mail which shall be considered as equivalent to one linear foot both sides of car. Pending such test 18 sacks shall be taken as equivalent to one linear foot both sides of car.

11. All units of overflow space needed to supplement regular authorization shall be of 3, 7, 15 or 30 ft., without duplication or grouping, and such units shall be discontinued increased or decreased at any point where a fluctuation in the volume of mail carried requires a change from one unit to another.

12. When on account of a delayed train, or connection, a special or extra train is made up to go out either on the time of the regular train or after the arrival of the delayed connection, and the mails carried on such special or extra train are those which would have been

carried on the regular train if it had been run according to schedule, the transportation of the mail on the special or extra train will be considered as part of the service required of the regular train, and no additional pay will be allowed for either train unless the quantity of mail carried in both trains is in excess of that which could have been carried in the space regularly authorized.

13. Where, on account of delayed connection, the mail due to go out on one train falls back upon a following train on the same line, the transportation of such mail on the second train will be considered as part of the service required of the first train and no additional pay will be allowed for either train unless the quantity of mail carried in both trains is in excess of that which could have been carried in the space regularly authorized.

14. At stations where mail trains do not stop regularly, the railway company shall erect and maintain at its own expense, a mail catching device approved by the Postmaster General and the Board of Railway Commissioners for the exchange of mails. When the Post Office Department orders an exchange of mails at a point other than a railway station, a mail catching device of the same description as that authorized for use at railway stations shall be erected and maintained by the railway company concerned, but the cost of erection and maintenance shall be borne by the Post Office Department. Locomotive engineers shall give notice to railway mail clerks by means of whistle or bell, when approaching a mail catching post, and for this purpose the regular station or crossing signal, as the case may be, will govern. When catch posts are erected at points not a highway crossing, the crossing signal will be given.

15. The Post Office Dept. may dispatch as mails in the regular authorized mail space either in postal, baggage or storage cars, articles of post office equipment and supplies.

16. At all transfer points where mail transfer agents are employed, the Post Office Dept. will provide the necessary equipment for handling mails, such as trucks, but at all other stations where mail is to be transferred by the railways the railway company shall provide the same.

17. At large mail centers, where it is necessary that postal cars or storage cars shall be loaded before the departure of the train the railways shall place such cars on tracks that will make it reasonably convenient for loading and unloading.

18. Should any dispute arise as to the interpretation or operation of any of these regulations, such disputes shall be referred to a committee to consist of one representative of the Post Office Dept., one of the Railways and Canals Department, and one of each railway that may be concerned in the dispute, with power in said committee to add to their number as occasion may require. The committee shall approach such dispute in a spirit of conciliation with a view to reasonable adjustment. Should the committee fail to agree upon such adjustment the committee shall present the opposing views to the Postmaster General and the Minister of Railways and Canals, whose decision shall be final. The committee may make such recommendations as it may deem advisable for the conduct of the service.

19. The equipment and accommodation furnished by postal cars shall include

light, heat and an adequate supply of drinking water, mattresses, cooking apparatus satisfactory to the Postmaster General, stannp pads, brooms and other articles required according to specifications.

20. New postal cars and cars that may hereafter be equipped for the railway postal service shall be constructed and arranged in accordance with plans approved by the Postmaster General.

21. When it becomes necessary, owing to a wreck or washout, to transfer mails from one train or car to another, the railway shall see that the mails and railway mail clerks are promptly transferred and every possible convenience furnished the clerks for working the mails.

22. The Postmaster General reserves the right to demand such reports regarding railway mail service from the railway companies as may be required from time to time.

23. Payments for transportation of the mails shall be made quarterly after the service has been performed.

The U.S. Secretary of Commerce on Railway Efficiency.

The United States Secretary of Commerce, Hon. Herbert Hoover, made a statement before the Interstate Commission recently, in which he said, in part:—"A great deal has been said about the inefficiency of our railway system. I do not sympathize with these statements. Comparison with foreign railways, of the fundamental criteria of per ton mile costs, train loading and so forth, in the light of our cost of living, will demonstrate that our railways are of higher standards, better in methods than others and are growing in efficiency. The consolidation of our railways into larger systems has been contemplated in our legislatures for some years past as a gain in efficiency. Its value cannot be overestimated—it is not a panacea for all trouble. It does give hope, however, of economies in further efficiency from more complete utilization of rolling stocks and terminals, some small degree of saving in overhead, saving in current inventories, but probably its greatest saving would be decreased cost of proper finance, increased financial stability and fuller independence from the supply companies.

"It is probably unnecessary to refer to the question of government ownership. No one with a week's observation of government railways abroad, or with government operation of industry in the United States, will contend that our railways could ever be operated as intelligently or as efficiently by the government as through the initiative of private individuals. Moreover, the welfare of its multitude of workers will be far worse under government operation. We are struggling with the great problem of maintaining public control of monopoly, at the same time maintaining the initiative of private enterprise. I believe that we are steadily progressing to solution. Great social and economic problems find their solution slowly and by a process of trial and error. We have tried unregulated monopoly, and have tried government operation, and found the error in them. We still have much to solve if we are to maintain our transportation. Much of this solution depends upon the successful initiative of the railways themselves and much of the shaping of this matter lies fortunately in your hands."

Signals for Railway Grade Crossings.

The Board of Railway Commissioners passed general order 369, Aug. 10, as follows: Re application of Railway Association of Canada, under the Railway Act, 1919, sec. 287, for an amendment to rule 33 of General Train and Interlocking Rules, approved by order 7,563, July 12, 1900, so as to provide for the use of red signals by highway crossing watchmen as a warning to highway travel that trains are approaching: Upon hearing the application at Ottawa, June 21, 1922, the Railway Association of Canada, the Grand Trunk, Canadian Pacific, Toronto, Hamilton & Buffalo, Pere Marquette and Canadian National Railways, Michigan Central and New York Central Railroads, the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors and the G.T.R. trainmen being represented, and what was alleged; and upon the report and recommendation of the Board's Chief Operating Officer, the Board orders that rule 33 of the General Train and Interlocking Rules be struck out, and the following substituted therefor, viz:

"33. Watchmen stationed at public road crossings must, by day, display a metal disc (16 in. in diameter, white background, with the word 'Stop' in large black letters, and a black border); and, by night, a red light, to warn pedestrians and persons in vehicles that a train is approaching. Where gates are provided, a red light, hooded so as to show to the highway only, must be displayed by night."

2. That general orders 247 and 257, dated Aug. 6, 1918, and Dec. 6, 1918, made herein, be rescinded.

General order 247 required watchmen at all grade crossings protected during the day to have a metal disc, 16 in. in diameter, with a short handle, having a white background, with the word 'Stop' in large black letters, and a black border, and rule 33 providing that watchmen stationed at public crossings must use a green signal to prevent persons and vehicles from crossing the track when trains were approaching, was amended to conform with the new rule.

General order 257 cancelled rule 33 and provided a new rule as follows: "33. Watchmen stationed at public road crossings must, by day, display a standard metal disc, and, by night, a green light, to warn pedestrians and persons in vehicles that a train is approaching. Red signals must be used by them only when necessary to stop trains."

The Board passed general order 370, Sept. 6, as follows: Re general order 368, Aug. 10, 1922, amending General Train and Interlocking Rules by striking out rule 33 thereof and substituting therefor the rule set forth in the order. Whereas it appears that the said rules do not apply to certain railway companies incorporated elsewhere than in Canada, owning, controlling, operating or running trains, or rolling stock, upon or over lines of railway in Canada, either wholly owned, leased, or operated by such companies, and that said companies had been operating under their own rules; and whereas it is deemed desirable in the interest of uniformity in the operation of railways in Canada that rule 33 prescribed by general order 369 should have general application, the Board therefore orders that every railway company incorporated elsewhere than in

Canada, and owning, controlling, operating or running trains or rolling stock upon or over any line or lease of railway in Canada, either owned, controlled, or operated by such company or companies adopt and put into effect forthwith in connection with the operation of their trains in Canada the following rule, viz: "Watchmen stationed at public road crossings must, by day, display a metal disc (16 in. in diameter, white background, with the word 'Stop' in large black letters, and a black border); and, by night, a red light, to warn pedestrians and persons in vehicles that a train is approaching. Where gates are provided, a red light, hooded so as to show to the highway only, must be displayed by night."

Freight Car Location on Canadian Railways.

The Railway Association of Canada has issued a report on the location of freight cars on Sept. 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Central Vermont, in Canada; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Michigan Central, in Canada; Napierville Jct.; Pere Marquette, in Canada; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo; Wabash, in Canada, as follows: Cars owned by reporting railways, 221,890; home cars on Canadian foreign lines, 16; home cars on U.S. lines, 42,481; home cars on home roads, 162,440; Canadian owned foreign cars on home lines, 14,521; U.S. owned foreign cars on home lines, 21,027; total cars on lines, 397,988; per cent on line to total owned, 89.2; deficiency on line to total owned, 23,902; home cars in bad order, 14,563; foreign cars in bad order, 347; per cent in bad order, 3.7. Privately owned U.S. cars on lines, 1,904; privately owned Canadian cars on lines, 1,295.

The Steel Wage Increase and Its Relation to Railway Wages.

In rehearings before the United States Railroad Labor Board affecting wages of maintenance of way employees, effective July 1, counsel for the employees laid great stress upon the recent increase of 20% in wages granted by the United States Steel Corporation. John G. Walber, representing eastern railways, in this connection, said in part: "The hourly rate of pay by the Steel Corporation in 1915 was 20c. This rose to 50.6c in Feb., 1920. The hourly rate, including the present increase by the steel corporation, will be 70c, which shows that the present rates of this corporation are 80% over 1915. In the eastern territory the average hourly rate on the railways in 1915 was 16.6c an hour, and the average hourly rate of the maintenance of way employees under the decision effective July 1, last, is 37.1c compared to the Steel Corporation rate of 36c, so that the average hourly rates of the railways in the eastern territory is 123.5% greater than in 1915 as compared with 80% for the Steel Corporation." Mr. Walber pointed out that the Steel Corporation's prices have increased 17% since Feb. 1, while freight rates on the railways were decreased 10% by the Interstate Commerce Commission.

Motor Car, Hand Car, Velocipede and Push Car Operating Rules.

The Railway Association of Canada has issued the following circular: The following regulations to govern the use and operation of motor cars, hand cars, velocipedes, and push cars, have been prepared by the Railway Association at the Board of Railway Commissioners for Canada's suggestion, to assist in the establishment and observance of safe practices in the handling of the vehicles above mentioned. It is recommended that member railways adopt these rules as standard on their respective lines:—

1. No motor car, hand car, or similar vehicle is to be operated on the railway without permission of the proper authority. Each vehicle of this character must be placed under the control of one individual, who will be responsible for its operation.

2. No person or persons, except employees in the discharge of their duty, shall be allowed to ride on such cars on the tracks of the railway without holding special permission from the proper authority.

3. The person in charge of the operation of car must, when practicable, inform himself of the movement of trains.

4. Immediately after starting, brakes must be tested, to ensure that they are in proper working condition.

5. All cars not in actual use must be lifted off track, or otherwise placed clear of passing trains. They must not be left on or near road crossings. When unattended, they must be locked and the key retained by the person authorized to use the car.

6. When approaching railway, street, and highway crossings and switches, cars must be under full control, and prepared to stop immediately. Cars must not be run over crossings protected by gates, until the gates are down, or over crossings protected by flagmen, until given "Proceed" signal by flagman.

7. Cars loaded with rails, gages, ties, or similar material, must not go on main track without protection, as set forth in the company's rules.

8. Rails, frogs, or similar material must not be carried on motor or hand cars, except in cases of emergency. Water kegs, track jacks, and other tools likely to derail car if they were to fall off, must not be carried on or near front of car.

9. Motor, hand, or push cars must not be attached to a train.

10. Cars must not be run after sunset, or during foggy or stormy weather, except in cases of actual necessity. In such cases, and also in passing through dark tunnels, on single track, a red light must be displayed to the front and to the rear, and on double track a white light to the front and a red light to the rear. During fogs and storms, flagmen should be sent out in each direction, and the car run no faster than flagman can walk.

11. Cars must not be run closer than 500 ft. behind moving trains; the space between two motor cars, a hand or velocipede car and a motor car, must not be less than 500 ft.; the space between two hand cars must not be less than 300 ft. The car in advance should signal the following car before stopping.

12. Motor, hand, and velocipede cars must be run with great caution around obscure curves and approaching tunnels, and must be stopped frequently, so that approaching trains may be heard.

13. Hand cars, unloaded push cars, and velocipedes must be lifted from one track

to another, instead of turning switches. When necessary to use switches, they are to be turned only under supervision of the foreman, who will be held responsible for seeing that they are left properly set and locked.

14. In all cases a lookout must be kept in each direction, whether on single or double track.

15. Cars must be operated with care in passing trains receiving or discharging passengers at stations, and must not run between such trains and the station.

16. Hand or push cars must not be pushed ahead of motor car.

17. Employees must not get on or off motor cars when in motion, except when necessary in starting. The use of seats on hand cars is forbidden.

18. Employees in charge of the operation of motor cars must not permit occupants to sit in insecure or careless positions.

19. Motor cars must not be inspected with matches or torches.

Rules 3, 7, 10 and 12 do not apply to motor cars operated by train order.

Change in Maintenance of Way Flagging Rules for Impassable Track.

The Board of Railway Commissioners issued general order 368, June 29, providing for a change in regulation 9 of the rules in connection with flagging trains on account of impassable track. These rules were consolidated by general order 248, Aug. 12, 1918, which was published in full in Canadian Railway and Marine World for Oct., 1918, p. 433. By general order 280, Dec. 23, 1920, p. 113, a change was made in regulation 9. General order 368, issued recently, rescinded general order 280 and general order 248 is amended by a further change in regulation 9.

The original regulation 9, as given in general order 248, was as follows: "That the Brennan signal device, as approved by the Board, or a signal of an equally serviceable type, attached to the base of the rail, to be approved by the Board, be used to display the signals directed under rules 3 (b) and 6 (yellow signal) of this order, and rule 35 (yellow signal) of the Uniform Code of Operating Rules."

By general order 280, this regulation became as follows: "That a signal of a serviceable type, to be approved by the Board, be used to display the signals directed to be provided under rules 3 (b) and 6 (yellow signal) of this order and rule 35 (yellow signal) of the Uniform Code of Operating Rules."

General order 368, revising regulation 9 to date, is as follows: "Upon reading the reports of its Chief Operating Officer, the Board orders that: 1. General order 280, Dec. 23, 1920, be rescinded. 2. General order 248, Aug. 19, 1918, be amended by striking out regulation 9, on page 2 of the order, and substituting therefor the following, namely, viz.: "9. That a signal of a serviceable type, consisting of a bunting flag, 22 x 28 in., five feet above rail level, supported by any satisfactory device which will securely maintain such flag in proper position, be used to display the signals directed to be provided under rules 3 (b) and 6 (yellow signal) of this order, and rule 35 (yellow signal) of the Uniform Code of Operating Rules."

Railway Earnings.

Canadian National Railways.

Following are total operating revenues, total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry. System, Grand Trunk Pacific Ry. and Canadian Government Ry., the last including the Intercolonial Ry., Prince Edward Island Ry. and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government:—

	Revenue	Expenses	Net
	1922	1921	1922
Jan.	\$5,210,401	\$10,435,564	\$2,228,163
Feb.	6,694,145	10,926,572	2,376,929
March	7,418,198	10,977,087	2,558,889
April	7,804,222	9,153,738	1,349,216
May	9,678,965	7,736,029	17,055
June	10,401,367	7,436,666	2,964,701
July	8,877,776	10,510,778	1,633,062

\$59,875,810 \$70,447,811 \$10,572,001 \$17,604,020

Deer. \$6,620,100 \$13,552,519 \$6,932,019

Approximate earnings for August, \$9,407,184, and for two weeks ended Sept. 14, \$19,083,119, against \$12,736,462 and \$15,916,356 for same periods, 1921.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1922 compared with those for 1921. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are due to the fact that the C.P.R. is, at its request, furnished with figures by the C.P.R., including the Esquimaux & Nanaimo Ry., and the Kootenai & Astoria Ry. and Quebec, which are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net	Decreases
	1922	1921	1922	1921
Jan.	\$1,337,976	\$1,054,498	\$488,477	\$117,948
Feb.	1,308,693	1,049,200	259,493	193,304
March	1,847,627	1,427,120	2,420,097	30,402
April	1,233,571	1,182,058	1,648,774	1,097,539
May	1,666,646	1,319,732	2,344,514	949,038
June	1,810,448	1,448,134	2,362,313	742,446
July	1,463,835	1,250,927	1,961,908	92,408

\$90,759,194 \$78,983,214 \$11,775,980 \$3,228,662

Deer. \$9,067,407 \$5,840,995 \$3,226,402

Approximate earnings for August, \$15,515,000, and for two weeks ended Sept. 14, \$27,225,000, against \$20,998,000 and \$28,885,000 for same periods, 1921.

Grand Trunk Railway.

Following are total operating revenues, total operating expenses and net operating revenues, or deficits, for 1922:—

	Gross	Expenses	Net	Revenue
	1922	1921	1922	1921
Jan.	\$5,045,317	\$4,983,533	\$360,984	\$770,166
Feb.	6,667,487	4,700,985	966,502	31,374
March	6,118,314	5,153,028	965,286	877,680
April	4,901,367	4,398,665	502,701	382,272
May	6,800,329	5,189,756	1,610,572	324,185
June	6,603,646	5,619,124	984,523	712,028

\$34,345,460 \$30,144,514 \$4,200,948 \$1,326,794

Incr. \$2,000,150 \$4,871,364

*Deficit.

Approximate gross earnings for July, \$9,820,641; August, \$10,635,145, and for two weeks ended Sept. 14, \$4,278,684, against \$9,472,261, \$10,231,232 and \$4,733,096 for same periods respectively, in 1921.

C.P.R. Crossing Accident.—Two boys were killed and 4 persons were injured at the C.P.R. crossing of St. Florent St., Hull, Que., recently, when a motor truck and a C.P.R. train collided. The coroner's jury found that the accident was caused by the negligence of the driver of the truck exceeding the speed limits at the crossing, and "also by reason of negligence on the part of the C.P.R. in that it did not give sufficient protection to Hull citizens at this crossing." The jury also strongly recommended to the Board of Railway Commissioners that railway companies be compelled to place gates at all level crossings.

Grenville Crushed Rock Co., which is located between Merrickville and Kemptonville, Ont., is supplying large quantities of crushed stone for the C.P.R. and is said to have still in sight two or three years' supply of rock. It has discarded its old steam plant and is now taking 400 h.p. from the Hydro-Electric Power Commission of Ontario.

The Bad Order Car Situation.

The Railway Association of Canada reports the total number of freight cars on Canadian lines, for the period ended Sept. 1, as 197,988. The allowance for bad order cars on the A.R.A. basis, which assumes a total of 7% of the cars in bad order, was 13,859, and the actual number of cars in bad order was 14,910, an excess of 1,051 on the 7% basis. The figures 14,910 represent 7.5% of the cars in bad order. There were 15,871 surplus cars in good order, making the total not in use 30,781, or a total of 16,922 idle cars, on the basis of 7% of the cars being normally in bad order.

The Railway Association's Car Service Division reports that the total number of freight cars on line on class 1 roads in the U.S. on Aug. 15 was 2,257,391. Of these, 335,575 were in bad order, these figures representing 14.8%, compared with 15.3%, Aug. 1. Out of 1,032,868 box cars, 154,981, or 15%, were in bad order; out of 57,658 refrigerator cars, 8,624, or 15%; out of 949,731 roadsters, 145,011, or 13.2%; out of 80,787 stock cars, 10,648, or 13.2%; and out of 94,677 flat cars, 12,670, or 13.4%, were in bad order.

From the figures showing the Canadian bad order car situation, it is evident that the railways have their rolling stock in good condition to meet the demands occasioned by the heavy autumn traffic, and from the U.S. figures it appears that to Aug. 15 the shopmen's strike has occasioned no deterioration of freight equipment, as about 15% of the U.S. freight cars have been in bad order for the past two years.

Canadian National Railway's Locomotive Terminal Construction at Moncton.

Canadian Railway and Marine World for Dec., 1921, contained a very complete description of the new yards and locomotive terminal built at Moncton, N.B., by the Canadian National Ry., together with illustrations showing the terminal location with relation to lines radiating from Moncton, the terminal layout, and details of the principal buildings. S. B. Wass, Terminal Engineer, who was in charge of the construction at Moncton, and who is now in charge of the Mount terminal yard work near Fort William, Ont., read a paper on the Moncton work before the Engineering Institute of Canada's Winnipeg branch, recently, in which he gave the following summary of material used in the work and material handled: Excavation by steam shovel, 158,000 cu. yd.; trenching for sewers, 4,960 cu. yd.; trenching for water pipes, 3,690 cu. yd.; foundation excavation for buildings, asphalt, tanks, etc., 12,670 cu. yd.; concrete poured, 5,315 cu. yd.; brick laid, 1,190,400; British Columbia timber, 392,000 lb. b.m.; other timber and lumber, 1,025,000 lb. b.m.; steel water tank, 150,000 gal.; structural steel, 57 tons; reinforcing rods, 31 tons; reinforcing rails, 13 tons; sewer pipes, 3,583 ft.; cast iron water pipes, 5,460 ft.; hot air pipes, 2,350 ft.; wrought iron piping, 11,600 ft.; stand pipes, 4; fire hydrants, 5; permanent tracks, 7.03 miles; permanent switches, 43; ballast and sleepers, 1,000 cu. yd.; roof area, 1,073 square ft. glass area (approx. 10,000 lights), 8,300 sq. ft.

Mr. Wass' description of how the turntable was transferred from the old to the new locomotive house is also of interest. He said: "The table was put out

of service at the old house at 8 a.m., and was raised out of the pit, without moving deck or rails, by a 75-ton wrecking crane, by a rather unique method. The crane lifted one end of the table, blocking was placed under the center, the table was then tilted over the blocking, and the opposite end blocked up. By repeating this several times, the table was raised high enough to permit car trucks, with specially constructed bolsters, to be pushed under it. The table was transferred to the new site by 4 p.m., where it remained till the following morning. During the night the crane was taken away on other service, and it returned at 11 a.m. By reversing the tilting process, the table was lowered into the new pit, and at 4.30 p.m. the first locomotive went into the new house."

Radiotelegraph Receiving Equipment on Trains.

A live stock and demonstration train, which the C.P.R. has been operating in the prairie provinces, in conjunction with Dominion and provincial governments, was equipped with a radiotelegraph receiving apparatus, by which market reports, sports results, music, etc., were received by those attached to

the train during the tour. The equipment was installed by D. E. Bankart, radio editor and operator, Winnipeg Tribune. The C.P.R. had made two supports, 3 ft. high, the width of the upper part of a car roof, as shown in the accompanying illustration. In these were set 4 porcelain insulators on bolts, and the aerial wires were strung taut, and the 4 loose ends carried to a high tension wall insulator on the roof, from which was taken a red cable over the roof to the nearest window above where it entered the carriage, passing down the length of the instrument, which included a magnavox. The ground was made by taking a lead to the steam heating pipes which passed right round the car. A copper end was soldered to the wire, to make a good connection, and was bolted to the cleaned pipe. This made a good counterpoise, and proved quite sufficient. It was found that it made no difference to receiving messages, whether the train was being switched, with the consequent humps, or was stationary.

Canadian National Telegraphs have

also been experimenting with radiotelegraphic communication with high speed trains in motion, and an address by D. B. Hanna, President Canadian National Ry., through Toronto Star's broadcasting station, was received on the C.N.R. express between Toronto and Ottawa recently.

Newfoundland Railway and Other Development Plans.

The Great Lakes, Newfoundland & Atlantic Co. is reported to have been formed at St. John's, Nfld., with authorized capital of \$10,000,000, to acquire the franchises, property, and assets of the Newfoundland Railway and Train Ferry Syndicate, and to carry out that company's undertaking. The incorporators of the company are: J. O. O'Neill Conroy, W. J. Wallace and John Fenelon. H. B. Thompson, who represented the original company in Newfoundland, is stated to be connected with the new one. The Newfoundland Railway & Train Ferry Syndicate was incorporated in London, Eng., in 1914, to build railways in Newfoundland, and operate train ferries to connect them with Louisburg, N.S., and Gaspe, Que. The railways which it was proposed should be built were to be from Rantem Bay, Trinity, to Little Southern Harbour, Placentia Bay, in connection with the proposed ferry to Louisburg; and from South West Arm, Green Bay, and from White Bay, to Humbermouth, Bay of Islands, in connection with the proposed ferry to Gaspe. The then Newfoundland Government granted the company a number of concessions conditional upon the carrying out of the plans. However, the war came on and the big project, like many others, fell into the background. It is now being brought forward again, at a time when the Reid Newfoundland Co. is endeavoring to do something definite in the way of developing its great Humber River Valley concession. (May, 1914, p. 214.)

In connection with the project for the development of the Humber River Valley concession, in which Sir W. G. Armstrong Whitworth & Co. are interested, H. R. Reid, President, C. O'Neill Conroy, General Counsel, J. P. Powell, and J. N. Forbes, directors, Reid Newfoundland Co., went to England recently. The Premier of Newfoundland, Sir Richard Squires, also went to London at about the same time. It is stated that the object of their visit was to endeavor to secure a guarantee of principal and interest of the company's bonds by the Imperial Government. The financial end of the negotiations is being carried on in England by the Newfoundland Banking & Trust Corporation. The matter came before the Imperial House of Commons in the form of a question, and the Young, on behalf of the Government, is reported to have stated that an application had been made to the Trade Facilities Act advisory committee for a guarantee in respect of £2,000,000, being part of a loan of \$18,000,000 for the enterprise. The Government did not propose to interfere in any way with the committee's consideration of the application. It is reported in Newfoundland that the arrangements between the company and the Government are practically completed, except upon two points, viz.: whether the contract is to be submitted to the country for approval before being finally signed, and a proposal by the Premier, that the contract shall be widened, so as to include the operation of the Newfoundland Ry.

Panama Locomotives on G.T.R. Western Lines.

In answer to an enquiry by a correspondent, it was stated in Canadian Railway and Marine World for April, pg. 175, that the 12 Panama locomotives on the G.T.R. Western Lines, were built in 1906 by Brooks Locomotive Works, Dunkirk, N.Y., and are what is commonly known as 2-6-0, or mogul type; that they were built for the United States Government, and used in the construction of the Panama Canal, hence their name; that when the canal was complete, a number of them were shipped back to the U.S., being purchased by second hand machinery companies; that 12 of them were bought by the G.T.R. for its Western Lines, and that they were being used in switch and way freight service. One of our subscribers, Arlington Bryant, of Detroit, Mich., has sent us their general dimensions as follows:

Weight of engine.....	147,500 lb.
Weight on drivers.....	127,400 lb.
Cylinders, diam. and stroke.....	26 in. x 26 in.
Diam. of drivers.....	63 in.
Steam pressure.....	180 lb.
Boiler diam.....	64 in.
Tubes, no.....	316
Tubes, diam.....	2 in.
Tubes, length.....	12 ft. 3/4 in.
Heating surface, tubes.....	2,029 sq. ft.
Heating surface, firebox.....	331 sq. ft.
Graze area.....	109 1/2 x 41 1/2 in.
Firebox dimensions.....	109 1/2 x 41 1/2 in.
Driving wheel.....	22 ft. 8 in.
Engine wheel, base.....	22 ft. 8 in.

Locomotive Stokers for Canadian National Railways.

As stated in Canadian Railway and Marine World for September, pg. 464, good progress is being made with the installation of duplex locomotive stokers on Canadian National Rys. locomotives at Moncton, N. B., and Transcona, Man. At Moncton, 10 Santa Fe locomotives, nos. 4025-26-27-29-31-32-33-34-35-36, are being equipped, the first being 2-10-2 locomotives with 26 x 32 in. cylinders, 57 in. drivers, 200 lb. per sq. in. boiler pressure, 64,500 lb. tractive effort, 257,800 lb. weight on drivers, weight of engine 319,300 lb., and weight of engine and tender in working order 518,100 lb. To the end of August, stokers had been applied on locomotives 4029, 4031, and 4026, the work being done as the locomotives were shopped for general repairs. Up to the end of August only one locomotive at a time of this class was being put through the shop, but it was expected that they would be put through in pairs beginning Sept. 1, in which case it is probable all the 10 will be equipped by Oct. 15.

At the Transcona shops, work is proceeding on the application of stokers to 10 mikado locomotives and 5 heavy consolidations.

In applying the stokers on the Santa Fe locomotives, two holes have to be cut through the boiler back-head and fire-box door sheet, one on either side of the fire door, and 12 in. diameter tubes are applied by electric welding, to accommodate the stoker's distributor tubes. The foot plate casting has to be cut away in one or two places, to clear the stoker mechanism, and the cab had to be reconstructed at the bottom, to clear the conveyor trough and drive shaft, a new cab bracket being used on the right side and a substantial plate applied to brace the cab together at the back of the foot plate. Two 2 x 2 1/2 in. openings are made in the top of the cab, directly above the elevators, to facilitate lifting them, if necessary for

repairing, and the cab vestibule is extended down to clear the conveyor trough. The tenders of these Santa Fe's were previously equipped with horizontal coal pushers, in equipping with the stokers, these coal pushers are removed and the tank cut out, and slide plates and supports, angles, and brackets applied to take the stoker conveyor trough. The stoker application entails considerable work, as in addition to the changes mentioned, the fittings on the boiler back-head, piping in cab, power grate shakers, etc., have to be completely rearranged.

The first regular run of the first Santa Fe locomotive to be equipped at Moncton, No. 4029, was made on Aug. 11, from Moncton to Truro, 125 miles, with full tonnage. The total time on the road was 9 hr. 25 min., with 3 hr. 10 min. detention, giving a net running time of 6 hr. 25 min.

Thus the average actual running speed for the trip was 19 1/2 miles an hour, a performance which we are officially advised, it would be impossible to duplicate with a hand fired locomotive of this class.

The stokers, which were made by the Canadian Westinghouse Co., Hamilton, Ont., under the supervision of H. C. Woodbridge, of the Locomotive Stoker Co., Pittsburg, Pa., have all been delivered.

Algoma Eastern Railway Operat- ing Results.

The Lake Superior Corporation's report, for the year ended June 30, contains following references to the Algoma Eastern Ry. Co.: The complete cessation of operations of the International Nickel Co., and other industrial concerns upon which the railway is dependent for its principal traffic, is reflected in the earnings of the company for the fiscal year. The reduction in the tonnage of mining and other products hauled is compared with the previous year as approximately 1,000,000 tons. As a result of this the company is not yet in a position to pay the half year's interest on its first mortgage bonds, which was due March 1. It is fully expected, however, that this condition is only temporary. It is understood that the mining, smelting and refining operations of the International Nickel Co. will be resumed about Sept. 1, on a basis which will furnish ore traffic to the railway of approximately 50,000 tons a month. Coal, coke, quartz and other mining supplies will be shipped in proportion. The physical condition of the property is excellent and will continue to be maintained.

Operating expenses for year ended June 30, 1922.....	\$8,225.28
Net earnings from operations.....	5,655.67
Other income.....	513,884.21
Interest and Rental Charges.....	\$124,976.00
On 1st mortgage bonds.....	12,885.75
On equipment trust bonds.....	31,307.78
On advances from Lake Superior Corporation.....	54,000.00
Rental of terminal prop- erty.....	5,021.16
Other rentals.....	\$228,191.09
Less, interest on bank ac- counts, etc.....	590.14
	227,600.95

Deficit for the year.....\$213,716.74
The Algoma Eastern Ry. Co. owes the Lake Superior Corporation \$653,409.33 on the C.P.R.'s Advances secured on railway's equipment held in trust, \$240,003.23; assigned claims of creditors against railway company, purchased by Corporation, \$217,996.99; unsecured general advances, \$195,409.01.

The Inverness Railway and Col- leries' Position and Future.

A conciliation board which sat recently to deal with the differences between the Inverness Railway & Collieries, Ltd., and its coal mining employees has sent its report to the Labor Department, and is said to have recommended that the company's railway be taken over by the Government and added to the Canadian National Rys. The railway extends from Inverness Jct., about a mile from Point Tupper, N.S., on the Intercolonial Ry., northeasterly on Cape Breton Island, to Inverness, 60.91 miles. There are 4.6 miles of sidings, and the company has a shipping pier at Point Hastings. The line was built by the Inverness, Richmond Ry. & Coal Co., and was acquired by the Mackenzie-Mann interests, about 20 years ago. Several plans were reported to have been considered for the extension of the line, with a view of making it independent of the Intercolonial Ry., and for improving its coal shipping facilities, but nothing came of them.

For the year ended June 30, 1914, the company reported earnings of \$212,911.61; and operating expenses, \$122,586.96, leaving net earnings of \$90,324.65. This is the last return made to the Dominion Government. A meeting of bondholders in Toronto, June 30, 1915, passed a resolution suspending payment of interest on bonds and the provision of a sinking fund, and subsequently the National Trust Co., Toronto, took proceedings for the foreclosure of the mortgage, and the Eastern Trust Co. was appointed receiver. The taking over of the line was considered by the Railways Department, and in Oct., 1919, a price of \$150,000 was fixed for the railway, the equipment and stores to be taken over at a valuation, the price of the whole lot to exceed 175,000, but the transaction was never completed.

American Travelling Passenger Agents' Association in Canada.

The American Association of Travelling Passenger Agents opened its annual meeting in Montreal, Sept. 8, and after a preliminary session and some sight-seeing, the members left there in two special C.P.R. trains. Some members who arrived in Toronto from U.S. points, joined the party at Sudbury, where the first stop was made. At Fort William the party was given a civic reception, and reached Winnipeg, Sept. 11. Members from western United States points joined the party at Winnipeg, having travelled in a special train leaving Minneapolis, Minn., Sept. 10. The entire party was entertained at dinner at the Royal Alexandra Hotel, Winnipeg, at which the Lieutenant-Governor of Manitoba, the Mayor of Winnipeg, and D. C. Coleman, Vice President, C.P.R., were the principal speakers. The entertainment was provided for the visitors, who left the city on the following day, in special trains travelling half an hour apart. Stops were made at Regina, Calgary, Banff and Lake Louise where business was combined with pleasure. Vancouver was reached Sept. 17, and the next two days were spent in the Association's business. On Sept. 18, the party was entertained at luncheon on the C.P.R.'s s.s. Empress of Australia. The Association's business was concluded Sept. 19, when the party was taken on the C.P.R. s.s. Princess Charlotte, to Victoria, leaving there at midnight for Seattle, Wash.

Freight and Passenger Traffic Notes.

The Canadian National Rys. management has prohibited the transportation of beer over its lines, out of Windsor, Ont.

The Canadian National Rys. are reported to have put on 225 new crews of men, each to handle grain trains from western line points.

Grant Hall, Vice President, C.P.R., and several Eastern and Western Lines officials, met in Winnipeg, July 31, to consult as to the winter train schedules.

The Sydney & Louisburg Ry. hauled a train of 237 cars of coal from the assembly yard to Hub Jet, Glace Bay, N.S., on Sept. 6, which it said to have been the longest train ever hauled.

The C.P.R. re-opened its freight yards at Transcona, Man., Sept. 2, to facilitate the handling of the grain crop. These yards are not ordinarily used, but are operated to take care of any excess of traffic.

The C.P.R. has provided a train to travel over its lines in Quebec, for agricultural instruction purposes. The Dominion and Quebec Agriculture Departments provide the instructors and the exhibits.

The Quebec Council of Agriculture, is reported to have decided to take up with the Dominion Government the matter of obtaining special rates of transportation for the exhibitions held in various parts of the province.

The Canadian National Rys. are reported to have moved 663 cars of grain on Sept. 1, the first day of the 1922-23 season. Of these, 351 were from Manitoba points, 280 from Saskatchewan, and 32 from Alberta.

The C.P.R. is reported to be considering utilizing shed 28 on the St. Charles River waterfront, Quebec, for storing import merchandise freight. Shed 26 is being used now, but its location is not so convenient as no. 28.

The Canadian Northern Ontario Ry. (Canadian National Rys.) has been authorized by the Board of Railway Commissioners to close its station at Oshawa, Ont., and the G.T.R. station there will be used in future.

The C.P.R. is reported to have handled 4,660,975 bushels of grain, during the last 10 days in August, against 3,955,185 bushels in the same period of 1921. The number of cars loaded during these 10 days was 2,887, against 2,621 in the same period of 1921.

The C.P.R. commenced, Sept. 24, operating a passenger train, leaving Toronto union station, at 12.30 a.m., Sundays only, arriving Montreal, Windsor St. station, 9.40 a.m. It carries standard sleeping cars, and first class passenger car with smoking compartment, and stops at Peterborough and Smiths Falls.

The Fredericton & Grand Lake Coal & Ry. Co., is reported to be sending out large shipments of coal from its collieries over its railway from Minto to Fredericton, N.B., which is operated by the C.P.R.

A press report states that on Aug. 16, a train of 28 cars of coal, a record shipment for a day, was taken into Fredericton.

The Sydney & Louisburg Ry. is reported to be carrying an exceptionally heavy coal traffic, and in order to cope with it nine brakemen and firemen have been borrowed from the Canadian National Ry. For the week ended Aug. 5, there was reported to have been required for shipment at Sydney pier, over the rail-

way from the collieries, 98,000 tons of coal.

The Alberta Government's attention has been called to what are termed the excessive freight rates being charged on the Lacombe & Northwestern Ry., running from Lacombe to Rimby, Alta., which is owned and operated by the Government. An instance is given where a box of cherries was carried from the British Columbia fruit districts to Lacombe for 55c, and the consignee had to pay an additional 60c for its conveyance over the 30 miles between Lacombe and Rimby.

The U.S. Interstate Commerce Commission made an order recently under which on western freight billed through to and from New England, the proportions to be allowed to New England roads is to be 15% more than heretofore. The C.P.R. and the G.T.R., which were not parties to the case before the Commission, are reported to have accepted the terms of the order voluntarily. According to a Boston, Mass., press report, the Boston Chamber of Commerce announced recently that the revision in rates is retroactive to July 1.

Lester and A. Mayoff were committed for trial in the Montreal Enquete Court, recently, charged with a breach of the criminal code, article 412a. They are alleged to have promised bribes to C.P.R. conductors to permit persons to travel on the line between St. Agathe and Montreal, for \$1. The evidence showed that \$1 was paid to each of the accused on different occasions for transportation to Montreal, and that in return punched bad checks were given. Other persons are said to have been seen dealing with the accused.

The Kettle Valley Ry. has been authorized by the Board of Railway Commissioners to carry freight traffic over the portion of its line from Penticton to the international boundary, B.C., between miles 1.62 and 3.99, at not exceeding 15 miles an hour. This is the branch line from Penticton to the northerly end of Dog Lake, from which point traffic will be carried by towed scows to the south end of the lake. From that point another section of the line is under construction to the irrigation colony. The line will be extended to the international boundary at a later date, and when traffic warrants it, the section which will run round Dog Lake will be built.

Railway Association of Canada Circulars.

The Railway Association of Canada has issued the following circulars:—

Circular 96 dated Jan. 28, 1919, and Supplement 1, dated March 14, 1919, issued by the Canadian Railway War Board in connection with privately owned tank cars, are hereby cancelled. It is understood that Canadian Railways will be governed by the American Railway Association's Circular 2266 B, dated June 17, 1922.

As the Canadian Freight Association's Tariff J-A, effective Aug. 1, 1922, contains regulations governing the weighing of cars and freight, now covered by the Canadian Railway War Board's Circular 118, the latter is hereby cancelled.

Lord Shaughnessy, Chairman, C.P.R. Co., and Vice President, Montreal Jockey Club, presented a silver cup to the Dorval Jockey Club for competition at its autumn meeting.

Telautograph Installation at Montreal.

The G.T.R. has installed in its Bonaventure station, Montreal, a telautograph, by which handwriting is transmitted electrically over wires. The instruments in commercial use include a type by which messages may be either sent or received another type which receives only, and additional equipment includes a selective switch key by means of which a message written on a metal plate in an instrument used in sending, can be directed for written reproduction at any one or more of the receiving instruments used in the system, as desired. The exact handwriting of the sender is reproduced at the receiving instrument at the other end of the wire.

The installation at Bonaventure station is to provide the public with prompt information of train arrivals. For this purpose the sending machine is located in the dispatcher's office, one receiving machine is in the station master's office, for use in connection with the bulletin board, and another is in the information bureau, for the use of counter clerks and public information telephone operators.

The machines are operated on direct current. To transmit a message a special pen is used, which is connected to the transmitting machine by guide rods. As the message is written on the metal plate, every impression is exactly recorded in indelible ink, on a paper tape, and a full view of the writer, and by a very fine adjustment of the current is faithfully reproduced in synchronism on the receiving machine paper tape.

The Hanna No Politics Order.

Toronto Saturday Night says: "When Mr. D. B. Hanna, the retiring President of the Canadian National Rys., ruled to the effect that politics and railroadings should be divorced to the point where any employee of the National system, entering actively into the political arena, would automatically lose his railway job, he was on sound lines. And when the other day Premier King ruled the opposite, in the case of the two Winnipeg candidates in the recent provincial election, he was on dangerous ground. If the National Railways situation is to be bedeviled, politics will be the tool. It has been argued that what the C.P.R. can do in respect to having among its employees members of legislatures, and possibly members of Parliament, the Government Railways can also do. But it should be pointed out that the privately owned C.P.R. can hire and fire without any danger of the matter becoming a subject of debate in the Dominion Parliament, or an issue in an election. Why should government railway hands be an exception to the general rule prevailing among government employees? These labor candidates in Winnipeg are just as much employees of the Government of Canada as they would be if stationed at Ottawa in the Canadian Department. And a rule that applies to an Ottawa Government official in respect to minding his own business, doing his work, and keeping out of politics, should apply also to the railway department. And, furthermore, how can any railway executive hope to succeed in his difficult task when his general orders are not only brazenly disobeyed, but the Prime Minister goes so far as to back up those who disregard established rules."

"The Great Landslides of the C.P.R. in British Columbia."

(Canadian Railway and Marine World, for April, in referring to the death of R. B. Stanton, civil engineer, at New Canaan, Conn., who was mentioned as having been the author of a number of works, including "The great landslides of the C.P.R. in British Columbia," expressed its desire to get a copy of the latter, and we are much indebted to Hugh B. Walkem of Port Haney, B.C., formerly Assistant Engineer, C.P.R., who has given us the following information:—The paper referred to was read by Mr. Stanton before the Institution of Civil Engineers, in London, Eng., of which he was a member, and was published in its Transactions in the latter part of 1896 or beginning of 1897. The article was the outcome of an action brought by the C.P.R. against two ranchers who were irrigating a piece of ground above the railway at Black Canyon, some five miles east of Ashcroft, on the Thompson River, the C.P.R. contending that the irrigation caused slides that threatened the roadbed's stability and the traveling public's safety. Mr. Stanton was retained by the company, as an expert on clays, and gave evidence as to the effect of water on the soil, in causing slides. The C.P.R. lost its case, and the ranchers abandoned their farm. From the title of the article it might be supposed that the C.P.R. had enjoyed a monopoly in slides in British Columbia, but several slides occurred in the district referred to, which were not a menace to the track in any way, and which were caused by irrigation. The first and greatest slide at Black Canyon occurred in 1880, four years before the railway was built; in fact before it was located, and was caused by overirrigation. Another slide occurred at Spences Bridge, in 1905, which entombed 16 Indians and wiped out their village and graveyard. This occurred on the right bank of the Thompson River, and did not affect the C.P.R., which is on the left bank, and was about the third or fourth slide at that point caused by irrigation. Mr. Walkem has an intimate knowledge of the slides, both during construction and maintenance of the railway, and did much to stop their movements finally.

Aerial Transportation Notes.

The Aerial Survey Co. is reported to have received 3 new aeroplanes at Botwood, Nfld., from England for survey, mail transportation, and general transportation work.

Giuseppe Pagliacci, who is spoken of as having been a celebrated Italian aviator during the war, is reported to be working as a freight handler in the G.T.R. at Depot Harbor, Ont.

Lt. Col. Broome sailed from Victoria, B.C., Aug. 10, for Japan, to prepare stations on the Kamchatka Peninsula and the Aleutian Islands for the Blake aeroplane flight round the world, which is since reported to have been abandoned.

A London, Eng., cablegram states that the Civil Aviation Advisory Board on Imperial mail services suggests that the Imperial Government should grant a considerable measure of financial assistance to efficient civil attempts to keep open the Empire's airways.

Major E. MacLaurin, in charge of the Dominion Government aeroplane station

at Vancouver, B.C., was drowned Sept. 11, when a seaplane which he was piloting plunged into shallow water on the Point Grey shore of English Bay. A passenger sustained a broken leg, and the mechanic was injured in the back.

The Laurentide Airship Co., which is carrying on forestry survey and patrol operations from Grand Mere, Que., had one of its hydroplanes wrecked on the Saguenay River, near Tadoussac, Aug. 5. The plane had made a landing in the river, and was about to rise again, when it came in contact with a submerged log, which ripped out a large part of the bottom of the machine.

A London, Eng., cable states that arrangements are projected to operate a mail and passenger airship service between London, Eng., and Bombay, India, the ships to have a capacity of 5,000, 6,000 cu. ft., to be capable of flying 80 miles an hour, and to carry 200 passengers, the trip is to be made in three days, and the fares to be charged \$300 for 1st. class accommodation, and \$175 for 2nd. class.

The Canadian Forestry Association has issued a pamphlet, in which it is stated that about 3,000 forest fires have been reported since the beginning of 1922, and that airplanes and seaplanes have been used to great advantage in locating fires and in reducing losses. Excellent work has been done in British Columbia, where 1,400 fires were reported, and in Central Quebec, which passed through its worst forest fire experience for many years.

The Dominion Government aeroplane station staff at Jericho Beach, B.C., according to a press report, has made 997 flights in about two years to July 21, flying 42,851 miles and carrying 1,700 passengers, the total passenger mileage being 436,084. The work done includes forestry reconnaissance, photography and patrol; photographic survey, exploration, communication, demonstration and transportation, geodetic survey work and customs patrol.

Radio stations have been established at the Victoria Beach and Norway House aeroplane stations, in Manitoba, for use in connection with the Dominion Forestry Service. The distance between the two stations is approximately 300 miles. As an illustration of the value of the radio adjunct to the service, a forest fire was located in the vicinity of the Norway House station, on the morning of July 29, and within a few hours the available forces of the service were fighting the fires, which were got under control by night.

The Aerial Survey Co., which is making surveys at Hawkes Bay, Nfld., had a difference with it employed recently, as to wages. Major Cotton, went to Hawkes Bay to effect a settlement, but the men refused to accept it, and struck. About 150 of the men assembled at Hawkes Bay, and on Sept. 5, boarded the Reid Newfoundland Co's s.s. Home, and demanded to be taken to Humbermouth. On their demand being refused they took charge of the ship and it is reported they carried out their object; being subsequently taken to St. John's by train.

The Sinclair Construction Co. Ltd. has been incorporated under the Dominion Companies' Act with authorized capital of \$150,000 and office at Toronto, to carry on business as general contractors for the construction and equipment of public and private works and as an engineer, including railways, tramways, docks, harbors, piers, wharves, canals, etc. It will take over the business carried on by the late Angus Sinclair.

Buffalo and Fort Erie Public Bridge Co.

The House of Commons passed a bill at its recent session incorporating a company with this title to build a general traffic bridge, with electric railway tracks, across the Niagara River, from Walnut St., Fort Erie, Ont., to Hampshire St., Buffalo, N.Y., the company to have power to charge tolls. On the bill coming up for its second reading in the Senate, Senator Robertson opposed its principle, and stated that while improved facilities are needed between Fort Erie and Buffalo, they should be provided by the Government completing the building of a second track on the G.T.R. bridge, which now has a double track from Buffalo to an island in the middle of the river, and by the addition of facilities for general traffic. The revenue derived from tolls, he thought, would compensate the Government for the expenditure. When the bill subsequently came before the railway committee it was rejected on the ground that it was not at present in the public interest to authorize the construction of such a bridge.

Baggage-man Fined for Drunkenness.

Frank Lang, a former C.P.R. baggage-man, was fined \$400, or in default 6 months imprisonment at the Montreal Court of Special Sessions recently, for being under the influence of liquor when on duty, at Windsor St. station, Montreal, March 8, 1920, in contravention of Sec. 423 of the Railway Act of 1919. When the case was originally heard by the Court of Special Sessions, a verdict of not guilty was recorded on the ground that no evidence had been offered that his occupation had anything to do with the operation of trains. A reserved case upon this point was stated for the Court of Appeal, and after hearing arguments the court sent the case back to the Court of Special Session for supplemental details, including a definition of a baggage-man's duties. These having been supplied, judgment was delivered in Dec., 1921, by the Court of Appeal, a majority of the judges holding that Lang's duties as a baggage-man included acting as a trainman when required so to do, and directing that the case should go back to the Court of Special Sessions for disposition according to the Railway Act, sec. 423, the finding of not guilty being quashed. This decision was subsequently confirmed by the Supreme Court, and the decision referred to above is the disposition of case under the section. It is stated that an appeal will be made against the sentence.

Misplaced Familiarity.—An east end matron got the shock of her life over the telephone the other day. She is extremely dignified, and conducts her whole life in keeping with a calm staidness that is increasing with the whitening of her hair. In her quiet, slow, perfectly self-possessed manner and tone of voice she called the Pennsylvania station, requested "Information," and from the person at the other end of the wire enquired concerning trains to a certain town. Imagine her emotion when said voice flippantly rasped out: "What time of the day do you want to go, girly?"—Pittsburg Chronicle-Telegraph.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines Ltd.—R. BROCK THOMSON has been appointed Secretary, vice F. Percy Smith, resigned on account of ill health. Office, Montreal.

Canadian National Ry.—J. E. ARMSTRONG, heretofore Chief Dispatcher, Grand Trunk Pacific Ry. portion of Biggar Division, Alberta District, Edmonton, has been appointed acting Superintendent of Transportation, Alberta District, vice C. H. Brown, appointed Assistant Superintendent, Biggar Division. Office, Edmonton, Alta.

C. H. BROWN, heretofore Superintendent of Transportation, Alberta District, Edmonton, has been appointed Assistant Superintendent, Biggar Division, with

vice J. T. Armstrong, appointed acting Superintendent of Transportation, Alberta District. Office, Edmonton, Alta.

Canadian Pacific Ry.—H. W. BRODIE, heretofore General Passenger Agent, lines west of Revelstoke, B.C., Vancouver, has been appointed Assistant Passenger Traffic Manager, Eastern Lines, vice C. B. Foster, whose appointment as Passenger Traffic Manager, Rail Lines, Montreal, was announced in our last issue. Office, Montreal.

G. BRUCE BURPEE, heretofore General Agent, Passenger Department, Cleveland, Ohio, has been appointed District Passenger Agent, Rail and Steamship Lines, New Brunswick District, vice N. R. Des Brisay, appointed Assistant General Passenger Agent, at Vancouver. Office, St. John, N.B.

ALLAN CAMERON, heretofore Superintendent, Land Branch, Natural Resources Department, Calgary, Alta., has been appointed Oriental Manager, C.P.R. and Canadian Pacific Steamships Ltd., Hong Kong, China, and not Oriental Manager, Canadian Pacific Steamship

Toronto, has been appointed Assistant General Passenger Agent, Eastern Lines, vice W. Maughan, appointed Assistant to General Passenger Traffic Manager. Office, Montreal.

R. G. McNEILLIE, heretofore Assistant General Passenger Agent, Western Lines, Winnipeg, has been appointed General Passenger Agent, lines Field, Kootenay Landing and east, vice G. A. Walton transferred to Montreal. Office, Winnipeg.

W. MAUGHAN, heretofore Assistant General Passenger Agent, Eastern Lines, Montreal, has been appointed Assistant to General Passenger Traffic Manager. Office, Montreal.

W. H. SNELL, heretofore General Passenger Agent, Eastern Lines, Montreal, has been appointed General Passenger Agent, lines west of Field and Kootenay Landing, vice H. W. Brodie,

G. A. Walton,
General Passenger Agent, Eastern Lines, C.P.R.

jurisdiction over Bashaw, Cutknife, Dodds, Porter, Three Hills, Viking and Unity Subdivisions, vice M. H. Stuart. Office, Biggar, Sask.

F. H. KEEFE, heretofore dispatcher, Biggar, Sask., has been appointed Chief Dispatcher there, vice T. S. Sullivan, appointed Chief Dispatcher at Edmonton, Alta.

J. P. JOHNSON, heretofore Assistant Superintendent, Prince Albert, Sask., has been appointed Superintendent, Prince Albert Division, a new division which has been established, comprising the lines from Prince Albert to Hudsons Bay Jct.; Melfort to Humboldt; junction with Prince Albert Subdivision to Ridgedale; Shellbrook to Big River; Young to Cudworth Jct.; and Prince Albert to Warman, not including Warman. Office, Prince Albert, Sask.

T. S. SULLIVAN, heretofore Chief Dispatcher, Biggar, Sask., has been appointed Chief Dispatcher, Grand Trunk Pacific Ry. portion of Biggar Division,

William Fulton,
District Passenger Agent, C.P.R., Toronto

Lines, as stated in our last issue.

N. R. DES BRISAY, heretofore District Passenger Agent, New Brunswick District, St. John, N.B., has been appointed Assistant General Passenger Agent, Western Lines, Field, Kootenay Landing and east, vice R. G. McNeillie, appointed General Passenger Agent, at Winnipeg. Office, Winnipeg.

W. FULTON, heretofore Assistant District Passenger Agent, Toronto, has been appointed District Passenger Agent there, vice W. B. Howard, appointed Assistant General Passenger Agent, at Montreal.

G. H. GRIFFIN, heretofore City Passenger Agent, St. Louis, Mo., has been appointed General Agent, Passenger Department, Rail and Steamship Lines, Cleveland, Ohio, vice G. Bruce Burpee, appointed District Passenger Agent, at St. John, N.B.

W. HORDER, heretofore chief clerk, Passenger Department, Montreal, has been appointed Assistant District Passenger Agent, Ontario District, vice W. Fulton, appointed District Passenger Agent there. Office, Toronto.

W. B. HOWARD, heretofore District Passenger Agent, Ontario District,

W. S. Thompson,
Publicity Agent, Grand Trunk Railway.

appointed Assistant Passenger Traffic Manager, Eastern Lines. Office, Vancouver, B.C.

G. A. WALTON, heretofore General Passenger Agent, Western Lines, Winnipeg, has been appointed General Passenger Agent, Eastern Lines, vice W. H. Snell, transferred to Vancouver, B.C. Office, Montreal.

Grand Trunk Ry.—GEORGE F. ANCRUM, heretofore Assistant to Treasurer, has been appointed Assistant Treasurer. Office, Montreal.

A. B. ATWATER, Assistant to President, Detroit, Mich., after 48 years service with the company, has asked to be relieved from active service, and will be placed on the pension fund, from Oct. 1. The directors in acceding to his request placed upon the company's records their appreciation of his long and faithful service. The office of Assistant to President at Detroit has been abolished, and all correspondence hitherto addressed to him, and pertaining to the company's business, should be forwarded to H. E.

Whittenberger, General Manager, Grand Trunk Western Lines, Detroit.

R. W. DENMAN, of the Treasurer's office, Montreal, has been appointed chief clerk there, vice E. Fleming, appointed Assistant to Treasurer.

E. DONALD, heretofore Land and Tax Commissioner, has been appointed Solicitor, Land and Taxation Division. Office, Montreal.

E. FLEMING heretofore chief clerk, Treasurer's office, has been appointed Assistant to Treasurer, vice G. F. Ancrum, appointed Assistant Treasurer. Office, Montreal.

G. C. JONES, whose position as Assistant to President, with office at Toronto, has been abolished, will, until further notice, be attached to the Vice President and General Manager's office, and perform such special work as may be assigned to him by that office.

R. S. LOGAN, Vice President, Land, Tax and Claims Department, has after 27 years service, asked to be relieved from active service, and will be placed upon the superannuation fund from Oct. 1. The directors, in according to his request, placed upon the company's records their appreciation of his long and faithful service. The office of Vice President, Land Tax and Claims has been abolished, and its functions and the duties performed by its officers have been transferred to the Legal Department, except as follows:—H. A. Palmer, heretofore Assistant, Land and Tax Commissioner, has been appointed Property Commissioner, to deal with all matters connected with the purchase, sale and leasing of the company's lands, reporting directly to the Vice President and General Manager's office. The handling of Government mails, compensation therefor, etc., has been placed under the Traffic Department's jurisdiction.

W. R. McRAE continues as Chief Claims Agent, and reports to the General Solicitor. Office, Montreal.

H. A. PALMER heretofore Assistant Land and Tax Commissioner, has been appointed Property Commissioner, dealing with all matters connected with purchase, sale and leasing of the company's lands, reporting directly to the Vice President and General Manager. Office, Montreal.

J. P. PRATT, heretofore Assistant to General Counsel, has been appointed Assistant General Solicitor. Office, Montreal.

W. D. ROBB, who has been appointed ranking Vice President and General Manager, continues in charge of the Transportation, Construction and Maintenance Departments.

WALTER S. THOMPSON, heretofore Editor, Press Bureau, General Advertising Department, has been appointed Publicity Agent, reporting to the Vice President and General Manager's office.

Reid Newfoundland Co. — E. V. CHESEMAN, Travelling Paymaster and statistical clerk, has resigned to enter private business at Burin, Nfld.

M. A. WHITE, Trainmaster, has also been appointed Claims Agent, vice W. Chard, deceased. Office, St. John's, Nfld.

Train Requests, Not Orders.—The Gohlin, Toronto, says: "Our own correspondent, at the headquarters of the railway brotherhoods, informs us that a strike is expected over the refusal of the employers to abandon 'train orders' in favor of 'train requests'."

German railway passenger rates are, according to a Berlin cable, to be raised 50% on Oct. 1.

Canadian National Railways Construction, Betterments, Etc.

Lunenburg, N.S.—The Board of Railway Commissioners has approved the proposed location of station and freight shed at Lunenburg, and authorized the diversion of track on Lunenburg Subdivision, from station 347-1632 to 367, south of Medway St. and to cross Dufferin, Falkland and Medway Sts.

Limoilou Locomotive House.—A press report states that a locomotive house is being built at Limoilou, Que., by day labor.

Cadorna-Chaudiere Block Signals Installation.—A press report states that automatic block signals are being installed at Cadorna and Chaudiere, Que., 11 miles, on the bridge and Drummondville Subdivision, Quebec District. They are style T2, direct current, 25 signals.

Lachevotie and St. Marc Cut-Off.—The Board of Railway Commissioners has authorized the operation of trains over the cut-off between Lachevotie station and the Canadian Northern Ry. to St. Marc station on the National Transcontinental Ry., mile 47.9 to 50.1 from Quebec. This piece of line was described in Canadian Railway and Marine World, for Jan. 1921, pg. 11.

Graham-Kashabowie Subdivision Connection and Grade Revision.—We are officially advised that the C.N.R. is about to build a diversion between mile 35.65 and 38.59 west of Port Arthur, on the Kashabowie Subdivision, to accomplish a grade reduction of five-tenths of 1%, compensated. In addition, a connection between the Graham and Kashabowie Subdivisions will be built, the connecting line leaving the Graham Subdivision at mile 30.52 west of Fort William, and entering the revised Kashabowie Subdivision line 4.589 ft. west of mile 35.65 west of Port Arthur. The Kashabowie Subdivision is in the Rainy River Division on the Canadian Northern Ry., and the Graham Subdivision is in the Fort William Division, on the Grand Trunk Pacific Ry.'s Fort William branch. The length of the revision will be 2.73 miles, and of the connecting line 0.66 mile.

At the points of connection, the C.P.R. double track line from Fort William to Winnipeg runs between the Canadian National Rys. Kashabowie and Graham Subdivisions' lines. The C.P.R. line parallels the Mattawin River there, and the new Canadian National Rys. connecting line will be carried over the C.P.R. tracks and the river on a bridge about 700 ft. long, with the Canadian National Rys. grade about 30 ft. above the C.P.R.

The building of this connection is intimately connected with the Canadian National Rys. terminal improvements now under way at Fort William, and will enable the large Mount yard now under construction there to serve both Canadian National Rys. lines from the west with maximum economy in the handling of traffic.

The contract for grading and culverts for both diversion and connection has been let to W. A. Dutton, Winnipeg. Tracklaying and ballasting will be done by the railway's own forces. No contract has been let for the bridge work.

Water Supply.—Tenders were received recently for the construction of the following works:—For approximately 12,500 lin. ft. of 8-in. water pipe line in Neeping Tp., Ont.; for the improvement of the water supply in the Little Saskatchewan River near Riverdale, Sask.; for water supply at mile 14.7 Riverhurst Subdivision, Sask.; for approximately 6,500 lin. ft. of 8-in. pipe line

at North Battleford, Sask.; for approximately 3,100 lin. ft. of cast iron pipe line at Lampman, Sask.

Victoria Beach Line Electrification.—Winnipeg papers have been persistently stating that the line from Winnipeg to Victoria Beach, 61 miles, is to be electrified, and that the Manitoba Power Co., which is controlled by the Winnipeg Electric Ry. Co. has offered to supply power for the operation of the branch at a very low rate, from its plant now under construction at the Great Falls of the Winnipeg River. The transmission line from that new development will be in close proximity to the branch, and the necessary connections could, it is said, be made easily. We are officially advised that the C.N.R. management has no present intention of electrifying the line as the expenditure involved would not be justified by the business, and the Winnipeg Electric Ry. Co.'s management advises us that no consideration has been given to the matter.

Dauphin Freight Sheds.—Tenders have been received for the erection of a brick freight shed and office at Dauphin, Man.

Regina Improvements.—A press report states that the old Canadian Northern Ry. locomotive house north of Regina is being taken down and that the material is being salvaged for use in the erection of a 6-stall addition to the North Regina locomotive house. Work is also reported to be well advanced in a new piece of line connecting the Canadian Northern Ry. line to Saskatoon, so as to enable trains to run into North Regina. The yard tracks at North Regina are being extended, and it is reported that all Canadian Northern Ry. buildings are to be removed to North Regina, thus concentrating all the Canadian National Rys. terminals at one point.

Radville Water Supply.—We are officially advised that a contract has been given Gibbs Bros., Lumsden, Sask., for grading an earth dam and spillway at Radville, Sask., for water supply purposes.

Saskatoon Office Building.—Tenders have been received for building an additional story to the office building at Saskatoon, Sask.

Jasper and Lucerne Divisional Points.—The Board of Railway Commissioners sitting at Jasper, Alta., Sept. 12, had evidence in connection with the C.N.R. application, to close the divisional point at Jasper, B.C., and to consolidate it with the divisional point at Lucerne, B.C. Jasper is the divisional point on the Grand Trunk Pacific Ry., and Lucerne is the divisional point on the Canadian Northern Ry. When about 200 miles of track on these two lines were taken up in 1919, and the remaining mileages consolidated into one line between Imrie and Resplendent; there was no necessity for two divisional points, about 22 miles apart. Lucerne is just west of the divide, and Jasper is 290 ft. lower, while the latter has the larger population, and is not a rugged, more remote village, as Lucerne is. It is claimed that Lucerne has the advantage of being 22 miles nearer the area where snow blockades are likely to occur than is Jasper. It is claimed by those who desire the terminal facilities to be concentrated at Jasper, that the buildings there were planned on a larger and more permanent basis than those at Lucerne, and would therefore require a smaller expenditure for the alterations that may be required.

Canadian Railway AND MarineWorld

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir, Donald F. Keir and
Edwin Winfield.

United States Business Representative,
A. Penton Walker, 148 Liberty St., New York.

Member of
Associated Business Papers, Audit Bureau of Circulations,
Canadian National Newspapers and Periodicals Association,
Canadian Press Association.

Authorized by the Postmaster General for Canada,
for transmission as second class matter.

SUBSCRIPTION PRICE, including postage, Canada, United Kingdom, most other British Possession (except Australia), and to Mexico, \$2 a year. Extra postage to United States, 50¢ a year; to other foreign countries, except Mexico, \$1.50 a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or post office money order. If remittance is made by cheque, 15 cents should be added to cover cost of collection, unless cheque is payable at par in Toronto or Montreal.

ADVERTISING RATES furnished on application.
ADVERTISING COPY must reach the publishers by the 10th of the month preceding the date of the issue in which it is to appear.

Unfair Government Discrimination.

The Customs and Excise Department, at Ottawa, has announced that cheques with words indicating that the stamp tax thereon has been paid, may be used by persons to whom a license is issued in accordance with regulations, made under the provisions of the Act of 1922 (sec. 4) to amend the Special War Revenue Act, 1915. Regulation 10 is as follows: "The blank cheques must be forwarded to the American Bank Note Co., Ottawa, who must be advised by the shipper as to the quantity and description of blank cheques in the consignment, the outer covering of the parcel being also marked to indicate the name and address of the shipper. Packages, the gross weight of which exceeds 90 lb., if shipped from Montreal; 60 lb., if shipped from Toronto; or 40 lb., if shipped from Winnipeg, must be forwarded by freight. Under these weights shipment must be made by express. From each of the three places mentioned the parcels are to be forwarded by Canadian Government Railways or Canadian National Express (as the case may be), charges collect."

This direction to people as to what railway they must make their shipments by is a most glaring discrimination. Men in the railway industry, and students of railway regulation, have watched with interest, throughout the years, the gradual throttling of discrimination as practiced by railways, among shippers, by regulatory laws designed to do away with it, but this new departure which now undertakes itself, that of a Government undertaking practices of discrimination among railways, is a development full of significance.

When necessity forced the launching of the Canadian National Ry. enterprise, the common hope and belief was that competition as between the National lines and the Canadian Pacific would be kept on an absolutely fair and proper basis, and that it would be a competition of service, purely and simply. Competition is the life of trade, and modern business sentiment is to the effect that competition must be kept on a plane of honesty, decency and fair dealing. It is only with that kind of competition prevailing that the success all hope will attend the National Railways venture can be a real success. A success based on unfair competition and discrimination. Favoritism shown the National system is not to be desired. In Canadian Railway and Marine World's opinion, the only success worthy of the name to be obtained by the National Railways will be coincident with increased success by the Canadian Pacific—in other words, the success of both enterprises must depend on the country's prosperity and growth and on fair competition and discrimination injected into the railway industry will not advance the common prosperity one iota.

It is probable the traffic in cheques forwarded for embossing will not be very large or very profitable, but it is the principle of the thing which is important. Unless the fact is that the Government saw fit to privately call for tenders on this business, and awarded it to the successful bidder, which was very highly doubtful, it would seem the part of wisdom and fairness for it to withdraw regulation 10, refrain from ordering private individuals to ship their goods by a specified railway, and forever desist from causing any discrimination, or suspicion of discrimination, to taint the atmosphere

of honesty and decency in competition, which should surround the Canadian railway industry.

Another Lame Duck Railway.

The conciliation board which investigated a dispute between the Inverness Ry. and Coal Co. and certain of its employees recently in presenting its report said, in part:—"The men's claim that the company's crippled financial condition is due largely to the losses sustained annually in the operation of the railway, and that the two projects, railway and mine, should be dissociated, involves a question of policy which is perhaps beyond the province of this board to deal with, but it was made to appear so clearly that it was in the interest; not only of the miners and the company, but of the entire district, that the Dominion Government should take over and operate the railway; that the board recommends that some joint action be taken by the men and the company to impress this view upon the Dominion Government." The Canadian National Ry. have already been loaded down with far too many so-called branch lines that have never been made to pay and probably never can be. Several local lines in the Maritime Provinces, and one in Quebec, have been taken over by different Dominion Governments, at prices which, in view of their earnings, were absolutely unjustifiable, and have been tacked on to the Canadian National Ry., making it increasingly difficult to even begin to earn operating expenses, and the practice should stop. The Inverness Ry. & Coal Co.'s line is one that should never have been built, and if the present owners cannot run it, it should be abandoned, and not be taken over by the Government to increase the deficits of the national system.

Howard G. Kelley's Policies.

The Montreal Star, in referring to Mr. Kelley's resignation from the G.T.R. directorate and Presidency, says: "If Mr. Kelley's policies had been more faithfully followed, neither the railway nor the country would be in so desperate a plight." It would be interesting to know what the policies were which were not followed. Presumably the Star knows, and we suggest that it makes them public.

Bunker Coal Rates.—The U.S. Interstate Commerce Commission held an investigation recently concerning the propriety of rates on bunker coal which are lower than the rates from the same points of origin to the same ports on similar kinds of coal for local delivery into ships, and held that the maintenance of such lower rates on coal for delivery at ports to ships, whether as cargo or for bunker purposes, is not in violation of the Interstate Commerce Act, sec. 4, or otherwise unlawful.

Ride Stealers Punished.—W. Kennedy was fined \$5, or in default, 15 days imprisonment, by the Quebec Court of Sessions, recently, for travelling without a ticket on the Canadian National Ry., and W. Baker was fined \$5 or in default 8 days imprisonment, by the Montreal Enquete Court, for travelling without a ticket on the G.T.R.

Canadian Railway Club.—The first meeting for the 1922-1923 season was held in Montreal, Sept. 12, when W. T. Hawes lectured on radio. The 21st anniversary of the Club's establishment was celebrated at the same time.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Cowichan Bay Ry.—A press report states that plans have been filed with the British Columbia Department of Railways showing a line from Deerholm, Vancouver Island, on the Canadian National Ry., to the head of Cowichan Bay, and for a 5-mile line along the southern shore of Cowichan Lake. The main line route will, it is said, cross the Esquimalt and Nanaimo Ry. at Kokisilah, and reach Cowichan Bay near the present wharf. The extension along the south shore of the lake is intended to reach Bear Lake, where wharves are to be built.

Dominion Atlantic Ry.—A press report states that a spur line is nearly completed at Digby, N.S., for use in connection with the shipping facilities of the port. This is probably one of the five spur lines, of the construction of which during the year we were advised in July. (Aug., pg. 409.)

Drum Lamin Mines Ry.—A press report states that work on the railway from Hartley Bay, B.C., to the company's mines is progressing rapidly, it being about 50% completed. A wharf, 1,100 ft. long is reported to have been completed at Hartley Bay, on which the railway will run. It is expected that the first shipments of ore will be made early in October.

Esquimalt and Nanaimo Ry.—G. A. Mountain, Chief Engineer of the Board of Railway Commissioners, Ottawa, inspected the work in progress on the new Johnston St. bridge at Victoria, B.C., recently. (Sept., pg. 458.)

Lacombe & Northwestern Ry.—The Alberta Minister of Railways completed a trip of inspection over the 16-mile extension, under construction from Rimbey, Alta., northwesterly, recently, and is reported to have stated on his return to Edmonton that it was expected to have the extension finished this autumn. (Sept., pg. 458.)

Michigan Central Rd.—The Board of Railway Commissioners has authorized the M.C.R. to build a bridge over the Niagara River, just below Niagara Falls, Ont. This approval is for a bridge to replace the company's present cantilever bridge, built in 1882, the reconstruction of which has been under consideration for a considerable time. As the bridge connects the company's Canadian line with its line into Buffalo, N.Y., the U.S. authorities' approval is also required. (Aug., pg. 410.)

Quebec Central Ry.—Owing to a recent washout just north of Ascot, Que., the Q.C.R. had to route its trains between Sherbrooke and Dudwell Jet and Quebec, over the C.P.R. via Cookshire. Aug., pg. 410.)

Pere Marquette Ry.—We are officially advised that there was no foundation for the recent press report, stating that the company was planning to build a line from St. Thomas, Ont., to the Niagara frontier. The company has an arrangement with the Michigan Central Rd., under which it operates its trains over that company's line from St. Thomas to and across the Niagara River.

Timiskaming & Northern Ontario Ry.—A press report states that the construction of the extension from Cochrane to opposite New Post, on the Abitibi River, is going on rather slowly, and

that the progress made to the end of July was not what was expected, as at that date only about 4 miles of track had been laid out of Cochrane. The contract let to Grant Smith & Co. and McDonnell, Ltd., Vancouver, B.C., calls for the completion of the first 49 miles from Cochrane by Dec. 31, 1922, and of the remaining 35 miles by Dec. 31, 1923.

We are officially advised that grading has been completed, track laid and ballasting in progress to the first crossing of the Abitibi River, 11.3 miles from Cochrane. Grading is well under way from the opposite side of the river for 33 miles to the second crossing of the Abitibi River, mile 44.4 from Cochrane. The erecting of the bridge at the first crossing of the river was suspended for some time, owing to a washout, and one pier is not completed. The Hamilton Bridge Co., which has the contract for the superstructure, is putting up temporary work where the incomplete pier is located, and the permanent steel work on the other spans. The bridge is expected to be completed sufficient for operation early in October, and it is expected that track will be laid to the second crossing of the Abitibi River this winter, and a first lift of ballast put down.

The Premier of Ontario left Toronto, Sept. 12, for a trip into Northern Ontario, during which he made an inspection of the work in progress on the extension, and is reported to have looked into matters connected with the proposed electrification of the line. (Aug., pg. 410.)

Wigwag Pulp & Paper Co.—In connection with the erection of a large addition to the Wigwag Pulp & Paper Co.'s plant at Elko, B.C., a press report states that about 8 miles of railway is to be built from Elko to the site of the plant at Phillips Bridge. The report states that the railway will be built by the C.P.R. and the Great Northern Ry. jointly, that it will be used for getting lumber in for the construction of the plant and then for hauling out the product of the paper mills, that it is estimated to cost about \$200,000, and that surveys for its construction are in progress. The contract for the whole undertaking is stated to have been let to MacDougall & MacNeill, Ltd., Calgary, Alta.

Grain Carried by Canadian National Railways.

Geo. Stephen, Freight Traffic Manager, formation:—During the crop year ended Aug. 31, 1922, the C.N.R. handled 116,034 cars of grain, compared with 96,358 during the crop year ended Aug. 31, 1921. The increase for the year which has just ended is, therefore, 19,676 cars, or 20.4%. The figures are taken from the Dominion Government Grain Inspection Bureau's returns at Winnipeg, which further indicate that of the total crop produced in the three prairie provinces in 1921 the C.N.R. handled some what in excess of 50%, compared with 47% of the 1920 crop, the balance of the crop movement during the two years mentioned being handled by the other rail carriers.

The crop year begins on Sept. 1, and for the first week, i.e., Sept. 1 to 7, inclusive,

the movement of this year's crop, as reported by the Dominion Government Grain Inspection Bureau at Winnipeg, was divided amongst the rail carriers as follows:—C.N.R., 2,689 cars, 49.4%; C.P.R., 2,649 cars, 48.6%; G.N.R., 110 cars, 2.0%; total, 5,448 cars.

United States Railways' Financial Results.

Results secured by the U.S. class 1 railways in July were not so favorable as in July, 1921, as they were carried at the rate of but 4.04% annually on their tentative valuation, compared with 4.78% in June, the July net operating income being but \$69,239,000 compared with \$76,594,000 in June. Compared with July 1921, the returns in July, 1922, were about one-tenth of 1% smaller. The Interstate Commerce Commission, in its last general rail statistics, fixed 5% as the rate at which the railways should be allowed to earn on their tentative valuation, but in order to earn at that rate in July, they would have had to get \$29,333,000 more than they did.

The railways in the eastern district had a net operating income in July of \$24,165,400, compared with \$31,054,370 in July, 1921. The net operating income earned in July this year is representative of an annual return of 2.86%. Operating revenues for these roads were 5.3% smaller than in July, 1921, while operating expenses were but 3.4% smaller.

The railways in the western district had a net operating income in July of \$38,594,500, representative of an annual rate of return on tentative valuation of 5.30%. The net operating income in July, 1921, was \$33,566,800. Operating revenues decreased by 5.7% from those of July, 1921, but operating expenses decreased 9.2%, accounting for the more favorable net operating income secured.

The railways in the southern district had a net operating income in July of \$6,479,000, representative of a return of 4.38%. The net operating income in July, 1921, was \$3,396,800. Operating revenues decreased 1.9% from July, 1921, and operating expenses decreased 7.1%.

For all class 1 railways, operating revenues in July were \$443,183,000, a decrease of 4.3% from July, 1921, and operating expenses were \$340,725,800, a decrease of 6.1% from July, 1921.

Despite the coal miners' and shopmen's strike, loadings of revenue freight on the U.S. railways as a whole were 10% greater in July, 1922, than in July, 1921. While the number of cars loaded with coal was 48% less than in July, 1921, the number of cars loaded with other commodities was 24% greater.

For the first seven months of the year, operating revenues were \$3,054,531,000, a decrease of 2.6% from the first seven months of 1921. Operating expenses for the period were \$2,419,602,000, a decrease of 11.2%. The net operating income for the first seven months of 1922 was \$48,271,000, representative of a return of 4.36%, compared with \$214,150,400 for the same period of 1921, which was representative of a return of 2.24%.

Heretofore the statistics for U.S. class 1 roads have been based on returns filed by 201 carriers, but due to consolidation of reports by several properties, beginning with July, there are now but 197 class 1 roads reporting to the Interstate Commerce Commission.

Railway Wages and Working Conditions in Canada and the United States.

Shopmen.—The conciliation board appointed to enquire into the dispute between the Canadian railways and their shopmen, of which Alex. Smith, barrister, Ottawa, was chairman, and on which the railways were represented by F. Pitblado, K.C., and the shopmen by Jas. Simpson, Toronto, met on Aug. 8, and also in Montreal between Aug. 10 and Sept. 1. In the proceedings before the board, the railways were represented by Geo. Hodgie, Assistant General Manager, Eastern Lines, C.P.R.; A. J. Hills, Assistant to President, Canadian National Kys., and C. F. Needham, Assistant to General Superintendent, Motive Power and Car Departments, G.T.R. The men were represented by R. J. Tallon, President, American Federation of Labor, Railway Employees' Department, Division 4; F. McKenna, Vice President, C. Dickie, Secretary, and John Bruce, general representative, plumbers and steamfitters. The wage decreases which the railways proposed to put into effect were given in full in Canadian Railway and Marine World for August, pg. 401, and were, generally, 7c. an hour for machinists and other shop craftsmen, 9c. for freight carmen, 7c. for apprentices and helpers, and 5c. for car cleaners.

The board's majority report, signed by Messrs. Smith and Pitblado, made public Sept. 5, reviewed at length the circumstances of the case and the evidence taken, and, while not laying down the principle that United States conditions should always prevail in every detail, said the board was impressed with the bearing which the U.S. wage adjustments have had on Canadian railway wages during the last five years, and particularly with respect to the class directly concerned in those proceedings. It proceeded:—"The fact, that the large majority of the membership of the men's organizations have expressed their willingness to resume work at reduced rates in the U.S. subject to a re-hearing by the U.S. Railroad Labor Board, is an argument for the same class of employees on Canadian railways continuing work under the same scale, protected as they are by the railways' proposals, under which, in Canada, the reductions are only tentatively made. The view of the undersigned is that the question of permanent rates (the word permanent being understood to mean rates embodied in a wage agreement, but subject to the usual termination clause, included therein) has not yet received sufficient consideration by the parties to the dispute, the railways taking the position that by their announced intention was only with respect to tentative withholdings. Only meagre evidence was submitted to the board which would assist it to form a judgment on permanent rates. Therefore, in the board's opinion the parties therefore should confer with respect to permanent rates, and some conditions indicate that an arrangement might reasonably be concluded, and if they fail to reach an agreement such disagreement would constitute a new disagreement, for the hearing of which the laws provide ample means.

It seems to the undersigned that the proposed tentative agreement, while fully protecting the railway companies in case a definite reduction in rates by mutual agreement became retroactive until July 16, at the same time fully protected the interests of the employees until such time as such definite agreement could be entered into, and was

a fair and reasonable proposal. Having in view, however, the fact that the railways undertook, pending a report of the board, to pay the employees at the old rates of pay on conditions set out, the board recommends that the rates of pay suggested in the notice posted in the shops should be made effective from Aug. 15, 1922, on the basis mentioned in such notice, and that promptly on notice from one party to the other, the representatives of both parties confer further as to definite or permanent rates, provided, however, that in so far as such definite rates are concerned, they should, when agreed upon, be retroactive to July 16, 1922, and that, notwithstanding the fact that the employees have received, or will receive, pay at the old rates up to Aug. 15, 1922, any necessary adjustments, when definite rates are agreed upon, be made as of July 15, 1922. In negotiating an agreement covering such definite rates, the employees will have the advantage of having actually received the old rates of pay until Aug. 15, 1922."

Mr. Simpson, in his minority report, contended that the majority report rendered did not deal with the proper subject. In his opinion, the issue before the board was not the railways' tentative proposal to reduce wages, but the justification for any wage reductions, and in this connection he said: "In presenting this report to you, as Minister of Labor, it is my intention to make it clear that the difference between my colleagues and myself is as to the cause of the dispute, and the issue before the board. The acceptance of the tentative proposition, as to the issue before this board does not ensure industrial peace on Canadian railways, but, on the other hand, only delays the reaching of amicable understandings between Canadian employers and employees, based upon the conditions existing in this country. It is unreasonable and unjustifiable to accept a compromised proposal of the railways, pending negotiations, as the real issue to be determined by our board. Had the board performed its duties in dealing with the issue upon which the application for its appointment was made, the railways should have submitted evidence to justify the reductions in wages which they are desirous of putting into effect. Without this evidence it is impossible for the board to report upon the question of wage reductions, either tentative or prolonged, and I therefore submit that the issue before the board has not been dealt with. It is with the hope of averting a renewal of the dispute that I refer to the acceptance of a report dealing with the railway companies' tentative proposal."

On Sept. 6, the shopmen's officers notified the Minister of Labor, that in their opinion the board's award brought about no settlement of the dispute, and to all intents and purposes left the men in the place where they stood before its sessions were begun, and acceptance of the majority report by the Labor Department was strongly protested. In reply, the Minister telegraphed to Chas. Dickie, the shopmen's secretary, stating that he was not at all convinced that it would answer any beneficial purpose to resubmit questions bearing on the original dispute to the same board, but assuring the shopmen that he was willing and anxious to do all possible to preserve industrial peace. Acceptance of the board's majority report, and announcement of intention to place in

effect the recommendations contained therein was made by the railways on Sept. 6. On Sept. 7 the shopmen's officers held a meeting in Montreal, attended by Messrs. Tallon, McKenna, Dickie, and by W. C. Rogers, Moncton, N.B., representing the machinists; J. A. Davis, Stratford, Ont., representing the boilermakers; J. Corbett, London, Ont., representing the carmen; F. Walsh, Montreal, representing the pipe-fitters; F. Harrison, Montreal, representing the blacksmiths, and P. A. Jardine, representing the electricians at which the matter was discussed and future action deliberated. Mr. Tallon went to Chicago, where he attended meetings of the shopmen's policy committee, and where he was informed by B. M. Jewell, President of the American Federation of Labor's Railway Employees' Department, that it would be well to withhold strike orders for some time. Following another shopmen's meeting in Montreal on Sept. 8, shopmen throughout the country were advised to hold themselves in readiness for a strike, and the Minister of Labor was advised by letter that, in the shopmen's opinion, the board's report held the Industrial Disputes Investigation Act up to ridicule, and, as nothing more was to be expected from the board or the act, in all probability the committee's deliberations, which were continuing, would result in a strike being called. On Sept. 9 the Minister of Labor wrote the Railway Association of Canada's General Secretary, calling attention to the shopmen's refusal to abide by the board's majority award, and recommending that the railways should without delay intimate to their employees their willingness to at once take up the matter of negotiating permanent wages, as recommended by the report. He also wrote Mr. Dickie, suggesting that the country deserved something better than a strike at that time, and requesting the shopmen's committee to try to reach, by direct negotiation, an understanding with the railways as to permanent wages. He also dealt with the shopmen's criticism of the act, pointing out that through its operation Canadian shopmen were in a position which the U.S. shopmen were striving to regain, and had enjoyed 30 days more employment at the higher rates than the railways' proposals had intended. On Sept. 11 the Minister was advised by the Railway Association of Canada that the proposal to negotiate with the shopmen on permanent wages had been refused by the members of the act, and on Sept. 12 the Minister was notified by the Association that the railways concerned had accepted the board's majority report, without reservation, and that, therefore, in accordance with the recommendations made therein, they were prepared to negotiate with the shopmen on permanent rates of pay. On advice that the shopmen were agreeable to that course of action, On Sept. 14, R. J. Tallon, returning from Chicago, acquainted the other members of the shopmen's committee with what he had learned from the policy committee as to how things were going in the U.S., and on the 15th, meetings having been held daily from Sept. 14 to 19, the committee decided to agree to the opening of direct negotiations with the railways, following an assurance obtained from the Minister of Labor, that by again negotiating with the railways, in the event of disagreement, a new dispute necessitating a new

board would not be created under the terms of the act, and that, failing an agreement within a reasonable time, the shopen's committee would be legally free to go ahead and issue its strike call.

New York Central Rtd., New York and Ottawa Division, Shopen.—This dispute was referred to a board of which Senator G. D. Robertson was chairman, and on which M. Goodrich represented the railway and J. T. Foster the employees. The board's report, signed by all three members, recommended that the railway apply, and the men accept, the wages paid shopen on the larger Canadian railways, as changed from time to time. The award was accepted by all concerned.

Michigan Central Rtd. Shopen.—The dispute between the M.C.R. and its shopen was investigated by a board, of which J. M. McEvoy, K.C., was Chairman, and on which H. T. Malcolmson, Superintendent T. H. & B. Ry., Hamilton, represented the railway, and W. D. Robbins, Toronto, the men, and the majority report, signed by Messrs. McEvoy and Malcolmson, in which the circumstances were reviewed at length, and the cuts proposed by the railway were upheld, was made public Sept. 12. A minority report, in which the reductions were held to be unjustified was made by Mr. Robbins. Prior to the report being made public, the railway posted notices in its shops at St. Thomas, Ont., to the effect that the cuts were going into effect, whereupon the shopen held a meeting on Sept. 10, and decided to strike. On the same day, J. Lane, chairman of the local federation at St. Thomas, received a message from the Minister of Labor asking that the strike be postponed, and on the same day, a message was received from J. A. Franklin, President, International Brotherhood of Boilermakers, from Chicago, advising that no strike be called pending developments in the U.S. The M.C.R., one of the U.S. lines settling with the shopen on the terms of the agreement detailed in the latter part of this article, and on Sept. 14 the general chairman of the boilermakers' union on the M.C.R. received notification from Chicago to the effect that the St. Thomas men would be included in that settlement. It is probable, therefore, that they will accept the reductions as provided for in the Chicago settlement and in the board's award. The award stated that the reduced wages should be retroactive to Aug. 16, but it is said that the railway officials have assured the shopen that the retroactive feature of the award will not be enforced.

Pere Marquette Ry., Shopen.—This dispute was investigated by a board of which W. T. R. Preston, of Port Hope, Ont., was chairman, and on which the railway was represented by A. Leslie, and the men by W. D. Robbins. The majority report, signed by Messrs. Preston and Leslie, and made public Sept. 17, declared the reductions in wages proposed by the railway to be justified, and recommended that they take effect Sept. 16. A minority report, signed by Mr. Robbins, held the reductions to be unjustified. However, it is said the railway and its employees had come to an agreement before the report was made public, the men agreeing to the reductions. The majority report showed that the railway shopen were in receipt of wages much in excess of those paid for similar work in other shops throughout western Ontario.

Canadian National Rys. Telegraphers.—The C.N.R. telegraphers are negotiating directly with the railway manage-

ment in connection with working conditions.

C.P.R.—As stated in Canadian Railway and Marine World for September, pg. 454, the C.P.R. and its telegraphers came to an agreement on working conditions, which were up for discussion. As a result, supplement B to the existing schedule was introduced by which certain changes are made in articles 2, 15, 18, 20, 23, 28, and while it was agreed that the preamble and clause G of articles 7, 8, 10, 12, 24, and 26 will also apply to assistant agents. The agreement, as amended, is to remain in effect subject to 30 days notice from either party.

G.T.R. Telegraphers.—Negotiations between the G.T.R. and its telegraphers for a settlement of differences in regard to working conditions are taking place.

Canadian National Rys. Clerks, Etc.—The dispute between the C.N.R. and its clerical employees, members of the Canadian Brotherhood of Railway Employees, in which the employees being notified of wage reduction, was referred to a conciliation board, of which F. T. Costello, barrister, Alexandria, Ont., is Chairman, and on which the railway is represented by G. D. Kelley, Ottawa, and the men by H. S. Ross, K.C., Montreal. Several sittings have been held at Montreal, the railway and employees being represented by the same men as mentioned in Canadian Railway and Marine World for September, pg. 454. At the time of writing (Sept. 22) the sittings are continuing. As stated in our September number, the railway agreed to restore the previous rates of pay pending a report from the board.

C.P.R. Clerks, Etc.—As stated in Canadian Railway and Marine World for September, pg. 454, a board was appointed to hear the dispute between the C.P.R. and its clerks, freight handlers, etc., the majority of whom are members of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The chairman was Daniel Urquhart, Toronto, and the railway was represented by J. T. Arnold, formerly General Superintendent, Ontario District, C.P.R. and the men by J. G. O'Donoghue, Toronto. The board held a preliminary meeting in Montreal on Aug. 23 and then suspended sittings till Sept. 18, during which time the railway and its employees were able to agree on working conditions, but not in connection with the proposed wage reduction similar to that ordered in the U.S. by the U.S. Labor Board. Sittings were held in Montreal from Sept. 18 to 21, at which the railway was represented by Geo. Hodge, Assistant General Manager, Eastern Lines, and W. A. Mather, General Superintendent, Saskatchewan District, and the employees by W. Carr, W. E. Brodie, Vancouver, and W. E. Turner, for the western lines, and F. H. Hall, Montreal, W. Rowe, Windsor, and J. Fisher, McAdam Jct., for eastern lines. The railway stated that pending the board's report the original wage rates would be kept in force, with the understanding that the company's case should not be prejudiced by such action. The board's sittings were concluded Sept. 21, but no report has been made public at the time of writing (Sept. 22).

Grand Trunk Ry. Clerks, Etc.—The dispute between the G.T.R. and its clerks, freight handlers, express and station employees, and other employees associated with the foregoing classes, in the Canadian Brotherhood of Railway Employees, was referred to a conciliation board of

which E. McG. Quirk, Montreal, is chairman, and on which the G.T.R. is represented by U. E. Gillen, Toronto, and the employees by H. S. Ross, K.C., Montreal. Numerous sittings have been held by the Board in Montreal, and at the time of writing (Sept. 22) are continuing. Not all of the men belong to the Canadian Brotherhood of Railway Employees, some being members of the International Brotherhood of Railroad Stationmen, and others of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, but all are concerned equally in the proposed wage reductions. It was reported that a protest was sent to the Prime Minister against the railway's action in enforcing the lower wages pending the board's report, but subsequently it was stated that the Canadian Brotherhood of Railway Employees' officers had nothing to do with this protest. On Sept. 12 it was announced by the railway that the old wage scale would be restored, pending a report from the board, on the understanding that this would be without prejudice to the railway's case.

Pere Marquette Ry. Clerks.—The dispute between the P.M.R. and its clerical employees on Canadian lines was referred to a conciliation board, of which W. T. R. Preston was chairman, and on which the railway was represented by A. Leslie and the employees by C. B. McLaugh. The board's report, signed by all three members, recommended that there shall be no discrimination made by the railway between employees of the class affected in Canada and those in the U.S.; that the former wages should continue till Sept. 15; that after that date such wages as may be agreed upon between the railway and the employees should obtain, or, if there is no agreement, the reduced wages ordered by the U.S. Labor Board in decision 1074 (effective July 1, in the U.S.) should apply, and that if the Labor Board increased the wages, such increase should automatically apply in Canada. The Canadian employees, by applying for a board, were able to enjoy the higher wages two and a half months longer than the U.S. employees.

General.—At a meeting in Montreal on Sept. 18, attended by officers of the Canadian Brotherhood of Railway Employees and the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and by Tom Moore, President, and J. T. Foster, Vice President, Canadian Trades and Labor Congress, a proposal to amalgamate the two railway labor organizations was discussed. It was stated by A. R. Mosher, President, C.B. of R.E., that if the amalgamation were effected, the present status of his membership in so far as the conduct of business in Canada is concerned would not be affected, but that duplication of effort in the amalgamated two organizations would be eliminated. No definite information is available as to just what would be the terms on which the amalgamation would be effected, and the results of the meeting were not made public.

On Sept. 10 a meeting was held in Fredericton, N.B., by maintenance of way employees' representatives, at which the question of breaking away from the maintenance employees' international union was debated. Two suggestions were considered, one to amalgamate with the Canadian Brotherhood of Railway Employees, and the other to form a new national organization. No definite action was taken, but another meeting to dis-

cuss the matter is to be held in October, after the Canadian delegates have returned from the International Brotherhood of Maintenance of Way Employees and Railway Shop Laborers convention to be held in Detroit in October.

On Aug. 25, the Minister of Labor wrote the following chairmen of conciliation boards: A. Smith, J. E. McEvoy, W. T. R. Preston, and Senator G. D. Robertson, to the effect that, as the matters to be considered by all boards were similar, it would be detrimental to the public interest, and to the railways' and employees' interests, if the findings of the boards were not in substantial agreement in principle. He said that it was not sought to influence the findings of any one of the four boards, but suggested that it would be well if the respective chairmen could meet and talk things over. An Ottawa press dispatch of Aug. 28 reported E. W. Beatty, President, C.P.R., as protesting against this procedure, on the ground that it would delay matters, but the meeting was held at Ottawa on Aug. 31, at which the chairmen exchanged views.

In view of developments to date, and in view of the situation which matters in the U.S. have taken, the indications are that all disputes between Canadian railways and their employees will be amicably settled without strikes, a condition of affairs which can be viewed with much gratification by the railways, the employees and the public alike.

United States Situation.—Following the rejection by the U.S. railway executives of the terms proposed for settlement of the shopmen's strike on Aug. 23, by a vote of 254 to 4, executives representing 52 class 1 carriers got together with the train service brotherhood leaders as mediators, and tried to come to an understanding upon which the strike as it affected their roads could be settled. Conferences were held on Aug. 24 and 25. New York City, in which the railways were represented by Daniel Willard, President, Baltimore & Ohio Rd.; Chas. Donnelly, President, Great Northern Ry.; N. D. Maher, President, Norfolk & Western Rd.; A. H. Smith, President, New York Central Rd.; and Hale Holden, President, Chicago, Burlington and Quincy Rd. The train service brotherhood leaders who acted as mediators were L. E. Sheppard, President, Order of Railway Conductors; W. N. Doak, Vice President, Brotherhood of Railroad Trainmen; W. S. Stone, Grand Chief, Brotherhood of Locomotive Engineers; D. B. Robertson, President, Brotherhood of Locomotive Firemen and Engineers; and T. C. Cashen, President, Switchmen's Union of North America. The final conference broke up on Aug. 25, with no agreement having been secured, the railway executives being unwilling to desert their loyal and new employees and grant the strikers their seniority, and the strikers being unwilling to return at the end of the week without restoration of their seniority. The shopmen's leaders were also unwilling to have the strikers return on some roads only, holding out for a national settlement of the strike.

During the week ended Sept. 2, the U.S. railways recruited many more men for work in their shops, and on Sept. 1, the number employed was approximately 305,000, compared with 400,000 before the strike began. During that week, however, violence due to the strike increased, and as a result the U.S. Government, through Attorney-General Daugherty, applied on Sept. 1, to the Federal District court at Chicago, pre-

sided over by Judge J. H. Wilkerson, for a temporary injunction restraining all striking railway employees throughout the U.S. from interfering with train operation in any way. This injunction was granted, and Sept. 11 was set as the date for hearings on the Government's application to have the temporary injunction made permanent. The injunction named all shop crafts' officers, and restrained them from instructing any of their organizations' members to attempt to make any railway employee leave his employment or refuse employment, and also restrained all shopmen and their officers on strike from picketing, trying to discourage employment of men by railways, by intimidation or other means, interfering with employees, loitering near entrance gates to railway shops, committing violence of any kind, interfering with railway operations, conspiring to hinder transportation, doing bodily harm to any railway employee, and trespassing on railway property.

In applying for the injunction, the Attorney-General stated the Government's attitude as follows: "The United States Government is not opposed to labor unions if they perform such functions as can be performed by labor in America. Never, while the labor unions limit their activities to legitimate acts and lawful pursuits not injurious to society, at least while I speak, and to the extent that I can speak, for the U.S. Government shall a blow be struck at them. But it may be understood that, so long, and to the extent, that I can speak for the U.S. Government, I will use the power of the Government within my control to prevent the labor unions of the country from destroying the open shop. When a man in this country is not permitted to engage in lawful toil, whether he belongs to a union or not, with full protection and without interruption, the death knell to liberty will be sounded, and anarchy will supersede the organized government." As further justification for the injunction, the Attorney-General informed the court that in California alone more than \$75,000,000 worth of fruit had been lost because of transportation failure; that lawlessness and violence had resulted in applications for 40,000 deputy marshals, and that delays in railway transportation were seriously adding to domestic and industrial fuel difficulties originating with the coal strike. The granting of the injunction drew forth severe criticism from Samuel Gompers, President, American Federation of Labor, who forthwith threatened to bring J. M. Jewell, President, Federation of Railway Employees, to Detroit, assuring the shopmen of the Federation's sympathy and support in the strike. Although many ominous threats of a nation-wide general strike were provoked by the injunction, nothing of the sort materialized.

On Sept. 2, S. Davies Warfield, President, Seaboard Air Line Ry., who cast the lone four votes in favor of the strike settlement proposed in the meeting of Aug. 23, met Mr. Jewell in Baltimore, and as a result, it was believed by both that an understanding to settle the strike could be reached. Thereupon Mr. Warfield called upon A. H. Smith, President, New York Central Rd., and Daniel Willard, President, Baltimore & Ohio Rd., and these, in conference with Mr. Jewell and his associates, reached a mutually acceptable agreement. Other railway executives being called in, a further meeting was held in Chicago during the week ended Sept. 16, at which an agreement for the strike's termination

was arrived at between the shopmen's representatives and railways representing about 55,000 miles of line. The railways entering into this agreement were largely those which participated in the conference terminating Aug. 25, but some of these did not sign the agreement. The shopmen's leaders authorized the general chairmen on individual railways to try to get such railways to agree to the terms set forth, which were as follows:

1. In order to bring to an end the existing strike of employees upon the undersigned railroads and relieve the country from the adverse effects thereof and to expedite the movement of essential traffic, the following memorandum of agreement is made upon the understanding, which the parties hereto accept, that the terms hereof shall be carried out by the officers of the companies and the representatives of the employees in a spirit of conciliation and sincere purpose to effect a genuine settlement of the matters in controversy referred to below. This paragraph does not apply to or include strikes in effect prior to July 1, 1922.

2. All men to return to work in positions of the class to which they originally held on June 30, 1922, and at that same point. As many of such men as possible are to be immediately put to work at present rates of pay, and all such employees who have been on strike to be put to work or under pay not later than 30 days after the signing of this agreement, except such men as have been guilty of acts of violence, which in the opinion of the commission, hereinafter provided for, shall be sufficient cause for dismissal from service.

3. The relative standing as between themselves of men returning to work and men laid off, furloughed or on leave of absence, including general chairmen and others who were on June 30, 1922, properly on leave of absence, will be restored as of June 30, 1922, and they will be called back to work in that order.

4. If a dispute arises as to relative standing of an employee or if any other controversy arises growing out of the strike that cannot be otherwise adjusted by the carrier, and said employee or the duly authorized representatives thereof, the matter shall be referred by the organizations by parties to this agreement, the employees or the carrier in the interest of any employees who may be aggrieved, to a commission to be established and constituted as hereinafter provided for final decision by a majority vote.

5. The commission referred to in paragraph 4, hereof, shall be composed of 6 representatives to be named by the chief officers of the organizations parties hereto and 6 railroad officers or representatives selected from and by the railroads agreeing hereto. This commission shall be constituted within 15 days from the signing of this agreement and shall have jurisdiction to decide all cases that may properly be referred to it on or before May 21, 1923, but not thereafter.

6. Inasmuch as this agreement is reached for the purpose of composing in a spirit of compromise this controversy, all parties hereto agree that neither this settlement nor the jurisdiction to decide all cases above provided for, shall be used or cited in any controversy between these parties or between the railroad signing the same or any other class or classes of their employees in any other controversy that may hereafter arise.

7. Both parties pledge themselves that no intimidation nor oppression shall be

practiced or permitted against any of the employees who have remained at work or have taken service or as against those who resumed work under this understanding.

All suits at law now pending as the result of the strike to be withdrawn and cancelled by both parties.

It is evident from the wording of this agreement that the strikers have agreed to return to employment without any definite prospect of having their seniority rights restored, and it appears that the commission provided for in the agreement will have a multitude of disputes to settle. It is also alleged that the shopmen's leaders saw fit to retire from their previous position to the effect that nothing but a national settlement would be acceptable to them.

Reports are very conflicting as to the roads which have adopted this agreement, as much secrecy has surrounded the negotiations and no official statement has been made. Latest advice are to the effect that it was acceptable to the following large systems: Baltimore & Ohio; New York Central; Southern; Seaboard Air Line; Chicago & Northwestern; Chicago, Milwaukee & St. Paul. The following have refused to take their shopmen back on the terms of the agreement: Pennsylvania; Union Pacific; Norfolk & Western; Southern Pacific; Chicago & Alton; Chicago, Rock Island & Pacific; Northern Pacific; Great Northern; Chicago, Burlington & Quincy; Missouri, Kansas & Texas; Central of Georgia; Delaware, Lackawanna & Western; Erie, Illinois Central; Louisville & Nashville; Missouri Pacific; Frisco; Wabash; Acheson, Topeka & Santa Fe; Chicago Great Western, and numerous others. It is said that on the New York Central additional misunderstandings and difficulties have presented themselves, and that the strikers have made demands which are not countenanced in the agreement, resulting in the refusal of the company's officers to adopt it. On the majority of the roads refusing to enter into the agreement, shop forces have been recruited up to near normal, while the American Railway Association's figures for bad order cars and locomotives show that equipment has not suffered any great deterioration.

Argument on the U.S. Government's application to have the temporary injunction of Sept. 1, made permanent was begun in Judge Wilkerson's court at Chicago on Sept. 11, by D. R. Richberg, counsel for the shopmen, arguing for the injunction's dismissal. This was refused, and following further argument by opposing counsel, the injunction was extended for 10 days. Blackburn Esterline, Assistant U.S. Solicitor-General, in argument as to why the injunction should be made permanent, submitted evidence concerning the numerous cases of murder, assault, arson, train wrecking, burning of bridges and dynamiting caused by the strike. A. M. McLaughlin, an assistant to the Attorney-General, said he intended to show, as a result of secret service reports, that the shopmen's officials were not acting in good faith when they claimed they did not intend violence, and that he would produce evidence to show that he would do everything possible to hinder traffic. Latest reports indicate a legal battle of several weeks' duration.

U.S. Maintenance of Way Employees.—It will be remembered that the Railroad Labor Board promised U.S. Maintenance of Way Employees a hearing of their

wage dispute with the railways, as a spirit of conciliation and fairness, except reward for their refraining from striking. The hearing was held before the Board in the latter part of August, and terminated early in September, and was important chiefly because the employees' representatives, led by E. F. Grable, President of the maintenance men's organization, asked the Board to adopt the principle of the living wage and grant his men a minimum of 48c. an hour. W. Jett Lauck, consulting economist for various labor organizations, admitted that the Board in fixing just and reasonable wages, should base their awards on a

"just and reasonable wage system," which, he claimed, has not heretofore existed. The Board was not very sympathetic to his theories, particularly when the railway representatives, J. Aronson and J. W. Higgins, undertook to demonstrate the economic impossibility of having the consumption of wealth continuously exceed its production. The railways appeared, however, to give the impression throughout the hearings that they were approaching the matter in a spirit of conciliation and fairness, but were strongly opposed to the theories advanced by Mr. Lauck. The Board took the matter into consideration.

Traffic Orders by Board of Railway Commissioners.

Interswitching at Simcoe.

32,684. July 24.—Re application of manufacturers and shippers of Simcoe, Ont., and district, for an order requiring the establishment of interswitching facilities at Simcoe: Upon hearing the application at Simcoe, June 9, 1922, the Town of Simcoe, the Dominion Canners, the Norfolk Fruit Growers' Association, the Norfolk Co-operative Co., the Simcoe Board of Trade, J. B. Jackson Co., the Norfolk Milling Co., the Picking Co., the Grand Trunk and the Lake Erie & Northern Rys., and the Wabash R.R. being represented; and upon reading the further submissions filed, the Board orders that the Lake Erie & Northern Ry. be required to construct and maintain at its own expense, an interchange track between its railway and the G.T.R. tracks at Simcoe; detail plans of the proposed interchange tracks to be filed for the approval of an engineer of the Board; and the work to be completed on or before Sept. 1, 1922.

British Columbia Electric Railway Freight Tariff.

32,784. Aug. 23.—Re application of British Columbia Electric Ry. under sec. 330 of the Railway Act, 1919, for approval of standard freight mileage tariff C.R.C. 221, cancelling C.R.C. 191: Upon reading what is filed in support of the application and on the report of its Assistant Chief Traffic Officer, the Board orders that the said standard freight mileage tariff C.R.C. 221, cancelling C.R.C. 191, in so far as it contains application to the Vancouver & Lulu Island Ry. and the Vancouver, Fraser Valley & Southern Ry., be approved.

Supplement to Express Classification.

32,785. Aug. 23.—Re application of the Express Association of Canada for approval of Supplement B to Express Classification for Canada no. 5; and order 32,652, dated July 21, 1922: Upon reading what is filed in support of the application and the reports of the Board's Chief and Assistant Chief Traffic Officers, the Board orders that the change in the classification of returned empties having been disallowed by order 32,652, July 21, 1922, that, with the exception of the item covering returned empties, and with the addition of rating on dress forms, as follows:—

Dress forms or dummy figures, n.o.s.:
K.d. or collapsed, boxed or crated.....1
Kept otherwise in barrels.....2 to 1
Double-faced corrugated strawboard, shipping cases.....1½
Shipped otherwise.....2 to 1

Supplement B to Express Classification for Canada no. 5, be approved. The Board further orders that the proposed supplement be published as Supplement 2 to Express Classification for Canada no. 5.

Cordwood and Lumber Export Rates.

32,813. Sept. 2.—Re application of Zwicker & Co., Lunenburg, N.S., complaining against a rate charged by Canadian National Ry. on cordwood and lumber for export. Upon hearing the application at Bridgewater, N.S., on Sept. 29, 1921, and upon the report of the Board's Chief Traffic Officer, the Board orders that the application be dismissed.

32,814. Sept. 2.—Re application of the Town of Bridgewater, the Bridgewater Board of Trade, and the Acadia Gas Engines, Ltd., complaining against a rate charged by Canadian National Ry. on cordwood and lumber for export: Upon hearing the application at Bridgewater, N.S., on Sept. 29, 1921, and upon the report of its Chief Traffic Officer, the Board orders that the application be dismissed.

New Brunswick Coal and Railway Co's Freight Tariff.

32,829. Sept. 7.—Re application of Canadian Pacific Ry. Co., as lessee exercising the franchises of the New Brunswick Coal & Ry. Co., under sec. 330 of the Railway Act, 1919, for approval of its Standard Mileage Freight Tariff, 59, C.R.C. 89: Upon the report and recommendation of the Board's Assistant Chief Traffic Officer, it is ordered that the standard tariff of maximum mileage freight rates, C.R.C. 89, to apply between stations on the New Brunswick Coal & Ry. Co's railway, be approved.

Fredericton and Grand Lake Coal and Railway Co's Tariff.

32,830. Sept. 7.—Re application of Canadian Pacific Ry. Co., as lessee exercising the franchises of the Fredericton & Grand Lake Coal & Ry. Co., under sec. 330 of the Railway Act, 1919, for approval of its standard mileage freight tariff, C.R.C. 123: Upon the report and recommendation of the Board's Assistant Chief Traffic Officer, it is ordered that the standard tariff of maximum mileage freight rates, C.R.C. 123, to apply between stations on the Fredericton & Grand Lake Coal & Ry. Co's railway be approved.

Eastern British Columbia Ry. Fire.

A press report states that the locomotive house and adjoining machine shop at Corbin, B. C., have been burned; the damage being put at over \$70,000. Two locomotives and a steam shovel were saved, but two other locomotives could not be got out. The Eastern B. C. Ry. extends from C.P.R. Crownstons Pass line at York, B.C., to Kingsgate, 1.96 miles, while it connects with the Spokane International Ry., both lines being owned by the Corbin interests.

Canadian Pacific Railway Construction, Betterments, Etc.

Chateau Frontenac, Quebec.—Work on the central tower has progressed as far as the 12th story, and the Dominion Bridge Co. is pushing forward the erection of the steel work for the other 8 stories. It is expected that the steel work will be completed by the end of the year, and that the tower will be fully completed by next summer.

Interprovincial and James Bay Ry.—A press report states that about 1,200 men are employed on the construction of the line from near Kipawa, Que., to the Quinz River falls, and the branch to Ville Marie. There is a considerable amount of rock work. The grading gangs are reported to be working east of Fabre, and expect to get into Ville Marie next spring.

The Board of Railway Commissioners has approved revised plans for the line from Lot 37, Range 1, Laveraschere to Lot 51, Range 5, Bay Tp.; mile 52.12 to 67.78, Timiskaming County, Que.

St. Agathe Subdivision Bridge.—We are officially advised with regard to the reconstruction of bridge 42.3 over North River, St. Agathe Subdivision, Quebec District, that the existing bridge consists of a 30 ft. half-deck plate girder span, resting on masonry abutments. It is intended to replace this span with a heavier type one to permit of the operation of heavier power. The only changes to the abutments will be a small amount of cutting down of the bridge seats, to suit the heavier span, which is being fabricated by McGregor, McIntyre & Co., Toronto. The alteration in the bridge seats will be done by the railway's forces.

Owen Sound Dock.—A press report states that a contract has been let to Green and Woolrich for rebuilding the dock in front of no. 1 shed, Owen Sound, Ont., at an estimated cost of \$20,000.

Fort William Freight Shed.—We are officially advised that plans are being prepared for rebuilding on the same site, freight shed no. 3, on the Kaministiquia River, Fort William, Ont., destroyed by fire Aug. 23.

Fort William Electrical Work.—We are officially advised that the company's own forces are doing a considerable amount of electrical work at Fort William, Ont., which it is expected to have completed by Oct. 15. It includes the rewiring of sheds 1, 2, 3, 5 and 6; of 18 stalls in the locomotive house; of the hard coal pick-ups, and of the rewiring of front of no. 5 hard coal shed; installation of axle car lighting equipment at the station and the lighting of Mead coal dock.

Ignace-Kenora Track Relaying.—Rapid progress is reported to have been made with the relaying of 16 miles of the double track between Ignace and Kenora, Ont. The old 80 and 85 lb. rails are being replaced with 100 lb. rails. Six rail laying machines are reported to be at work, and to be replacing 6 miles of track a day.

Winnipeg Freight Shed Improvements.—We are officially advised that the company is making considerable improvements to its Winnipeg freight sheds, which it is expected will be completed this year. The work being done by the company's own forces includes the rearrangement of tracks and platforms and the renewal of platform; the re-roofing of a section of the inbound freight shed; the renewing of eavestroughing and

downspouts of both ends; and the erection of an awning for outbound freight shed. For the renewal of a portion of the paving of G yard, a contract has been let to Bitulithic Contracting Co., Winnipeg.

Weston Shops.—We are officially advised that the improvements being made at the Weston shops, Winnipeg, consist of painting all the frame buildings; bricking up of 2 doors in the east end of the stores building; putting in a sump at the tender shop; erecting a lye vat in the creting shop, and building a scrap platform and shelter. The work is being done by the company's forces.

Brandon and North Bend Turntables.—We are officially advised that a contract has been given Hamilton Bridge Co., Hamilton, Ont., for two 90 ft. turntables, one to be installed at Brandon, Man.; and the other at North Bend, B.C.

Russell Northerly.—We are officially advised that a contract was given the Northern Construction Co., Winnipeg, for completing the grading on the extension of the branch from Russell northerly from the present terminus at Cranknell, Man., to Inglis, 6.2 miles. It is also intended to lay rails, do ballasting, fence the line, erect stations and telegraph line, and put the extension in condition for operation.

Regina and Saskatoon Divisions Culverts.—We are officially advised that contracts have been let as follows: Poole Construction Co., Regina Sask., building concrete culverts on Indian Head Subdivision; E. C. W. Johnson, Regina, building 4 concrete culverts on Colonsay Subdivision; La Cour & Schoeler, Winnipeg, building 4 concrete culverts on Hardisty Subdivision; Hurst Engineering Construction Co., Winnipeg, building one concrete culvert each on Wynyard, Sutherland and Wilkie Subdivisions.

Lanigan Branch.—We are officially advised that a contract has been given A. C. Crohm, Ltd., Calgary, Alta., for building stations, section houses, grain-loading platforms, stock yards and water tanks, and for the fencing on the 50 miles of the branch from Lanigan to Naicam, Sask., on which track was laid in 1921.

Swift Current Northwesterly Branch.—The Board of Railway Commissioners has approved revised location of a portion of the Swift Current, Sask., northwesterly branch (Empress Subdivision), from Sec. 12, Twp. 16, Rng. 18, West 3rd Meridian, mile 31.07 to 34.02.

Secretan Coaling Plant.—We are officially advised that a contract has been given A. E. Hamilton, Moose Jaw, Sask., to build a 100-ton standard mechanical coaling plant at Secretan, Sask. It is expected to be completed by Oct. 15.

Consul Southeast Branch.—We are officially advised that this branch from Consul will extend southeasterly to Linmax mile 61.07, in the s.e. ¼ of Sec. 17, Twp. 3, Range 18, West 3rd Meridian, Sask. The grading on the first 30 miles has been completed and a contract for grading the second 30 miles was let to W. A. Dutton, Winnipeg, in 1920. This line is now to be completed.

Medicine Hat Locomotive House.—We are officially advised that the work to be done at Medicine Hat, Alta., consists of a 15-ft. extension to the rear wall of the 80-ft. locomotive house.

Weyburn-Lethbridge Line.—We are officially advised that a contract has

been given W. A. Dutton, Winnipeg, for grading the final section of the Weyburn-Lethbridge Line, from the present western terminus at Bain, Alta., to Manyberries, Alta., the present eastern terminus. A contract has been given J. H. Simmons, Winnipeg, for building 4 small pile and trestle bridges on the line, and for the necessary buildings.

Coutts Detention Shed.—We are officially advised that a contract has been given T. Stubbs, Lethbridge, Alta., for removing the immigrant detention shed at Coutts, Alta., closer to the station, and for putting in a concrete foundation under it. The work is expected to be completed Oct. 15.

Ogden Shops.—We are officially advised that the improvements being made at Ogden shops, Calgary, include installing a sprinkler system in the dry lumber shed, and repairing the interlocking plant. The work is being done by the company's forces, and will be completed this year.

Calgary Locomotive House.—We are officially advised that a contract has been given T. Jamieson & McKenzie, Ltd., Calgary, Alta., for extending the 12 westerly stalls of the Calgary, Alta., locomotive house 20 ft. The work is to be completed this year.

Nelson Wharves.—We are officially advised that the wharf improvement to be done at Nelson, B.C., consists of filling a wharf trestle 985 ft. long. It will be done by the company's own forces.

Shuswap Subdivision Bridge.—We are officially advised that the work to be done in the bridge over the Eagle River, mile 19, Shuswap Subdivision, British Columbia District, consists of putting in concrete abutments in place of the old pile ones.

Vancouver Freight Handling Facilities.—We are officially advised that auto truck scales and a motor generator set are being installed at Vancouver, B.C. (Sept. pg. 461). The shop mill floor is being repaired. The work is being done by the company's forces, and will be completed this year.

Transportation and Power Corporation Ltd. has been incorporated under the Dominion Companies Act, with authorized capital of \$15,000,000, and office in Montreal, to acquire the assets of the Great Lakes and Atlantic Canal and Power Co., Ltd.; to make plans and estimates for dredging, deepening, lowering or raising levels of existing rivers, lakes or waterways; to acquire terminals, harbours, docks, etc.; to acquire or build dams or other works necessary for the production of electric, hydraulic, pneumatic or other power; to lease, or otherwise dispose of all such works; to enter into agreements with municipalities for franchises to operate waterworks, power and electric light plants; to operate steamships, tugs, dredges, etc.; to build drydocks or shipbuilding plants; and to carry on other businesses connected with any of the above. The incorporators are J. M. McEvoy, K.C., and others of London, Ont.

Toronto Union Station.—The Goblin makes a number of suggestions for an exhibition pagant interpreting the spirit of Toronto, including the following: "Float bearing a model of the new Union Station, with the caption, 'To be opened next week—or the week after.'"

Canadian National Newspapers and Periodicals and the Canadian National Exhibition.

In speaking at the Canadian National Exhibition directors' luncheon at Toronto, Press Day, Aug. 31, Horace T. Hunter, Vice President, Canadian National Newspapers and Periodicals Association, in responding to the toast of the press, said:—You have heard from the Daily Newspaper Association, from the Weekly Newspaper Association and I have been asked to speak for the Canadian National Newspapers and Periodicals Association, which might be termed the residuary legatee of the newspaper publishing business. It is not, however, an uncommon thing for the residuary legatee to get a very large part of an estate.

Over 3,000,000 Subscribers.—The extent and influence of publications represented by our Association are indicated by the following approximate statement of circulation:—Farm papers, 1,030,897; magazines, 1,065,307; religious and educational papers, 725,000; business and technical newspapers, 399,099; total, 3,220,303. On behalf of the Canadian National Newspapers and Periodicals Association, representing about 3,000,000 subscribers, I wish to congratulate you on the success of this year's Exhibition. We know that it has not, like Topsy, "just grown." It has been brought to the high state of perfection it occupies today by the shrewd and far-seeing policies of the directors and executive officers, and by their untiring energy in carrying out those policies. You referred, Mr. President, to the old custom of subscribers to weekly newspapers sending in cordwood to pay for subscriptions, and suggested that some of this wood be sent to relieve fuel shortage in Toronto. May I suggest that if there is still a shortage some of the "hot air" in the daily newspapers could be used to advantage.

Optimistic Outlook.—It is easy to be optimistic about the exhibition today; but there are many of us here who can remember the difficulties that had to be overcome, and the optimists of 25 years ago would probably be looked upon as the pessimists today. This situation reminds me of an old settler who was told that they were going to build a railway right through the village in which he had lived for 70 years. He shook his head, however, and stated: "They'll never do it." The right of way was secured, the tracks were laid and finally a person went to him and told him to come down to the station, that the new train was there and was going to start off in an hour's time. The old settler went down, looked over the equipment, and finally, as the train glided gracefully away, remarked: "They'll never do it." This Mr. President, must be the feeling of everyone today. Nothing will stop your progress.

Similar Aims and Interests.—There are many points of similarity between the work of our Association and that of the Canadian National Exhibition. These form a strong bond of interest and sympathy between us.

Both are national. Our subscribers in the various provinces of the Dominion are the men and women you are most anxious to bring to the exhibitor. The fact that they are readers and subscribers of our papers is the proof that they are people of intelligence, students of business, interested in new methods and in learning of new goods. They are the people who will travel a hundred or a thousand miles when the opportunity

offers to see an exhibition such as you have developed, and I congratulate you that these people are coming in increasing numbers each year. The international aspect is also a common bond. You have an increasing number of visitors from foreign countries, thus creating a feeling of good will with these countries, and helping our manufacturers to establish connections abroad. The same reason that brings business men from the United States, Great Britain, West Indies, etc., also causes them to subscribe for our publications. These foreign subscriptions have become such a big factor with some of our publications that they are now issuing export editions.

Educational Aspect Most Important.—Then we are on common ground in educational work. I believe, that this exhibition was started primarily for educational purposes, and its great success is due to the fact that you have never allowed the amusements side to dominate. I believe the educational features should be given wider publicity. The individual exhibitors do a good deal in this connection but there is much to be done collectively. A few people would come to see a few exhibits of motor cars, but thousands will come when they know there will be 70 exhibitors representing probably 70% of the manufacturers who are seeking Canadian business. In our Association there is a publication for practically every line of business. These publications have told, year by year, the outstanding events of the exhibition that would be of interest to their readers, and I think we can claim that this has been a factor in increasing interest and attendance of a very desirable class of people.

Influence of Business Press.—I would like to quote briefly from an address delivered within the past year by the Lieutenant-Governor of Ontario, Colonel Harry Cockshut, who officially opened the exhibition this year. Addressing the Canadian National Newspapers and Periodicals Association, he said:—"I believe that the influence of the business press will be one of the most important factors in re-establishing business conditions in Canada on a safe and sane basis. I make a distinction between the business newspapers and the daily press, because I believe that your papers—the business newspapers of Canada—exert a more powerful influence than the daily press because of the greater confidence your readers have in them. People read the daily newspapers to keep abreast of the general news of the day. They are interested in what is happening around them and they read to satisfy their desire for excitement or interest or entertainment. What they read in the daily newspapers today is forgotten tomorrow. But this is not the case with the business newspaper. Business men need the service of these papers in the conduct of their every day business life. I have noted that they usually have a business paper or two in their pocket when they go home Saturday night. I do not say that they read them on Sunday, that I do not know, but I do know that they study them carefully and a great number of your readers will come to their business on Monday morning with some clippings from your papers in their pockets. They will say to their associates: 'This is the situation, I can show it to you in this clipping.' For that

reason, gentlemen, I say that yours is the greater obligation, because you are leaders, because you are helping to build up the business fabric of the country."

We appreciate the honor the exhibition directors have conferred on the press in singling out a day, in their honor. In a larger sense, however, every day is "Press Day," for some of the publishers in our Association. Our publications are sure to cover a varied nature and cover such diversified fields that in nearly every case there is one or more publication devoted to the industry that gives the day its name.

Quality Not Quantity.—I believe your directors are interested, not merely in bringing the numbers, but in bringing the men and women with a stake in the country—the responsible people, the people of large buying power. To put it in newspaper language, you are interested in class in circulation rather than in the mass circulation. In every one of the lines mentioned above our publications reach a large percentage of the best men and women engaged in the business, and reach them with publications that they have come to regard as their business associates.

I believe the big work of the future for the Canadian National Exhibition is to develop the exhibits of the various industries as units. I believe this is the line on which you are working and which has been so well exemplified this year in the pure food building, a building in which we were particularly interested because the editor of one of our publications, H. H. Huston, acted as secretary of the committee in charge of the work during the past couple of years.

I can assure you the publications in our Association will be very glad to co-operate with you, not only in organizing exhibitors, and inducing them to guarantee the cost of the buildings, but in making the buildings a success after they are erected, by bringing to the exhibition the class of people these exhibitors want to reach. For, after all, the real success of an exhibition does not consist in large buildings, or elaborate exhibits, but in the class of people who attend.

Grand Trunk Railway Construction, Betterments, Etc.

Midland Division.—A press report states that it is proposed to relay the Midland Division with 90 or 100 lb. rails next year.

Woodstock Improvements.—A press report states that two new footbridges have been added to the Wellington and Bay St. bridges approaching the station; that tarvia macadam is to be laid on the approaches, and that it is reported that an interlocking plant is being installed about 200 yards east of the station.

London Station Improvements.—A good deal of work is reported, as in progress on repairs to the London, Ont., station, including the renewal of the platform.

New Steel Bridges in Michigan.—A contract is reported to have been let to American Bridge Co., for 200 tons of fabricated steel for bridges in Michigan.

C.P.R. Elevator D. Fort William Ont., has been leased to the Northland Elevator Co. for five years.

Self Propelled Cars on Steam Railways.

The Canadian National Ry. had 4 self propelled cars on exhibit at the Canadian National Exhibition, Toronto, from Aug. 26 to Sept. 9, viz., 15,803, storage battery car; 15,805, steam car; 15,813, gasoline car; and 15,814, gasoline car. The showing of these brought home to the public the possibilities in connection with self propelled car operation in short line and branch line service, and great public interest in them was evident. Car 15,814 was the service gasoline car, which has been thoroughly described and illustrated in preceding numbers of

from storage batteries contained in the large battery holder seen below the car body and between the trucks, the batteries being charged between trips. The car is equipped with ball bearing trucks of the arch bar type, and is fitted with a snow plough arrangement as shown at the front. At the time of writing (Sept. 13) some changes remain to be made in the car, viz., renewal of storage battery, equipping of car with lavatory, baggage racks, coat hooks, locomotive type bell, and a smoking seat in the baggage compartment. This work will

Horse power, normal.....90
Weight, approximately.....50,000 lb.
Steam pressure.....700 to 1000 lb. per sq. in.

This car burns kerosene, or crude oil, as fuel, and as the name "unit car" implies, each car is a unit in itself, carrying its own fuel, water and other supplies. The car is propelled by a modified twin cylinder engine, mounted on, and forming a part of, the leading truck, power being transmitted direct to the axle by a spur gear, the engine and driving gear running in an oil bath in an oil tight case. The power developed is approximately 60 h.p., and when periods of emergency exist, such as when starting on heavy grades, or in deep snow, a maximum of 280 h.p. may be developed. An improved water tube boiler, mounted in the forward end of the car, supplies steam at a working pressure averaging 750 lb. In operation, oil is fed to the combustion chamber, under a constant pressure controlled by an automatic valve. The main burner and pilot are parts of the automatic control system used, and the water is also fed automatically to the boiler. The throttle valve is placed in the steam line where it leaves the boiler, and the throttle valve control lever, together with the reverse lever and air brake control equipment, are located in the operating compartment at the forward end of the car.

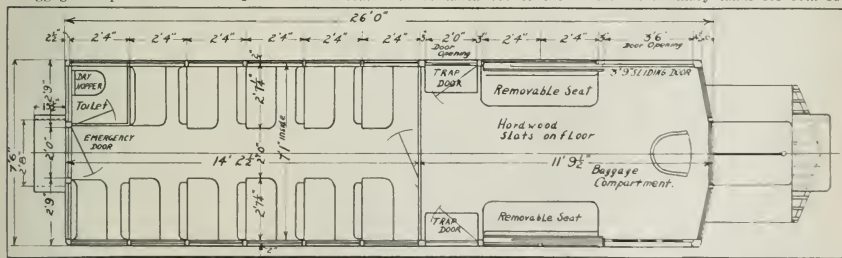

The water is fed from the auxiliary water tank to the boiler, by a double acting pump, and the automatic control feature is arranged so that if more water is being delivered than is required, the water is diverted back to the tank by an automatic movement of a valve. If the water supply to the boiler falls below a predetermined rate, resulting in the level getting dangerously low, the fuel oil supply to the burner is automatically cut off. The main water and oil tanks are below the car floor, but there are auxiliary tanks for both fuel

Canadian National Railways Gasoline Railway Motor Car, 15813.

Canadian Railway and Marine World. Gasoline car 15,813, built by Ledoux, Jennings, Ltd., Montreal, has not been described and illustrated, but car 15,812, a car very similar to 15,813, and built by the same builders, has been. No. 15,813 is illustrated herewith and a floor plan is given. It is the same as 15,812 with the exception of the leading truck and the interior arrangement. No. 15,813 has a baggage compartment 11 ft. 9 1/2 in.

be done at the Niagara, St. Catharines & Toronto Ry. shops at St. Catharines, Ont. The other battery car bought from the Cambria & Indiana Rd., No. 15,802, is larger than 15,803, the seating capacity being 50. This car will also undergo some changes at the Niagara, St. Catharines & Toronto Ry. shops, among which will be the providing of a larger baggage compartment. It is probable that 8 seats will be taken out of the

Canadian National Railways Gasoline Railway Motor Car, 15813.

long, fitted with removable seats, while 15,812 has no baggage compartment. The leading truck of 15,813 is the same as the rear truck, with the exception of the side rods on the latter, while on 15,812 the front truck wheels are much smaller than those of the rear truck. With these exceptions, the description given in preceding numbers of Canadian Railway and Marine World for 15,812 is applicable to this gasoline motor car.

Car 15,803, of the storage battery type, is one of two bought from the Cambria & Indiana Rd., in the U.S., and is illustrated herewith. It has a seating capacity of 36. The drive is by motors geared to axles, with current derived

passenger compartment to provide for this. Renewal of the storage batteries will also be necessary before the car is placed in operation.

Car 15,805, the steam car furnished by the Unit Railway Car Co., Boston, Mass., a plan and illustration of which are given herewith, has the following dimensions:

Length over bumpers.....	50 ft. 7 in.
Length of passenger compartment.....	24 ft.
Width of operating compartment.....	8 ft.
Width of smoking and baggage compartment.....	12 ft. 7 1/2 in.
Width over side sills.....	8 ft. 6 in.
Width of aisle.....	1 ft. 9 1/2 in.
Height from rail to top of roof.....	11 ft. 11 1/2 in.
Truck wheels.....	28 in.
wheel base, motor.....	6 ft. 1 in.
wheel base, trailer.....	5 ft. 6 in.
Total seating capacity.....	42

and water, that for the fuel being in the baggage compartment, and that for the water at the front of the car. The oil is elevated to the auxiliary tank by air pressure, and then flows from the auxiliary tank to the burner, while the water is elevated to the auxiliary water tank by a lifting injector, and is forced from there to the boiler by a pump, as stated above. The steam is superheated in a 2 unit superheater. Simplicity is the outstanding feature of the control system.

The trucks are of the arch bar type, and are equipped with roller bearings. The engine and front, or driving, truck being a unit, with the drive connecting to the leading axle of the truck, the

holster is placed near the driving axle, to secure a proper weight on the driving wheels. The steam car is said to be capable of a speed of from 45 to 50 m.p.h. on level track, and of 14 m.p.h. on a 3% grade. It is claimed that it will operate at an average car-mile cost of 10 cents, and that from 2 to 4 miles, depending on conditions, will be obtained from one gallon of kerosene. The car is of semi-steel construction, with M.C.B. standards throughout, and is equipped with air brakes and electric

officially advised that delivery of the second car was expected by Sept. 15, and that, on delivery, it would be placed in service between Levis and Scotts Jct., Que., 32 miles. As stated in our September issue, the Quebec Central Ry. cars are similar to Canadian National Ry. cars 15,812 and 15,813, but differ from both of them in that while they have the small leading truck like the 15,812, they also have a baggage compartment, similar to that provided in car 15,813.

Quebec, Montreal & Southern Ry.—An

ented the experiences of some 500 short line railways located throughout the U.S. with self propelled cars. Regarding gasoline car costs, he said: "Operating costs vary from 10 to 25 cents a mile, and gasoline consumption from 5 to 10 miles a gallon. Maintenance costs have been found to be surprisingly low, averaging about \$15 a month on smaller type cars and only slightly above this on the larger ones. By smaller type is meant those using a 2½ or 3 ton motor truck chassis, and by larger cars those

Canadian National Railway Steam Car, 15805.

lighting, the current being obtained from a steam driven generator. The interior arrangement is shown in the accompanying plan.

The C.N.R. has self propelled cars in operation as follows: Gasoline-electric car 15,800 between Winnipeg and Transcona, Man.; storage battery car 15,801 between Bathurst and Campbellton, N.B.; gasoline car 15,810 between Souris and Elmira, P.E.I.; gasoline car 15,811 between Cross Creek and Stanley, N.B.; and gasoline car 15,812 between Picton, Trenton Jct., and Napanee, Ont. It is probable that gasoline car 15,814 will be placed on the latter run also. A self propelled car service is to be established between Victoria and Sooke, B.C., on the Victoria-Alberni lines, 22 miles, and it is likely that gasoline car 15,813 will be sent there. A self propelled car will also be placed in service between Brockville and Westport, Ont., 44.4 miles. A gasoline car was on that run for a short

illustration is given herewith of the self propelled car built for this road, a Delaware & Hudson Co. subsidiary, by Ledoux, Jennings, Ltd., Montreal. It is similar to those ordered by the Quebec Central Ry., and, like them, is propelled by a Reo 6-cylinder 50 h.p. engine. It was placed in service Sept. 1, between Montreal and Sorel, Que., 44.5 miles, running on Sundays, Tuesdays, Thursdays and Saturdays, as trains 52, 53, 54 and 55, and between Montreal and Fortierville, Que., 109.69 miles, on Mondays, Wednesdays and Fridays, as trains 50 and 51, the daily average mileage being in the neighborhood of 200. Train 52 leaves Montreal at 8 a.m. and arrives at Sorel at 10.15 a.m. Train 53 leaves Sorel at 10.50 a.m. and arrives at Montreal at 1.14 p. m. Train 54 leaves Montreal at 12.40 p.m. and arrives at Sorel at 3 p.m. Train 55 leaves Sorel at 4.10 p.m. and arrives at Montreal at 6.50 p.m. Train 50 leaves Montreal at

using 5 ton chassis. The operating cost of 10 cents per car mile was, of course, confined to the former, which were being operated by one man. But some of the larger types, using two men, were being operated as low as 20 cents per car mile, as shown in the following table. The figures per mile in this table were made on a basis of \$12,500 as the purchase price, and an operation of 100 miles a day."

Summarizing his observations, Mr. Cain said: "The consensus of opinion by the short lines was that all cars should be equipped with a pivotal lead truck for safety, and that a single pair of drivers, with the proper weight distribution, gave satisfactory service, though the riding qualities of the car

Canadian National Railway Steam Car, 15805.

period some time ago, but was removed. A third additional self propelled car service is to be established between Toronto and Washago, Ont., 89 miles, and it is likely that a battery car will be sent there.

Quebec Central Ry.—As stated in Canadian Railway and Marine World for September, the Q.C.R. ordered two gasoline cars from Ledoux, Jennings, Ltd., Montreal, one of which had been delivered and loaned to the C.P.R. for use on its Lasalle Loop Division, Montreal Terminal Division, Quebec District, between Highland and Cote St. Paul, 5.85 miles. We were

8 a.m. and arrives at Fortierville at 1 p.m. Train 51 leaves Fortierville 1.20 p.m. and arrives at Montreal at 6.50 p.m. Two men are used in operating this car. About 12 miles a gallon of gasoline have been secured. On the trial trips a speed of 48 m.p.h. was secured, but instructions limit the speed to 30 m.p.h. in operation.

Results With Self Propelled Cars in the U.S.

J. W. Cain, Purchasing Agent, American Short Line Railroad Association, in a discussion at a recent meeting of the Society of Automotive Engineers, pres-

were naturally not as good as though a 4-wheel truck with swing bolster were employed. In our personal examination and inspection of the different cars available, it was found that the light 6-wheel type cars up to a length of 36 ft. and a weight of about 20,000 lb. could be operated successfully at a speed of 30 to 35 m.p.h., making from 5 to 6 miles per gallon of gasoline. Beyond this, there is too much vibration, and the single driving wheel arrangement makes the car ride uncomfortable, but for a capacity up to 35 passengers and about 2,000 lb. of baggage, we found this the most successful car of the

present time. Above this capacity, we examined a car 43 ft. in length, equipped with two 4-wheel pivotal trucks, which was capable of making a maximum speed of slightly better than 40 m.p.h., at which speed it rode very comfortably. The weight of this car was about 30,000 lb. I believe that these cars are going to prove the salvation of a great many short-line railways, as well as branch lines of the larger systems; and, as a

special switch is provided for charging when the car is standing. In addition to the saving in operating costs claimed for these Diesel-electric cars, other advantages claimed are the saving in car heating from the engine cooling water, the independence of cooling and charging stations, and the elimination of waste of time in taking on water and fuel at stations, as the oil fuel suffices for a 600 mile run, and no cooling water is

Canadian National Railways Storage Battery Car, 15563.

great many of our member lines have stated, they have figures from red to black. While the cars of the type under consideration are absolutely successful and will faithfully perform the duties imposed on them, I feel that efforts should be expended toward the development of a higher powered engine, as the present equipment has none too much power. I do not mean to increase the bore of the cylinders, or go to the slow speed marine type of engine; but, instead, to increase the number of cylinders and adhere strictly to the successful and proved type of automobile engine."

Diesel-Electric Cars.—Swedish railways have been using self propelled cars, equipped with 75 and 120 h.p. Diesel engines, and electrical transmission, for many years, some of them having been in service since 1913, and more recently cars equipped with 160 and 250 h.p. engines have been placed in service. Four of these large units are in service between Gothenburg and cities south of that point. The complete power installation for these cars consists of the following apparatus: one Diesel engine of the 4 stroke cycle type, with 6, 8 or 12 cylinders, according to the capacity. The size of generators and other electrical equipment is also increased with the engine capacity; one direct-coupled, direct-current generator of the 8-pole type, with commutating poles. The generator is shunt wound, but has a separate series winding, the latter being connected to the circuit only when the generator is driven from the storage battery in starting. The generator voltage can be varied within wide limits up to 550 volts. Two electric motors of standard series-wound railway type, with commutating poles. (Power is transmitted to the axles by spur gearing); one storage battery of alkaline type, suspended beneath car and supplying current for starting, lighting and working auxiliary apparatus. This is charged automatically when the car is in motion, and a spe-

cial switch is provided for charging when the car is standing.

Canadian Railway and Marine World has been advised that some of its readers have been under the impression that the rear trucks of the gasoline railway motor cars built by Ledoux, Jennings, Ltd., of Montreal, are fixed and rigid in relation to the car body, which has caused enquiries to be made as to how curvature is taken care of. We cannot understand how such an idea could have

Quebec, Montreal & Southern Railway Gasoline Railway Motor Car.

originated, as Canadian Railway and Marine World has published nothing to that effect.

Of course, proper curving and tracking would be impossible with the truck fixed, and the rear truck on these cars, like the front trucks, swivels on a center plate and side bearings as on any other railway car, the drive being taken care of by a ring universal joint and the telescoping.

Railway Finance, Meetings, Etc.

Algoma Central & Hudson Bay Ry. Co. The Lake Superior Corporation's report for the year ended June 30, says:—The year's operations of the Algoma Central & Hudson Bay Ry. Co., and Algoma Central Terminals, resulted in a net loss, before bond interest, of \$95,403.48, against net earnings of \$159,425.66 for the previous fiscal year.

Boston and Maine Rd.—There has been deposited with the Secretary of State at Ottawa, a duplicate original of an equipment trust agreement dated Aug. 1, between J. H. Hustin and others, the First National Bank of Boston, and the Boston and Maine Rd., and a lease from the First National Bank to the Boston and Maine Rd., covering the following rolling stock:—22 switching locomotives, 2 Mallet switching locomotives, 65 steel passenger cars, 20 steel smoking cars, 8 steel baggage and smoking cars, 5 steel baggage and mail cars, and 25 milk cars, passenger equipped.

The Hereford Ry. shareholders' annual meeting was held at Sherbrooke, Que., Sept. 5. Following are the directors for the current year:—President, Stephen Bond, New York; Vice President, J. H. Walsh, Sherbrooke; Secretary-Treasurer, H. R. Fraser, Sherbrooke; other directors, J. F. Allen, New York; E. W. Farwell, Sherbrooke. The company's railway, from the International Boundary, Compton County, Vt., to Lime Ridge, Que., 53.30 miles, is leased to the Maine Central Rd.

Lacombe and Northwestern Ry.—An issue of \$225,000 of the company's 5% first mortgage bonds was offered recently at 93.74. The issue is guaranteed by the Alberta Government, which owns the line, having taken it over from the original owners.

Steel Rail Prices.—A New York press dispatch of Sept. 13, says that the United States Steel Corporation announced that

it had recommended to its subsidiary companies that the price of standard rails be increased, commencing Oct. 1, to \$43 a gross ton base, f.o.b. mills for delivery in about equal monthly installments prior to June 30, 1923, the price of \$40 a gross ton base to continue in effect until Sept. 30, 1922.

Steel Plates.—The C.P.R. ordered 100 tons of British plates recently, through a Montreal jobber.

Railway Rolling Stock Orders and Deliveries.

The G.T.R. has received 6 switching locomotives from its Montreal shops.

Abitibi Transportation & Navigation Co. has received 30 flat cars at Iroquois Falls, Ont., for the logging railway which it is building from there to Hughes. They were shipped from Chicago Heights, Ill.

The C.P.R., between July 13 and Sept. 13, received 14 vans from its Angus shops, 1 industrial wrecking crane of 160 tons capacity, from F. H. Hopkins & Co., and 1 scale test car of 80,000 lb. capacity from Canadian Fairbanks-Morse Co., and has ordered 25 vans.

The Timiskaming & Northern Ontario Ry. has placed an order with Canadian Locomotive Co. for rebuilding and repairing six 10-wheel locomotives, which were built by that company in April, 1908, and weigh 144,000 lb., of which 114,000 are on the drivers; cylinders are 19 x 24 in., and the driving wheels are 19 in. dia., the boiler having a working pressure of 200 lb. a sq. in., with saturated steam. The following equipment is to be applied: Robinson superheater, Mudge-Slater smoke box, new firebox with Nicholson thermic syphon, American brick arch, Franklin fire door, steel cab in place of wood originally applied, metallic packing, Walschaert valve gear in place of Stephenson gear applied originally, Westinghouse E.T.6 air brake, cold steam heat equipment, Barco metallic joints between engine and tender. The locomotives will have new cylinders of the piston valve type, 20 x 24 in., with 57 in. drivers, the boilers being made to carry a working pressure of 180 lb. a sq. in.

The Brazilian Railway Board has ordered a mikado (2-8-2) locomotive from Montreal Locomotive Works. Following are the chief details:

Gauge.....	39 1/2 in.
Weight on drivers.....	86,000 lb.
Weight on engine truck.....	10,000 lb.
Weight on trailing truck.....	21,500 lb.
Weight, total engine.....	122,500 lb.
Wheel base, engine.....	11 ft. 3 in.
Wheel base, total engine.....	26 ft. 10 in.
Cylinders, diam. and stroke.....	16 x 22 in.
Driving wheels, diam.....	7 x 8 in.
Engine truck wheels, diam.....	24 in.
Engine truck journals.....	5 1/2 x 10 in.
Boiler, type.....	Straight top, combustion type
Boiler, diam. first ring.....	58 in.
Firebox, length and width.....	90 1/2 x 70 1/2 in.
Tubes, no. and diam.....	102 x 2 in.
Flues, no. and diam.....	14 x 5 in.
Heating surface, tubes.....	160 sq. ft.
Heating surface, firebox.....	152 sq. ft.
Heating surface, flues.....	231 sq. ft.
Heating surface, total.....	343 sq. ft.
Grate area.....	47 sq. ft.
Tractive power.....	10,500 hp.
Factor of adhesion.....	1/2
Superheater.....	Superheater Co.
Reverse gear.....	Shaw-Walker
Water capacity.....	2,600 gal.
Coal capacity.....	4 tons

Algoma Relling Stock Co.—The Lake Superior Corporation's report, for the year ended June 30, gives the Algoma Rolling Stock Co's balance sheet at June 30 as follows: Assets, equipment, \$75,000; accounts receivable, \$1,131.43; Dominion of Canada bonds, \$700; total, \$76,831.43. Liabilities, capital stock, \$700; first mortgage 6% bonds, \$75,000; accrued interest on bonds, etc., \$1,131.43; total, \$76,831.43.

Automatic Stokers and Power Shakers. The Brotherhood of Locomotive and Firemen, having asked the Board of Railway Commissioners to consider the question of locomotive the equipping of coal burning locomotives, weighing over 100,000 lb. on drivers, with automatic stokers and power grate shakers, the matter was placed on the order paper to be heard at Ottawa, Sept. 19.

Telegraph, Telephone and Cable Matters.

Wm. Farrell, President, British Columbia Telephone Co., died at Vancouver, Sept. 12, aged 68.

C. E. Mersereau, Commercial Manager, Maritime Telegraph and Telephone Co., died at Halifax, N.S., Sept. 5, aged 52.

Canadian National Telegraphs have opened offices at Norway Bay, Que.; Callander and Joe Lake, Ont.; Laporte, Pathow and Rama, Sask., and Bollis, Bloufroot and Scollard, Alta.

The Commercial Cable Co. announces the partial restoration of its cable service with Great Britain. The deferred service has not yet been restored, but it is expected that it will be shortly.

A conciliation board has been appointed to enquire into the matters in dispute between the Marconi Wireless Telegraph Co. of Canada and its employees. E. McG. Quirk, Montreal, has been appointed chairman, the company is represented by M. P. White, Toronto, and the employees by Taylor, Toronto.

Oliver S. Chalk, Chief Clerk, Plant Inspector's Office, Canadian National Telegraphs, Toronto, died at the Victoria Memorial Hospital, Toronto, Sept. 1, aged 34, following an operation. He entered Great North Western Telegraph Co's service about 17 years ago, in the District Plant Superintendent's office.

The Postal Telegraph-Commercial Cable System, is reported to have entered into an alliance with the Atlantic Cables, Inc., involving over 50,000 miles of submarine cable. The agreement provides for an exchange of traffic between the two systems, the agents of each company acting as agents for the other. C. H. Mackay, President, Postal Telegraph-Commercial Cables, states that the arrangement provides a comprehensive cable system extending from all parts of the U.S. to Canada to Central and South America, and from Europe to the Orient.

The Canadian National Telegraphers during the Canadian National Exhibition at Toronto, Aug. 26, to Sept. 9, demonstrated in actual operation various types of equipment in use for commercial and railway communication service. A 2-channel multiplex was installed at the Transportation Building's western entrance and handled sample telegrams with accuracy at a high speed. Another automatic telegraph device in the exhibit was the teletype, which has become popular with public and private institutions for handling telegrams, conversations, stock quotations, etc.

This machine has recently been demonstrated in radio communication. On the opposite side of the room, telephone train dispatching equipment, for central and way stations, was displayed. The train dispatching apparatus, enclosed in fireproof steel cabinets, was designed and built by the Canadian National Telegraphers especially for use on the Canadian National Ry's transcontinental line. There was a demonstration of radio reception on a Canadian National Ry's standard all steel passenger train. In co-operation with the Marconi Co. and the Northern Electric Co., a concert programme was broadcasted daily from the C.N.R. steamship Dalhousie City, plying between Toronto and Port Dalhousie on Lake Ontario. Concerts were also received on this train from other broadcasting stations in Canada and the United States.

Among the Express Companies.

E. J. Wearing, European Agent, Canadian National Ex. Co., has moved his office from 20 Water St., Liverpool, to 17 Cockspur St., London, Eng.

A. W. Lee, heretofore route agent, British Columbia Division, Dominion Ex. Co., has been appointed agent at Victoria, B.C., vice J. H. Young, deceased.

E. E. Nixon, heretofore station agent, Dominion Ex. Co., Vancouver, B.C., has been appointed route agent, British Columbia Division, Vancouver, vice A. W. Lee.

John Buchan, heretofore chief clerk, European Agent, Canadian National Ex. Co., Liverpool, Eng., has been appointed local agent, there, the European Agent's office have been moved to London.

The Board of Railway Commissioners passed order 32,785, Aug. 23, approving Supplement B to Express Classification for Canada no. 5, with certain changes. The order is given in full on another page of this issue, and is approved by Board of Railway Commissioners.

The Canadian National Ex. Co. has opened offices at Walsh and Hughes, Ont., Makaroff, Man., Laporte and Rama, Sask., and Scollard, Leslieville and Gibbons, Alta., and has closed its offices at Elmira, P.E.I., Victoria Beach and Grand Beach, Man., and Crooked River, Sask.

The Lake Superior Corporation's annual report, for the year ended June 30, gives the following particulars of the British America Express Co's operations for the same period:—Net earnings from operations, \$3,937.31; interest on bank account, \$74.78; balance brought forward from previous year, \$20.37; total \$4,032.46. Dividend on capital stock, \$3,550, income tax, \$384.52; balance at credit, carried forward, \$147.94.

James Hector Young, agent, Dominion Ex. Co. and American Express Co., at Victoria, B.C., who died there, Aug. 3, as stated in Canadian Railway and Marine World for September, entered the Dominion Ex. Co's service Aug. 25, 1886, as messenger between Calgary, Alta., and Vancouver, B.C., continuing in that position until May 17, 1897, when he was appointed agent at Rossland, B.C. He was transferred to Victoria, as agent, Dec. 5, 1905.

The Post Office Department is entering into competition with the express companies. It has given notice that commencing Oct. 1, a c.o.d. service will be established in connection with mail matter, for delivery within Canada, whereby charges due the sender up to \$100 may be collected from the addressee, and remitted to the sender by money order. The fees will be 15c. if the amount to be collected is not more than \$50, 30c. if over \$50, the limit of collection being \$100, and the fee is to be paid by stamps affixed to the parcel by the sender. The fee also covers insurance and registration, in the case of articles prepaid at parcel post rates, for loss, abstraction or damage, not to exceed \$50 when a 15c. fee has been paid, and not to exceed \$100 when a 30c. fee has been paid; and in the case of articles prepaid at other than parcel post rates, the indemnity for loss only, shall in no case exceed \$25, or the actual value of the lost article if the same is less than \$25. Articles sent on this plan must have been ordered by the addressee, and no article is to be accepted for transmission which bears any wording to the effect that it may be examined before acceptance.

Electric Railway Department

Toronto Transportation Commission's Work.

The track work to be done under the Toronto Transportation Commission's programme for this year's working season is well on the way to completion, and September saw a start made and good progress accomplished on the Commission's largest individual undertaking in the way of track reconstruction or extension to date, viz., the laying of a double track line on upper Yonge St., from Farnham Ave. to Deloraine Ave., at the city's northern limits. This involves the laying of 37,100 single track feet of track. The loop for turning some of the cars operating on Yonge St., in order that not all of them will have to operate to the northern city limits, has been installed at Lawton St. Of the list of work to be done this year, as given in Canadian Railway and Marine World for Sept., pp. 480, the following remains to be done. Track to be resurfaced and joints welded on Dundas St., between Roncesvalles Ave. and Queen St.; track to be rehabilitated on Bloor St., between Spadina Ave. and Avenue Road; extension to be built on Terauley St., between Bloor St. and Davenport Road; track to be rehabilitated on Bloor St., between Yonge St. and Church St.; track to be resurfaced and joints built up on Dundas St., between Terauley and McCaul St.; joints to be welded in track on Danforth Ave., between Hillingdon and Luttrell Aves.; extension to be built on Kingston Road, between Columbine Ave., near Queen St., and Victoria Park Ave.

Work on the upper Yonge St. track extension was begun on Aug. 26, and at the time of writing (Sept. 12), track had been laid on 122-S-G, from Dundas St. to Woodlawn Ave. to Heath St., 2,370 ft., and the foundation was completed from Woodlawn Ave. to Lawton Ave. loop, 2,773 ft., North from Lawton Ave., 122-C-G construction is being used, and at the time of writing the foundation between Lawton Ave. and Berwick Ave., 4,746 ft., is nearing completion. Between Berwick Ave. and Eglinton Ave., one block apart, the turnouts for entrance to and exit from the new car house and yards are located, and at Sept. 12 this special work had been laid, while on Eglinton Ave., west of Yonge St., the foundation has been laid for the car house turnouts from Eglinton Ave. North of Eglinton Ave. Grading was completed and the concrete slab laid as far north as Glengrove Ave., 4,694 ft., and the rails laid from Eglinton Ave. to Roselawn Ave., 1,544 ft., while on a section farther north, from Lawrence Ave. to the northern city limits, 3,151 ft., the grading was completed. The 122-S-G construction used from Woodlawn Ave. to Lawton Ave. has a broken stone foundation and granite block wearing surface. While the 122-C-G construction used north of Lawton Ave. has a concrete slab foundation and granite block wearing surface. Illustrations of longitudinal and cross sections in types of track construction were given in Canadian Railway and Marine World for Dec. 1921, pp. 656.

In excavating for the new track, in the macadamized road material, the Commission has used steam shovels throughout, drills operating by compressed air being used along the side limits of the excavation. The excavated ma-

terial was hauled away by motor trucks. Traffic on Yonge St. has been suspended, except at important road crossings, and a temporary track to replace the Toronto and York Radial Ry.'s Metropolitan Division single track line has been built at the west side of Yonge St. As the new track is completed, this temporary track will be removed by sections and temporary connections between the remaining portion of it and the completed portion of the new track will be established. At present the T. & Y. Ry. is operating its own cars as far south

half mile of double track will be laid with International steel twin ties, which are built up on transverse steel channels spaced about 2 1/2 ft. apart, with a plate spanning the channels, to which the rails are secured by clips passing through the plate, and the other half mile will be laid with Carnegie steel ties, section M 24, of 1 beam section.

Loop at north city limits.—The Ontario Railway and Municipal Board has approved the location plan of the Commission's loop for turning its Yonge St. cars at the northern city limits, and for the Toronto & York Radial Ry.'s Metropolitan Division barns and yards. Doncliffe Road is to be closed from Yonge St. east to Forest Glen Crescent, the latter to be extended south one block. The Commission's loop will be built east of Yonge St. on land provided by closing Doncliffe Road, the T. & Y. Ry. line will come to a dead end at the loop, and a diverging track will be built to give access to the radial railway barns and yards to be built east of Yonge St. and north of the Commission's loop. The new barns and yard for the T. & Y. Ry. are necessitated, of course, by the fact that the radial cars will, on completion of the Commission's new Yonge St. line, run only as far south as the city's northern limits, where passengers will transfer to the Commission's cars.

Car Houses.—Rapid progress is being made with the building of the car house at the intersection of Yonge St. and Eglinton Ave., the contract for which was given Wells & Gray, Ltd., Toronto, on July 19. The work is to be finished by Dec. 6, under a penalty and bonus clause in the contract. Considerable grading was necessary to prepare the property for the house and yards, and retaining walls have been built to support a portion of the fill required.

The Commission received tenders, Sept. 29, for the installation of a fire protection system and car washing service for the St. Clair, Danforth, Russell and Lansdowne car house yards, including water lines, monitor nozzles, hydrants, standpipes, hose and other equipment.

Dundas St. Cross-Town Line.—Work has been begun on the removal of buildings necessary for the provision by the city of a right of way for the line to be built by the Commission to make the Dundas St. line continuous across the city from east to west. Buildings have to be removed from the east side of Yonge St. north of Dundas St., and on the north side of Dundas St. both east and west of Victoria St., after which the line on Dundas St. west will be extended from Terauley St. to Yonge and continued to join the present line on Dundas St. east, at a point about 400 ft. east of Victoria St.

Philip Doeck, Chairman, London, Ont., Public Utilities Commission, and Vice Chairman London Railway Commission, is reported to have stated, Sept. 11, that, owing to increased charges for hydro electric power since the putting into operation of the Chippewa power plant, there will probably be an increase in the cost of power for operating the London and Port Stanley Ry.

Canadian Electric Railway Association.

Honorary President, E. A. Robert, President, Montreal Tramways Co., past President Ry., Light, Heat & Power Co.

Honorary Vice President, Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co.

Honorary Council, Thos. Ahearn, President, Ottawa Electric Ry.; Acton Burrows, Proprietor, Canadian Railway and Marine World; Geo. Kidd, General Manager, British Columbia Electric Ry.; H.-Col. J. E. Hutchison, General Manager, Montreal Tramways Co., and director, Quebec Ry., Light, Heat & Power Co.

President, Major R. D. Burpee, Manager and director, Ottawa Electric Ry.

Vice President, H. H. Couzens, General Manager, Toronto Transportation Commission.

Executive Committee, The President, the Vice President, the immediate past President (G. Gordon Gale, Vice President and General Manager, Hull Electric Co.) and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, Vice President, and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; D. W. Houston, Superintendent, Regina Municipal Ry.; C. J. Pelmont, Vice President and General Manager, Winnipeg Electric Ry.; R. Mayne-Rende, Superintendent, Quebec Railway, Light & Power Co.; W. A. Roberts, General Superintendent of Railways, Hydro-Electric Power Commission of Ontario; W. L. Weston, Manager, Nova Scotia Tramways & Power Co.; H. E. Weyman, Manager, Lewis County Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Treasurer, W. S. Mart, Managing Director, Three Rivers Traction Co.

Auditor, Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Ry.

Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry., Ottawa, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

as Heath St., and using cars rented from the Toronto Transportation Commission to carry passengers down to Woodlawn Ave. on the new track, and as the work progresses, the passengers will be transferred at Eglinton Ave., later at Glengrove Ave., and finally will be transferred permanently at the northern city limits, at the northern terminus of the Commission's new line. The Yonge St. work is progressing in two shifts, about 500 men being employed on the day shift and 450 men on the night, about 50 watchmen at road crossings and at other points being necessary. Over 100 trucks are employed in removing the excavated material and in other work. Steel ties are being introduced by the Commission in its north Yonge St. work, and will be tried thoroughly. The most northerly mile of track, extending to the city limits, will have the rails supported on steel ties embedded in the concrete. One

Toronto Transportation Commission Fare Prepayment Wickets.

The accompanying plan shows the car loading platform and prepayment wickets built this year near the Canadian National Exhibition's western, or Dufferin St. entrance in Toronto. In past years much delay and confusion was experienced in loading passengers on street cars on Dufferin St., outside the exhibition grounds entrance, and a great deal of time was lost by conductors selling tickets on the crowded cars. With the introduction of the prepayment wickets and loading platform, combined with the method used of looping the cars, this delay has been obviated, and a speeding up of the exhibition car service and greater satisfaction to passengers have resulted. Exhibition cars coming south on Dufferin St. unload their passengers at the corner of Dufferin St. and Springhurst Ave., the latter street running east and west and intersecting Dufferin St. about 300 ft. north of the prepayment wickets. The cars then loop, by swinging west on

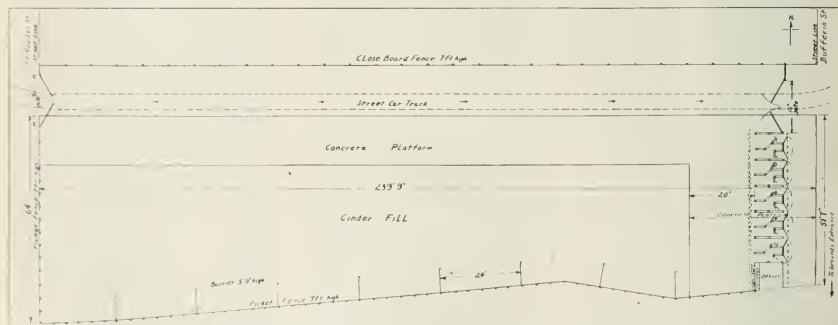

butted to the fare box attendants is also shown.

A fare prepayment arrangement was installed by the Toronto Ry. in 1921 at the eastern entrance to the exhibition grounds, and this was altered and enlarged by the Toronto Transportation Commission for this year's exhibition. The number of wickets at the eastern entrance is greater than at the Dufferin St. entrance, and the wickets are at right angles to the track, but the principle of operation is the same.

We are officially advised that 1,415,000 people used the street cars to and from the exhibition this year, and when it is considered that this number of people were handled to and from two terminals during the two weeks the exhibition was in progress, some idea of the traffic density may be had. The manner in which the fare prepayment facilities speeded up the car service and assisted in obviating crowding and discomfort to passengers was most gratifying.

Hull Electric Co's Paugan Falls Electrical Development.

Residents of Ottawa, Ont., and Hull, Que., and particularly those who have been interested in the local hydro electric development, have long known of the Paugan Falls, on the Gatineau River, at Low, about 35 miles northwest of Hull. The ownership of these falls developed a controversy which was finally carried to the Imperial Privy Council, the judgment of which settled for all time the claims of the opposing parties. This question having been settled, prospective purchasers were interviewed, and in 1916, C. Gordon Gale, Vice President and General Manager, Hull Electric Co., investigated the possibilities of developing electric power from the falls with a hydraulic head of 30 ft. He reported that such an undertaking could not be carried out economically at that time, and the offer to dispose of the falls was not accepted. During the study of the locality, however, Mr. Gale was impressed with the topography above the falls, which apparently made possible a much larger development, involving the construction of a huge dam above the falls,

Fare Prepayment Wickets, etc., Canadian National Exhibition's Western Entrance.

Springhurst Ave. for a short block, then south on Fort Rouille St., then east as shown by the arrows, pulling up at the concrete platform, where there is accommodation for 4 large cars.

When street car passengers leave the exhibition, they pass through some of the 10 prepayment wickets shown at the right, each wicket having standard street car fare box, as numbered in the plan. A conductor is stationed at each fare box to sell tickets and collect fares. On depositing his fare or ticket the passenger proceeds to board the waiting car, from the conductor of which he receives a transfer if required. After the cars start, the cars leave the platform east-bound, completing the loop, and proceed north on the north-bound track on Dufferin St.

The wooden barriers, 5 1/2 ft. high, shown along the south side of the enclosure, have a tendency to check the surging movement common to large crowds, and have also been found useful in segregating parties destined for special cars, such as lodge members, children's excursion parties, etc. The arrangement of gates, fences, etc., to ensure collection of all fares and the proper operation of the system is evident from the plan, and the office from which tickets are distributed

Street Car Speed in Victoria. — The British Columbia Electric Ry. Co., and D. Templeton, one of its motormen, were summoned in the Victoria, B.C., police court, Aug. 29, for exceeding the speed limit of 18 miles an hour under the provisions of the traffic bylaws as amended in 1921. The police magistrate decided that the weight of evidence was in the company's favor, and dismissed the charges. We are advised that on Fort St., Victoria, between Harrison and Oak Bay Jct., there is a narrow strip of roadway upon which the company has tracks. The city, some weeks ago, passed an ordinance limiting the speed of vehicular traffic through there to 15 miles an hour. A number of motorists have been fined for exceeding this speed at that point, and on Aug. 16, information was laid against the company and D. Templeton, for a breach of the ordinance. From the evidence given by the witnesses for the defence the company's management does not believe that the speed limit was exceeded. We are further advised that since the city put up its notice reducing the speed, instructions have been issued to all motormen to maintain a speed of less than 18 miles an hour, and that this order is being strictly carried out by those concerned.

which would back up the Gatineau River for many miles and inundate large areas. Walter J. Francis & Co., consulting engineers, Montreal, were engaged to survey and report upon the property, and in 1918, a score or more of engineers worked for several months investigating the territory. The report made confirmed the preliminary investigation, and arrangements were made to acquire the properties which would be flooded by the proposed dam. It is proposed to build a dam 125 ft. high, above which a lake of from 8 to 10 sq. miles will be formed, stretching from Low to Kazabazua, providing a very desirable local storage basin. The plant's ultimate capacity will be 150,000 h.p. The estimated cost has not been definitely determined, but is expected to be approximately \$10,000,000.

The Hull Publicity Commission has received a number of enquiries from prospective users of large blocks of power, and the Hull Electric Co's decision to undertake this great work will have a marked effect upon those who have been considering the possibilities of establishing industrial plants in Hull. The growth of many of the towns and cities in the Province of Quebec has rapidly followed the introduction of hydro electric power, which is so necessary for al-

most all the activities of modern industry. When this great undertaking has been completed, and quantities of electric power are made available, there is every prospect that Hull will soon grow into an extensive and important industrial center. Ottawa and Hull have been advertised for many years as the power cities, with over 1,000,000 undeveloped water horsepower within easy reach. Their needs have so far been provided for by the electric plants at the Chaudiere, and the ambitious engineering feat now proposed by the Hull Electric Co. marks a definite step towards the expansion and industrial development which has for years been prophesied for Hull.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.

	July, 1922	July, 1921
Gross	\$834,772	\$840,155
Expenses	612,113	636,091
Net	222,659	204,136

Cape Breton Electric Co.

	July, 1922	July, 1921	July, 1920	July, 1919
Gross	\$52,712	\$62,128	\$67,071	\$69,264
Expenses	39,567	45,901	58,582	578,122
Net	13,145	16,227	17,539	111,142
Interest	5,641	5,739	67,518	68,881
Balance	7,504	10,488	4,922	42,260

Chatham, Wallaceburg and Lake Erie Ry. Co.—The following officers and directors were elected, Sept. 6:—President, R. G. O. Thomson; Vice President, J. D. Morton; Secretary-Treasurer, H. S. Gausby; other directors: J. G. Kerr, W. A. Walker, F. M. Little, R. Keemle.

Fort William Municipal Ry.—A press report of Sept. 6, stating that earnings since Sept. 1, showed a saving of \$60 a day, compared with the cost of operation before the putting on of one-man cars. The extension to Chippewa Park which was put in operation during July, is reported to have had a net revenue of \$495 to the end of that month, and a net revenue of \$817.39 for August.

Hamilton St. Ry.—Hamilton, Ont., City Treasurer is reported to have stated that the company's revenue declined considerably during the three months ended, June 30, notwithstanding the fixing of the fare at 5 cents straight. The percentage of earnings payable to the city during that period was \$20,005.28, compared with 20,292.86 for the corresponding three months of 1921. The decrease in earnings is said to be due to buses being run on Main St. in direct competition with the railway.

Hull Electric Co.'s annual meeting was held Sept. 6. Following are the officers and directors for the current year:—President, A. D. MacTier; Vice President, G. Gordon Gale; other directors: Grant Hall, I. G. Ogden, W. R. MacInnes, F. L. Wanklyn and E. Hanson; Secretary-Treasurer, H. C. Oswald.

Quebec Ry. Light and Power Co.—Gross earnings for the three months ended March, are reported to have been \$197,777, an increase over the corresponding period of 1921.

Sault Ste. Marie Traction Co.—Following is the profit and loss account for the year ended June 30, 1922:—

Income from operations	\$ 5,435.39
Less: interest on bank account	123.03
	\$ 5,312.36
Depreciation of buildings, equipment, etc.	4,104.24
	\$ 1,208.12
Balance at debit from previous year	\$ 9,116.60
	9,244.29
Balance at debit carried forward	\$18,660.89

The Southern Canada Power Co. which owns the Sherbrooke Ry. and Power Co., has sold \$650,000 of 6% preferred stock. The proceeds will be used in part to liquidate notes payable for \$527,120.

Winnipeg Electric Railway.

	7 mos. to July 31, 1922	7 mos. to July 31, 1921	7 mos. to July 31, 1920
Gross	\$397,685	\$390,110	\$315,172
Expenses	299,958	296,561	233,870
Net	97,727	93,549	81,302
Fixed charges	70,233	42,778	428,701
Surplus	27,494	50,771	385,611

The Comptroller has written as follows:—The surplus after fixed charges for the month, is somewhat below July, 1921. This may be attributed to two general causes, a decrease in the gross receipts of the railway utility, and an abnormal increase in operating expenses of both railway and electric utilities. The decrease in railway gross receipts is due to a small adjustment in some of the special rates of fare that took effect Aug. 1, 1921, to stimulate traffic and encourage riding, and the lack of activity and general depressed business conditions. The increase in operating expenses of both the railway and electric utilities, is due primarily to an increase in the cost of power, on account of it being necessary to operate a steam reserve plant almost continually throughout the month. Part of this was due to damage that was done to the transmission line by the June 23 storm, and the balance to a breakdown at the hydraulic plant during the month, which put 2 of the generators out of service. Had we continued to operate throughout July under regular normal conditions, the operating expenses would have compared very favorably with July 1921 and the 6 preceding months of this year, and the net showing for the month would have shown an increase over 1921."

Fort William and Port Arthur Street Railway Matters.

The Port Arthur, Ont., Civic Ry. put a one-man car service in operation on its entire system, Sept. 1, which necessitated a revision of the main line service. The new service from Current River, Port Arthur to Yonge St., Fort William is a 13 minute one on week days. On Sundays a 26 minute service is given until noon, and thereafter a 13 minute one. The other services on the other lines are unchanged. The new service was put in operation in conjunction with the Fort William Municipal Ry. two cars being operated by each railway. Two additional cars will be added by each railway.

Fort William Municipal Ry. and Port Arthur Civic Ry. operate a joint service over a line connecting the two cities, the cars of each railway running over the lines of the other to a central point in each city. Owing to the mileage in Port Arthur over which the Fort William cars operate being about a mile longer, than that over which the Port Arthur cars operate in Fort William, there has been a dispute between the two corporations as to mileage cost. The Fort William Municipal Ry. claimed \$18 a mile. The Port Arthur Civic Ry. offered \$750 in settlement. As they could not agree, the matter was referred to the Ontario Railway and Municipal Board for settlement. After hearing the parties, the Board fixed the amount for 1922 at \$1,000, to be paid before Dec. 31.

Electric Railway Freight and Passenger Rates.

The British Columbia Electric Ry's standard freight mileage tariff C.R.C. 221, cancelling C.R.C. 191, in so far as the same has application to the Vancouver & Lulu Island Ry. and the Vancouver & Fraser Valley & Southern Ry., was approved by the Board of Railway Commissioners' order 32784, Aug. 23.

The City of Vancouver and G. E. Bennett applied to the Board of Railway Commissioners recently, for an order directing the Vancouver Fraser Valley & Southern Ry., a B. C. Electric Ry. subsidiary, to reduce its passenger fares on the Burnaby Lake line, within Vancouver, to the same rate as existing on city lines, and the case was set down for hearing at Vancouver on Sept. 19. The Burnaby Lake line is an interurban one, which parallels a city line at a distance of about three-quarters of a mile. The city fare is 6c. and the interurban line fare 10c.

Kitchener and Waterloo St. Ry.—We are officially advised that the Kitchener, Ont., and Waterloo Commissioners, who operate the railway, do not at present contemplate any increase of fares. There has been an increase in cost, due to higher rates for Chippewa power, which may necessitate a slight increase in fares next year.

London and Port Stanley Ry.—Summer cottage owners at Port Stanley, Ont., whose permanent residences are in London and other points on the L. and S. Ry., are reported to have asked the London Railway Commission to sell the commutation tickets, which are sold only during summer months, throughout the year. They desire this so that they may lengthen the period of their residence at the lakeside, and be able to have house parties for winter amusements for week-ends.

Ontario Hydro Electric Ry., Essex Division.—We are officially advised that a charge of 1 cent is still being made for transfers from the electric railway lines in Windsor to the trackless trolleys and vice versa. This charge was put in force on the installation of the buses; and will be effective until further notice.

Toronto Transportation Commission.—P. W. Ellis, Chairman, when addressing the city council recently, in opposition to the proposal to give the Hydro Electric Power Commission of Ontario a free right of way over the Toronto Harbor Commissioners' property, said that, under the act constituting the Toronto Transportation Commission, it is compelled to charge fares which will sustain the enterprise; that during reconstruction and its interference with travel, a large amount had been lost in fares, but now that reconstruction is nearly completed the Commission would concentrate on economy of operation, in the hope that it would be possible before long to lower fares. He advises Canadian Railway and Marine World that while he can make no promise, the public can rely upon the Commission doing its utmost, while reconstruction is nearly completed, to make frequent, rapid and comfortable service, to cheapen the cost of transportation.

St. Thomas Municipal Ry.—A press report states that a 7 cent fare was put in operation on the St. Thomas, Ont., Municipal Ry., Sept. 6. Tickets are reported as being sold, at a rate which makes the fare only half a cent more than under the old rate.

York County and the Toronto and York Radial Railway.

The County of York has entered action in the Ontario Superior Court against the Toronto Transportation Commission and the City of Toronto, the writ asking for a mandatory injunction compelling the defendants to restore the roadbed, right of way, tracks and other equipment of the portion of the highway formerly occupied by the Toronto and York Radial Ry. on Yonge St. in Toronto, which is alleged to have been illegally and unlawfully removed by the defendants, their servants, workmen or agents, and for an injunction restraining the defendants from in any way interfering with the County of York, exercising all the rights, privileges and franchise which the county is legally entitled to under and by virtue of the provision in certain agreements confirmed by statute entered into between what was formally known as the Metropolitan Ry., and also for a direction that the county is entitled to uninterrupted use of Yonge St. as far as Farnham Ave. This action is one of the side issues arising out of the Toronto electrical clean-up deal.

Electric Railway Employees' Wages, Working Conditions, Etc.

Ottawa Electric Ry.—An Ottawa press dispatch of Sept. 18 says that the company's Manager, Major F. D. Burpee, has signed an agreement with the Amalgamated Association of Street and Electric Railway Employees of America, Division 279, based on the finding brought in some three months ago, by a conciliation board, which recommended a general reduction of 12 1/2% in wages and a continuance of the 9 hour day, the wages, per hour, to be as follows: 1st. year, 43c; 2nd. year, 45c; 3rd. year, 46c; 4th. year and after, 48c. The agreement provides that the management will meet and treat with officials of the Division on questions and differences that may arise during the term of the agreement, including dismissals after suspension.

The schedule of wages per hour for conductors and motormen, mentioned in draft agreement annexed to the majority report was:—1st. year, 43c; 2nd. year, 45c; 3rd. year, 46c; 4th year and after, 48c.

An Ottawa press dispatch stated that this clause was claimed as a distinct concession to the men, but there is nothing new about it, as for many years past the agreements have contained a similar clause. The whole agreement is such as could be entered into with any number of employees who wished to form themselves into an association, or with any individual employee, is he so desired.

Toronto Suburban Ry. has entered into a new agreement with its conductors and motormen, members of the Amalgamated Association of Street and Electric Railway Employees of America, Division 113, to be in effect until Sept. 1923, subject to 30 days notice, under which wages have been reduced by from 3 to 5c. an hour, as follows:—

	New	Old
First year	41c	46c
Second	42c	48c
Third	43c	49c
Over three years	45c	52c

England.—A London cablegram says that tramway workers throughout England are facing the prospect of a reduction of 12 shillings a week in their

wages, the reduction to be made in three installments. The municipalities which are the largest employers of this branch of labor, assert that skilled workmen in many industries are now receiving less than the tramway workers.

It is asserted that the municipal tramways throughout the country are being conducted at a loss of about £250,000 annually.

The tramway workers are organizing a national resistance to the proposed wage reduction.

Canadian Electric Railway Association's Activities.

The Association's executive has appointed the following special committees: Standards: G. Gordon Gale, Vice President and General Manager, Hull Electric Co., chairman; D. E. Blair, Superintendent of Equipment, Montreal Tramways Co.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; C. C. Curtis, Manager, Cape Breton Electric Co.; W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.

Public Relations: A. W. McLimont, Vice President, Winnipeg Electric Ry., chairman; G. Kidd, General Manager, British Columbia Electric Ry.; W. J. Lynch, General Manager, Quebec Railway, Light, Heat & Power Co.; E. W. Oliver, General Superintendent, Niagara, St. Catharines & Toronto Ry.; M. A. Pooler, General Manager, New Brunswick Power Co.

Safety: J. F. H. Wyse, General Manager, Ontario Safety League, chairman; C. C. Curtis, Manager, Cape Breton Electric Co.; W. H. Darracont, chief clerk to Manager, Winnipeg Electric Ry.; W. R. McKee, Superintendent of Rolling Stock and Shops, Toronto Transportation Commission; R. M. Reade, Superintendent, City Division, Quebec Ry., Light & Power Co.

It is proposed to appoint a special committee on the government classification of electric railway accounts, to deal particularly with maintenance and depreciation questions.

Electric Railway Notes.

L. Pilon, Hull, Que., was fined \$10 and costs, by the Ottawa Police Magistrate, recently, for passing a standing car on the Ottawa Electric Ry.

The Kitchener Light Commissioners have bought 5 Peter Witt cars, 50 ft. long overall, all-steel construction, and with seating capacity for 64 passengers, from Cincinnati Car Co.

Moncton Tramways, Electricity & Gas Co. has ordered a McGuire-Cummings street railway sweeper, through D. M. Campbell, Preston, Ont. It will also probably order two Birney safety cars.

The British Columbia Electric Ry. Company, started operation of its Broadway West extension in Vancouver, on Sept. 1, giving a 10 minute service. Since then traffic has increased so that 3 additional cars have been placed in service in the evening rush hour, making a 7 1/2 minute service.

The Montreal & Southern Counties Ry. has ordered a 500 k.w. rotary converter complete for substitution operation, from Canadian Westinghouse Co.; a Wilson plastic arc rail bond welder complete with truck, from Ohio Brass Co., and 2 motor and 2 trailer interurban passenger cars from Ottawa Car Manufacturing Co.

The British Columbia Electric Ry. Co's

extension work at its Stave Lake power plant near Vancouver, B.C., was visited, recently, by a Vancouver Board of Trade delegation. George Kidd, General Manager, B. C. E. Ry. Co., acted as host. Reference to this work was made in Canadian Railway and Marine World, for Sept. pg. 481.

The Hull Electric Co's franchise for an electric railway in Hull, Que., is for 25 years, of which about 7 are still to run, and provides that the city may acquire the property after 25 years. The city council passed a resolution Sept. 6, asking the company to name a price at which it would sell its railway and power plant.

Hull, Que., city council was asked by Alderman Legault, Sept. 6, to prevent the Hull Electric Co. from operating one-man cars. The City Solicitor advised that there is nothing in the franchise which would prevent the company operating such cars, and that the only way of obtaining redress would be to bring the matter to the Board of Railway Commissioners' attention. No action was taken.

The St. John, N.B., City Council has arranged a conference with the New Brunswick Power Commission to discuss the draft contract for the supply of power from the province's Musquash plant to the city. The question of whether the city will enter into a contract with the New Brunswick Power Co. for the distribution of the power, or distribute it itself, either by taking over the company's undertaking, or by installing a separate plant, is still under consideration.

Calgary Municipal Ry. employees have heretofore belonged to a union affiliated with the International Union of Street Railway Employees. A press report states, that a considerable number of the employees have withdrawn from the union recently, and have formed an organization for which they have obtained a charter from the Canadian Federation of Labor, Toronto. One of the 215 men in the railway operating branch of the street railway, it is stated that about 100 have joined the new organization.

The special transportation committee appointed by London, Ont., city council, recently, to study the transportation question in the city, engaged an engineer to make a valuation of the London St. Ry. It was reported, Sept. 8, that he had completed his inspections, and that while the basis of the valuation will be the estimate of the value of the road as a going concern made by the Hydro Electric Power Commission of Ontario in 1920, the present valuation is to show the scrap value of the property.

The Board of Railway Commissioners sitting at Quebec, Que., Sept. 6, heard two applications affecting the Quebec Ry., Light and Power Co's line from Limoilou to Beaufort. The first was in regard to the provision of a spur line at Limoilou to permit merchants to obtain freight, instead of having to go to Quebec for it, and the second was in connection with the operation of through cars on the line to Beaufort Asylum. This line crosses the Canadian National Rys. and passengers have to transfer from one car to another at that point. The company's solicitor stated that the company was willing to contribute one-third of the cost of a subway, estimated to cost \$150,000, which the city had obtained authority to construct. The company objected to a level crossing, owing to the heavy traffic. Both matters were referred to the Commissioners' engineer for a report.

Right of Way for Hydro Electric Radial Railway in Toronto.

Following the signing of agreements for the purchase of the various properties involved in the Toronto electric clean-up deal, and the ratification of the same by the Ontario Government, as announced in Canadian Railway and Marine World, September pg. 478, the Toronto City Council, on Sept. 6, by a vote of 18 to 6, decided to lease to the Hydro Electric Power Commission of Ontario, as trustees for the associated municipalities, a right of way along the water front for the radial railway. This decision was only reached after considerable negotiations and a prolonged and acrimonious debate in the council. The agreement of which the resolution approves, provides for leasing, for 50 years to the Hydro Electric Power Commission, a 6 track right of way over city property within the Toronto Harbor Commission's jurisdiction, for the nominal rental of \$1 a year, and gives the Commission authority over the radial railways entering Toronto. The agreement was opposed by the Toronto Transportation Commission on the ground that it would practically hand over to the Hydro Electric Commission the right to operate electric cars within the city and to collect fares. The Toronto Harbor Commissioners, and the Toronto Board of Trade also opposed it.

An interim injunction was obtained to restrain the city council from dealing with the matter, but it was dissolved Aug. 27, and an arrangement was made for hearing a general action, which will involve the legality of the agreement, at the earliest date possible.

The agreement for the leasing of the right of way by the city to the H. E. P. Commission will be ineffective unless ratified by the Ontario Legislature. Prime Minister Drury has written Sir Adam Beck, Chairman of the Commission, pointing out that bills validating agreements with the Commission have been regarded as government bills, and that the Government will not be disposed to bring in such a bill because it appears to be important differences between the radial entrance plans now put forward and those voted on in 1916; and that a considerable minority of the city council, and the Toronto Transportation Commission, the Toronto Harbor Board and the Canadian National Exhibition Board are opposed to the plan. This position of the Government would be changed if the agreement were submitted to, and approved by, a majority of the ratepayers.

Mainly About Electric Railway People.

Wm. Farrell, of the British Columbia Telephone Co., who died in Vancouver, Sept. 12, aged 68, went there in connection with the Yorkshire Guarantee Co's business about 30 years ago, and was interested in the British Columbia Electric Ry. in its early days.

Fred R. Miller, a member of the Toronto Transportation Commission, and of the Hydro Electric Power Commission of Ontario, whose serious illness was mentioned in our last issue, died at Toronto, Aug. 30, aged 44. He was Vice President, Roger Miller & Sons, harbor and general contractors, Toronto.

E. A. Robert, President Montreal Tramways Co., and Quebec Ry., Light and Power Co., was the principal guest

at a luncheon given by the Quebec exhibition directors at Quebec, Sept. 4.

Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Ry., and Mrs. Royce, returned to Toronto early in September, after spending the summer in Muskoka. J. C. Smith, Vice President and General Manager, Shawinigan Water & Power Co., which controls the Shawinigan Terminal Ry. and the Three Rivers Traction Co., was entertained at dinner at Shawinigan Falls by the employees, on Sept. 14, in connection with the completion of his twentieth year of service with the company. Among the other principal guests were Premier Taschereau, of Quebec, Sir Lomer Gouin, Minister of Justice, and Hon. Jacques Bureau, Minister of Customs and Excise.

Levis County Railway Snow Fighting Equipment.

As stated in Canadian Railway and Marine World for August, the Levis County Railway, Levis, Que., has ordered 3 sweepers, a rotary plough and a snow loader. Details of which have been furnished us as follows: Of the 3 single truck bevel gear drive long broom snow sweepers, 2 will be arranged so as to throw the snow on the same side of the street, running in either direction, the other will be standard. The 40 ft. flat car will have cabs at each end, equipped with Westinghouse straight air brakes, detachable snow plough noses on each end of car, and 2 special single track flangers mounted under the center of the car body, and operated by air for cutting out ice down to the track level. It will also have heavy side wings, for pushing back the snow several feet beyond the plough cut. The 30 ft. car body will have composite wood and steel underframe, to fit the railway company's standard plough ends. It will also have heavy side wings. The rolling stock is being supplied by Russell Car & Snow Plow Co., Ridgway, Pa.

Motor Omnibus Notes.

The London St. Ry. Co., we are officially advised, is now considering the use of motor buses in London, Ont., as press reports stated recently.

County Judge Gauld, is reported to have questioned the conviction of the owners of 7 motor bus lines operating in Hamilton, Ont., who were fined \$50 each, for operating in the city in contravention of a bylaw. He is said to have held that the bylaw is not valid, as the companies suspended business following the imposition of the \$50 fine by the Police Magistrate on Aug. 21. Following the imposition, the Hamilton City Council's special subcommittee on licenses, gave consideration to a number of licenses raised by the bus owners as to the bylaw under which they were fined. As a result the subcommittee recommended the rearrangement of the fees for licenses, and fixed Sept. 15, as the date upon which the police would enforce the bylaw in contravention of it. The license fee for passenger buses was fixed at \$2 per sent a year for buses having carrying capacity up to 20, and \$40 for those having a larger seating capacity. The original bylaw was \$3.25 per sent a year. The charges to be paid by interurban freight transport trucks were also reduced. Cars operating between points inside the city to points outside exclusively will be required to pay \$5 per sent for the first ton and \$1 for each additional ton capacity, or frag-

tion of a ton. Thus the charges for a 5-ton truck will be but \$9, compared with \$25 on the straight \$5 ton charge, which was previously in force.

Toronto Street Railway Arbitration.

The arbitration proceedings to determine the amount the City of Toronto shall pay for the Toronto Ry. Co's property, which it took over Sept. 1, 1921, were resumed in Toronto, Sept. 19, before Hume Cronyn of London, Ont., chairman; Sir Thomas White, representing the company; and Sir Adam Beck, representing the city, the sitting on Sept. 19, being the 120th, the first having been on Sept. 11, 1921, and the last previous one on June 23, 1922, when the arbitrators adjourned to allow counsel to prepare their arguments.

On the reopening of the hearings, the company's case was argued by Hon. N. W. Rowell, K.C., who submitted that the principal questions to be considered were, the subject matter of the arbitration, the basis of principles of valuation; how these principles should be applied in arriving at the value of the property, and the value of the property. After speaking on two days, he was followed by Eugene Lafleur, K.C., Montreal, Pierre Butler of the Minnesota bar, and F. H. Phippen, K.C., Toronto, and the arguments are proceeding at the time of writing, Sept. 26.

Twelve Miles in Toronto for Six Cents.

The Toronto Star says: The new carline along the Sunnyside Boulevard to the Humber opened today, and King St. cars will now run from the eastern limits of Toronto to the Humber, a distance of nearly 11½ miles. But this is not the longest ride obtainable in Toronto for 6c, though it is the longest non-transfer ride. From the north limit of North Toronto to the Humber via Yonge and King Sts. is approximately 12¼ miles. For this trip, at 6c, the passenger pays less than half a cent a mile. On Danforth Ave. the old civic carline gave a trip of 3.4 miles for 1.66c, which is practically the same ratio.

The Manchester Guardian points out that in Glasgow the longest tramway ride for a penny is 1 mile and 264 yards; Aberdeen, 1 mile and 422 yards; Dundee, 994 yards; Edinburgh, 931 yards. These fares are of course far higher per mile than Toronto passengers pay when they take the longest possible ride which the single fare system affords. But if they travel only 1 mile and 264 yards, they still pay 6c against Glasgow's 2c. It is the long haul passenger who rides cheap in Toronto. And that after all, encourages residence in the suburbs, and militates against the creation of congested districts downtown.

L. and J. Roy were each fined \$30, or in default a month in jail, by the Ottawa Police Magistrate recently, for assaulting A. J. McRae, Ottawa Electric Ry. conductor while on duty. The defendants were indicted, and interfered with the conductor while he was collecting fares.

The Quebec Ry., Light and Power Co. is reported to have contracted with the C.P.R. to supply an additional 400 h.p. of electric energy to the Chateau Frontenac, Quebec. It is also reported to be considering plans for the enlargement of its power plant.

Electric Railway Projects, Construction, Betterments, Etc.

The British Columbia Electric Ry. Co., through its subsidiary the Vancouver Fraser River and Southern Ry. Co., owns and operates a line from New Westminster to Chilliwack, which crosses the Vedder River. Owing to freshets considerably damage is done to the railway as well as to surrounding property nearly every spring. The Public Works Department has prepared plans for straightening out the river channel, and building a wall, to prevent the river breaking through, and flooding the country. The cost of the work is estimated at \$75,000 of which the B.C. Government will pay half, and the remainder will be contributed in various proportions by the Sumas Dyking District, the property owners, the City of Chilliwack and the B. C. E. Ry. Co. (Sept. pg. 479.)

The British Columbia Electric Ry. Co. is electrifying its Stave Lake railway, which connects the Stave Lake power plant with the C.P.R., at Ruskin, B.C. The line is about 6 miles long, and besides being used in the past for hauling logs from the lake above, will be used extensively for hauling gravel during the building of the new dam at the power plant. Power will be supplied from one substation, containing 3 transformers and one 400 k.w. motor generator set. Electric locomotives from the company's interurban system will be used and the 2 steam locomotives will be sold. Passenger service is now given by a gasoline car. The company's plan calls for a second development, lower down the river than the first plant, in a few years, and when that is proceeded with the present railway will be submerged. The work, therefore, is of a more or less temporary nature.

Kingston, Portsmouth and Cataragui Electric Ry.—Experts, we are officially advised, to rebuild about 1,500 ft. of track next spring. It will be relaid with 90-lb T rails. The work is rendered necessary owing to the Kingston, Ont., City Council desiring to do certain paving work. (Sept. pg. 479.)

Kitchener & Waterloo St. Ry.—We are officially advised that the car barn to be built on the corner of King and Preston streets, Kitchener, Ont., will consist of 3 bays. The dimensions will be 124 x 164 ft. It will provide storage for 24 cars, besides containing paint shops, machine shop, conductors' and motormen's quarters; supply, storage and Master Mechanic's office. (Sept. pg. 479.)

Levis County Ry.—We are officially advised that the new car barn will be fire proof, a combination of steel, brick and concrete. The dimensions and layout have not been definitely decided, neither has the location been finally fixed upon.

Moncton Tramways, Electricity and Gas Co.—We are officially advised that the new car barn to be built will be on Mechanic St. on the site of the old one which was destroyed by fire. It will be built of concrete blocks, and will be 30 x 70 ft., with capacity for 8 cars. A Wheeler, Moncton, is the contractor. (Sept. pg. 479.)

Montreal and Southern Counties Ry.—We are officially advised that a contract has been let to Nicholson Construction, Ltd., Montreal, for the erection of an automatic substation building at South Kensington, Que. It will be built of cement, brick and steel, and its inside

dimensions will be 16 x 26 ft. and 14 ft. high. There will be installed in it a 500 k.w. rotary converter, the contract for which complete, has been given to Canadian Westinghouse Co.

New Brunswick Power Co.—Track relaying on Prince William St., St. John, N.B., is reported to have been completed. New rails are reported to have been ordered for relaying the track on Dock St., which will be done as soon as they are delivered.

The track on Mill St. and Main St., will, it is reported, be relaid next spring. (Sept. pg. 479.)

Quebec Ry., Light and Power Co. is we are officially advised, extending its line in Belvedere Ward, in the upper section of Quebec. The extension is a continuation of the line on Marguerite-Bourgeois Ave., and then westerly, towards the city limits, on Garvier St., a total length of about a mile. The company has undertaken to build an extension of its St. Valier St. line westerly towards Bell's Road, about half a mile, and negotiations are in progress for the construction of an extension, of about half a mile on Charlesbourg Road. All these extensions are single track. A press report, referring to the latter extension, states that the plans have been accepted, and that it will run from St. Frances d'Assisi Hospital to the Canadian Northern Ry.

We are further advised that work on the installation of the loop at Parent Square, at the foot of the railway trestle leading from Palace Hill, has been completed, and that a curve has been placed at the intersection of Crown and St. Josephs Streets. With the installation of this loop and curve, the company is in a position to give a direct service from the three railway stations and to and from the exhibition grounds without trans-fering. (Sept., pg. 479.)

Three Rivers Traction Co.—We are officially advised that an extension of the line on Norman Boulevard and Bellefeuille and St. Philippe Streets, Three Rivers, Que., is under consideration, but it is doubtful if it will be done this year. (Aug. pg. 429.)

Toronto and York Radial Ry.—The Ontario Railway and Municipal Board has approved tentatively of plans for terminal facilities at Glen Echo Ave. and Doncliffe Drive, Yonge St., for the Toronto and York Radial Ry., and the Toronto Transportation Commission. The facilities for the latter are described in another column. The T. and Y. R. Ry. will have a joint interest in the passenger station, and will own the spur line connecting with the facilities, and a freight shed on Glen Echo Ave.

The question of the improvement of the T. and Y. R. Ry. track is reported to be under consideration, and it is said that a survey is being made from the new terminus at Toronto city boundary, for a new right of way on private property to beyond Newmarket, where the railway leaves the road for a private right of way to Sutton.

Windsor, Essex and Lake Shore Rapid Road Ry.—A report states that work has been started on a new terminal at Oak St., Leamington, Ont. We were advised in April that a siding was to be built into the terminal for which 3,000 oak ties were being purchased. (May, pg. 259.)

Winnipeg Electric Ry.—The extension

of the Broadway West Ave. to Alma Road, has been completed and an experimental service was put in operation Sept. 1. The first cars leave Alma Road at 6.15, 6.28, 6.40 and 6.50 a.m., and every 10 minutes thereafter, the last cars for the day leaving at 11.41 p.m., 12 midnight and 12.26 a.m. on week days. On Sundays the first car starts from Alma Road, at 8.15 a.m., and five other cars are run to 10 a.m., after which the service is a 12 minute one, until night when the cars leave at 11.01, 11.11, 11.25 and 11.51 p.m.

Toronto's Purchase of the Toronto Suburban Railway.

At the Toronto municipal elections on Jan. 2, the voters by 16,087 to 13,850 approved of a bylaw authorizing the city to acquire from the Dominion Government, the Toronto Suburban Ry., at present operated as part of the Canadian National Ry. The consideration for the sale consists in the payment by the city, of \$202,000 for such of the lines as are within the city limits and on which the franchise has expired, and the taking over of the company's bond issue of \$2,628,000. The bylaw also authorized the city to issue \$150,000 of debentures for betterments to the lines within the city, which are to be linked up with the city's lines, and operated by the Toronto Transportation Commission. The other lines are to be handed to the Hydro Electric Power Commission of Ontario for operation, the city being responsible for any deficits on their operation, and any surplus would be disposed of to the H. E. P. Commissioners' discretion.

In the closing days of its last session the Ontario Legislature authorized the city of Toronto to acquire the Toronto Suburban Ry. Owing to the numerous matters necessary to be looked into in connection with the Toronto electrical clean-up deal, the proposed taking over of the line has been kept in the background. Nevertheless, some progress is said to have been made, and a conference is reported to have been held in Toronto, Sept. 14, between the Hydro Electric Power Commission of Ontario and the city board of control to discuss various matters in connection with the taking over of the line and the finding of the money to pay for it.

Air Brake and Electrical Equipment, Toronto Transportation Commission Cars.

The article, "Additional Cars for Toronto Transportation Commission," in Canadian Railway and Marine World for September, pgs. 473-475, contained the following sentence: "The electrical equipment will include 35 h.p. motors, and both electrical and air brake equipment will be furnished by Canadian General Electric Co."

We are officially advised that both the air brake equipment, and the electrical equipment, of the 100 motor cars and 100 trailers ordered recently, will be furnished by Canadian Western Electric Co., and not by Canadian General Electric Co., as stated erroneously, a mistake which we regret, and which, in pursuance of our invariable policy when mistakes do occur in our paper, which is not often, we hasten to correct.

Trackless Trolley Operation, Toronto Transportation Commission.

Canadian Railway and Marine World for January contained a thorough description of 4 trackless trolley buses ordered by Toronto Transportation Commission, an illustration of one of which is being given herewith, (fig. 1). The first bus arrived in Toronto on June 17, and was placed in operation June 19. The remaining three were received shortly after. Prior to their delivery, the over-

between the trolley wires and the poles at each side of the street, as shown in fig. 2, at A and H, to protect workmen in case the span wires should become alive.

The buses are turned on Y's, and not on loops. While looping them would be the most natural method, it was impossible to build a loop at the Yonge St. end of the run without acquiring an area

the trolley will follow the proper wire. The cross-over used, designed by the Commission's wiring officers, consists of the standard 33 degree fixed cross-over, arranged with suitable side-guards, and with 4 plugs inserted to act as keepers. This arrangement confines the trolley wheel to a narrow channel, the keepers not permitting the wheel to swivel out of line. It is felt that the elimination of the use of springs will prove to be a decided advantage. In fig. 4 the negative wiring is indicated by solid lines, and the positive wiring by broken lines. Fig. 5 is a general view of a portion of the overhead work at the Mount Pleasant Road and Eglinton Ave. intersection.

When operation with the trackless trolley buses was begun, they were equipped with the single pole current collection device, the pole being equipped

Fig. 1. Trackless Trolley Omnibus, Toronto Transportation Commission.

head wiring construction had been completed under the supervision of J. F. Neild, Electrical Engineer, the route being along Merton St. east from Yonge St. to Mount Pleasant Road, thence north on Mount Pleasant Road to Eglinton Ave. the total one-way distance being 1.3 miles. In the overhead construction, all material used is standard, with the exception of the crossovers, which are adapted to suit conditions. Standard 30 ft. cedar poles are used for span support. Two double lines of wire are strung, a positive and negative wire in each. The lines are strung 9½ ft. centers, and while the positive and negative wires in each line were spaced at 18 in.

Fig. 2. Wire spacing and insulation location.

for single pole operation, it is contemplated that this spacing will be changed to 30 in. when the wire spacing will be as in fig. 2, in which the two inside wires are the positive and the two outside ones the negative. The line is triply insulated, as shown in fig. 2. In addition to the wire support insulators, at A, B, D, E, G, fig. 2, standard 504 porcelain insulators are cut in between the positive and negative wires of each line, as at C and F. On straight line construction, standard straight line hangers are used with 12 in. trolley cars, and on the curve construction the cap and cone method of insulation and support is used. The straight line support is shown in fig. 3, upper drawing, and that used on curves in fig. 3, lower drawing. The third point of insulation is provided by porcelain insulators, cut in

of valuable land, and at the other end of the run looping would have required the paving of streets not justified by existing vehicular traffic. Fig. 4 shows the Y at the intersection of Mount Pleasant Road and Eglinton Ave. In operating around the Y, the bus is driven in the direction indicated by the arrows, with

Fig. 3 Upper-Standard steel line hangers for tangent. Lower-Cap and cone suspension for curves.

with equalized arms, spaced at 18 in., carrying the trolley wheels. A great deal of trouble was experienced in keeping the wheels on, particularly in operating around the Y's. Experiments with one bus, equipped with a double pole installation, showed that the double pole would be more satisfactory, no trouble being encountered in keeping the wheel to the wire in Y'ing, or in swinging out to avoid traffic on the road, and the result has been that double pole current

Fig. 4. Arrangement of wiring at Mount Pleasant Road and Eglinton Ave. Y.

no interference, and with power on. In backing up, it is necessary to throw off the power, and coast from A to B, a distance of 4 ft., between the two sectional insulators used to separate the wires of different polarity. Similarly, from C to D, the gap must be coasted over, two section insulators being also located at C and D. At E, F, G and H are spring switches, arranged so that

collection is now installed on all 4 buses. The illustration accompanying the description of the buses in Canadian Railway and Marine World for Jan., showed the bus equipped with but one pole, but in the Dec., 1921, number, an illustration of a bus tried in Detroit, very similar to those operating in Toronto, and equipped with two poles was given. Other details of the current collection apparatus

tus include 2 standard bases, modified somewhat to suit conditions, employed on each bus. Some of the buses are equipped with 15 ft. poles, and the others with 18 ft. poles, and the poles are equipped with special swivel harps, ball bearing. The harps are insulated, so that the poles and bases are not alive, and the wires are led through the inside of the poles, which are of seamless welded steel. Trolley cords are used and O-B trolley catchers.

Two buses operate on the run specified, throughout the day, with an additional one placed in service during the rush hours, and a fourth is held in reserve. The p.a.y.e. system being used, but one man is required on each bus. A trip consumes approximately 10 min. each way, the total mileage made by the buses operating being 333.6 daily. From July 1 to 10, the number of passengers carried daily averaged 1700. Pending the commencement of operation of T.T.C. cars on North Yonge St., 3-part tickets are being sold to bus patrons, at 4 for 25c, one part of the ticket being good on the bus, the second part on the

Montreal Tramways Co's Operations for Year Ended June 30.

The Montreal Transportation Commission has issued its report on the Montreal Tramways Co's operations for the year ended June 30, from which the following is extracted:—

Receipts.	
Passengers	\$11,466,883.92
Freight	118,218.92
Car advertising	35,238.11
Freight car rental	1,864.30
Mail service	121.21
Prison cars	3,372.72
Miscellaneous	37,386.53
	\$11,712,525.11

Operating Expenses and Taxes.—The allowance for operating expenses was fixed at 26.62c a car mile for motor cars and 19.43c for trailers, at a density of 8.5. The company, having satisfactorily complied with the conditions laid down in regard to mileage and density, is entitled to receive the allowance granted.

Motor cars	20,916,979 car miles
Trailers	630,366 "
Total car miles	21,547,345
20,916,979 x 26.62c =	\$5,565,099.81
630,366 x 19.43c =	122,480.11
	\$5,687,579.92

Plus 2½% authorized by contract	142,264.50
Total	\$5,829,844.42

Actual Operating Expenses and Taxes.	
Car service	\$3,043,566.24
Car house expense	234,801.83
Tracks, cleaning and sanding	85,823.21
Removal of snow and ice	212,510.30
Motive power	1,065,467.62
Salaries, general officers	75,500.00
Office salaries and expenses	166,260.98
Stationery and printing	23,425.83
Stores expenses	59,213.82
Stable expenses	13,923.10
Miscellaneous expenses	140,998.14
Injuries and damages	129,318.50
General legal expenses	14,883.17
Insurance	111,576.48
Mutual Benefit Association	21,049.55
Freight expense	66,774.43
Taxes	117,908.90
	\$7,769,403.20

Difference between allowance and actual expenditures	\$ 63,441.22
--	--------------

Operating Profit.—The company, having kept its expenditures within the allowance, is entitled to its operating profit, \$47,959.08, being ¼ of 1% of the average value of the capital during the year, \$38,367,983.68.

Maintenance and Renewals Fund.—The Commission fixed the allowance for this fund at 12.01c a car mile for motor cars and at 10.64c for trailers.

20,916,979 x 12.01c =	\$2,512,120.19
630,366 x 10.64c =	6,707.04
Total allowance	\$2,518,827.23

Actual Expenses.	
Maintenance track and roadway	\$375,109.88
" electric line	113,046.50
" buildings	64,679.21
" steam plants	51,454.50
" stations and platforms	9,222.93
" electric plants	33,848.29
" cars, body and trucks	496,963.52
" cars, electric equipment	312,140.63
Miscellaneous equipment	64,475.57
Shop expense	69,948.95
Renewals (part chargeable to this fund)	611,660.45
Value of properties and material discarded and scrapped	158,294.36
	\$2,368,235.83

Credit to the maintenance and renewals fund	\$ 210,964.30
---	---------------

In the year 1920-1921, the company exceeded the allowance by \$381,521.85. The company was allowed by the Commission to appropriate this amount from the gross receipts. The city appealed from this ruling, on the ground, that this over-expenditure could not be appropriated from the gross receipts, and, in case that argument was not admissible,

that, at any rate, the maintenance and renewals fund could not be overdrawn and that any deficit would have to be paid by the company, with a possibility of being reimbursed in the following fiscal year. The Public Service Commission disallowed the city's appeal, and declared that there was no other means but to authorize the company to charge these expenditures to gross receipts, that it would not be sound administration to carry this deficit to the following fiscal year and that such expenditures must be paid out of the receipts of same year, being shown as such in the annual report, which must be an exact financial statement of the year.

Operations from July 1, 1921, to June 30, 1922.

Gross receipts	\$11,712,525.11
Operating expenses and taxes	\$5,769,403.20
Maintenance and renewals fund	2,579,200.13
Interest on capital value	127,177.73
" " of additions	145,000.00
" " 6% on working capital	6,696.10
Financing expenses	181,431.37
City's rental	500,000.00
Contingent reserve fund, 1% of gross receipts	117,125.25
	\$11,524,577.60
Surplus	\$ 187,947.51

In the previous years there were deficits and the interested parties, in order to avoid an excessive rate of fare, have agreed not to exact immediate payment of the amounts due them.

General Statistics.	
Total length of tracks	miles 267,355
Length of tracks in operation	29,116
Gross receipts per mile of total tracks	\$43,808.89
Gross receipts per mile of tracks in operation	\$47,016.34
Gross receipts	\$11,712,525.11
Operating expenses and taxes	\$ 5,769,403.20
Maintenance and renewals expenses	\$ 2,579,200.13
Percentage of gross receipts devoted to operating expenses and taxes	49.67%
Percentage of gross receipts devoted to maintenance and renewals	22.02%
Percentage of gross receipts devoted to total operating expenses	71.69%

Transportation	
Passengers (total number of)	362,065,226
Revenue passengers	188,201,267
Transfers	73,851,859
Percentage of transfers to number of revenue passengers	39.24%
Gross receipts per passenger (total)	4.47c
Gross receipts per revenue passenger	6.22c
Receipts per passenger (transportation of passengers only)	6.09c
Total operating expenses and taxes per revenue passenger	4.46c

How Car Fares Are Disposed of.—The Winnipeg Electric Railway Public Service News says: The car rider in Winnipeg will be interested in knowing just how his car fare is portioned out. The average car fare in Winnipeg, taking into consideration the low rate children's tickets, and the 5c Sunday fare, is 5.86c. Taking the Price Waterhouse report to the city on the Winnipeg Electric Ry's 1921 expense account and apportioning this average fare of 5.86c on the basis of this report, it shows this average fare to be disposed of as follows: Wages of motormen, conductors, etc., 2.60c; city percentages and taxes, .44c; interest on bonds, loans, etc., 1.25c; maintenance (wages and material), .72c; general expenses, .43c; power, .23c; depreciation, .19c.

The Port Arthur, Ont., Civic Ry. is reported to have carried 11,890 passengers on Sept. 13, the big day of the autumn fair, and to have maintained a 6-minute service during the rush hours. It is claimed that this proves that one-man cars, which were put into operation on the line, are efficient and adequate.

Fig. 5 Overhead work at Mount Pleasant Road and Eglinton Ave. intersection.

Toronto and York Radial Ry. Metropolitan Division cars operating on Yonge St. as far south as the Yonge St. line's northern terminus, and the third part on the T.T.C. lines.

The 4 buses were obtained by the Commission from Packard Ontario Motor Co., which assembled the chassis in Toronto. The bodies were built by Canadian Brill Co., Preston, Ont., and the electrical equipment was supplied by Canadian Westinghouse Co. We are informed by W. Forsyth, in charge of the Commission's bus operations, that the results secured to date in operating the trackless buses have been highly gratifying, particularly since they were equipped with the double pole current collection, and that the service is proving very popular with the residents of the portion of the city served by them.

Conductors and Conductors.—Mrs. Muschendorf: "Do you consider Wilhelm Mengleberg our greatest conductor?" Mrs. Newlyrich: "Well, really, I do seldom use the trolleys nowadays."

The International Ry., Buffalo, N.Y., offered rewards totalling \$100,000 for information of those responsible for the continuing outrages on its lines during the 10 weeks of the strike of its employees had lasted to that date. A reward of \$20,000 is offered for the apprehension of those responsible for the outrage on the Niagara Falls line on Aug. 17, and rewards of \$10,000 each are offered in 8 other cases of outrage.

Marine Department

American Association of Port Authorities' Annual Meeting.

The American Association of Port Authorities' annual meeting held at Toronto, Sept. 14 to 16, was attended by some 75 members. The only Canadian ports represented were St. John, N.B., Quebec, Montreal and Toronto. United States ports were represented by members from Alabama, District of Columbia, Florida, Illinois, Louisiana, Maryland, Massachusetts, Michigan, Missouri, New Jersey, New York, Ohio, Oregon, Pennsylvania, Rhode Island, Texas, Virginia and Washington. The chair was occupied by the Association's President, Benjamin Thompson, Consulting Engineer, Tampa, Fla.

The following papers were read and discussed:

Ships, ports and commerce. By E. H. Outeridge, Chairman, Port of New York Authority.

What are the factors at a port which will determine the kind and amount of freight handling machinery and equipment that is justified? by B. F. Cresson, Jr., consulting engineer, New York, N.Y.

Control of waste fuel oil in harbors, by Bancroft Hill.

Teaching port facts in university schools of commerce, business colleges and high schools of commerce, by R. E. Lambert, New York University, New York, N.Y.

The New Orleans Navigation Canal, by J. H. Walsh, General Manager, New Orleans port.

Chicago's port, past and future, by J. B. Strauss, Strauss Bascule Bridge Co., Chicago, Ill.

Free ports for the United States, by Captain F. T. Chambers, C.E.C., U.S.N., Washington, D.C.

The port of San Francisco, by J. H. McCallum, Harbor Commissioner, San Francisco, Cal.

The port and its relation to production, by F. W. Cowie, Consulting Engineer, Montreal Harbor Commission.

Destructive action of marine borers, by H. Von Schrenk.

Rail freight rates and the development of lake ports, by W. H. Adams, engineer, Detroit, Mich.

British port methods, by Brysson Cunningham, D.Sc., editor Port & Dock Authority, London, Eng.

Public operation of port terminal facilities, by W. S. Lincoln.

Resolutions. It was decided to have a standing research committee of three members, to be appointed by the President each year, and to solicit and disseminate such information as may be deemed beneficial to the Association, or as may be requested by the membership. It was applied for through the executive committee, committee, by oil, and to request a hearing before the U.S. Congressional committee dealing with such legislation.

The President was authorized to appoint a committee of three, to examine and consider legislation proposed in the United States respecting the pollution of rivers, harbors, etc., by oil, and to request a hearing before the U.S. Congressional committee dealing with such legislation.

It was resolved that the Association is of the opinion that an effort should be made to bring about greater co-operation

between those responsible for development of ports, with a view to determining economy that could be effected by greater uniformity in port design and equipment, the President to appoint a committee to communicate the substance of the resolution to port authorities throughout the world, with a view to determining how far international co-operation in design, equipment and expenditure, may be possible and the best methods of bringing it about.

The following officers, etc., were elected:—President, M. P. Fennell, Jr., General Manager and Secretary, Montreal Harbor Commission; Vice President, J. H. Walsh, New Orleans, La.; Second Vice President, B. F. Cresson,

Dominion Marine Association.

Honorary President, A. A. Wright, President, Tidewater Shippers, and Vice President and Managing Director, Davis Shipbuilding & Repairing Co., Montreal.

President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal.

First Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Second Vice President, G. J. Madden, George Hall Coal Co. of Canada, Ogdensburg, N.Y.

Executive Committee. The President, First and Second Vice Presidents, and W. E. Burke, Canada Steamship Lines, Montreal; J. H. More, Simpson-McGee, Montreal; Montreal: M. J. Haney, Canada Steamship Lines, Toronto; A. E. Mathews, Mathews Commission, Toronto; W. J. McCormack, Algoma Central Steamship Co., Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Keystone Transports, Montreal; Honorary members, L. L. Henderson and A. A. Wright, Montreal.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

Jr., New York, N.Y.; Third Vice President, E. L. Cousins, Chief Engineer and General Manager, Toronto Harbor Commission; Secretary, T. S. McChesney, General Manager, Assistant Secretary and Assistant Treasurer, Orleans Port Commissioners; Treasurer, F. C. Marron, Seattle, Wash. Directors:—B. C. Allin, Houston, Texas; Major-General L. H. Beach, Chief of Engineers, U.S. Army, Washington, D.C.; C. W. Francis, Chicago, Ill.; E. B. Hazard, Portland, Ore.; A. G. Harbo, Portland, Norfolk, Va.; C. T. Leeds, Engineer, Orange County Harbor Commission, Los Angeles, Cal.; Brig-Gen. T. L. Tremblay, Commissioner and Chief Engineer, Quebec Harbor Commission, Quebec, Que. Executive Committee:—J. N. Cole, Public Works Commissioner, Boston, Mass.; J. H. McCallum, Harbor Commissioner, San Francisco, Cal.; B. Thompson, consulting engineer, Tampa, Fla.

New Orleans, La., was selected as the next place of meeting, and it was recommended that the date be as late in the year as possible. In view of the rapidly improving improvements of the

Mississippi barge line, which will be seen and discussed at the next meeting, and in view of the newly constructed terminals of that line at St. Louis, Mo., it was recommended that as the majority of the members can go via St. Louis to New Orleans, the executive committee arrange for a preliminary meeting of such members as may be able to be in St. Louis on the day previous to the opening of the meeting at New Orleans, so that the St. Louis terminals may be inspected, and the members may travel together from there to New Orleans.

The social features included a hotel luncheon, given by the Toronto Board of Trade; a dinner at the Toronto Harbor Commission's Sunnyside pavilion, given by the city, and a luncheon at the Royal Canadian Yacht Club, given by the Toronto Harbor Commissioners. The Board of Trade luncheon's chairman was the President of the Board, D. A. Cameron, Manager, Canadian Bank of Commerce, Toronto branch, the other speakers being B. Thompson, President of the Association, and Brysson Cunningham, D.Sc., editor, Port & Dock Authority, London, Eng. The City Council dinner's chairman was Mayor Maguire, the other speakers being T. L. Church, M.P., for North Toronto; B. Thompson, President of the Association; J. B. Strauss, Strauss Bascule Bridge Co., Chicago; Dr. W. L. McDougall, President, Montreal Harbor Commission, and J. N. Cole, Commissioner of Public Works, Boston, Mass. Mr. Church strongly advocated the construction of the proposed St. Lawrence deep waterway, which Mr. Cole as strenuously opposed. The Toronto Harbor Commission's luncheon was presided over by the Commission's chairman, R. Home Smith, the other speakers being B. Thompson, President of the Association; and J. H. Cohen, Counsel, New York-New Jersey Port and Harbor Development, New York, N.Y. After the Toronto Harbor Commissioners' luncheon the members made a trip on the Commissioner's yacht throughout the harbor and were given every opportunity to see the whole of the development work. The ladies accompanying the members in addition to being at the luncheon at the Royal Canadian Yacht Club, were entertained at a hotel luncheon, a theatre party and a golf club dinner.

A considerable number of the Association's members left Toronto, Sept. 16 by Canada Steamship Lines steamship, and arrived in Montreal on Sept. 17, spending Sept. 19 in an inspection of the port.

U.S. Wooden Steamships Sold.—The U.S. Shipping Board Emergency Fleet Corporation has sold 236 wooden steamships, comprising practically its entire wooden fleet, to G. D. Perry, an attorney, of San Francisco, Cal., for \$750,000, or a little over \$3,318 for each ship. One of the conditions of the sale was that they will not be operated as steamships and will promptly be dismantled as such.

Grain Shipments Through Vancouver.—Between Sept. 1, 1921 and Aug. 31, 1922, 7,552,044 bush. of grain were shipped through Vancouver, against 460,000 bush. during the previous 12 months.

Dominion Government Dredge No. 16.

The twin screw hopper and barge loading dredge no. 16, which was completed for the Dominion Government, by Canadian Vickers, Ltd., in July, and which is illustrated herewith, was accepted finally by the Marine Department, Aug. 21, after having undergone a series of trials. It is one of the largest of its kind in the world, the dimensions being: Length overall, 292 ft.; breadth moulded, 48 ft.; depth moulded 20½ ft. It is of the self-propelling, center bucket ladder, self-loading, or barge loading, type, and is capable of dredging and discharging into barges on either side, at the rate of 1,500 tons of soft material an hour, or a proportionately less amount of gravel, stiff clay or other material. It is also capable of digging a channel to a maximum depth of 57 ft. below the water surface, and of cutting its own flotation through shoals, and discharging into its own hopper, or on barges. There are 2 complete sets of 43 buckets each, one for soft material, each of 54 cu. ft. capacity, and the other for stiff clay and hard material, each of 30 cu. ft. capacity. The hull is of steel, and the dredge throughout is built and equipped, under Lloyd's special survey, to class 100 A1, and also

The bucket ladder, with its string of buckets, is suspended from the main frame at the top end, and is free to hinge about same. The lower end is raised and lowered to the necessary dredging depth, by a steam driven hoisting gear, with winding drum and wire rope, led to top of forward frame on forecastle deck. The steam gear is in the forward hold, with control levers on the upper deck. The hopper well is of 1,500 tons capacity, and is stiffened by internal cross divisions and longitudinal girders. The mooring arrangements are very complete, consisting of bow and stern winches, steam driven, together with bow and stern fair leads, all of special design and rugged construction, and capable of moving the ship when at dredging station, either forward or aft, or port or starboard, as required. The forward bow winch also acts as a windlass, to operate the 2 bower anchors used for ordinary navigation purposes. There are also 4 powerful warping capstans. A combined steam and hand steering gear, of the chain barrel type, is installed in the engine casing, with control rods to the wheel house on the navigating bridge. There is accommodation for a crew

Dominion Marine Association's Activities.

The revision of the grain shipping contract has been under active discussion recently, with a view to the inclusion of a demurrage clause. The matter has been referred to a sub-committee of the Association, to negotiate with special parties, but no final action in the proposed direction has been taken.

The Association's efforts to secure a reduction in the grain shovelling charges at terminal elevators, has met with success, a reduction of 35c per 1,000 bush, having been arranged at the railways' elevator and at other eastern terminals, except Port Colborne and Montreal, effective from June 1. Later, a proportionate reduction of 25c per 1,000 bush, was agreed upon by the Montreal Harbor Commissioners, effective from July 1.

The Association has interested itself in various improvements in navigation channels between the head of the lakes and Montreal, aids to navigation throughout the route have been under consideration, and recommendations have been made to the Lighthouse Board and the various departments concerned. Particular attention has been devoted to the dam under construction in Cedar Rapids, at Isle aux Vaches; the middle ground at

Dredge 16, built for Marine and Fisheries Department, by Canadian Vickers, Ltd., Montreal.

to Canadian Government inspection. The propelling machinery consists of 2 sets of triple expansion, surface condensing engines, with cylinders, h.p. 17 in., i.p. 27 in., and i.p. 43 in. diam., by 27 in. stroke. The main engines are so arranged that either can drive the dredging gear. There are 2 boilers, each 15½ ft. diam. by 11½ ft. long, of the single-ended marine type, supplying steam at a working pressure of 180 lb. a sq. in., and built to Lloyd's and Canadian Government Steamboat Inspection rules. The dredging machinery consists of a train of spur wheels and pinions, forming reduction gear, with friction wheels for driving top tumbler on bucket ladder. The transmission gear consists of a clutch gear, coupled to crank shaft of each main engine, arranged for two speeds of 12 small, or 18 large, buckets a minute, from thence by shafting and bevel gearing to the main gear already mentioned. All gear wheels are of cast steel, with double helical teeth and shafting of fluid pressed steel, the whole being of extra massive construction. The main frame amidships is a piece of extra strong structural steel work, supporting the dredging gear, bucket ladder and navigating platform, and on it are also the mud shoots and doors for directing the flow of soil overboard to either side, or to the dredge's own hopper, to either side, fore and aft.

about 40, the officers and engineers being berthed in rooms on the bridge deck, and the seamen and firemen on the lower deck amidships, with separate mess-rooms. The dredge is steam heated throughout, and has complete electric lighting, sanitary and ventilating arrangement. It was designed by Wm. Simmons & Co., Renfrew, Scotland. A more complete and illustrated description of it was given in Canadian Railway and Marine World, for January, pg. 48.

Vancouver Drydock Etc.—Hon. J. H. King, Minister of Public Works, is reported to have stated at a luncheon given him by the Vancouver Board of Trade, Sept. 16, that a drydock for Vancouver is not an early possibility, and to have said,—"When you go to the people of eastern Canada and try to tell them, at a time when the government is reaching out for new revenues and new taxation, that it is necessary to start two drydocks on the Pacific coast, you have some explanation to make." He considered in any event that the development of the grain trade through Vancouver should come first. That the greatest lack in the port at present is not in grain storage facilities, but appliances for cleaning and drying grain, and that it was this shortage which caused the congestion at the port.

Port Huron; the shoals below the lock at Sault Ste. Marie; the Port Colborne breakwaters, etc.

Regarding the proposal for a suspension of the coasting laws on account of a slightly lower grain rate to Buffalo prevailing, as against the rate to Georgian Bay ports, the Association has had considerable correspondence and some interviews with the Minister of Trade and Commerce, and the Association's statements as to the position of Canadian ships, and the advantage enjoyed by U.S. tonnage, as well as with reference to the whole movement of export grain, were accepted by the authorities as a sufficient answer to the claims made by certain shippers, and no action was taken toward the proposed suspension. Attention was particularly called to the provisions of the statute, which permits the suspension of the coasting laws by order in council, only when reciprocal privileges are extended in a foreign country.

Wheat Shipments Through Vancouver, B.C.—During July, wheat was shipped through the Dominion Government elevator at Vancouver, as follows: To United Kingdom, s.s. Gladstair, 74,666 bush.; s.s. Mongolian Prince, 108,445 bush.; to Japan, s.s. Africa Maru, 16,566 bush.; s.s. Hawaii Maru, 33,083 bush.; total, 232,760 bush.

Canadian Government Merchant Marine Ltd., Operation, Etc.

The s.s. Canadian Commander completed her repairs at Canadian Vickers Ltd. yard, Montreal, during September, after running ashore at Plate Point, Little Miquelon, July 3, when she sustained considerable hull damage. She was released, after stranding by the Quebec Wrecking & Salvage Co.'s s.s. Lord Strathcona and barge G.T.D., assisted by the steam trawler Sadie Mac and the s.s. Sabie, the refloating being accomplished by duplex and Gwynne pumps. She was then taken to St. Pierre, Miquelon, where temporary repairs were effected, and afterwards proceeded to Montreal.

The s.s. Canadian Pioneer, which, as mentioned in our last issue, collided with an iceberg, about 9 miles east of Belle Isle Strait, towards the end of July, and afterwards put into North Sydney, N.S., had several shell plates buckled, causing considerable leaking in the starboard bow, forward of the collision bulkhead. While at North Sydney, a diver was requisitioned and the leaks were plugged from the outside, and the damaged part cemented inside, and further reinforced by cross timbers, in place of partially distorted beams, stringers and frames. She left North Sydney, July 29, on her voyage to the United Kingdom, where permanent repairs were made.

The s.s. Canadian Transporter, while on her route between Canada and New Zealand, in the early part of July, received a wireless call from the French steel sailing ship France, asking for help, the ship being a wreck off the coast of New Caledonia, in the southern Pacific, and the crew being in grave danger. Though she was some 220 miles away, the Canadian Transporter proceeded immediately at full speed for the wreck, but after having covered over half the distance, she was advised by the Brisbane wireless telegraph station, that the crew, who had abandoned the ship, had landed, without any loss of life, at New Caledonia, on which the Canadian Transporter resumed her voyage.

The Canadian Transporter was docked at Esquimaux, Aug. 31, to have a new propeller blade fitted, and later went to Chemainus to load lumber for Australia, and sailed Sept. 12.

The s.s. Canadian Trooper has been awarded \$25,000 by the Admiralty Court at Montreal, as salvage for towing the Norwegian s.s. Otta into St. John's, Nfld., in Oct., 1921, when she was in danger of foundering, about 600 miles from Newfoundland. The amount has been apportioned as follows: Owner, \$17,000; master, \$1,500; first officer, \$700; second officer, \$500; chief engineer, \$800; second engineer, \$500; wireless operator, \$500; the balance of \$3,500 to be divided between the other officers and crew, according to their rating. The owners of the Otta, who had offered \$12,500 in settlement of all claims, were also taxed the costs of the action. The Otta, with a crew of 30, was outward bound from Montreal, for Denmark, with grain, and on Oct. 8, when about 500 miles from Belle Isle Strait, sent out a wireless call for help, as her rudder stock was broken, and she was helpless. The Canadian Trooper, inward bound to Montreal, changed her course, and went to the Otta's assistance. The parties, for the purpose of the case, agreed that the value of the Canadian Trooper was \$150,000, and her freight and cargo, \$5,533.17, and the value of the Otta, \$105,000 and her freight and cargo, \$141,142. On the

Trooper's arrival, the Otta was rolling heavily, and in a critical condition, having sustained considerable damage, some of her deck equipment having been washed overboard. She was then, and continued until near the Newfoundland coast, in great peril. Both ships were in great peril during the tow, as tempestuous weather, intermittent gales, and high seas continued throughout. Lines, ropes and wires used in towing, parted almost daily, and both ships, in renewing these, were exposed to imminent risk of collision. The Trooper sustained considerable damage to her equipment and lines, and devoted 10 days to the salvage services. The master and officers displayed great skill and courage of a high degree in the services rendered. The total distance travelled from the time the Trooper went alongside the Otta, until both ships reached port, was over 600 miles. The court considered the amount offered by the Otta insufficient, the cost of operating the Trooper while rendering the services, and the repairs necessitated thereby, being \$6,095.48.

Officers of Steamships.—The following appointments of chief engineers have been made since those mentioned in previous issues.—Canadian Aviator, F. C. Still; Canadian Commander, F. C. Brown; Canadian Constructor, J. J. R. Pringle; Canadian Navigator, S. Evans; Sheba, J. Hoey.

Pacific Coast Steamship Services.—A Vancouver press dispatch states that the Canadian Government Merchant Marine's local officials have received no word that would indicate the intended disposal of the coastwise ships, but that they have issued a statement, that in the event of the ships being sold, their places will be taken by larger ships; that there is no intention of abandoning the coastwise service, which is said to be one of the most satisfactory of the entire fleet. Larger ships on the California run would mean more space for cargoes, and at present all ships are loaded to full capacity including deck, when they sail south from B.C. ports, and more freight could be taken if there was more space.

Coal Shipments from Australia.—The steamships Canadian Britisher, Canadian Highlander, Canadian Traveller, Canadian Transporter and Canadian Scotish, which are taking lumber to Australia, have been chartered to the Canadian Trading Co., Vancouver, B.C., for their return trips, to load about 7,500 tons of coal at Newcastle, New South Wales, about 4,000 tons of each cargo to be unloaded at Honolulu, and the balance at some U.S. mainland ports.

Burial Ritual by Wireless.—A press report says: There have been many stories of the strange uses to which wireless communication has been put on the high seas, but the Cunard liner Carmania brought in a new one on her arrival at Liverpool from New York, recently. While off the Irish coast the liner's operator picked up a message asking that the ritual for burial at sea be sent in full. The strange request came from the Canadian Government Merchant Marine s.s. Canadian Trooper.

Montreal Sailings.

Liverpool Service.—Canadian Ranger, Oct. 11; Canadian Spinner, Oct. 25; Canadian Mariner, Nov. 8; Canadian Ranger, Nov. 22.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

46. July 28.—129, British Columbia, Vancouver Island, west coast, Alberni Canal, Port Alberni, lighthouse destroyed. 130. British Columbia, Strait of Georgia, Vancouver harbor entrance, First Narrows, inner beacon established.

131. British Columbia, Smith Sound, Browning Passage, entrance to Takush harbor, uncharted rocks.

47. July 31.—132, Quebec, St. Lawrence River, between Quebec and Montreal, above Three Rivers, gas buoy to be placed temporarily, caution. 133. Newfoundland, north coast, Jacques Cartier Island (Noble Island), light discontinued.

48. Aug. 3.—134, Ontario, Lake Huron, Cape Hurd channel, range day beacon established. 135, Ontario, Lake Superior, Mission River entrance, buoy placed.

49. Aug. 9.—136, British Columbia, Vancouver Island, Victoria harbor, dredging. 137, British Columbia, Burrard Inlet, Vancouver harbor entrance, buoys discontinued. 138, British Columbia, Seaforth channel, Raven Cove, uncharted rocks.

50. Aug. 12.—139, British Columbia, Vancouver Island, Esquimaux harbor, beacon erected. 140, British Columbia, entrance to North Arm of Fraser River, inner beacon destroyed. 141, British Columbia, Queen Charlotte Islands, Darwin Sound, Amur Rocks, buoy established.

Vancouver Harbor Commissioners.—The newly appointed harbor commissioners held their first meeting Sept. 1, when the new members, R. E. Beattie and S. L. Prenter were sworn in. Lieut.-Col. Kirkpatrick, who was chairman of the old board, is continuing in that position.

British Shipbuilding.—A London press dispatch says that the revival of shipbuilding in Great Britain is indicated by the fact that the largest month's output this year was recorded in August, during which month Clyde shipyards launched 14 ships, aggregating 53,000 tons.

Atlantic and Pacific Oceans.

Manchester Liners Ltd. announce that its steamship service between Manchester, Eng., and Canadian ports, which has hitherto been a fortnightly one, has been made a weekly one, since the addition of the s.s. Manchester Regiment.

The Head Line s.s. Bengore Head, 1,512 tons net, arrived at Montreal, Sept. 6, on her maiden voyage. She was built for the company's Baltic trade, but on account of the depressed condition of the trade in that region, was transferred to the Montreal service.

Furness Withy and Co.'s s.s. Comino, outward bound from Montreal to Hull, Eng., was reported ashore about 2 miles below Pointe aux Trembles, near Montreal, Sept. 15. The channel at that point is between 400 and 500 ft. wide, and it is reported that there was ample depth of water.

On the arrival of the Head Line's s.s. Melmore Head at Belfast, Ireland, from Canada, recently, presentations of a piece of plate for the ship and medals and diplomas for the crew were made on behalf of the Norwegian Government, for services in rescuing the s.s. Mod's crew last January.

The White Star-Dominion Line announced recently that owing to increased demand for freight accommoda-

tion in the Canadian service, the s.s. Darian, launched at the end of August, at Glasgow, Scotland, for the Leyland Line, will be operated by the White Star Dominion, and that she would sail from Glasgow, for Montreal, Sept. 23, with a cargo of coal. Her dimensions are,—length 425 ft., breadth 52 ft., depth 29½ ft.; tonnage, 6,425 gross.

The Cunard Line's s.s. Ausonia, the fifth new steamship placed on the St. Lawrence route this year, by the company, arrived at Montreal, Sept. 11, on her maiden voyage from Liverpool, Eng. She is 15,000 tons gross, and a sister ship of the Andania and Antonia. Her dimensions are,—length 540 ft., breadth 65 ft., depth 43 ft. She is equipped for oil burning, and has accommodation for 600 cabin and 1,200 third class passengers. She sailed from Montreal, on the return trip, Sept. 16.

The s.s. Baluchistan, registered as owned by the Hindustan Steamshipping Co., Newcastle, England, outward bound from Montreal, ran ashore near White Islet, Aug. 26, during a storm. The Quebec Wrecking and Salvage Co.'s s.s. Lord Strathcona was dispatched to her, and it was necessary to unload her before refloating. White Islet, on Hare Island north reef, is about in the middle of the St. Lawrence River, between Cacouna Island and Cape Dogs. It is small and sandy, with trees about 10 ft.

high, and at low water, when the reef is showing, it appears only as a clump of trees on the reef. A light vessel is moored in 8 fathoms of water about 3½ cables northeastward of the northeastern end of White Island reef.

Manchester Liners' s.s. Manchester Regiment arrived at Montreal, Sept. 6, on her maiden voyage. She is under the management of Furness, Withy and Co., who entertained a number of shippers on board. She was built by Furness Shipbuilding Co., Haverton Hill-on-Tees, Eng., and was especially designed for the requirements of the service between Manchester and Montreal, via the Manchester Ship Canal and the St. Lawrence River. On her recent trials she maintained a sea speed of 15½ knots an hour, which makes her the fastest cargo steamship on the St. Lawrence route. She is of the tween deck type. Owing to the arrangement of decking, she has a total cargo stowage capacity of 618,800 cu. ft., increased by 20,000 cu. ft. when oil is used as fuel. The hull is divided into 7 watertight compartments. There are 4 large cargo holds, each served by a hatch 20 ft. wide. The propelling machinery consists of geared turbines driving a single screw through single reduction gearing. The high pressure turbine is placed on the starboard side and the low pressure turbine on the port side, and they are designed for a maxi-

Ships Registered in Canada During June and July, 1922.

In compiling the following lists of ships registered, steamboats and motorboats operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

(1) Formerly a steamship. (2) Recovered wreck.

mum of 5,000 h.p. Steam is supplied by 4 cylindrical, single ended, multi-tubular boilers, fitted with smokebox superheaters and forced draft, with oil burning apparatus. The cargo handling equipment is of the most modern type for easy and rapid handling. Her dimensions are—length over all 47 1/4 ft., length b.p. 450 ft., breadth extreme 58 ft., depth moulded to upper deck 31 ft., height of shelter 'tween decks 10 ft., height of main 'tween decks 10 ft., tonnage, 7,390 gross, 4,947 net, 11,600 d.w.

Maritime Provinces and Newfoundland.

The Cape Pine Shipping Company Ltd., St. John's, Nfld., has gone into liquidation, with T. Cook and W. R. Neal as liquidators.

The Dominion Government s.s. Lady Laurier sailed from Halifax, N.S., Aug. 31, on a supply trip to light stations between Newfoundland and St. Paul Island.

The Newfoundland schooner L. Morton, was reported to have been lost at Port Manners, on the Labrador coast, Aug. 27, during heavy westerly weather. The crew were landed safely.

Heavy shipments of fish from Newfoundland to Mediterranean ports were reported during September. It is stated that approximately 165,000 quintals were shipped during the month.

The revenue from the St. John, N.B., ferry service for August, decreased \$881.16 from August 1921. A general falling off in traffic is reported, there being a decrease of 44,766 in passengers and 2,148 in vehicles for Aug. 1922, compared with Aug. 1921.

The steam yacht Ewayee has been bought by V. Bacha, Curling, Nfld., from S. A. Williamson, St. John, N.B. She was built in 1912 for pleasure trips on the St. John River and is to be used for towing in the Bay of Islands, on the Newfoundland west coast.

A French steam trawler, operating out of St. Pierre, Miquelon, when returning to port, from the Banks, towards the end of August, ran ashore at Langley, and was expected to be a total loss. She ran on the rocks, during a dense fog, while going at full speed, and sustained considerable bottom damage, there being little likelihood of refloating her.

The schooner Maid of Canada, owned in La Hève, N.S., bound from a U.S. port to Halifax, N.S., with bituminous coal, sank near Halifax, Sept. 4, after collision with the s.s. Sadie Mac. The crew were saved and taken to Halifax on the Sadie Mac. The Maid of Canada was 330 tons net, built at Weymouth, N. S., in 1918, and owned by Zwicker Bros., Mahone Bay, N.S.

The s.s. Convallaria, a wooden steamship registered as owned at Gardenswain, Banffshire, Scotland, was labelled at Chatham, N.B., recently, by Eastern Stevedores Ltd., as guarantee for an action for \$1,780 against the owners for breach of contract. It is claimed that an agreement was made by the ship owners to engage the stevedores, which engagement it is said was made by cable.

The Newfoundland Government's estimates for the current year include subsidies for steamship services as follows:—Ocean, Port aux Basques, Nfld., and North Sydney, N.S., \$30,000; occasional service \$5,000; Postal Union, \$5,000; Coastal,—Bay of Islands, \$8,200; Bell

Island, \$5,000; Fogo District, \$40,000; Fortune Bay District, \$15,000; Labrador \$80,000; northeast coast, \$40,000; Port aux Basques and Placentia, Nfld., and Sydney, N.S., \$40,000; Notre Dame Bay, one steamship, \$35,000; Placentia Bay, \$32,760; St. George's Bay \$17,500; Battle Harbor and Humbermouth, \$35,000; Bonavista and Trinity Bays, \$35,000.

The Dominion Coal Co., as charterer of the British s.s. Lord Strathcona from the Lord Curzon Steamship Co., of Liverpool, Eng., has obtained judgment in England on a claim for loss of services of the steamship while under charter. The ship was chartered by the Dominion Coal Co. in April, 1914, for 10 years, for the St. Lawrence coal service, and she was twice requisitioned for war work. The judgment was that the Lord Curzon Steamship Co. pay the charterers two-thirds of the difference between the hire they would have received from the chartered party, and the money they had received in the course of the government requisition.

The Reid Newfoundland Co.'s s.s. Home ran ashore Sept. 11, at Barge Point, on the Labrador coast, a few miles east of Amour Point, where H.M.S. Raleigh was wrecked during August, and she is reported to be a total loss. She had been engaged in the company's freight and passenger service, between Bay of Islands, Nfld., and Labrador points, for some years. She was built at Pointhouse, Scotland, in 1900, for the Newfoundland service, was screw driven by engine of 99 h.p. Her dimensions were, length 154.7 ft., breadth 25.1 ft., depth 12.6 ft.; tonnage, 439 gross, 200 net. Barge Point, which is on the southwest side of Barge Bay, is low, and Barge Bay, the northeast point of the entrance of which is about 2 1/2 miles southwest of Wreck Bay, is about 1 1/2 miles wide at the entrance, and about 3/4 of a mile deep. There is a temporary shelter for small ships, from westerly winds, and a small village at the head of the bay.

The s.s. Bassan owned formerly by the United States Shipping Board, which was wrecked about a year ago at St. Pierre, Miquelon, was floated from the blocks at Huntley's shipyard, Parrsboro, N.S., Aug. 23. She was built at Portland, Maine, in 1916, and trouble with her commenced immediately she was put in service for war transport purposes. She was in trouble in France, which delayed her return to the U.S., at the close of the war, and on her homeward

trip she ran ashore at Newfoundland, and after being released she again ran ashore at St. Pierre, Miquelon, when she was seriously damaged. She was then sold to a French firm at St. Pierre, and after being refloated, was sent to Halifax, N.S., for examination and later was sent to Parrsboro, N.S., where she was repaired. The repairs were delayed for a considerable time, owing to the owners' shortage of funds, and the crew with other creditors libelled her for their claims, and she was sold as she lay to Piper and Paige, of Maine. She lay on the blocks at Parrsboro during the winter, filling and emptying with each tide, and in the spring of this year, work proceeded on the completion of the repairs, and on being floated off the blocks, she was towed to Portland, Me., by her new owners.

Province of Quebec.

It was reported at the end of August, that the cattle exports out of Montreal, for this current season, were greater than during the whole of last season, the number, to Aug. 25, being 32,358 head, compared with 31,217 for the 1921 season.

The Montreal Harbor Commissioners are reported to have bought 5,000,000 ft. of lumber in British Columbia, for shipment this year. It is stated that the C.P.R. s.s. Montegale has been secured for carrying half of it from Vancouver to Montreal, via the Panama canal.

From the reopening of navigation to the end of August, 80,248,953 bush. of grain were handled in the port of Montreal, or some 5,000,000 bush. more than in the entire season of 1914, which was the best year in the history of the port, prior to 1921. The bulk of the grain was U.S. wheat.

Work is proceeding on the addition to the 1,000-ft. piers in Montreal harbor, and it is expected that about two-thirds of it will be completed before winter. The addition of 300 ft. to the Alexandra pier is also well under way. The contractor, Atlas Construction Co., is required to have the crib work and structure completed by Oct. 31, and the lower half of the superstructure by Dec. 15. The balance of the work is to be finished by May 31, 1923.

Canada Steamship Lines s.s. Rapids Prince, which went ashore off Heron Island, below the Lachine Rapids, July 30, was released Sept. 9. A cable was stretched from the ship to a small island

Ships Added to and Deducted from the Canadian Register During June and July, 1922.

where a hauling winch was located, and the ship was hauled into mid channel, after which she proceeded to Montreal under her own steam. Considering the position in which she was, and the necessity for hauling her over the rocky bottom, the damage sustained was comparatively slight. The propelling gear is stated to be seriously damaged, as well as both propellers. The hull has been buckled to some extent, and the oak sheathing badly torn. It is stated that she is insured for \$180,000.

Ontario and the Great Lakes.

The U.S. Government is erecting a modern coast guard station at Whitefish Point, Lake Superior, at an approximate cost of \$30,000.

An order in council has been passed approving regulations for the operation of a ferry service across the St. Lawrence River, between Morrisburg, Ont., and Waddington, N.Y.

The Dominion Government is reported to have awarded a contract to Frontenac Dredging Co., Kingston, for dredging the approaches to Cobourg harbor, to facilitate the operation of car ferries.

The Canada Atlantic Transit Co.'s s.s. Kearsarge ran aground off Yoe Island, Depot Harbor, at the end of August, while inbound with a cargo of mill feed, which had to be lightered before she could be refloated.

The Northern Navigation Co.'s s.s. Noronic left Port Arthur, Sept. 13, on her last down bound trip for this season. She was bound for Detroit, Mich., and returned thence to Sarnia, where she will go into winter quarters.

Two cargoes of Welsh coal arrived at Toronto, Sept. 15. The coal was sent shipped from ocean ships at Montreal and into the steamships John F. Morrow and Maplehead, the latter being the first to arrive with 2,400 tons, and the former with 1,900 tons. Other ships arrived at Toronto with Welsh coal later in the month.

A Kingston press report states that arrangements are being made for the reopening of the Montreal Transportation Co.'s grain elevator there, to assist in relieving the grain congestion at Port Arthur, Fort William and Montreal. The elevator, which has about 850,000 bush capacity, is now owned by Canada Steamship Lines.

The grain elevating ship Robert L. Fryer, operating in Port Arthur harbor, collided with the Northern Navigation Co.'s s.s. Hamonic, Sept. 10, damaging several plates above the water line. The sailing of the Hamonic east was delayed for several hours, while the damage was being repaired by Port Arthur Shipbuilding Co.

The Kirkwood Line, which is operating the s.s. Greypoint between Montreal and Toronto, in the freight trade, has placed the following class rates in effect between the two points, including insurance—1st. 61c.; 2nd. 52c.; 3rd. 44c.; 4th. 36c.; 5th. 20c. A weekly sailing takes place every Wednesday from Montreal, and every Saturday from Toronto.

The freight handlers' strike at Port Arthur and Fort William, was ended Aug. 31, the men returning to work on the company's terms, i. e., an increase of 5c. on hour, without the signing of an agreement. The companies objected to signing an agreement on the ground that it was compiled and fostered by the so-called One Big Union, which they declined to recognize.

The United States Lake Survey reports the stages of the Great Lakes in feet above mean sea level, for August, as follows:—Superior 602.63; Michigan and Huron 580.56; St. Clair 575.23; Erie 572.50; Ontario 246.56. Compared with the average August levels for the past 10 years, Superior was 0.09 ft. below; Michigan and Huron 0.40 ft. below; Erie 0.28 ft. below, and Ontario 0.02 ft. below.

The wreck of the steam yacht Guinidia, which sank in Lake Superior, near Rossport, during the summer of 1912, has been located by the Dominion Towing and Wrecking Co., and it is expected that an attempt will be made next spring to salvage the ship. She was owned by W. C. Harkness, of Imperial Oil Ltd., and struck a rock near Rossport, after which she slipped off and sank in 200 ft. of water. It is stated that a number of personal valuables belonging to the party on board, were lost. She is said to be lying with her stern 225 ft. below the surface, and her stern about 240 ft. below. She was valued at about \$200,000.

The s.s. Joyland, which was wrecked at Little Round Island, near Brockville, some time ago, abandoned by Canada Steamship Lines to the underwriters, and sold later to John E. Russell, contractor, Toronto, has been sold to D. H. Mapes, Jr., Montreal. She was built at Detroit, Mich., in 1884, and was originally named William A. Haskell. Her dimensions are,—length 250 ft., breadth 37 ft., depth 14.3 ft.; tonnage, 1,845 gross, 1,070 net. She was owned formerly by Montreal Transportation Co., and was taken over by Canada Steamship Lines, on the acquisition of that company's property. After being wrecked near Brockville, she was taken to Kingston, by John E. Russell, for temporary repairs, and later to Port Dalhousie, where she was completely overhauled.

British Columbia and Pacific Coast.

On the closing of the Alaska tourist season, the C.P.R. s.s. Princess Louise was placed in night service between Vancouver and Victoria.

The s.s. Fred Baxter, in going up the Fraser River to Vancouver, Sept. 7, struck a wing dam, which had been reported as washed away.

The Vancouver Harbor Commissioners have invited tenders for the supply and erection of the following mechanical equipment: semi portable electric crane,

electric freight elevators and escalators or inclined conveyors, electric captains, tractors and trailers.

The C.P.R. s.s. Princess Maquinna, which struck a reef at the entrance to Esperanza Inlet, while bound from the west coast of Vancouver Island, recently, had a number of plates damaged amidships, 14 of which were replaced by Victoria Machinery Depot Co.

The Consolidated Whaling Corporation's s.s. Gray ran aground on Java Reef, six miles from Lyall harbor, Satarua Island, Haro Strait, Aug. 29, and was floated later in the day without assistance and proceeded to Esquimalt, under her own steam, where she was hauled out at Yarrows Ltd. plant, for examination and repairs.

H. A. Stevenson, Vancouver, has been appointed receiver for Canadian Western Steamships Ltd., owner of the s.s. Margaret Coughlan, on the application of debenture holders, following non-payment of interest. Bonds were issued originally for \$850,000, and have since been reduced to \$510,000. It is stated that the action is a friendly one to facilitate the company's reorganization.

The C.P.R. British Columbia Coast Steamship Service reports a very successful tourist season in the Alaska service, the new s.s. Princess Louise, built at North Vancouver, having proved a great success, and the two steamships Princess Alice and Princess Louise, having run to capacity during the entire season. The overhauling of the coast steamships during the winter, will be of a general character, consisting of repainting, re-carpeting, etc., and will be chiefly carried out in the company's own shops.

The Pacific Salvage Co., Victoria, has bought the s.s. Leebro, owned formerly by Crescent Shipping Co., and has changed her name to Salvor. She is to be used in coastwise salvage operations. She was built at the Turpel shipyard, Victoria, in 1908, and is screw driven by engine of 22 h.p. Her dimensions are,—length 125.5 ft., breadth 28.8 ft., depth 11.1 ft.; tonnage, 323 gross, 198 net. For some time past, she has been under charter to the Dominion Government, as a lighthouse tender. She has been equipped with powerful pumps and salvage gear.

The s.s. Henriette, which is reported to be aground near Suva, Fiji Islands, was at one time owned by S. F. Mackenzie, Vancouver, and operated as a barge in the freight and cattle trade to Skagway,

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during August, 1922:

Alaska. In 1906 she was converted into a twin screw steamship, and was the first ship of that type to be fitted out at Vancouver. She was continued in the Skagway trade, and was in 1910 bought by the Grand Trunk Pacific Coast Steamship Co. and operated by it until 1917, when she was sold to a purchaser in Seattle, Wash., and later to a San Francisco firm, when she was reconverted into a sailing ship, and placed in the Fiji Island trade. She was originally built at Havre, France, in 1872.

Mainly About Marine People.

Arthur Carfrae Dicks, civil engineer, last surviving son of the late Jas. Dicks, for many years Dominion Inspector, Marine & Fisheries Department, died at Vancouver, B.C., Sept. 17.

J. C. Johnson, former in the passenger Department, Canadian Pacific Steamships Ltd., Montreal, died at Outremont, Que., Aug. 30, aged 61.

D. J. Perrault, a local pilot, and a members of the Montreal Pilots Association, has been appointed deputy harbor master, Montreal, vice Capt. J. F. Symons, appointed harbor master early in the year, on the retirement of Capt. T. Bourassa.

F. Percy Smith, Secretary, Canada Steamship Lines Ltd., Montreal, has resigned on account of ill health. He has been suffering from insomnia and nervous dyspepsia for some time. He is spending a holiday in the mountains, and will later take a trip to Europe.

R. Brock Thomson has been appointed Secretary, Canada Steamship Lines Ltd., Montreal, vice F. Percy Smith, resigned on account of ill health.

Brig.-Gen. T. L. Tremblay, one of the Quebec Harbor Commissioners, has been appointed the Commission's Chief Engineer, succeeding St. George Boswell.

Engineer-Commander G. A. Vine, R.N.R., Superintendent Engineer, Canadian Pacific Steamships Ltd., Liverpool, Eng., arrived in Canada, by the s.s. Montclare, at the end of August, on a visit.

Norman A. Yarrow, of Yarrows Ltd., Victoria, B.C., returned to Canada at the end of August, after spending six months in Great Britain.

The Detroit and Cleveland Navigation Co. has ordered two of the largest side wheel steamships in the world, for its Buffalo-Detroit Division. They will be 544 ft. long with 100 ft. beam, with 650 staterooms for the accommodation of 2,000 passengers, of a single class. The hull will be of mild steel, which will be carried up to the promenade deck rail. All the deck house and paddle wheel housing will be of the same material. The hold will be divided into numerous watertight compartments, by steel bulkheads extending from the keel to the main deck, and a double bottom will be provided, also divided at the center line and athwartships, into several compartments, all arranged to carry water ballast. Powerful pumps will be installed to enable the water ballast to be discharged quickly as desired. They will be equipped with modern safety devices and fully fitted out for the comfort and pleasure of passengers. They will cost approximately \$3,500,000 each, including furnishings, and it is stated that they are to be ready for the opening of navigation in May 1923, on the 70th anniversary of the commencement of the company's passenger steamship service between Detroit and Cleveland.

Ship Building and Ship Repairing Throughout Canada and Newfoundland.

B. C. Marine Engineers and Shipbuilding Ltd., Vancouver, B.C., has a contract from the Dominion Public Works Department for overhauling and repairing dredge 305 (King Edward), for \$8,986, and unit prices for any additional work which may be required.

Canadian Vickers, Ltd., Montreal—Canadian Railway and Marine World for August contained an illustrated description of a 38½ ft. sea sled, built by this company for demonstration purposes. We are advised that at the trials, held in August, a speed of 40 miles an hour was obtained, though the sled is not intended as a racer, but as a fast cruiser. The sled proceeded subsequently up the St. Lawrence and Lake Ontario to Toronto, where it was demonstrated during the Canadian National Exhibition. The selling price of this sled is about \$25,000. The company is building 2 more 38½-ft. sleds, and six 25-ft. sleds. The latter are being equipped with one marine type, Hall-Scott, 100 h.p. engine, driving 2 propellers, will carry 8 to 10 people, at speeds of from 30 to 35 miles an hour, and will sell at between \$7,000 and \$8,000. It is also building a number of sea sled dinghies, of which it has sold several.

The company is building a steel pontoon lock gate lifter for the Railways and Canals Department. Repair work was done during August, on the following ships—Canadian Government Merchant Marine, s.s. Canadian Challenger, Canadian Commander, Canadian Ranger, Canadian Runner; C.P.R., s.s. Empress of Australia, Essex County, Metagama, Minnedosa; Canadian Steamer Line, s.s. Mapleton, Edmonton, Glenella; Imperial Oil Ltd., s.s. Vancolite, Calgarolite, Montrolite; Cunard Line, s.s. Velavia, Taranta; International Waterways Navigation Co., s.s. Aragon; George Hall Coal Co., s.s. Brignogan; Runciman and Co., s.s. Elswick Park; Clarke Steamer Co., s.s. Gasperia; Navigazione Libera, s.s. Isomzo; C. Salvason and Co., s.s. Katanga; D. S. Noulson, s.s. Sarmatia; U.S. Shipping Board, s.s. Hoven; Anchor-Donaldson Line, s.s. Cabotia; Harrowing Steamship Co., s.s. Ethelwolf; Ornis Steamship Co., s.s. Dront; Ropner Shipping Co., s.s. Somersby; National Navigation Co., Fordonian.

Thos. Cantley, of New Glasgow, N.S., Chairman, Nova Scotia Steel & Coal Co., and formerly a Canadian National Ry. director, bought some little time since the German steel schooner Alda, which was ashore at Miramichi, N.B. She is 103 ft. 7 in. long, 22½ ft. broad and 9½ ft. deep, and was built at Hammelwarden in 1889. He is entirely rebuilding her at the Nova Scotia Steel & Coal Co. yard at New Glasgow, where a number of steel steamships were built during the war. She has been cut in two and is being lengthened by 7 frame spaces, or say 12½ ft., and is having added to her a raised quarter deck and poop aft, also a forecastle forward, 22 ft. long. We are advised that, if she should sail in the meantime, she will probably be run between the Maritime Provinces, Newfoundland, and the West Indies, in the winter.

Halifax Shipyards Ltd., Halifax, N.S., did the following work during August—H.M.C.S. Patriot, scraped and painted, and miscellaneous engineering work; Canadian Government Merchant Marine, s.s.

Canadian Constructor, 7,177 tons, scraped and painted, new pin for ballast pump, opened air pump for inspection, also main condenser, and general repairs; s.s. Canadian Gunner, 2,415 tons, scraped and painted, tail shaft drawn, jacked up furnaces, opened sea valves for inspection, new key for propeller shaft and miscellaneous hull work; s.s. Canadian Miller 5,429 tons, scraped and painted, dynamo repairs, tail shaft drawn, miscellaneous engine and hull repairs; s.s. Canadian Warrior, 2,409 tons, scraped and painted propeller removed, tail shaft disconnected etc., sea connections opened for inspection, and general repairs; s.s. Sheba, 2,268 tons, scraped and painted, and tail shaft drawn and replaced; Canadian National Rys., car ferry Scotia II, 1,859 tons, scraped and painted, tail shaft drawn and replaced, and miscellaneous hull work; G. S. Campbell and Co., s.s. Titan, 5,134 tons, temporary repairs.

The contract for repairing the U.S. s.s. Benton, which ran ashore at Seal Island, Cape Sable, in August, was awarded to this company, in competition. The work was completed during September.

Nickson Construction Co. Vancouver, B.C. The transfer barge which this company is building, at Nelson, B.C., for the C.P.R. Kootenay Lake service, is expected to be completed shortly. It will have a depth of frame at side, between bottom planking and covering board, of 7½ ft., width of frame inside of planking 41½ ft., width over planking 42 ft. and over nosing amidships 42½ ft. Its length on deck outside of crown piers will be 224 ft. and length over all 225 ft. ½ in. The crown of the deck in 41½ ft. will draw in 5 in. to the bow corner, will draw in 5 in. to the side in a 16 ft. run aft.

Reid Newfoundland Co., St. John's, Nfld.—Repairs have been completed at this company's drydock on the s.s. Sagona, several plates having been replaced, owing to damage received in ice. Repairs have also been completed on the schooner Union Jack, practically the whole of the bottom of the hull having been replaced.

Shelburne Shipbuilding Co., Shelburne, N.S. launched the schooner Edwina, 119 tons net, recently, for Harvey & Co., St. John's, Nfld. She is of the semi knock-about type and will be operated out of Belleoram, Nfld., in the Banks fishing service. Another ship of similar type is being built for the same owners at Riverton, N.S.

Victoria Machinery Depot Co., Victoria, B.C. did the following repair work during July—Canadian Government Merchant Marine s.s. Canadian Traveller, 5,500 tons, docked at Esquimalt drydock, painted, and hull and engine repairs; C.P.R. 511 tons, docked at hull repair dock, painted and hull and engine repairs; s.s. Princess Patricia, 1,158 tons, docked, painted and hull and engine repairs; Consolidated Whaling Corporation s.s. Gray, 707 tons, docked and painted; s.s. Green, 102 tons, docked, painted and repairs; Capt. A. Berquist, s.s. Santa Cruz, 511 tons, docked at hull repair dock.

Wallace Shipbuilding and Drydock Co., North Vancouver, B.C. has a contract from the Dominion Public Works Department for overhauling and repairing dredge 303 (Frühling) for \$10,592.50, and unit prices for any additional work which may be required.

Canal Statistics for July.

The Dominion Bureau of Statistics, Transportation Branch, has issued the following summary for July:—

Sault Ste. Marie.—Total traffic through the Canadian and U.S. locks at Sault Ste. Marie increased over 26% over July, 1921, and also over June, 1922. The large increases were in wheat and iron ore, the latter totaling 8,942,659 tons, compared with 4,356,760 tons in July, 1921; 9,255,086 in July, 1920, and 8,912,609 in July, 1919. Wheat shipments for the month were 17,177,377 bushels, against 7,838,878 in July, 1921; 7,838,470 in July, 1920, and 7,100,008 in July, 1919. Coal shipments continued light.

Welland.—Total traffic showed a slight decrease from July, 1921, the main factor being decreases in soft coal shipments and in U.S. corn. Wheat shipments increased 191,291 tons, or 6,376,000 bushels, and barley, iron and steel and pulpwood also showed increases.

St. Lawrence.—There was an increase in passenger traffic of over 44% compared with July, 1921. Freight traffic increased 23,256 tons or 4% despite large decreases in coal shipments and in corn and oats. Wheat, iron and steel, pulpwood, lumber and timber all showed good increases.

Great Lakes Grain Freight Rates.

Following are Cleveland, Ohio, press dispatches:—Sept. 4.—The Lake Superior grain shippers are taking little early loading tonnage, but they are in the market for future loading capacity and another big carrier was placed on Sept. 2 to load at the head of the lakes the last ten days of November to hold in Buffalo at 4c. More storage capacity for that period is wanted, but some owners will not charter that far ahead. Three cents was bid from head of the lakes to Buffalo for the last half of October. A big ship was placed to load in South Chicago for Georgian Bay at 1½c and a small carrier will take a cargo of oats from Chicago to Buffalo at 2c.

Sept. 8.—Little future chartering has been done this week, and indications are there will not be much more tonnage placed ahead without a dispatch guarantee, as shipping men feel satisfied that grain carriers will spend considerable time in port at the lower end of the route when the movement gets started in good shape. Shippers at the head of Lake Superior are in the market for October and November capacity, and the bidding 4½c for ships to load the last half of November at Buffalo. Ore carriers are arriving about as fast as they are being worked out, and all the big docks have a good line-up. There is a shortage of cars at some ports, and ore carriers that arrive Saturday will be held over Sunday.

A steamship of medium size was placed to load at Fort William early next week for Buffalo at 2½c and a cargo for Buffalo was taken in Duluth at that figure. Two big carriers were chartered to load in Duluth for Buffalo at 2c. Lake Michigan rate holds steady at 2c and 2 big ships were placed in South Chicago at that figure. One cargo will be delivered at Port Colborne and the other will go to Buffalo.

Sept. 10.—Grain tonnage is in fair demand and some chartering was done Sept. 9 for prompt and future loadings.

Handy ships that are close by are wanted and better rates were paid for tonnage of that class in the Lake Michigan trade and at the head of the lakes. A steamship of medium size was placed to load at South Chicago for Buffalo at 2½c and on a cargo to load at South Chicago for Port Colborne at 2½c was Chicago for Port Colborne. A steamship of medium size was placed to load at Fort William at 2½c to Buffalo and two ships that will report for cargoes by end of this week will load at the head of the lakes for Buffalo at 2½c.

Sept. 19.—Grain is offered freely, but most of the tonnage for early loading has been taken and little chartering was done. A big steamship that will be ready the first of next week was placed to load at Fort William for Buffalo at 3c, but some owners are holding for a better rate. Shippers are in the market for future loading capacity and are bidding 4½c from the head of Lake Superior for late November loading and storage at Buffalo. There is some tonnage on the market for that loading period at 5c. Some ship owners will not charter very far ahead, and not many storage cargoes have been taken.

Marine Public Works Contracts.—The Dominion Public Works Department has awarded contracts as follows: Aug. 8, overhauling and repairing dredge 303 (Fruhling), Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., \$10,592.50 and unit prices for additional work which may be required; Aug. 9, overhauling and repairing dredge 303 (King Edward), B.C. Marine Engineers & Shipbuilding Ltd., Vancouver, B.C., \$8,986 and unit prices for additional work which may be required; Aug. 17, repairs to breakwater at Port Burwell, Ont., W. Birmingham, Kingston, Ont., unit prices; Aug. 19, repairs to wharf at St. Laurent d'Orleans, Que., L. Lemieux, O. Roberge and E. Lemieux, Levis, Que., unit prices; Aug. 16, repairs to superstructure of eastern and western breakwaters, Port Colborne, M. J. Hogan, Port Colborne, Ont., unit prices; Aug. 21, dredging eastern entrance channel, Toronto, Randolph Macdonald Co., Toronto, class B 45c a cub. yd. scow measure; Aug. 22, repairs to wharf at Melford, N.S., T. D. Morrison, D'Escoisse, N.S., 12½c a cub. ft.; Aug. 23, dredging wharves at St. John, N.B., St. John Drydock and Shipbuilding Co., St. John, N.B., class B 34c a cub. yd. scow measure.

The S.S. Narragansett, which was bought by Canada Steamship Lines, from the U.S. Government, last year, is being rebuilt by Davie Shipbuilding & Repairing Co., Levis, Que., and is expected to be ready for service by May 1, 1923. She was built at Wilmington, Delaware, in 1917, for service in Long Island Sound, and she is informed she was not operated until bought by the U.S. Government in 1917, when she was sent overseas and used as a channel transport between England and France. On the close of the war, she was returned to the U.S., where she was laid up until sold to Canada Steamship Lines in 1921. Her dimensions: Length 320 ft.; breadth, 48 ft.; depth moulded, 21 ft., and she is equipped with 2 triple expansion engines, 4,000 i.h.p., for a speed of from 20 to 23 knots an hour, driving twin screws. It is said that, when completed, she will have 222 cabins, 16 with tub cabins and 16 with showers, that every cabin will be an outside one, and that she will run between Montreal and Saguenay ports, stopping at Quebec both ways.

Montreal Warehousing Co's Elevator.—It was stated in Canadian Railway and Marine World for March that the Montreal Warehousing Co. was going to add a 1,600,000 bush storage annex to its elevator B at Windmill Point, which would increase the elevator's storage capacity to 3,000,000 bush; that it would install a car dumping machine for unloading by air shovels; that a second carrier would be built for delivering grain into ocean steamships; that the car dumping machine and additional loading facilities would be in operation at the reopening of navigation last spring and that the additional storage capacity was expected to be ready a month or two thereafter, and in plenty of time for handling this year's grain crop. We were advised Sept. 15 that nothing had been done in regard to the additions, with the exception of the installation of a car dumping plant.

British Columbia Pilotage Association Ltd. has been incorporated under the Dominion Companies Act, with \$25,000 authorized capital and office at Vancouver, B.C., to carry on a pilotage service in B.C. coastal waters and to own and operate ships of all kinds; to fix charges for pilotage and to amend same from time to time; to make enquiries into applications for appointments of pilots in the company, as may appear necessary; and to maintain a competent body of pilots; to appoint examiners and prescribe examinations for all applicants for positions as pilots, and to grant certificates of qualification. The incorporators are:—R. A. Batchelor, G. W. Roberts, T. S. Guns, pilots, Vancouver, B.C.; I. Harris, and W. D. Owen, pilots, Victoria.

Welland Canal Lock Gate Accident.—The steam tug Russell, harbor contractor, in Toronto, while proceeding up the Welland Canal, Sept. 11, struck and carried out the two upper gates of lock 15. The ship had a line out, and was apparently stopped in the lock chamber, when a speed ahead order was given her. As she went, stern first, out of the lock, she carried out the two lower gates, which had been partially closed. The water released from the reach above partially washed out the rear slopes of the banks at the upper end of lock 14. Four spare gates were placed in position and navigation was resumed early the following morning, a few ships have been delayed about 17 hours. The estimated cost of erecting repairs is \$12,000. The tug received only minor injuries.

Great Lakes Seamen Threaten Strike.—Detroit, Mich., Sept. 18.—(Press dispatch).—Sailors on the Great Lakes will go on strike, Oct. 8, unless their demands for an 8-hour day and the institution of the three watch system are acceded to by the Lake Carriers' Association. Announcement to this effect was made here tonight by W. Donnelly, business manager of the Detroit local, who received official notice of pending walkout from K. N. Nolan, Chicago, of Great Lakes Sailors' Union. The official notice says: "On Oct. 1, all seamen, watchmen, boatswains, able seamen and ordinary watchmen on vessels of the Lake Carriers' Association, will demand the three-watch system, an 8-hour day, and will refuse to sail on any association vessel which does not establish the new watch system for the deck crew." It is estimated the strike notice will apply to 10,000 sailors.

Eastern Stevedores Ltd., a Dominion incorporated company, has had its name changed to Blair, Eaton, Blair, Limited.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Grounding of s.s. John B. Ketchum 2nd.

Held at Montreal, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. C. Lapierre and T. R. Coffin, as nautical assessors, into the cause of the George Hall Coal Co's s.s. John B. Ketchum 2nd, touching ground, or grounding momentarily, in the Saguenay River, Que., July 1, causing damage to the ship. The evidence showed that the pilot, G. E. Koenig, on joining the ship at Quebec, did not appear to be in a social frame of mind, the master, Capt. B. A. Sullivan, stating that his replies to questions throughout the trip were curt, and though he had been informed of the time that the ship would be ready, he did not arrive on board until an hour later, and gave no reason for the delay. It was stated that the ship steered well ordinarily, but the master took the wheel and steered until the grounding, after which it was given over to the wheelman. Throughout the trip, there appeared to have reigned an atmosphere of ill feeling between the pilot, master and officer. Prior to the mishap there were four men on board, the master, the pilot, the wheelman, the pilot, first officer, and wheelman. At a certain stage, the pilot ordered the officer to shut up, the reason given for the rather rude order was that the conversation interfered with the giving of orders. When the officer made a remark about the close proximity to a buoy, which the officer stated was struck by the propeller, the pilot replied with an epithet which is unprintable. Then the striking of the ship occurred, which the pilot claimed was due to the master's dilatoriness in performing the orders given. On the other hand, the master stated that the orders were so numerous that it was with difficulty that they could be complied with, but, however, they were executed as given. The pilot expressed the opinion that the bad temper exhibited by the pilot affected his judgment and his perception of objects. Why was the master at the wheel instead of the wheelman, who apparently was qualified? The master explained that he generally steered the ship in narrow waters, a practice which the court did not condone, but admitted that he was at liberty to adopt that procedure. The court found that the pilot, G. E. Koenig, was to blame for the grounding, and fined him \$100, to be paid by Sept. 15. As to his misconduct in arriving later than advised, and using vile epithets, unworthy of any man, especially a pilot, to an officer of a ship, the court left the matter in the hands of the Deputy Minister of Marine, to deal with as he may deem fit.

Indochine-Sarmatia Collision.

Held at Montreal, Aug. 22 and 23, and continued at Lauzon, and Quebec, Que., Aug. 24, into the collision and subsequent grounding of the s.s. Indochine, owned by the French Indochina Government, and the s.s. Sarmatia, owned by Peter Bow, Copenhagen, Denmark, in the St. Lawrence River, near buoy 596, opposite Three Rivers, Aug. 11. The evidence of those on the Indochine, as to the cause of collision, hinged on the smoke or fumes from the pulp works at Three Rivers, which spread over the harbor, hiding objects from view, and preventing those on duty from seeing the Sarmatia's lights, except at a very short distance. There

was a striking difference of opinion as to the density of the vapor, and the distance at which objects were visible, the pilot stating that the Sarmatia's mast-head light was visible at a distance of 1,500 ft., others stating that the vapor was very dense. The evidence from the Sarmatia, on this point was that the Indochine's lights were seen at about a mile, which was confirmed by independent witnesses, such as the s.s. Quebec's master and pilot and the pilot of the s.s. Cabotia, the ship astern, the close proximity of which, it is said, prevented the Indochine from coming astern after the collision. The question arose, if the chemical fumes were obscuring objects to the extent said by some of the witnesses of the Indochine, why were the engines at full speed, which, under such conditions, was a violation of articles 16 and 29. The preponderance of evidence as to the range of visibility apparently justified the full speed. Why were not the Sarmatia's lights seen at a greater distance if a good lookout was kept? When the Sarmatia appeared, noting the position of both ships, it was the Indochine's duty to remain on her own side of the channel. If, as stated, she was under the impulse of a starboard helm and swinging to port, it was the pilot's duty to immediately order full speed astern and helm aport. The pilot knew well that at the position he saw the Sarmatia's lights, and he being about 350 ft. from the wharves, the former would not attempt to pass between him and the land, and he was consequently, in duty bound, to swing to starboard in order to take the center line of the channel, or its southern boundaries. There was no justification whatever for sounding a 2-blast signal; a 3-blast signal was obligatory, for two reasons,—first it was the Indochine's duty to maintain her own side of the channel, and second, if the Sarmatia had not begun to turn when her lights were seen, she was reasonably expected to do so, and there is a constant current running east, whose velocity is retarded or accelerated according to the state of the tide, which is well known to all pilots. On such occasions the duty of the ascending ship is also well known to all navigators. Therefore, regulation 14, which must be read in its general sense, and articles 23 and 25, were violated. When two blasts were given, it was in direct violation of article 28, as it signified a course absolutely unauthorized under the circumstances. Another violation of article 28 was, when the Sarmatia, on the sound of the Indochine omitted to sound a 2-blast signal. While this contravention did not contribute to the collision, it indirectly affected the subsequent grounding. In view of the foregoing, it follows that article 29 was also disregarded. The examination of the exhibits as to the position of each ship at the moment of contact, which was obligatory on the part of the Sarmatia, indicated that the helm of one of the ships was not operated as given in evidence. If the Indochine's helm was hard to starboard, and the Sarmatia's helm hard to port, the angle of impact would have been obliquely toward the Sarmatia's stern. This was referred to to show that the evidence and the exhibits did not stand favorably in comparison. The master's evidence was unimportant, as he only came on the bridge when the impact took place. The placing of a lookout on the bridge is, it is said, a custom on French ships, upon which, the court

refrained from commenting. It was stated by a witness, that the pilot, first officer and lookoutman, were together on the starboard side of the bridge, and the court surmised that their attention was drawn to the magnificent display of lights around the pulp works, and they failed to see the Sarmatia's lights, until a slight starboard helm was given.

The evidence from the Sarmatia showed that she was moving at slow speed, and gradually rounding the buoy on the port helm. The Indochine's red light was seen on her port bow, at 250 ft. below the buoy, and everything was clear. When about 1,000 ft. below the buoy, two separate one blast signals were given, and a hard to port helm, and in blowing the first one blast, it was noticed that the Indochine also sounded a signal. The court was impressed with the straightforward way in which the pilot and first officer gave their evidence, and only found one flaw in their actions, which was the failure to sound a 3 blast signal when the order full speed astern was sent to the engines, but this did not contribute to the collision, nor would its sounding have evaded it. As the Sarmatia had been going astern by her machinery for only 20 seconds, she had no time to gather sternway, hence the contention that if both ships had been under the helm stated, the impact could not possibly have happened in the manner indicated by the exhibits. The trend of the whole of the Sarmatia's evidence was such that any criticism could be launched against her for the collision. Her subsequent grounding was unavoidable under the circumstances. The court therefore found that the s.s. Indochine was solely to blame for the collision, and that the pilot, J. B. Angers, was in default, and suspended his certificate for six months of navigation, from Aug. 24, 1922, to July 24, 1923. As he had in a recent instance shown lack of order and discipline, and had various mishaps within the last three years, he was warned that should he again appear before the court, and be found in default, the question of revoking his license would be considered seriously. The court stated that it will not permit the good reputation of the pilots as a whole, to be besmirched by the actions of one of its members, nor will it countenance any actions on the part of pilots and navigators generally to damage the good repute of Canadian waters, or place the shipping in position to incur serious damages and endanger lives. With respect to the Indochine's master, the court refrained from criticizing the custom of the country in which the ship is registered, in regard to the placing of the lookout, but wondered, if the visibility of objects was obscured to the extent stated, why the master was not on the bridge. For the subsequent grounding of the ship, the master was exonerated, as the pilot was the one to direct or suggest, but it was his duty as commandant of the ship, to prevent the withdrawal from the water, thus putting off from the Sarmatia's crew the only means of escape for the moment. Further, when going astern, no signals were given which would have served as a warning to the s.s. Cabotia, and have permitted the Indochine to evolve to a place of safety instead of running into danger and grounding. While the direct cause of the collision and subsequent grounding was not attributable to the chemical fumes, the court expressed the opinion that they constituted a nuisance

and a serious obstacle to safe navigation on account of the two converging courses which ships have to follow in passing up or down Three Rivers harbor, the width of safe navigable water being but 1,500 ft., and the varying velocity of current, besides the occasional fogs or natural vapor at certain times for which no remedy can be suggested. There are so many navigational and natural difficulties which the mariner has to encounter, that any artificial embarrassment or obstacle to navigation, for which the court contends a remedy of elimination can be applied, should not be tolerated. The court therefore suggested that engineers and chemists combine to find means for an immediate cessation of this menace to navigation. The s.s. Sarmatia was found not at fault, and the pilot, D. Paquette, was exonerated from blame.

Loss of Schooner Rose M.

Held at St. John's, Nfld., Aug. 31, into the loss of the Newfoundland schooner Rose M. at Petterars, Fayal Island, Azores, Jan. 15, before F. J. Morris, Commissioner, assisted by E. J. English and C. S. Marshall, as nautical assessors. The ship, which was 169 tons gross, 147 tons net, was built by Norris Arm & Ship building Co., Norris Arm, Nfld., in 1915, and was fully equipped and manned. After leaving Fogo, Nfld., ordinary winter weather and heavy winds were met, during which the ship was strained considerably, and as she began to leak, a portion of the cargo had to be jettisoned. This, with the loss of the ship's fresh water, and damage to sails, compelled the master to make for the nearest port, Fayal Island, Azores. He passed the semaphore station at the western end of the island, Jan. 13, and kept his ship tacking back and forth inside a radius of 10 miles from the semaphore station and Horta breakwater, until she struck on Jan. 15. Though the court appreciated the difficulty of entering Horta breakwater, owing to the ship's waterlogged condition, and the baffling winds, it was clear from the evidence that no serious effort was made to reduce the water in the ship's hold below 4 ft. In neglecting to display distress signals, the captain was negligent, and he did not use the ordinary means at his disposal to get assistance. The evidence showed that he must have observed the ship drawing nearer to land on each tack, and he should have let go the anchor, with all his chain, in much less time than 15 or 20 minutes. He was again at fault in not sounding to get the depth of water, and finding if the ship was dragging, all of which showed great lack of seamanship. The ship was about 400 ft. from the breakers when the anchors were let go, and before she was brought up, she was on the rocks, and nothing could be done to save her. The court expressed the opinion that in abandoning the voyage, and bearing up for Fayal Island, the captain had acted in the best interest of all concerned, as he could not have continued the voyage to Gibraltar under the conditions existing. He held no certificate, either of competency or service.

Navigation Aids by Radiotelegraph.—A list of radiotelegraph stations distributing messages as aids to navigation, given in Canadian Railway and Marine World for September, contained the station at Barrington Passage, N.S., which, it was then stated, was to be closed shortly. We have since been officially advised that it was closed Aug. 11, and the transmission of weather and ice reports from there ceased on that date.

Longshoremen's Wages at Montreal.

An agreement between the shipping companies and the longshoremen at Montreal, was signed Sept. 7, providing for a general decrease of 10c an hour from rates in force last year. The new rate is 50c an hour for day work, and 60c for night work, with double time for Sunday work, and higher rates for handling certain commodities. The agreement provides that each of the men shall sign a personal contract with the company engaging him, when commencing work each season, whereby he will undertake to work in accordance with the existing agreement until the close of navigation in 1923, the companies agreeing to give work to the men signing such personal contracts, when they are available, in preference to men who have not so signed, and the union contracts to supply from the men under its jurisdiction, a sufficient number to perform the work required during the term of the agreement. Mails and baggage shall be handled on Sundays, holidays and week days, at prevailing rates of wages, pay to commence at the time for which the men are ordered. The rate for handling nitrate and bulk sulphur is 65c an hour for day work, and 75c for night work, and the same rate applies to grain trimming and bagging. Coal handling on general cargo ships will be paid 55c an hour for day work and 65c for night work.

Canadian Pacific Railway Ocean Steamship Services.

A few days after the arrival of the s.s. Montclare at Montreal, recently, on her maiden trip, the company entertained about 150 members of the Montreal Publicity Association, on board.

The s.s. Scotian, which was chartered by the British Government, to convey troops between India and England is reported to have again been chartered, for a similar purpose, and is being refitted in England.

The s.s. Grampian which was burnt, and which afterwards sank in the harbor at Antwerp, Belgium, about a year ago, will, it is stated, probably be raised and rebuilt by the underwriters, when the time is considered opportune. The hull is said to be in good condition. The Grampian saw considerable war service, chiefly in transporting British crews to the mouth of the Euphrates River, Mesopotamia, where they were transferred to shallow draft boats for transport into the interior.

Capt. R. G. Latta, master of the s.s. Montclare, commenced his sea service on the sailing ship Arden Craig, sailing between South Shields, England, and San Francisco, Cal. He later entered the service of James Gardiner and Co., shipers, Glasgow, Scotland, and sailed to ports in all parts of the world. He entered C.P.R. steamship service in 1905, and served on the steamships, Montclair, Montreal, Mount Royal, Lake Erie, Montrose, Missanabie, Milwaukee and Metegama. His first command was on the s.s. Monmouth, from Liverpool to Archangel, and he holds the record for having taken C. P. R. ships farthest north and farthest south. He was later transferred to the steamships Scotian, Grampian, Sicilian, and Scandinavian, and after shore duty at Antwerp, Belgium, he took charge of the s.s. Minnedosa, and was later placed in charge of the C.P.R.

steamship service between Southampton, Eng., and Hamburg, Germany.

The s.s. Montclare, which arrived at Montreal on her maiden trip recently, while on her trials before sailing from England, made 17.8 knots an hour, and maintained an average speed in an endurance trial, of 17.3 knots. Oil fuel is used, as in the other ships of the same type, and on the Empresses. Apart from the relative cost of coal and oil as fuel, there is a material reduction in labor cost, with economy of bunker space, better accommodation for the crew, and shortening of time in port, all factors which have an important bearing on traffic costs, especially with passenger ships. After the s.s. Empress of Britain was converted into an oil burner last year, there was an elimination of labor in the handling of 30 tons of ashes a day. With the use of oil fuel there is also an increase in boiler efficiency of 7%, and owing to the higher calorific value of oil, the evaporation is considerably increased, so that the weight of oil for equivalent evaporation is about 2 to 3.

Furness, Withy & Co's report for the year ended April 30, presented at the annual meeting of shareholders, recently, shows that the profits, after providing for taxation, and including balance brought forward, were \$258,554 19s. 4d., which was appropriated as follows: 5% dividend on preference shares, \$52,500; 5% dividend on ordinary shares, \$200,000; 5% bonus on ordinary shares, \$200,000; transferred to general reserve, \$200,000; balance carried forward to current year's accounts, \$206,054 19s. 4d. The year was one of serious depression in the shipping industry, and only a small portion of the profits were derived from earnings of steamships, the main portion being from other branches of the company's business, and from investments. The total reserve account stands at \$2,000,000.

Transportation Conventions in 1922.

Oct. 2 to 6.—American Electric Railway Association, Chicago, Ill.; J. W. Welsh, 3 West 40th St., New York.

Oct. 10, 11.—American Association of Passenger Traffic Officers, Louisville, Ky.; W. C. Hope, General Rd. of New Jersey, 148 Liberty St., New York.

Oct. 17 to 19.—American Railway Bridge and Building Association, Cincinnati, Ohio; A. L. Lichte, 219 North Waller Ave., Chicago, Ill.

Oct. 17 to 20.—American Association of Dining Car Superintendents, San Francisco, Cal.; L. A. Stone, Chicago and Eastern Illinois Ry., Chicago, Ill.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

American Association of Port Authorities—Canadian Council, W. D. Lighthall, K.C., Montreal.

Canadian Car Demurrage Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—D. N. Gill, Comptroller, Ottawa Electric Ry., Ottawa, Ont.

Canadian Freight Association (Eastern Lines)—G. C. Ransom, Chairman, 909 Shaughnessy Bldg., Montreal.

Canadian Freight Association (Western Lines)—F. W. Thompson, acting Chairman, 305 Boyd Block, Winnipeg.

Canadian Passenger Association—Eastern Lines, G. H. Webster, 54 Beaver Hall Hill, Montreal; Western Lines, E. J. Stone, 306 Union Station, Winnipeg.

Canadian Railway Board of Adjustment No. 1—R. Chapple, 268 St. James Street, Montreal.

Canadian Railway Club—J. H. Booth, 63 Rushbrooke St., Montreal. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Canadian Railway and Marine World

November, 1922

The Pacific Great Eastern Railway's Position and Prospects.

The Pacific Great Eastern Ry. was promoted to give a connection between the Grand Trunk Pacific Ry. at Prince George, B.C. and the city of Vancouver. The British Columbia Legislature guaranteed the company's bonds and during the construction period was forced to take over the line owing to the original guarantees having been exhausted. The government then gave a contract to the Northern Construction Co. for the completion of the line to Fort George but as the cost of construction continued to mount up in excess of estimates, and the deficits in operation to increase, the question was raised as to whether it was wise to continue. With a view of arriving at a conclusion on this matter the Government was authorized at the Legislature's session to obtain reports on the railway as laid out, its operation, and the prospects of the country through which it passed. Acting on the advice of Lord Shaughnessy, and D. B. Hanna, the British Columbia Premier invited J. G. Sullivan, Consulting Engineer, Winnipeg, and formerly Chief Engineer, C.P.R., to report on the physical condition of the line; W. P. Hutton, formerly Vice President and General Manager Grand Trunk Pacific Ry., to report on operating matters and Col. J. S. Dennis, Chief Commissioner of Colonization and Development, C.P.R., to report as to the possibilities of development of the territory through which the line passes. Their reports have now been issued by the government.

J. G. Sullivan's Report says it is evident that the principal object in building the line was to make a rail connection between Vancouver and the Grand Trunk Pacific Ry. The route chosen was to start from North Vancouver, where practically no terminal facilities were provided, follow the seashore for 42 miles to Squamish, at the head of Howe Sound, and then strike northeasterly. After describing the route followed, and suggesting that it might have been better to go through the old town of Lillooet, instead of building a long bridge to a new townsite, and that the best route at Quesnel was 1, 3 or 4 miles back from the Fraser River, which had never been considered by the original locating engineers or by the Government engineers on the relocation of this section, Mr. Sullivan says: "The locating engineers of this line are to be complimented in their successful locating of a line to fit the contour of the country. I have never been over a line the length of the P.G.E.Ry. where one could find so few points of detail in location to criticize. The curves of 2 degrees and over, are all spiralled and the line so located as to make excavation balance embankments, all of this tending to economic construction if it were not for the country's adverse physical features." These, he stated were all adverse to the economic construction of the line, and tended to make the cost of maintenance almost prohibitive.

The line is built from North Vancouver to Whytecliff, 2.7 miles and the

cost of the 42 miles thence to Squamish, is estimated at from \$3,500,000 to \$4,000,000. The line is built and in operation from Squamish to Quesnel, 350 miles; grading is completed to Prince George, approximately 80 miles, and track is laid thereon from Quesnel to Cottonwood River, 17.5 miles, and from Prince George to Red Rock Creek, 18 miles, leaving about 45 miles to be completed. The timber for the trestle work, and the rails and fastenings for this mileage are on the ground, and the steel for the superstructure of the Cottonwood River viaduct has been fabricated, but nothing has been done in putting in the foundations. The cost of completing the gap and putting it a state for operation, is estimated at from \$500,000 to \$600,000. The line is built in accordance with good branch line construction, with 70 lb. rails on gradients of 2 and 2.2 degrees, and 60 lb. rails at other places, and very liberally supplied with a good type of the plate on curves. There are on the line 27 wooden bridges having a total length of 3,180 ft., in addition to 27,000,000 ft. b.m., wooden trestles and culverts, without taking into account the 8,400,000 ft. b.m. to go in to complete the Quesnel-Prince George gap. The timber structures, while standard for new construction in a lumber country, can only be maintained at a very heavy cost. The replacement of them with permanent ones of concrete and steel in places with fixed embankments would require at least \$5,000,000 of new capital expenditure. The track has been laid with too much expansion, and this is more apparent on the portion of the track laid since the B.C. Government took over the line. If the line is completed between Quesnel and Prince George extra equipment to the value of \$1,500,000 would be required. The total amount of new capital required to complete the line between North Vancouver and Prince George would be approximately \$6,000,000.

The total par value of the debt is \$44,226,403.12, of which \$5,925,125 is held by the company, leaving outstanding \$38,301,208.12, the interest charges for 1921 on which were \$1,911,913.14. The investment as shown in the company's books at Dec. 31, 1921, was \$18,438,590.23, of which \$10,543,530.79 had been paid out in interest and deficit on operation during construction. If the line is completed from North Vancouver to Prince George, \$14,000,000 will have to be added, and if the line is completed from Quesnel to Prince George only, \$10,000,000 will have to be added, to the total investment, bringing the total interest charges to be borne up to \$2,611,913.14, and \$2,411,913.14 respectively. If no more construction be undertaken and the Quesnel-Prince George line be abandoned the total new capital required, allowance being made for salvage, would be \$2,250,000, bringing the total investment up to \$44,688,950, and the interest charges to \$2,224,413.14 for 360 miles of railway. It is therefore evident that whatever action is taken the owners are

faced with an ultimate minimum charge of \$5,500 a mile of railway.

During the year ended Dec. 31, 1921, the railway carried 15,290 passengers and 53,351 tons of freight, and earned from all sources \$484,326.88. The total gross corporate expenses were \$2,689,205.11, showing a net corporate loss, of which \$292,965.12 represented the operating loss and \$1,911,913.14 the interest charges. After discussing rates and tonnage, and necessity of the production of ton mileage, Mr. Sullivan points out that the residents in the district served by the railway are not suffering from unreasonable freight rates, but from unfavorable location. The P.G.E. Ry. must depend almost entirely on business developed upon its own line, for revenue, as no business of any moment can be expected from the Canadian National Ry.s, which have a shorter line into Vancouver, and one cheaper to operate. After looking into the possibilities of increasing the traffic through development, Mr. Sullivan reaches the conclusion, "That as a local line between Vancouver or Squamish and Prince George the country will not produce enough traffic at any reasonable rate to pay operating expenses plus fixed charges."

In his letter of instructions to Mr. Sullivan, the Premier asked for an opinion on several distinct questions concerning the government's action upon the construction of the line. In regard to these, Mr. Sullivan finds that the Government was justified in making the revision at the crossing of the Cottonwood River, which effected a saving of 5 miles in distance, of 1,103 degrees in curvature and 137 ft. of rise against traffic in both directions, estimated to effect an annual saving in operation of \$31,777, as against the original line. The revision of the line at the crossing of the Quesnel River, which shortened the distance by one mile and saved 318 degrees of curvature, but added 67 ft. of rise against traffic in both directions, Mr. Sullivan considered as not justified. The saving effected in operation of the revised line into Quesnel would have justified a capital expenditure of \$109,215 on a revision, whereas the revision actually cost \$861,028.12. Regarding the question whether the construction work had been done economically after the Government took charge, Mr. Sullivan says, "If there is any criticism to make on the Government management's action, it would be for proceeding with the work when construction costs were from 50 to 100% higher than normal, and when the rates paid for money were at least 25% higher than normal, and at a time when practically all new industrial expansion was at a standstill." During the construction period there was a change in the terms of the contract, under which it was alleged that the contractors were paid \$700,000 more than they would have received had the original contract been adhered to. This allegation, Mr. Sullivan finds, is not in accordance with facts.

Mr. Sullivan discusses the proposals to

extend the line from Prince George, and shows that the traffic at present moving in the Peace River country will not justify the construction of a line either via Parsnip River and Pine River, or to Grande Prairie. Regarding the Quesset-Prince George section he points out that entrance into Prince George would have to be made over the Grand Trunk Pacific Ry. bridge, and that the territory through which the line would pass is undeveloped, and he expresses the opinion, the completion of the extension would impose a further burden on the railway and the province. He therefore recommends that the extension be abandoned and the track laid be salvaged. With regard to the proposal to extend the line from Clinton to Ashcroft there are, he says, "three principal objections. (1) The cost of building 46 miles of new line; (2) the necessity of making a diversion of revenues with another line; (3) making another head in the railway, which would increase the cost of operation. While there is no doubt that the proposed line would be far superior to the line built to handle business to Clinton and points north, the present development of the country will not warrant the construction of this line."

As to the possibility of leasing the line to any other railway, he points out that the line was originally projected to give the Grand Trunk Pacific Ry. an outlet to Vancouver, but with the amalgamation of the Canadian Northern Ry. and the G.T.P.Ry., it would now be of no value to that line, and possessed no strategic advantages which would make it attractive to any new line, except that if the craze for building railroads should ever demand a railway to Alaska it might become a link in it.

Mr. Sullivan concludes his report with seven recommendations, viz.:—(1) The building of the line from North Vancouver to Squamish cannot be justified on any grounds, therefore there should be some arrangement with the municipalities which grant concessions for its construction, and dispose of the line to Whytecliff. (2) Under present conditions no construction work of the Grand Trunk Pacific Ry. should be undertaken. (3) The line from Quesset to Prince George should be abandoned. (4) Abandon the operation of steam trains in the rest of the line, and operate it by gaso-line driven motor cars, selling some of the locomotives to provide these cars. Operate freight trains as business express. Close down portions of the line during the winter. Raise both passenger and freight rates to all that the traffic will bear. Encourage the development of the country. Abandon the operation of the line between Dragon Lake and Quesset, unless the municipalities inside of that point will pay maintenance costs in excess of \$1,250 a mile. If these suggestions are carried out the line should do better than pay operating expenses until such time as heavy renewals or replacements are required. 5. The engineers to keep in mind the possibility of abandoning the line south of Clinton, either by salvaging or selling it to the lumbering interests, with a view to the construction of the line from Clinton to Ashcroft if development warrants. 6. The province should not guarantee any more bonds for the construction of branch railways. 7. If the province is not prepared to continue paying \$2,000,000 to \$2,500,000 a year in interest and deficits the entire project should be abandoned and whatever salvage is possible should be recovered.

W. P. Hinton's report, first of all, deals with the present operating organization, which he finds both in numbers and remuneration sufficient for the bare operation of the various departments, but with additional clerical assistance sufficient to handle a much larger amount of business. He recommends that the North Vancouver-Whytecliff line be reduced to the status of a tramway and operated with motor cars, to reduce expenditure. There is no possibility of obtaining any net revenue from the operation of the line from Squamish to Clinton, to the abandonment of which consideration should be given when the Prince George connection is completed. If the Squamish-Clinton line is abandoned, the salvage could be used in the construction of the suggested line from Clinton to Ashcroft. In this way, the line would be preserved where there are traffic possibilities, and operating costs would be normal. It would connect the line most effectively with the outside to afford markets on a favorable basis with other competitors, so that colonization and the development of industries would be possible, and, furthermore, be the means possibly of making the property more attractive to other railway lines to lease and operate under suitable conditions, thereby relieving the province to a very marked extent of the obligation which is bearing and must increasingly become intolerably burdensome. There can be no hope of effecting arrangements to relieve the province under present conditions and prospects, but if the connections are effected at Prince George and Ashcroft, the province only retaining the line, if any, north of Squamish, until it, too, can be entirely abandoned, then it should not be difficult to conclude arrangements that would meet with the general approval of the public as constituting a welcome relief from the present burden.

Col. J. S. Dennis concludes his report as follows. "From a careful and detailed inspection of the natural resources tributary to the P.G.E.Ry., and a careful study of the available reports relative thereto, I am forced to the conclusion that, while there is the possibility of materially extending the present development of the agricultural, lumber and mineral resources, through the medium of government assistance, there is no prospect that traffic can be created as a result of such development, at least, for many years, and, hence, sufficient to provide for the heavy fixed charges resulting from the construction, maintenance and operation of this railway line." He suggests the creation of a colonization and development department of the railway's service, to study the area, and advise the government as to a development policy.

The Bad Order Car Situation.

The Railway Association of Canada reports the total number of freight cars on Canadian lines for the period ended Oct. 1, as 196,267. The allowance for bad order cars on the A.R.A. basis, which assumes a total of 7% of the cars in bad order, was 13,739, and the actual number in bad order was 13,797, an excess of but 58 cars on the 7% basis. The figure 13,797 represents 7.03% of the cars in bad order. The car surplus which has existed throughout the year to date has been replaced by a car shortage, the shortage as of Oct. 1 being 7,667 cars.

The American Railway Association's Car Service Division reports that the total number of freight cars on line on Oct. 1 roads in the U.S. on Sept. 15, was 2,269,060. Of these, 304,548, or 13.4%,

were in bad order, compared with 14.1% on Sept. 1. Out of 1,046,439 box cars, 137,084, or 13.1%, were in bad order; out of 56,764 refrigerators, 7,418, or 13%, were in bad order; out of 948,427 gondolas, 134,714, or 14.2%, were in bad order; out of 81,858 stock cars, 8,827, or 10%, were in bad order, and out of 93,551 flat cars, 12,400, or 13.2%, were in bad order.

From the above figures showing the condition of Canadian cars, it is evident that Canadian railways have their equipment maintained well up to the 7% margin, which represents about the best possible condition which can be secured. There is, however, large room for improvement in the condition of the U. S. lines' equipment, and it is evident that if the percentage of bad order cars could be reduced from 13.4, where it stood on Sept. 15, to 7%, a large number of cars could be released to help to meet the car shortage which has developed and which threatens to become worse. Altogether apart from the shopmen's strike, the abnormal bad order car situation in the U.S. is a heritage from the period of Federal control, and the period following it, in which the majority of the U.S. lines had earnings which were very seriously restricted, when maintenance was necessarily cut to a minimum. It was an unfortunate thing that, incidentally with an improvement in earnings, and a consequent increase in the roads' ability to expend sums for equipment maintenance, the shopmen's strike developed, for it prevented a speedy catching up with the deferred maintenance work. The American Railway Association's Car Service Division, in receipt of numerous communications, is giving attention to the enormous wastes that are taking place on account of car shortage, and it is to be hoped that good progress will in future be made on the U.S. roads in getting their freight equipment into shape. The condition of the U.S. freight equipment cannot fail to be reflected in the transportation situation in Canada, for the railway industry in this country has been woven in every way with that in the U.S., and a car shortage in the U.S. is immediately felt in Canada. If the U.S. railways were supplied with 159,090 more cars, which is the number they would have if the number of cars in bad order were reduced from 13.4% of the total to 7%, there is no doubt that the Canadian car shortage would also be reduced.

Newsprint Paper Rates from Canada to Nashville.—The U.S. Interstate Commerce Commission, on June 13, suspended Maine Central Rd. tariffs I.C.C. C-3681 and C-3682 providing for the carriage of newspaper paper originating in Canada, to U.S. points, including Nashville, Tenn. On Sept. 15, it appearing that a hearing could not be completed before Oct. 13, the Commission passed a further order, suspending the operation of the schedules contained in the above tariffs until Nov. 1, or until permission has been given by the Commission to place them in effect.

Transportation of Mails by Steam Railways.—While the order in council of Sept. 13, as published in full in Canadian Railway and Marine World for October, providing rates of pay and regulations for transportation of mails by steam railways does not contain any provision, it is probable that it will only be in effect for a year, viz., until May 31, 1923, and that before that time the railways will be called upon to give information, etc., as to the then costs of service, whether or not there is any decrease or increase, and that the rates to be paid thereafter will be based thereon.

All Steel Combination Mail and Baggage Cars, Canadian Pacific Railway.

Canadian Railway and Marine World for April gave some details of 15 combination mail and baggage cars built recently for the C.P.R., and an illustration of one of them was given. A floor plan of one of them is given herewith. Their chief dimensions are as follows:

Length over buffers.....	32 ft. 10 1/2 in.
Length over posts.....	29 ft. 1 in.
Distance between truck centers.....	57 ft. 6 in.
Inside length, mail compartments.....	60 ft. 3 in.
Inside length, baggage compartment.....	18 ft. 11 in.
Truck wheel base.....	11 ft.
Width outside over eaves.....	10 ft. 3/4 in.
Width between posts.....	9 ft. 1 in.
Width inside.....	9 ft. 3/4 in.
Height, top of rail to top of roof.....	14 ft. 1 1/2 in.
Height, top of rail to top of floor.....	4 ft. 5 3/16 in.
Weight, empty.....	160,600 lb.

The car underframe is built up of fish belly center sills, with 5/16 in. web plates, 9/16 in. cover plate and top and bottom reinforcing angles. The body bolsters are built up with 5/16 in. diaphragms, 1/4 in. top, and 11/16 in. bottom cover plates and reinforcing angles, and the side sills are 5 in. Z bars. The cars are of all steel construction, including the roof, 3-ply salamander insulation being used.

The truck frames, cross bolsters and center bolsters are of the cast steel Commonwealth type, and the wheels, 36 1/4 in. diam., have cast steel centers and Latrobe steel tires. The trucks are equipped with A.R.A. axles, with 5 1/2 x 10 in. journals, and McQuay journal boxes with steel inserts, and the cars are equipped with the Coleman truck locking device. The elliptical springs have 6 leaves and 40 in. centers, and the triple coil springs are of 1 1/16 in., 1 1/4 in. and 1 1/16 in. material.

Air brake equipment is Westinghouse schedule L.N. 1812, simplified for brake beam and Diamond S brake shoes are used, and geared type hand brakes are part of the brake equipment. The cars are fitted with Westinghouse schedule K air signal equipment, and American automatic slack adjusters, form K 1.

The draft gear is the Miner friction type, class A 5 P, passenger couplers with A.R.A. standard type D head are used, and Miner friction class B 10 buffers. The heating is the Vapor Car Heating Co's vapor system, and the lighting is the Safety Car Heating and Lighting Co's Pintsch gas system. Other specialties used in the cars' equipment include Holco improved type centering device, Acme diaphragms, Pyrene fire extinguishers, Rich pouch racks, Stucki side bearings, Gosso bunks, and utility exhaust honeycomb type ventilators.

The cars were built by Canadian Car and Foundry Co., Montreal. The couplers, truck center bolsters, truck cross bolsters and truck frames were made by the Canadian Steel Foundries.

The Hanna No Politics Order.

The Ontario Associated Boards of Trade and Chambers of Commerce, which met at Owen Sound recently, passed a resolution endorsing the position taken by D. B. Hanna, President, Canadian National Rys., that employees be not eligible for election to political offices, or take any part in the election of members for the Dominion Parliament or provincial legislatures.

Canadian National Rys. carmen, at their biennial meeting in Montreal recently, passed a resolution asking for the rescinding of Mr. Hanna's order.

Car Conversion Work, Canadian National Railways.

The Canadian National Rys. are converting, at the Moncton, N.B., shops, 200 flat cars into gondolas, for coal transportation, by boxing in the platforms with wooden sides and ends. They are to be used in handling coal from mines in the Maritime Provinces. The work was begun Oct. 1, about 7 cars a day being turned out, and it was expected that the 200 would be completed by the end of October.

The C.N.R. are also converting 4 baggage cars into mail cars at Moncton shops, and are fitting them with all modern conveniences for handling mail. Two of these cars were completed Oct. 4, and it is expected the other two will be completed before Dec. 31. In addition, 9 mail cars are being equipped with steel underframes, and having their interiors remodelled to conform to the latest specifications approved by the Board of Railway Commissioners and the Post Office Department. Four of them will be converted at the Moncton shops and the other five at Transcona, Man. The work is expected to be completed before Dec. 31.

Freight Car Location on Canadian Railways.

The Railway Association of Canada has issued a report on the location of freight cars on Oct. 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Central Vermont, in Canada; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Michigan Central, in Canada; Niparierville Jct.; Pere Marquette, in Canada; Quebec Central; Quebec, Montreal & Southern; Timiskaming and Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo; Wabash, in Canada, as follows: Cars owned by reporting railways, 221,918; home cars on Canadian foreign lines, 18,071; home cars on U.S. lines, 49,271; home cars on home roads, 154,576; Canadian owned foreign cars on home lines, 16,465; U.S. owned foreign cars on home lines, 25,226; total cars on lines, 196,267; per cent. on lines to total owned, 88.4; deficiency on line to total owned, 25,651; home cars in bad order, 13,427; foreign cars in bad order, 372; total cars in bad order, 13,797; per cent. in bad order, 7; privately owned U.S. cars on lines, 2,032; privately owned Canadian cars on lines, 1,343.

The situation as concerns the number of Canadian cars on U.S. lines, and the number of U.S. cars on Canadian lines is dealt with on another page of this issue.

L. B. Howland, formerly General Manager, Ironclad, Bancroft & Ottawa Ry., Ironclad, Ont., subsequently of Toronto, and latterly living at Pasadena, California, in remitting his renewal subscription from the latter place, writes: "I always appreciate receiving Canadian Railway and Marine World, as it is an excellent medium in keeping me posted of the activities of many of my old railways pals, and reading its columns brings back many pleasant recollections."

E. G. Evans, Division Engineer, Canadian National Rys., Moncton, N.B., in remitting his renewal subscription to Canadian Railway and Marine World, speaks of it as a valuable publication, as still progressing, and as very useful for reference.

Steam Railway Operating Revenues, Expenses and Other Statistics for July.

The following comparative table for July, 1922 and 1921, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There is a slight increase in the number of roads included under this heading, so that the data for 1922 and 1921 is not directly comparable with previous reports.

As the Canadian Government, Canadian Northern and Grand Trunk Pacific Railways are under one management, and operated as one system, the monthly operating reports for 1922 contain a consolidated report for these railways, under the heading "Canadian National Rys.," which includes the old Canadian Government Rys., viz., Intercolonial, Prince Edward Island, National Trans-

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.; the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government; and the Grand Trunk Pacific Ry.

The column headed "Canadian Pacific" includes also the Montreal and Atlantic and Esquimaux and Nanaimo Rys.

The column headed "Grand Trunk" includes all the G.T.R. Co. of Canada lines, including 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Provincial Line Ry., 3.77 miles, and Black Rock terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair rivers.

Items 1 to 6 in the table include rail

lines revenues only. Previous to this year they included water lines. Operating income items have been added. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. In former years the total of mixed train miles were added to both freight and passenger train miles when computing averages. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, excess baggage, parlor cars, etc., whereas previous reports gave an average per train mile of passenger receipts only. The number of employees is also a new feature of this year's reports.

	All railways.		Canadian National		Canadian Pacific		Grand Trunk

The Railways' Operating Results for July.

The results secured by Canadian railways as a whole in July do not show a large change from those of June, 1922, or July, 1921, as concerns gross revenues, operating expenses, and operating ratio. The gross operating revenue for July, \$35,086,075, was \$1,732,882 more than that of June, but \$1,116,724 less than that of July, 1921. Freight traffic revenues in July were \$222,177 more than in June, 1921, and \$117,202 more than in July, 1921. The decrease in passenger earnings, however, combined with the falling off in revenues from other sources, made the July, 1922, gross earnings less than those of July, 1921, by the amount stated above.

Compared with June, total operating expenses for July for the railways as a whole increased somewhat greater proportionately than gross operating revenues as between the two months. Compared with July, 1921, total operating expenses decreased somewhat greater proportionately than the decrease in gross operating revenues, as between the two months. The result is that the operating ratio in July, 1922, was not quite as favorable as in June, 1922, but was a little more favorable than that in July, 1921. The change in either direction, however, was but fractional.

Regarding the classified items of operating expense for the railways as a whole, it is evident that maintenance of way and structures was well up to the amount spent on the work in any criterion. Some reduction on the amount spent for maintenance of equipment is shown, while the reduction of \$1,039,651 in July, 1922, compared with July, 1921, in the expenditure on transportation account, is worthy of favorable notice. The wage reduction paid the railways in July, 1921, in 1921 did not take effect until July 16 of that year, so that in comparing transportation expenses for the two months, but two weeks of reduced wages can be considered as tending to make the July, 1922, expenses smaller. In view of this, and of the increased number of ton miles of revenue freight handled, and the increase in the number of passenger train miles operated, the reduction in transportation expense which was secured in July, 1922, must be considered satisfactory. Further, taking into consideration the amounts spent on maintaining the properties and their equipment, and combining this with the conclusion as to transportation expense, it may fairly be said that the railways in July accomplished as great a reduction in total operating expenses as could reasonably be looked for.

The railways as a whole handled 86,356,495 more ton miles of revenue freight in July, 1922, than in July, 1921, an increase of 5.1%. But due to the lower rates prevailing, caused chiefly by the reduction ordered by the Board of Railway Commissioners, effective Dec. 1, 1921, the gross revenue received from freight service increased only 0.53%. The lower rate scales prevailing are directly reflected in the figure for the average freight receipt per revenue ton mile, this being but 1.256c in July, 1922, compared with 1.313c in July, 1921. Extending our traffic comparison to the passenger service, it is seen that the lower gross passenger revenue secured by the railways as a whole was due, not only to the lower passenger rates, but to the passenger mile in July, 1922, compared with 2.994c in July, 1921, but also to a decrease in the number of revenue passen-

gers carried (from 4,675,203 in July, 1921, to 4,454,055 in July, 1922), which more than counterbalanced the extremely slight increase in the average passenger journey, so that the number of revenue passenger miles was decreased materially.

In examining the number of units of transportation service which the railways found it necessary to furnish to handle the traffic offered, it is seen that the additional freight traffic handled (86,356,495 additional revenue ton miles) necessitated the operation of 79,906 additional freight train miles. This additional mileage was but a natural consequence of the additional freight traffic offered, and the increase in freight train mileage was not at all disproportionate to the increase in the revenue ton mileage handled. In applying the same examination to the passenger traffic figures, however, a different state of affairs is found. The railways' gross passenger revenues were derived from the operation of 11,494,501 less revenue passenger miles in July, 1922, than in July, 1921, but they found it necessary, or desirable, to furnish 37,498 more passenger train miles in July, 1922, than in July, 1921, while the number of passenger train miles was also increased, despite a slight decrease in the number of passenger cars per passenger train. It seems to be a characteristic of passenger business that service cannot be curtailed to accord with falling off in traffic, to the same extent, or as quickly, as in freight service. A scheduled passenger train must operate, whether the cars are loaded to three-quarter capacity, or two-thirds. It is evident from these considerations that a falling off in passenger traffic means a larger expense to the railways, and such expenses cannot be reduced to correspond. It costs the railway practically as much to operate the train loaded to two-thirds capacity as to operate the one loaded to three-quarters capacity.

The salient features of the railways' operating results for June, 1922, as compared with June, 1921, as reviewed in Canadian Railway and Marine World for October, viz., a greater traffic carried at less cost to the public, with railway operating expenses reduced so that a better net return was secured, are present in a comparison of the July, 1922, results with those for July, 1921, but not nearly to the same degree. The figures for operating revenue and operating expense per mile of road operated show that, like any others, perhaps, the change which has taken place, and, considered in conjunction with those for traffic density, show that while an improvement was secured as between the two months, as concerns cost of railway transportation to the public, the cost of railway operation, it was indeed slight.

The increase in the number of freight train miles operated by the railways as a whole was not disproportionate to the increase in the number of revenue ton miles of freight handled. The figures for loaded and empty freight cars per freight train mile show that more cars per train were operated, which tended to keep down the freight train mileage. On the other hand, though, the average number of tons per loaded freight car shows a decided falling off from July, 1921, but applied to revenue freight only, this falling off was not so great as to make the average revenue train load smaller than in July, 1921. Considering all freight, however, the July, 1922, train-

load was not quite so large on the average as that of July, 1921. A decrease in the average length of haul was an additional unfavorable feature. While, as pointed out, the additional freight traffic offered was handled with an increase in freight train miles which was not unreasonable, it is evident that with better car-loading the increase in the number of freight train miles would have been smaller than it was. However, while the railways can exert great influence toward heavier car loading, it is a detail borne in mind that this is a detail of railway operation which must be affected largely by commercial conditions and requirements.

Considering the results obtained by the three largest railways individually, it is seen that the Canadian National Ry.'s operating deficit increased from \$1,334,568 to \$1,633,001. Freight traffic and freight revenues were practically on a parity with those of July, 1921, but passenger earnings, due to lower rates, declined 8.6%, with an increase in passenger miles of 2.9%. Net freight train mileage showed little change, but car loading declined 11 tons a car, and an additional car was added to each average train. Maintenance of way expense decreased 2.8%, but maintenance of equipment expense increased 15.8%, while total expenses increased 0.48%. While the increase in the number of employees was 4.5%, the pay roll decreased 1.6%.

Canadian Pacific freight traffic showed practically no change from July, 1921, but freight revenues declined 5.7%. Passenger traffic fell off 9.2% and passenger revenue decreased 15.6%. Total revenues for July, 1922, were 9% smaller than for July, 1921, but as operating expenses were 9.1% smaller, the operating ratio was improved very slightly, viz., from 87.04 for July, 1921, to 86.96 for July, 1922. Freight train miles increased 8.2%, the average trainload for all freight being 74.2 net tons smaller than in July, 1921. This was due to lighter loading of cars, as the average number of cars per train was practically the same as in July, 1921. Light movement of coal and grain this July undoubtedly helped to reduce the average load per car, which decreased 2.9 tons.

The Grand Trunk operating ratio of 79.7 for July is the best secured since the beginning of 1920. Net operating revenues were \$538,208 greater than for July, 1921. Freight traffic increased 31% and freight revenue increased 19% over July, 1921. Passenger traffic revenue was 11.7% less than in July, 1921. Total revenues increased 8.7%, while operating expenses increased only 0.67%. The railway situation in the United States, consequent on the coal strike and the railway shopmen's strike, undoubtedly served to increase G.T.R. traffic. It is noteworthy that the heavier traffic was handled with an increase in freight train miles of only 1.4%. The average net load per freight train was 531 tons, against 418.2 tons in July, 1921, and, with heavier loading of cars, the number of loaded cars per train was increased 2.5, with a decrease of 2.1 in the number of empty cars. The movement was affected, despite a light movement of coal, which would tend to decrease the average load per car.

A comparison of the July, 1922, results with those for July, 1921, shows, as stated above, but slight change. This means that but little progress has been made by the railways in their efforts to

get their operating ratio to where it should be, around 70 or 75. Results to date this year have amply demonstrated that all the advantages the railways have gained by reductions in wages and other items of operating expense have been passed on to the public in the form of lower freight and passenger rates. It remains to be seen how the last wage reduction is going to help matters for the railways. From the estimates made by railway traffic officers, as to the reductions in revenue which are going to be caused by the additional rate reductions, it is evident that the latest wage

and rate reductions are not going to help the railways much. Outside of an immediate upward revision in railway rates, or an immediate downward revision in railway wages and other expenses, both of which are extremely improbable, it is evident that the only way in which conditions in the Canadian railway industry can be permanently improved is by increased traffic, which at once gives increased emphasis to the fact, if, indeed, such be needed, that this country's primary need is greater population, increased industrial activity and greater production.

Birthdays of Transportation Men in November.

Many happy returns of the day to:—
J. O. Adams, General Eastern Freight Agent, Canadian National-Grand Trunk Rys., New York, born at London, Ont., Nov. 21, 1872.

J. O. Apps, General Agent, Mail, Baggage and Milk Traffic, C.P.R., Montreal, born at Tara, Ont., Nov. 9, 1877.

H. L. Beasley, General Superintendent, Esquimalt & Nanaimo Ry., Victoria, B.C., born at Hamilton, Ont., Nov. 10, 1862.

C. C. Blake, Divisional Accountant, Canadian National-Grand Trunk Pacific Rys., Winnipeg, born at Liverpool, Eng., Nov. 28, 1865.

C. C. Bonter, General Passenger Agent, Canada Steamship Lines, Montreal, born at Toronto, Nov. 13, 1884.

G. B. Burchell, Managing Director, Bras d'Or Coal Co., Little Bras d'Or, N. S., born Nov. 1, 1877.

J. R. Cameron, Assistant General Manager, Western Canadian National-Grand Trunk Pacific Ry., Vancouver, B. C., born at Truro, N.S., Nov. 5, 1865.

F. H. Clendenning, Foreign Freight Agent, C.P.R., Vancouver, B.C., born at Montreal, Nov. 9, 1881.

F. Conway, City Freight and Passenger Agent, C.P.R., Kingston, Ont., born at Ernestown, Ont., Nov. 19, 1850.

W. L. Crichton, General Advertising Agent, Canadian National Rys., Toronto, born at Derby, Eng., Nov. 9, 1871.

E. C. P. Cushing, Purchasing Agent, C.P.R., Calgary, Alta., born at Ottawa, Ont., Nov. 13, 1886.

W. R. Davidson, General Superintendent, Western Lines, G.T.R., Chicago, Ill., born at Everton, Mo., Nov. 8, 1871.

W. R. Devenish, C.P.R., General Superintendent, Ontario District, Canadian National Rys., Toronto, born in County Tipperary, Ireland, Nov. 21, 1882.

A. C. Douglas, Assistant General Purchasing Agent, C.P.R., Montreal, born there, Nov. 10, 1881.

E. J. Downie, ex-General Superintendent, Atlantic Division, C.P.R., now of Whitley, Ont., born at Rock Currie, Ireland, Nov. 12, 1850.

Jos. Dubrule, President, Prescott & Ogdensburg Ferry Co., and General Manager Canadian Pacific Car & Passenger Transfer Co., Prescott, Ont., born at Spencerville, Ont., Nov. 14, 1872.

R. L. Fairbairn, Assistant Passenger Traffic Manager, Eastern Lines, Canadian National Rys., Toronto, born at Stillwater, Minn., Nov. 24, 1880.

W. Fulton, District Passenger Agent, Ontario District, C.P.R., Toronto, born at Ballinderry, County Antrim, Ireland, Nov. 13, 1870.

J. S. G. Gibault, Division Engineer, Canadian National Rys., Levis, Que., born at St. Jerome, Terrebonne County, Que., Nov. 16, 1887.

G. N. Goad, Superintendent, Nipissing Division, Ontario District, Canadian Na-

tional Rys., Capreol, Ont., born at Toronto, Nov. 26, 1884.

Grant Hall, Vice President, C.P.R., Montreal, born there, Nov. 27, 1863.

J. McMillan, General Manager of Telegraphs, C.P.R., Montreal, born at Liverpool, Eng., Nov. 2, 1860.

H. R. Mallison, Purchasing Agent and Secretary to President, Montreal Tramways Co., Montreal, born at Toronto, Nov. 14, 1873.

Oscar Masse, Terminal Inspector, Transportation Department, G.T.R., Montreal, born at Coteau, Que., Nov. 7, 1884.

R. C. Morgan, General Manager, Reid Newfoundland Co., St. John's, Nfld., born at Missisquoi Bay, Que., Nov. 12, 1864.

C. Murphy, General Manager, Western Lines, C.P.R., Winnipeg, born at Prescott, Ont., Nov. 20, 1865.

G. H. Nowell, Master Mechanic, Lethbridge Division, Alberta District, C.P.R., Lethbridge, born at Montreal, Nov. 13, 1856.

J. Pelletier, Assistant Superintendent, Canadian National Rys., Levis, Que., born at Isle Verte, Que., Nov. 28, 1872.

W. J. Quinlan, District Passenger Agent, Canadian National-Grand Trunk Pacific Rys., Winnipeg, born at Montreal, Nov. 21, 1883.

J. W. Reid, Inspector of Railway Safety Appliances, Board of Railway Commissioners, Calgary, Alta., born at Harvey, N.B., Nov. 12, 1872.

J. L. Roberge, General Manager, Levis Ferry Ltd., Quebec, Que., born at Burlington, Vt., Nov. 25, 1874.

J. J. Rose, Passenger Department, Robert Reford Co., General Agents, Cunard, Algonquin and Amper-Dominion Steamship Lines, Toronto, born there, Nov. 22, 1878.

G. H. Shaw, ex-General Traffic Manager, Canadian Northern Ry., Toronto, born at Smiths Falls, Ont., Nov. 25, 1859.

P. D. Sutherland, General Agent, Passenger Department, Ocean Traffic, C.P.R., Hong Kong, China, born at Toronto, Nov. 2, 1870.

T. C. T. Thomson, General Storekeeper, Eastern Lines, Canadian National Rys., Toronto, born at Kingston, Ont., Nov. 25, 1882.

H. P. Timmerman, ex-Industrial Commissioner, Eastern Lines, C.P.R., Montreal, born at Odessa, Ont., Nov. 6, 186.

Guy Tombs, ex-Assistant Freight Traffic Manager, Eastern Lines, Canadian National Rys., now of Guy Tombs Ltd., Transportation Agents, Montreal, born near Lachute, Que., Nov. 22, 1877.

T. D. Utley, Car Foreman, C.P.R., Weyburn, Sask., born at Leytonstone, London, England, Nov. 1, 1890.

T. W. White, District Engineer, Canadian National Rys., Edmonton, Alta., born at Clinton, Ont., Nov. 29, 1880.

John Whitsell, Manager, Winnipeg Electric Ry., Winnipeg, born in Iowa, Nov. 30, 1868.

H. E. Whittenberger, General Mana-

ger, Western Lines, G.T.R., Detroit, Mich., born at Fern, Ind., Nov. 9, 1869.
W. A. Whyte, District Freight Agent, Canadian National Rys., Vancouver, B.C., born at Hornsey, Eng., Nov. 24, 1890.

Proposed Use of C.N.R. and G.T.P. R. Abandoned Lines for an Alberta Highway.

The Edmonton Automobile and Good Roads Association, is promoting the construction of a highway from Edmonton, Alta., to Vancouver, B.C., and favors the construction by Jasper Park, and the utilization of the abandoned right of way of the Canadian Northern Ry., and the Grand Trunk Pacific Ry., in that area as part of the route. Canadian Railway and Marine World for Sept. 1919, pg. 495, published a summary of the report of A. B. Bragha, an engineer in charge of the track lighting operations in 1917 when the following mileages of track were lifted and sent over to France:—Grand Trunk Pacific Ry.—Between Imrie and Leaman Jet, 13.6 miles; between Obed and Pocahontas, 42.25 miles; between Geckie and Resplendent, 24.8 miles; total 80.65 miles. Canadian Northern Ry.—Between Leaman Jet and Obed, 79.9 miles; between Snaring Jet and Geckie, 22.5 miles; total 101.14 miles. Grand total, 192.60 miles. The remaining tracks of the two lines were then linked up.

The association mentioned has petitioned the Dominion Government for a transfer of the abandoned railway route to the Alberta Government, so that the highway may be built. The petition stated, among other things, that in 1918, it was reported that unless the abandoned route was used for some purpose it would revert to its original wild state, and a recommendation was made that it be used as a link in the proposed Trans-Canada highway; that the Dominion Government could utilize 10.9 miles of the disused right of way for a highway from Libstock to Jeaman, at a cost of \$138 a mile; that since the 1918 report, 18 miles of the right of way has reverted to its original state and cannot now be used for highway purposes; that the route from Entrance to Pocahontas is now under from 8 to 20 ft. of sand; that the proposed highway could be built at a cost to the province of \$102,000 in addition to the Dominion highways grant to Alberta; and that the British Columbia Government, has promised to connect its transprovincial highway at the Alberta boundary with the proposed highway.

Accompanying the petition is a report of S. F. Bragha, who is assistant engineer in the work of lifting the rails in 1917, dealing with the abandoned right of way from Lobstock Jet, to the Jasper Park boundary, 121 miles. He says that the grade must be lowered so as to secure a roadway 18 ft. wide of solid material, graded round the existing railway bridges, and the ballast should be retained and the surface of the new road surface. It would be cheaper to build a road round the bridges than to lower, widen, floor and fence them. The estimated cost of the work varies, according to the route and plan of the work adopted, and to the mileage of the abandoned right of way included. The Grand Trunk Pacific Ry. right of way now considered is between Imrie and Leaman Jet, and between Obed and Pocahontas, a total of 42.4 miles; and the Canadian Northern Ry. right of way involved, is 78.8 miles of the abandoned route between Leaman Jet and Obed.

The Canadian National Railway and Grand Trunk Railway Directors' Reorganization.

On Oct. 4, Prime Minister King announced in Ottawa that Sir Henry Worth Thornton, K.B.E., General Manager and Chief Engineer, Great Eastern Ry., of England, who had arrived in Ottawa that morning from England, had entered into a contract with the Dominion Government to be President of the Canadian National Rys. for three years, at a salary of \$50,000 a year, and that eight other members of the board, whose names are given below, had been appointed.

Prime Minister King, in announcing the appointments to the press, said:—"We have chosen our new board, and have secured the services of Sir Henry Thornton, General Manager of the Great Eastern Ry. in England, as our President. We have for some time been in communication with our own representatives in England, including High Commissioner Larkin, and we have been going over the field ourselves generally and thoroughly. We are persuaded that Sir Henry is the man we need, and the man who will give us the greatest satisfaction. Sir Henry arrived here this morning from New York, having, of course, full knowledge of what our business was with him. He has accepted our offer, and this afternoon cabled the directors of the Great Eastern Ry. that he had done so, and that he would, consequently, be obliged to sever his connection with them. Sir Henry has had a wide and thorough experience in railway, steamship and railway hotel business, and seems to possess just the qualifications that we so urgently needed. We have gone outside the country to choose a President, because if we took a man from a Canadian railway, or any other big Canadian corporation, with the requisite business capacity, he would necessarily be identified with some particular concern not helpful to his new work. If we chose a Grand Trunk or a Canadian Northern man we might be accused of showing special favor, or if we chose a man from the C.P.R., we would be immediately open to the charge of selling out to it. The man we have secured for the Presidency is trained in every department of railway work, and moreover, has had the full confidence of labor in his activities in England, so that he comes to us trained to act as a great, big umpire in a tremendous enterprise, where there are many interests to co-ordinate and compose."

The following orders in Council were passed on Oct. 4:

Canadian National Rys. Board, No. 2,094:—"The committee of the Privy Council had before them a report, dated Oct. 4, 1922, from the acting Minister of Railways and Canals, referring to the Canadian National Railways Act, 1919, sec. 1, which reads as follows: 'The Governor in council may nominate such persons as may be deemed expedient, not less than 5, nor more than 15, to be directors of the company hereby incorporated, and upon such nomination being made the persons so nominated, and their successors, and such other persons as from time to time may be nominated by the Governor in council as directors, shall be and are hereby incorporated as a company, under the name of Canadian National Railway Company, hereinafter called The Company. No stock ownership shall be necessary to qualify a director.' The Minister recommends that the following persons be nominated accordingly as directors of the said Canadian

National Railway Co., viz.: Major-General Sir Henry Worth Thornton, K.B.E., London, Eng.; John H. Sinclair, K.C., New Glasgow, N.S.; Richard P. Gough, Toronto; James Stewart, Winnipeg; Ernest R. Decary, Montreal; Frederick G. Dawson, Prince Rupert, B.C.; Tom Moore, Ottawa; Graham A. Bell, Ottawa; Gerard G. Ruel, Toronto. The committee concur in the foregoing recommendation and submit the same for approval."

Grand Trunk Ry. Board, No. 2,095:—"The committee of the Privy Council have had before them a report, dated Oct. 4, 1922, from the Minister of Railways and Canals, submitting that the directors of the Grand Trunk Railway Co. of Canada, viz.: Sir Joseph Flavelle, G. A. Bell, N. Dupuis, E. L. Newcombe and A. J. Mitchell, have submitted their resignations as such directors, the Minister recommends that the said resignations be accepted, and that there be appointed as directors of the aforesaid company the following persons, viz.: Major-General Sir Henry Worth Thornton, K.B.E., London, Eng.; John H. Sinclair, K.C., New Glasgow, N.S.; Richard P. Gough, Toronto; James Stewart, Winnipeg; Ernest R. Decary, Montreal; Frederick G. Dawson, Prince Rupert, B.C.; Tom Moore, Ottawa; Graham A. Bell, Ottawa; Gerard G. Ruel, Toronto. The committee concur in the foregoing recommendation and submit the same for approval."

Sir Henry Thornton, who came out from England on the s.s. Majestic, which left Southampton, Sept. 27, arrived in Ottawa Oct. 4, as stated above. He left there again on Oct. 5, for New York, and on the same day Canadian National Rys. board member No. 2 was sent from Toronto to New York for his use while paying some visits to several points in the United States, including Concord, N.H., where he went to school, and Newcastle, Pa., Lady Thornton's birthplace, before sailing for England on the s.s. Olympic, Oct. 14, his intention being to be back in Canada before the end of November. Sir Henry was accompanied to America by Lady and Miss Thornton. During his stay on this side of the Atlantic, W. H. Hobbs, Secretary to Vice President and General Manager Robb of the G.T.R., acted as his secretary.

Before leaving Ottawa, Sir Henry said, according to the press report:—"In the nationalization of railways, the Canadian Government has embarked on an experiment and there is no reason why, with the right kind of administration, the experiment should not be successful. Certainly, there is every disposition on the part of those with whom I have come in contact to do everything in their power to make the National Railway System a success. I am coming here to serve the people of Canada to the best of my ability. The National Railways cannot be made a success as the sole result of one man's work. There must be loyal co-operation on the part of all those on the National Railways, from the highest to the lowest. We must have the feeling of loyalty to the Canadian National System and a feeling of pride on the part of all those connected with it."

Directors' Meetings, Appointments, Etc.—While Canadian National Ry. Co. directors were appointed, as detailed in order in council 2,094, given above, that company has as yet no railway or other property to administer, nor will it have

until some or all of the old Canadian Northern Ry. system, the Canadian Government Rys., the Grand Trunk Ry., and the Grand Trunk Pacific Ry., are transferred to it, by sale, lease or otherwise. It was therefore necessary to continue in the meantime to have a Canadian Northern Ry. board to function for the Canadian Northern Ry. system; for the Canadian Government Rys., which were put under that board's jurisdiction on Nov. 20, 1918; and for the Grand Trunk Pacific Ry., which the board has been operating for the receiver, the Minister of Railways and Canals, since July 12, 1920; and also to continue to have a Grand Trunk Ry. board to function for that system.

The old Canadian Northern Ry. board, consisting of D. B. Hanna, President; A. J. Mitchell, Vice President; A. P. Barnhill, K.C., St. John, N.B.; Major Graham A. Bell, Deputy Minister of Railways and Canals; Robt. Hobson, President, Steel Co. of Canada, Hamilton, Ont.; Sir Horridas Laporte, President, Laporte, Martin, Ltd., wholesale grocers, etc., Montreal; R. T. Riley, Managing Director, Northern Trust Co., Winnipeg; and E. R. Wood, President, Dominion Securities Corporation, etc., Toronto, tendered their resignations, at the Government's request, on July 20, but their acceptance was delayed while the Government was endeavoring to secure someone to appoint as President.

Following Sir Henry Thornton's appointment by the Government, the old Canadian Northern Ry. board met in Toronto on Oct. 4, and the directors, except Sir Horridas Laporte and R. T. Riley, being present. President Hanna took the chair, but suggested that the Deputy Minister of Railways and Canals, Major Bell, should occupy it, which was acted on. Mr. Hanna then tendered his resignation, which was accepted by the remaining directors, and Sir Henry Thornton was elected director in his place. The other old directors' resignations were also tendered, and as they were accepted one at a time, a member of the Canadian National Rys. board, as appointed by order in council 2,094, given above, was elected in the place of each retiring director.

The newly elected Canadian Northern Ry. directors, of whom there were present, were Sir Henry Thornton, R. P. Gough, G. G. Ruel and Jas. Stewart, the absent directors being Sir Henry Thornton, F. G. Dawson, T. Moore and J. H. Sinclair, then confirmed the agreement made by the Dominion Government with Sir Henry Thornton, engaging him as President, for three years, at \$50,000 a year, and elected him Chairman and Chairman of the Board of Directors. Major Bell was elected Vice President of the Canadian Northern Ry. Co. board, and also acting Chairman until Sir Henry Thornton takes up his duties, and he was also appointed Vice President of Finance, vice A. J. Mitchell, resigned.

The directors appointed S. J. Hungerford, heretofore Vice President, Operation and Maintenance, as ranking Vice President, with the title of Vice President and General Manager, and with jurisdiction over the Canadian Northern Ry. System, Canadian Government Rys. and Grand Trunk Pacific Ry. Until Sir Henry Thornton takes up the duties of the President's office, Mr. Hungerford will exercise the authority and perform

the duties heretofore exercised and performed by the President.

The directors also decided to make a trip of inspection over the Western Lines, as far as Edmonton, Alta., with the vice presidents and other general officers, starting from Montreal, Oct. 14. Other trips over the Eastern Lines, and over the G.T.R., will be made later.

The directors then sat as a Canadian National Ry. board, and elected Sir Henry Thornton, President and Chairman of the Board of Directors; Major Bell, Vice President and Vice President of Finance and acting Chairman, and appointed R. P. Ormsby, Secretary, Canadian Northern Ry. Co., as acting Secretary, Canadian National Ry. Co. They appointed Major Bell, G. C. Euel and R. P. Ormsby a committee to frame bylaws for the company, for submission to the directors.

The same directors, who, with others, were also appointed directors of the Grand Trunk Ry. Co., by order in council 2095,

as given above, then met as a G.T.R. board, and elected Sir Henry Thornton President and Chairman of the Board of Directors, Major Bell as Vice President and Vice President of Finance, and acting Chairman, and appointed R. P. Ormsby as acting Secretary. A number of daily papers stated that the directors confirmed the appointments of W. D. Robb, as Vice President and General Manager; C. G. Bowker, as Operating Manager, lines east of Detroit and St. Clair Rivers; W. R. Davidson, as General Superintendent of Eastern Lines, and R. H. Fish as General Superintendent, Ontario Lines, but these matters did not come before the board at that meeting, it not being necessary, Mr. Robb's appointment having been made by the old board, which was headed by Sir Joseph Flavelle; Mr. Bowker having been appointed by Mr. Robb; and Messrs. Davidson and Fish by Mr. Bowker.

After the meetings, Major Bell, as acting Chairman, issued the following

circulars:—

"Canadian National Railways, Grand Trunk Railway System, Canadian Northern Railway System; Grand Trunk Pacific Railway Co. At a meeting of the directors of the combined boards of the above companies, held Oct. 10, 1922, the following appointments were made: Sir Henry Worth Thornton, K.B.E., President and Chairman of the boards of directors; Graham A. Bell, Vice President and Vice President of Finance."

"Canadian National Railways; Canadian Northern Railway System:—The board of directors having accepted the resignation of D. B. Hanna as President and director, have, at a meeting held today, appointed S. J. Hungerford, ranking Vice President, with the title of Vice President and General Manager. Until Sir Henry Thornton, President, takes up the duties of his office, Mr. Hungerford will exercise the authority and perform the duties hitherto exercised and performed by the President."

D. B. Hanna's Retirement from the Canadian National Railways' Presidency.

On Oct. 9, on the eve of retiring from the Canadian National Rys. Presidency, D. B. Hanna sent the following telegram to the general managers at Montreal and Winnipeg: "As I retire from the service tomorrow and as it will be a physical impossibility for me to personally bid goodbye to the officers and employees, I am taking the opportunity of sending you copies of a letter which I am issuing to express my grateful appreciation of the loyalty and support which has been extended to me, and I hope you will be good enough to furnish each officer with a copy and place same in the bulletin books at the different divisional points, in order that it may be read by employees."

The letter was as follows: "To officers and employees: Since the formation of the Canadian National Rys. in the autumn of 1918 by the amalgamation of the Canadian Northern Ry. lines and the Canadian Government Rys. I have had the honor of being presiding officer of the great system which has become the possession of the public and which has included since 1920 the Grand Trunk Pacific Ry. The time has now come for the Grand Trunk Ry. to be co-ordinated with the National lines, and my office is being absorbed in a new presidency embracing all the Dominion Government's railway, steamship, express and telegraph properties. In bespeaking for my successor the same fine support that officers and employees have loyally given throughout my term of office, I desire to thank you for your contribution to the success thereby achieved."

"It is not necessary to say that the re-organized management, which took charge on Sept. 6, 1918, when the great war was still in progress, came into being in troublous times. Fortunately termination of hostilities came practically coincident with the extension of the new board's jurisdiction over Canadian Government Rys. In 1919 and 1920, the work of building up the physical properties of the lines was energetically undertaken, and the working results of 1921 and 1922 to date have shown that the operating conditions of the system have been very much improved. During the entire period the various units which comprise the Canadian National railway, steamship, express and telegraph services, have been operating as one smooth-working machine, have been developing in strength and efficiency, so that we are

now in a position, and have been for some time, to render dependable, efficient transportation service which has resulted in our building up for the system a very considerable amount of good will, that has been reflected in the handling of a substantial share of the country's freight,

David Blythe Hanna.

passenger, express and telegraph business. It has been our constant aim to keep the National system free from anything that could be used to support a charge that the Government's railway, steamship, express and telegraph services were being used for political purposes. I can only say for myself, and those directors who retire with me, that nothing of the nature of political interference would have been tolerated while we were in charge. It is a necessary policy if efficient administration is to be obtained.

"In sending out this note of farewell which will reach many of those with whom I have had practically a working

lifetime's association, I desire to express my hearty appreciation of the friendly personal relationships and friendships which have resulted from our joint efforts to do the best in our power for the fine properties in which we were employed, and which properties I know we have felt are of such potential worth that they can be made great national assets. The way has not always been smooth, and the work has always been hard, but it has always been worth while, because of those with whom I have had the pleasure of sharing the load. For all of you who remain to carry on, I wish the best of good luck. I hope that you will be permitted to advance the interests of Canada's National railway, steamship, express and telegraph services, to an extent that will demonstrate that public ownership may be consistent with good management. I hope for some time to be an interested spectator of your efforts. Again thanking you for your fine co-operation in the past and with all good wishes for you and yours, believe me, sincerely yours, D. B. Hanna."

Following the Canadian Northern Ry. Co's directors' meeting on Oct. 10, at which his resignation was accepted, Mr. Hanna went round the head offices in Toronto, and said goodbye to the staffs of the principal departments, an act which was evidently much appreciated. He then proceeded to the Dominion Bank Building, where the Canadian Northern Prairie Lands Co., of which he is President has its offices, and where a room had been prepared for him, which he is occupying as his private office.

David Blythe Hanna was born at Thornliebank, Renfrewshire, Scotland, Dec. 20, 1858, and entered railway service there in 1874, since when he has been, to 1879, clerk and ticket agent, Glasgow, Barrhead & Kilmarnock Ry., at Kinnishead, Pollokshaws and Barrhead; 1879 to 1882, cashier, Stobcross station, Glasgow; Caledonian Ry.; 1882 to 1884, Auditor's office, and Travelling Auditor, G.T.R., Montreal; 1884 to 1886, clerk, General Auditor's office, New York, West Shore & Buffalo Ry., New York; 1886 to 1892, Chief Accountant, Manitoba & North Western Ry., Winnipeg; 1892 to 1896, Treasurer, and from 1893 to 1896 also Land Commissioner, same road; 1896 to Nov., 1902, General Superintendent, first of Lake Manitoba Ry. & Canal Co., and afterwards of Canadian Northern Ry., Winnipeg; Nov., 1902 to Sept. 1918,

Third Vice President, Canadian Northern Ry.; Sept. to Dec. 20, 1918, President, Canadian Northern Ry. Co.; Dec. 20, 1918 to Oct. 10, 1922, President of lines operated as Canadian National Ry. He is President, Canadian Northern Prairie Lands Co., Canada Western Lumber Co., and Western Salt Co.; Vice President, Western Canada Flour Mills Co.; and a

director of British Empire Trust Co., London, Eng., Canada Steamship Lines and Chartered Trust & Executor Co. He is also President of the Scottish College Men's Association. The Canadian Northern Prairie Lands Co., to the affairs of which he will probably devote considerable time in future, has an as-sure fund of \$1,500,000. The company

\$1,500,000 is paid up, and it has a reserve fund of \$1,500,000. The company has large agricultural land holdings in the prairie provinces.

Mr. Hanna expects to visit Great Britain early in the New Year and will probably go to South America later, to look into possible railway developments there.

Sir Henry W. Thornton's Career

Henry Worth Thornton, son of Henry C. Thornton and Milemeta Comeggio Worth, was born at Logansport, Ind., Nov. 6, 1871, and was educated at St. Paul School, Concord, N.H., and at the Pennsylvania University's Civil Engineering Department from 1890 to 1894, when he graduated as B.Sc. He entered railway service in Dec. 1894 as engineering draftsman, Pennsylvania Lines, west of Pittsburgh, since when he has been consecutively, to Nov. 1899, assistant engineer on construction, Cleveland and Marietta Rd.; topographer attached to Chief Engineer's office, Southwest System, Pennsylvania Lines; assistant in engineers' corps, Pittsburgh division, assistant engineer in field work; attached to Chief Engineer's office, Southwest System, supervisor of yards at Columbus, O., assistant engineer assigned to special work; Nov. 1899 to March 1901, Engineer, Maintenance of Way, Erie and Ashtabula division, Northwest system; March 1901 to May 1902, Superintendent, Marietta Division, Northwest System; May 1902 to Dec. 23, 1903, Superintendent, Cleveland, Akron and Columbus Ry.; Dec. 23, 1903 to Feb. 1, 1911, Superintendent, Erie and Ashtabula Division, Northwest System; all with Pennsylvania Lines, west of Pittsburgh; Feb. 1, 1911, to Nov. 14, 1911, Assistant General Superintendent, Long Island Rd.; controlled and operated by Pennsylvania Rd.; Nov. 14, 1911 to April 1914, General Superintendent same road; April 1914 to Oct., 1922, General Manager, Great Eastern Ry., London, Eng., his salary at the time of his resignation being \$5,000 a year. While employed as assistant in engineers' corps, Pennsylvania Rd. he was appointed by the then General Manager, L. F. Loree, now President, Delaware & Hudson Co., to develop a student's course in transportation, and worked in practically every department of the railway, for a sufficient time to become familiar with its operation. When Mr. Thornton was appointed to the Great Eastern Ry., Lord Claud Hamilton, who was then, and still is, the company's Chairman, stated that it was impossible to find a man in Great Britain to fill the position satisfactorily, a statement which produced much hostile criticism.

In 1916 Mr. Thornton was appointed by the British Government as Deputy Director of Inland Waterways and Docks, with temporary rank of Colonel in the Royal Engineers. The Inland Waterways and Docks Department handled the inland navigation in northern France, Egypt and Mesopotamia. In 1917 he was appointed Assistant Director General of Movements and Railways, with temporary rank of Colonel, and went to France to represent the Director General and the Army Council in negotiations with the French, Italian and United States Governments' officials. In 1918 he was appointed Deputy Director General of Movements and Railways, with temporary rank of Brigadier-General. In 1919 he was appointed Inspector General of Transportation with temporary

rank of Major General, and had charge of army transportation on the European Continent.

He was naturalized as a British subject in March 1919 and in May 1919 was created a Knight of the British Empire. He was also given the Cross of Officer, Order of Leopold of Belgium; the French Legion of Honor, and the United States Distinguished Service Medal. In 1920 he was appointed by the British Government on the commission to investigate the operations and financial condition of the Metropolitan Water Board, which controls London's entire water supply. He also served as a member of the National Wages Board, in two arbitrations between English railway companies and

Sir Henry Worth Thornton, K.B.E., President and Chairman of the Board of Directors, Canadian Northern Ry. Co., Canadian National Ry. Co., and Grand Trunk Ry. Co.

their men.

He is one of the Vice Presidents of the Institute of Transport in London, and has been a member of the British Railways Advisory Committee. He is also a member of the Institution of Civil Engineers, London, Eng., and American Society of Civil Engineers, New York, and of the following clubs, viz., Junior Athenaeum, Royal Automobile and Queen's, London, Eng.; Mid Surrey Golf, England; Travellers, Paris; and Lotos, New York. He married, in 1901, Virginia Duke Blair, of Newcastle, Pennsylvania. They have one son and one daughter. In his college days he played football, later he took up lawn tennis and latterly golf. Some years ago he visited Kingston, Ont., frequently when his cousin, Col. McGill, was Commandant of the Royal Military College there.

Lord Claud Hamilton, Chairman of the Great Eastern Ry. is reported as saying

to a Montreal Star correspondent:—"Sir Henry Thornton's departure for Canada will be a very great loss not only to the Great Eastern, but to the whole of the British railway system. Thornton is a man of boundless energy and of larger and more enterprising views of transportation than most British railway managers. He brought with him the American readiness to try new developments. He was lately working hard on the restoration of better Continental traffic, in the interest of the recovery of British trade with both Northern Europe, including Russia and Germany, and the central states of Europe, all of which have been greatly disorganized since the war. He has immensely improved the Great Eastern suburban traffic. Our Liverpool St. terminus in London now handles more passengers daily than any other station in the world, including of course any in the United States. For two years during the war, Thornton won the highest opinions of British military authorities as Director of Transportation in France. The Canadian system will afford fine scope for his abilities—and the higher salary is not to be despised."

The London Standard, in commenting on Sir Henry's marked popularity, says that he has probably refused more dinner invitations in the past few years than any other man in England. Another English paper speaks of the appointment as a striking instance of the tendency of high railway officials there to seek new outlets for their talents and energies, as a consequence of the gradual extension of national schemes of railway amalgamation.

A London, Eng., press cablegram of Oct. 17, said:—"Sir Henry Thornton, who has been appointed to the presidency of the Canadian National Ry. and is now returning to England to wind up his affairs, will find a pile of invitations to farewell functions awaiting him on his arrival. His general business friends in London are promoting a big function, and all grades of the Great Eastern Ry. are uniting to give a farewell dinner and presentation to their late chief. The most interesting function is the intended gathering arranged by the leaders of the railway trades unions, with whom Sir Henry's relations have been particularly friendly."

U.S. Railway Officials' Congratulations.

—Samuel Rea, President of the Pennsylvania Rd. sent the following message to Prime Minister King:—"The Government and the people of Canada are to be congratulated upon the appointment of Sir Henry W. Thornton as head of the Canadian National Ry. I believe that no better selection could have been made for that important office. It is a distinct experiment upon which Canada has embarked in an effort to make a government railroad successful. If it can be accomplished under any auspices, I believe it can under Sir Henry's leadership. He has had the great advantage of having been trained in the United States, whose railroads in operation and

management are similar to those of Canada. In addition, he has had years of experience during an extraordinary period on one of England's important railway systems, The Great Eastern. He also had an important part in supervising railway operations during the war. Sir Henry is now a distinguished British subject and will, I am sure, meet with a warm welcome in Canada. American railroad executives will, I feel sure, welcome the appointment, because they know that he brings to his great task that full knowledge and experience of the transportation situation that will be mutually advantageous to both countries."

T. DeWitt Cuyler, Chairman of the Association of U.S. Railroad executives, telegraphed Premier King:—"May I congratulate you on the appointment of Sir Henry Thornton as head of the Canadian National Railroad. I have known him for many years, and he is admirably equipped for the post."

The Long Island Rd. of which Mr. Thornton was General Superintendent before going to England in 1914, and which operates between New York City and Long Island points, is controlled by the Pennsylvania Rd., but is operated independently. Its total operated mileage is 397, and it has a very heavy passenger traffic. It has 165 locomotives, 2756 freight cars, 1214 passenger cars and 279 miscellaneous cars. It operates ferry lines between Long Island City and New York City, and controls Montauk Steamboat Co., and some electric railways. The Great Eastern Ry. of which Sir Henry W. Thornton has been General Manager and Chief Engineer since 1914, while not one of the great English trunk lines, is a very important one, with a mileage, including joint lines, of 1,259. It is an amalgamation of many railways, and the two main lines from London, the

Colchester line and the Cambridge line, are remnants of an earlier state of things. The 51 miles to Colchester is all that was built by the original Eastern Counties Ry. Co., which was incorporated in 1836 to build a line from London to Yarmouth, through Chelmsford, Colchester, Ipswich and Norwich. Part of the Cambridge line remained, until 1902, the property of an independent company, the Northern and Eastern Ry. Co., which was incorporated in 1836 to build a railway from the Eastern Counties Ry., at Stratford, to Newport, with a branch to Hertford, and these lines were in 1844 leased to the Eastern Counties Ry. for 999 years, and were amalgamated with G.E.Ry. in 1902. These railways were built on the 5 ft. gauge, but in 1841 the gauge was changed to the then system of 84 miles was reduced to 4 ft. 8½ in. Among the amalgamated lines are the Norfolk, the Eastern Union, the Newmarket, the Harwich, the East Anglian, the East Suffolk, etc. The title of Great Eastern Railway was adopted in 1862. The railway's original London terminus was at Shoreditch, on the site now occupied by the goods station. The line to Liverpool St. was opened for local trains Feb. 2, 1874, and for all traffic on Nov. 1, 1875. The extension from the junction at Bethnal Green, to Liverpool Street, and the new terminus, cost considerably over £2,000,000. The G.E.Ry.'s suburban traffic increased so rapidly that an enlargement of Liverpool St. station became necessary, and the east side suburban was opened in 1894.

The G.E.Ry. serves principally the counties of Essex, Suffolk, Cambridge and Norfolk, and to a lesser extent Hertford, Huntingdon and Northampton. The principal towns served by it are Southend, Chelmsford, Colchester, Cambridge,

Ipswich, Harwich, Lowestoft, Yarmouth, Norwich, Cromer and Sheringham. By means of its joint line with the Great Northern Ry., from March, Cambs., its through trains go via Lincoln and Doncaster as far north as York. Its principal traffic is passenger, particularly suburban, some 500 trains going in and out of Liverpool St. daily. The passenger receipts are considerably larger than from freight. The G. E. Ry. operates steamboat and motor boat services on the River Orwell, between Ipswich, Harwich and Felixstowe, and passenger and cargo steamship services from Harwich to the Hook of Holland, Antwerp and Rotterdam. It owns hotels at Liverpool Street, London, Hunstant-on-Sea, Harwich, Parkston Quay and Felixstowe.

The G.E.Ry. will, in the near future, be merged into the North Eastern and Eastern group of British railways, as provided for in the Railways Act passed by the British Parliament in 1921, full particulars of which were given in Canadian Railway and Marine World for Aug. 1921, pg. 429; and Dec., 1921, pg. 627. The other principal lines in the group will be the North Eastern, Great Central, Great Northern, Hull & Barnsley, North British, and Great North of Scotland, together with 26 subsidiary companies, the whole having a total mileage of 6,441. Under this grouping the position of General Manager and Chief Engineer of the G.E.Ry. which Sir Henry Thornton has held, will probably be abolished in the near future, the company's Chairman, Lord Claud Hamilton, having stated that it is not likely a successor to Sir Henry will be appointed. Sir Henry Thornton and R. L. Wedgwood, General Manager, North Eastern Ry., were looked on as the most likely candidates for the general management of the northeastern and eastern groups.

The Canadian National Railways' Directors.

Biographical information about Sir Henry Thornton, President and Chairman of the Board of Directors, Canadian Northern Ry. Co., Canadian National Ry. Co., and Grand Trunk Ry. Co., is given in the preceding article. Following are particulars respecting other members of the three boards:—

Major Graham Airdrie Bell, C.M.G., Deputy Minister of Railways and Canals, at Ottawa, was born at Perth, Ont., Aug. 13, 1874, the son of James Bell, at one time Registrar for the south riding of Lanark County, and grandson of Rev. William Bell, a Presbyterian clergyman. He went to Perth, Ont., when he was opened as a military settlement, and was in the British Government's service as a clergyman there. He was educated at Perth public school and the collegiate institute. He entered government service at Ottawa, Dec. 1, 1890, with a temporary appointment in the Post Office Department, and received permanent appointment in the Railways and Canals Department July 6, 1893, and has since advanced through the various grades in the accounting and auditing branches of the department. He was appointed Financial Comptroller, Sept. 1, 1908, and Assistant to the Minister, Jan. 1, 1917, holding that position until June 22, 1918, when the positions of Assistant to the Minister and Deputy Minister were combined, and he was given the combined duties, with the title of acting Deputy Minister, and was appointed Deputy Minister in 1919. On Nov. 1, 1917, he was appointed one of the directors to represent

the Dominion Government on the Canadian Northern Ry. Co.'s board, under the arrangement by which the Government had advanced a large sum for temporary aid, and he has been continued as a member of that board ever since. In Aug. 1922 he was appointed by the Government as a director of the Grand Trunk Ry., succeeding H. G. Kelley, resigned. At the meetings of the newly appointed directors of the Canadian Northern Ry. Co., the Canadian National Ry. Co., and the Grand Trunk Ry. Co., on Oct. 10, 1922, he was appointed Vice President and Vice President of Finance of each company, and also acting Chairman, pending Sir Henry Thornton taking up the Chairman's duties. He received a commission as lieutenant in the 43rd Duke of Cornwall's Own Rifles in 1900, and has passed the various grades to the rank of Major. In 1912 he went to England at the request of the National Rifle Association to act as range officer at Bisley, and is the only Canadian officer who has held that position. At the end of that year he was appointed executive officer of the Dominion Rifle Association, which position he held until the outbreak of war. During the war he served months in France and England on special service, in the 20th Battalion, Canadian Expeditionary Force, during training, when he was recalled to civil duties. He was made a Companion of the Order of St. Michael and St. George in June 1917.

Frederick G. Dawson, of Prince Rupert, B.C., is a wholesale grocer, and is

about 50 years of age.

Ernest R. Decary, B.A., LL.B., notary, of Decary, Barlow & Jordan, 202 St. James Street, Montreal, who was born there, Dec. 9, 1877, is a son of Alphonse Clovis Decary and Rose de Lima, Saint Jean. He is descended from Jean Decary, who came from France with Maisonneuve and settled in Montreal in 1642. Educated at St. Mary's Jesuit College and Laval University, graduated, 1900, B.A., and LL.B. Read law with Decary & Brunet. Started in practice, Sept. 15, 1900, formed present firm in 1913; acted as chairman of the commission of administration of City of Montreal, from April, 1918 to Nov. 1921. In 1921 he organized the Title Guarantee and Trust Corporation of Canada, of which he became First Vice President and Director General; he is a director and member of the executive board, Detroit United Ry., director, Howe & Smith Paper Co., and Mount Royal Hotel Co. He represented the C.P.R. in purchasing property for the Place Viger Station and yards extension at Montreal and acted for the Canadian Northern Ry. in acquiring the land for its tunnel terminal in Montreal and for the promoters of the Mount Royal town-site at the other end of the tunnel. He is a life governor of Notre Dame Hospital, Montreal General Hospital and Western Hospital, Montreal, and Lachine General Hospital. He married Eva Lallemand; has three sons. Is a member of Montreal, University, Royal Montreal Golf, Royal St. Lawrence Yacht, and Montreal Reform Clubs. Is a Roman

Catholic, and a Liberal. He lives at 321 Peel St., Montreal, and has a house at Dorval, Que.

Richard Patrick Gough of Toronto, was born at Kleinburg, Ont., on Feb. 7, 1865, and is a son of the late Alex. Gough and the late Eliza McMahon. He was educated in York County public and high schools and St. Michael's College. He has been in storekeeping business since 1884, first at Peterborough, then at Lindsay and Port Hope, Ont., and in 1905 organized the Sellers-Gough Fur Co., in Toronto, of which he is President and Managing Director. He is also President of Gough & Sellers Investments, Ltd., and Murray-Kay Co.; Vice President Home Bank of Canada; Capital Trust Corporation and Capital Life Assurance Co., Ottawa; James A. Ogilvy's Ltd., Montreal, and Reynolds Lumber Co., and a director Canadian Fur Auction Sales Corporation, Montreal; Dominion Sewer Pipe & Clay Industries and Salts & Chemicals, Ltd. He is a Roman Catholic and is a member of the Canadian, Ontario, Lakeview Golf, and York Pioneers Clubs. His recreations are fishing and motoring. He lives at 92 Crescent Road, Toronto.

Tom Moore, of Ottawa, is an Englishman by birth, and was formerly a carpenter at Niagara Falls, Ont., being a member of the United Brotherhood of Carpenters and Joiners. Since 1898 he has been President of the Trades & Labor Congress of Canada, which is the chief labor organization in the Dominion, and occupies a position corresponding in a measure to the British Trades Union Congress, and the American Federation of Labor, as far as legislative matters are concerned. The Canadian Congress membership is derived mainly from international organizations with jurisdiction covering both Canada and the United States, and which operate under charter of labor by the American Federation of Labor. The Canadian Congress itself issues charters to unions which are not eligible for membership in any of the existing recognized international or national organizations, as well as to trade and labor councils and provincial federations of labor. Mr. Moore attended the annual meetings of the International Labor Conference at Geneva in Oct. 1921 and Oct. 1922. He lives at 172 McLaren Street, Ottawa.

Gerard G. Ruel, K.C., of Toronto, was born at St. John, N.B., July 5, 1866, and studied law there, subsequently graduating in law at Harvard University, Cambridge, Mass., in 1889. He practised in St. John for a number of years, and was for some time a partner in the law firm of Blair, Ruel & Blair. From July, 1899, to Oct. 1, 1903, he was Law Clerk, Railways and Canals Department, Ottawa; from Oct. 1, 1903 to 1909, Assistant Solicitor, Canadian Northern Ry., Toronto; 1909 to Dec. 31, 1918, Chief Solicitor, Canadian Northern Ry., Toronto; Jan. 1, 1919 to Apr. 1920, Counsel, Canadian National Rys., Toronto, and since Apr. 1920, General Counsel, Canadian National Rys., Toronto.

John H. Sinclair, K.C., LL.B., barrister, New Glasgow, N.S., was born at Gashen, Guysboro County, N.S., May 27, 1848, and educated at the common school there, at Guysboro Academy and Dalhousie College, Halifax. He was Mayor of New Glasgow, N.S., in 1890-91 and member of the Nova Scotia Legislature from 1894 to 1904. In March 1904 he was elected M.P. for Guysboro at a by-election to fill the vacancy created by the appointment of D. C. Fisher to the Nova Scotia Supreme Court Bench. He

was re-elected at the general elections of 1904, 1908, 1911 and 1917, but was not a candidate in 1921. He married, July 13, 1886, Jessie, daughter of the late Senator J. W. Carmichael. He is a Presbyterian and a Liberal.

James Stewart, of Winnipeg, was born

Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals; Vice President, acting Chairman, and Vice President of Finance, Canadian Northern Ry. Co., Canadian National Ry. Co., and Grand Trunk Ry. Co.

Richard P. Gough, One of the Canadian National Railways' Directors.

in Scotland, Dec. 11, 1881, and is a son of Ewan Stewart, of Kinlochell, Inverness-shire. He was educated at the higher grade school, Port William, Scotland, and was in the British Civil Service from 1898 to 1906 when he went to Manitoba.

and was in the C.P.R. service from June to Nov. 1906. He then entered the grain business, with the Western Elevator Co., K. B. Stoddart & Co., and other subsidiary companies. He is President of James Stewart Grain Corporation, New York; Maple Leaf Milling Co., Toronto, and Stewart & Cameron, Ltd., general contractors; Vice President, State Elevator Co.; Managing Director, James Stewart & Co., Ltd., Winnipeg, and Federal Grain Co.; director, Western Elevator Co., Western Grain Co., and Western Terminal Elevators, Ltd., and a member of the board of grain Supervisors of Canada. He was chairman of the Canadian Wheat Board, which was established by the Dominion Government in Aug. 1919, for merchandizing Canada's wheat crop of that year. He is a Presbyterian. He married Helen Kathleen, daughter of J. J. Rooney, Winnipeg, in 1914, and has two sons and one daughter. He is a member of the Carleton and Manitoba Clubs, Winnipeg.

Canadian National Railways Director's Inspection Trip.

As stated in a previous article, the joint Canadian Northern Ry. Co., Canadian National Ry. Co., and G.T.R. Co., directors decided at their first meeting Oct. 10, to make an inspection trip over the lines from Montreal to Lucerne, B.C., and arrangements were made by S. J. Hungerford, Vice President and General Manager, Canadian Northern, Canadian Government, and Grand Trunk Pacific Rys., for a special train to leave Montreal Oct. 15 at 10 p.m. The directors who went on the trip were Major G. A. Bell, Vice President and acting Chairman; E. R. Decary; R. P. Gough; F. G. Ruel; and J. H. Sinclair. F. G. Dawson, of Prince Rupert, B.C., joined them at Winnipeg, and went west from there with them. Of the other directors, Sir Henry Thornton had sailed from New York the day before for England; T. Moore was attending the International Congress at Geneva; and James Stewart was in Toronto, where he had other business to attend to.

The directors were accompanied by the following Canadian Northern, Canadian Government and Grand Trunk Pacific Rys. officials: S. J. Hungerford, Vice President and General Manager; M. H. MacLeod, Vice President, Construction Department; C. A. Hayes, Vice President, Traffic Department; R. C. Vaughan, Vice President, Purchasing, Supply and Stores Department; C. B. Brown, Engineering Assistant; and R. P. Gough, Secretary, Canadian Northern Ry. Co., and acting Secretary, Canadian National Ry. Co., and Grand Trunk Ry. Co., also R. A. C. Henry of the Railways and Canals Department, who is engaged upon special transportation problems. W. D. Robb, Vice President and General Manager, G.T.R., and F. L. C. Bond, Chief Engineer, G.T.R., also went, on invitation.

The through train was made up of a compartment observation car, and the President's business car 73, for the directors; business cars 51 and 52 for Mr. Hungerford and the other vice presidents and W. D. Robb's G.T.R. business car, Ottawa. W. A. Kinsland, General Manager, Eastern Lines, had his business car Knien attached to the train from Montreal to the end of his territory at Port Arthur, and also from there to Winnipeg. A. E. Warren, General Manager, Western Lines, had his business car 50 attached to the train from Port Arthur west. The general superintendents' cars were attached over each of their respec-

tive districts, and there was a baggage car for the crew.

The train was run over the G.T.R. from Montreal to Ottawa, thence over the Canadian Northern Ry., via North Bay, Capreol, Port Arthur, Winnipeg, Kinsley, Hanna, Calgary, Drumheller, Brandon, Kipling, Regina, Saskatoon, Big Valley, Edmonton and Jasper, to Lucerne, B.C., the principal stops being made at Port Arthur, Port William, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Jasper and Lucerne, where terminal and other facilities were inspected. From Lucerne east the train was run via Edmonton, Vermilion, North Battleford, Saskatoon, Watrous, Melville and Rivers to Winnipeg. From Winnipeg, which was left Oct. 23, it ran over the National Transcontinental Ry. to Quebec, and thence to Montreal, which was reached Oct. 26, and where the party dispersed.

W. A. Kingsland, General Manager, Eastern Lines, accompanied the party over his territory to Port Arthur, and then went on to Winnipeg, and returned by the National Transcontinental Ry. The following Eastern Lines officials went from Montreal to Port Arthur; L. S. Brown, Assistant General Manager; H. T. Hazen, Acting Chief Engineer; G. P. McLaren, Engineer, Maintenance of Way; W. U. Appleton, General Superintendent of Rolling Stock; T. C. Hudson, General Master Mechanic. At Port Arthur the party was met by the following Western Lines officials:—A. E. Warren, General Manager; H. H. Brewer, Assistant General Manager; H. A. Dixon, Chief Engineer; A. H. Eager, General Superintendent of Rolling Stock; R. Crossman, Assistant Passenger Traffic Manager, and W. G. Manders, Assistant Freight Traffic Manager, who went over the portions of the Western Lines which were visited.

The following officials travelled with the party over their respective districts: Ontario District, W. R. Devenish, General Superintendent; C. H. N. Cornell, District Engineer, and J. H. McAlpine, Master Mechanic, Manitoba District; A. Wilcox, General Superintendent; A. V. Redmond, District Engineer; H. English, Master Mechanic, Saskatchewan District; B. T. Chappell, General Superintendent; L. G. Roblin, Master Mechanic; A. M. MacGillivray, District Engineer, Alberta District; W. Brown, General Superintendent; T. W. White, District Engineer; J. Kyle, Master Mechanic, British Columbia District; J. R. Cameron, Assistant General Manager; N. B. Walton, Assistant General Superintendent; S. Morrison, Assistant Engineer, Maintenance of Way; C. J. Quantic, Master Mechanic.

The superintendents, division engineers, master mechanics and assistant superintendents accompanied the party over their respective divisions.

H.M.S. Raleigh's Commander Found Guilty.

A court martial, sitting at Portsmouth, Eng., Oct. 25-26, found Commander L. C. Bott guilty, in connection with the stranding and loss of the H.M.S. Raleigh, at Amour Point, Belle Isle Strait, on Aug. 8, and ordered him to be dismissed from his ship and reprimanded severely. The prosecution held that Bott was blameworthy for failing to point out to the captain the extreme risks being run in not commencing the taking of soundings sooner; in not using both sounding machines; in not reducing speed on his own initiative and immediately inform-

ing the captain when the density of the fog increased, and in not pointing out to the captain that the visibility in close proximity to Porteau Bay could be obtained from the wireless telegraph station at Amour Point as the ship approached Porteau Bay. The court investigated a report prepared from the ship's logs and registers, and the opinion was expressed that sounding was not commenced in time to ensure the safe conduct of the ship.

Immigration Problems Discussed.

The proposition of immigration into Canada was the main theme of interviews given, and of speeches made at functions at different points in the prairie provinces and British Columbia by E. W. Beatty, K.C., President, C.P.R., during his recent western trip of inspection. He endorsed the Western Canada Colonization Association's general plans, and stated that all existing immigration agencies could be used with advantage in making the Government immigration

S. J. Hangerford.

Vice President and General Manager, Canadian Northern Ry. System, Canadian Government Ry., and Grand Trunk Pacific Ry.

policy effective. This is essential, unless the Government itself is prepared to establish a widespread organization to obtain immigrants, to secure lands for them and to aid them during the first few years of their settlement.

The promotion of a thorough immigration policy for Canada was urged upon the Minister of the Interior at Ottawa, Oct. 11, by a delegation representing trans-Atlantic steamship companies, and a conference with them and C.P.R. representatives was held Oct. 13. The appointment of a separate Minister of Immigration, and co-operation with the Imperial Government under the plans of the Empire Settlement Act were urged.

The British Passenger Agents' Association held a meeting in London, Eng., Sept. 28, at which the Empire Settlement Act was the chief subject of discussion. Right Hon. L. S. Amery, M.P., Chairman of the Overseas Settlement

Committee, spoke of the work being done by the committee through the employment agencies, and intimated that it is not desired to work against the interests of the passenger agents in any way. F. C. Wade, Agent General for British Columbia expressed the opinion that under the Empire Settlement Act, it would be possible for co-operation between the Imperial and the Dominion Governments to transport and settle millions of people from the over populated Motherland. He put forward Canada's claims to share in the migration.

Railway Earnings.

Canadian National Railway.

Following are total operating revenues, total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry. System, Grand Trunk Pacific Ry., and Canadian Government Ry., the last including the Intercolonial Ry., Prince Edward Island Ry. and various local lines in the Maritime Provinces and Quebec which have been acquired by the Dominion Government:—

	Revenue	Expenses	Net	Deficit
Jan.	\$8,210,401	\$10,435,584	\$2,225,183	\$2,263,958
Feb.	7,650,743	10,026,572	2,375,829	2,988,598
March	9,418,100	10,387,547	979,447	2,532,359
April	7,304,222	9,153,738	1,849,516	2,835,439
May	9,678,985	9,726,020	47,055	2,554,450
June	8,235,603	10,199,592	1,963,989	2,585,267
July	8,377,776	10,510,778	1,833,002	1,931,689
Aug.	9,659,780	10,399,617	829,837	17,105

\$69,445,590 \$80,847,428 \$11,420,838 \$17,521,126
Deer. \$ 7,425,770 \$13,545,057 \$ 6,119,287

Approximate gross earnings for September, \$11,945,408, against \$11,521,839 for Sept., 1921.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1922, compared with those for 1921. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R. including the Equinash & Nanaimo Ry. and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net	Decreases
Jan.	\$11,337,976	\$10,854,498	\$488,477	\$157,948
Feb.	11,303,993	10,649,205	654,788	158,904
March	12,847,922	11,427,132	1,420,790	30,400
April	12,331,371	10,782,598	1,548,773	1,097,319
May	13,664,246	11,319,732	2,344,514	949,938
June	12,810,448	11,485,134	1,325,313	742,446
July	14,463,835	12,501,927	1,961,908	92,408
Aug.	15,918,060	12,971,613	2,946,447	\$70,297

\$106,677,243 \$91,954,827 \$14,722,416 \$2,858,205
Deer. \$10,215,623 \$ 7,357,418 \$ 2,858,205

*Increase.

Approximate gross earnings for September, \$17,839,060, against \$19,130,060 for Sept., 1921.

Grand Trunk Railway.

Following are total operating revenues, total operating expenses and net operating revenues or deficits for 1922 and 1921:—

	Revenue	Expenses	Net	Revenue
Jan.	\$5,354,317	\$4,384,364	\$969,953	\$536,366
Feb.	5,667,487	4,700,985	\$966,502	31,874
March	6,118,314	5,153,028	\$965,286	677,880
April	4,901,967	4,096,666	\$805,301	382,822
May	5,800,329	5,189,756	\$610,572	324,185
June	6,698,546	5,519,124	\$948,523	712,028
July	7,164,065	5,709,652	1,454,413	916,225

\$41,509,545 \$35,854,166 \$5,655,381 \$2,242,969
Deer. \$5,412,422

*Deficit.

Approximate gross earnings for August, \$10,655,145 for September, \$9,384,984, against \$10,231,222 and \$9,951,224 for same periods respectively in 1921.

St. John Potato Shed.—A new potato shed at Sand Point, St. John, N.B., which is under reconstruction by the Dominion Public Works Department is expected to be completed early in November. It is a reconstruction of old No. 14 shed, and is being fully equipped for handling of potatoes from the cars of the different railways. It will have a capacity of 2,300 tons.

Canadian Railway AND Marine World

Established 1896

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir, Donald F. Keir and
Edwin Winfield.

United States Business Representative,
A. Fenton Walker, 143 Liberty St., New York.

Member of
Associated Business Papers, Audit Bureau of Cir-
culation, Canadian Newspaper and
Periodicals Association, Canadian Press Association.

Authorized by the Postmaster General for Can-
ada, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British Pos-
session (except Australia), and to Mexico, \$2 a
year. Extra postage to United States, 50c a year;
for other foreign countries, except Mexico, \$1.00
a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.
ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

TORONTO, CANADA, NOVEMBER, 1922.

The Canadian National Railways' Presidency.

When D. B. Hanna was appointed President of the Canadian Northern Ry. Co. by the Dominion Government in Sept., 1918, Canadian Railway and Marine World said: "It is eminently fitting that Mr. Hanna, who in 1896 was the first official of the little Lake Manitoba Ry. & Canal Co., the nucleus of the present C.N.R. system, should have been chosen as its chief executive. He is acquainted with every detail of the building up of the system and has been responsible for years for its operation and for many other branches of its organization. Laboring under difficulties that many men would have found insurmountable, he has carried on the operation in a most economical way and has proved himself a most capable administrator. During the recent arbitration proceedings, he surprised even his most intimate friends by his thorough knowledge of every phase of the company's operations—finance, construction and operation. Mr. Hanna enjoys to an extraordinary degree the confidence and respect of the thousands of men on the C.N.R. pay rolls, and will undoubtedly receive an enthusiastic loyalty from them that no outsider could hope to secure. He is also very popular with other railway officials, and with the large number of the general public with whom he has come in contact, and we believe that now he has a free hand and can carry out his own ideas as to organization, etc., he will produce satisfactory results. One thing the public need have no fear. Mr. Hanna will serve the new owners of the road—the people—as loyally and enthusiastically as he served its private owners, and no man could do more."

Looking back over the four years which have elapsed since the article above was written, we find confirmation in reiterating everything we then said, and we have the satisfaction of knowing that what we foreshadowed as the result of Mr. Hanna's appointment has been more than fulfilled.

For the first two months after his appointment as President, Mr. Hanna had only the Canadian Northern Ry. System under his control. In Nov. 1918, his jurisdiction was extended over the Canadian Government Ry., including the Intercolonial, the Prince Edward Island and National Transcontinental Railways, and a number of non-paying small local lines in the Maritime Provinces, which were acquired by successive Dominion Governments and added to the Canadian Government Ry., as additional incubuses, the principal reasons for their purchase, in most cases, being to appease the demands of political supporters and relieve the latter of their financial burdens. In merging, first the Canadian Government Ry., and then the Grand Trunk Pacific Ry. with the Canadian Northern Ry. System, Mr. Hanna showed excellent judgment, and provided positions for the various chief officials as far as was possible, consistent with the necessity for efficiency and economy.

The organization which Mr. Hanna built up is outstanding proof of his organizing ability. He surrounded himself with a most able executive, in the various vice presidents, and these, in turn, organized the financial, construction, operating, maintenance, mechanical, traffic and other departments, so that they do not suffer by comparison with the organization of any other railway on this continent. To the ability of his of-

ficers, and the loyalty which he inspired in all classes of employees, is due a very large part of the success he met with in consolidating the several properties into a transcontinental railway system of the first order.

Mr. Hanna was faced with the task of operating, in combination, roads which were built primarily to operate in competition. The steady improvement secured is evidence of the success he met with in his task, and overcame this fundamental difficulty by co-ordinating services where opportunity offered. Many of the steps taken to effect economical co-ordination, which have only been completed recently, have not had time to be reflected in operating results, while other actions started to secure further co-ordination, but not yet completed, cannot show results for some time to come. A brief review of some of the results obtained under Mr. Hanna's presidency show some very outstanding facts.

In 1919 the Canadian Northern Ry's operating deficit was \$6,748,294, and in 1920, \$16,440,415. In 1919 the Canadian Government Ry's operating deficit was \$7,645,348, and in 1920, \$10,449,810. In 1919 the Grand Trunk Pacific's operating deficit was \$6,272,444 and in 1920, \$10,124,513. These figures show that at the end of 1920 prospects were certainly discouraging, but the 1921 results proved the wisdom of Mr. Hanna's policy in placing the properties in condition to efficiently perform the functions of a railway. The operating loss for the three systems for 1921 was \$16,159,022, or less than that for the Canadian Northern alone for 1920, and \$20,865,782 less than that for the three roads in 1920.

After a long period of disheartening operating losses, Mr. Hanna was able, in Aug., 1921, to show net operating earnings of \$47,231.44, compared with a deficit for Aug., 1920, of over \$4,000,000. Although the rate reductions, which have so greatly restricted C.P.R. net earnings, have made it impossible for the Canadian National Ry. to maintain net operating earnings, the fact remains that the results secured by Mr. Hanna and his officers, in the final year of his administration, have shown conclusively that they have succeeded in consolidating the lines into a system that needs only more traffic to make it at least able to be self supporting, outside of fixed charges.

For the first six months of 1922, the Canadian National Ry. had an operating loss of \$1,000,000 compared with an operating loss of \$16,169,451 in the first 6 months of 1921. In the first 6 months of 1922, the C.P.R.'s net earnings were \$3,213,713 less than in the first 6 months of 1921. This shows conclusively that, despite conditions which were generally unfavorable to financially successful railroading, the progress made by Mr. Hanna in improving the Canadian National Ry's position was real, and the large reduction in the operating loss is a tribute to his wisdom, and that of his officers, in their policy of placing the property and its equipment in a proper condition to handle traffic at a low cost.

In the first 6 months of 1922 the average revenue train load on the Canadian National Ry. was but 370.9 tons; in the first 6 months of 1922 it increased to 446.3 tons. Mr. Hanna's plans to make the road able to handle tonnage economically have begun to bring results this year, and the plans laid by him will, if adhered to, be responsible for even better results in the future. When meeting newspaper

men in Toronto on Oct. 10, in connection with the newly organized board of directors' first meeting, the acting Minister of Railways, Mr. G. P. Graham, stated that the good work done by Mr. Hanna and his co-directors and officers was just beginning to show.

In the first 6 months of 1922, Canadian National Rys. handled 3,914,761,324 ton miles of revenue freight, in 8,776,438 freight train miles; in the first 6 months of 1921 it took 10,115,419 freight train miles to handle 3,751,384,287 revenue ton miles. These figures alone show the vast improvements secured in operating efficiency. If those who have been so critical of the Canadian National management, since the property was placed under it, had any idea of the manner in which low traffic density increases the cost of handling the traffic offered, and particularly on lines not planned originally to co-operate with one another, their unfounded criticism would be replaced by expressions of appreciation for service rendered.

The rapid improvement in results secured on the Grand Trunk Pacific Ry., since its incorporation into the National System, are amazing. Operating ratios of about 200% were soon succeeded by others which gave promise of this road attaining to a position where operating expenses would be consistently earned, and although undoubtedly some part of this improvement was due to more favorable traffic arrangements, the fact remains that while a diversion of traffic to the G.T.P.R. would mean the loss of it to another part of the system, the system as a whole showed improvement simultaneously with that secured on the G.T.P.R., making evident the increase in efficiency throughout the National Railways enterprise as a whole.

It is an outstanding fact that in 1921 the Canadian National was the only transcontinental line in North America to increase its gross earnings over those of 1920. Despite the effects of the great industrial depression which spread over the continent, and slowed down all departments of business, the progress in the work of making the National System great and successful was well maintained under Mr. Hanna's direction.

So far as we are aware, the principal reason given by the Dominion Government for not continuing Mr. Hanna in the position of President, under the further co-ordination yet to be effected, is that he was formerly in Mackenzie, Mann & Co's service. He gave loyal service to his former employers for many years, and we are satisfied he was as loyal as his recent employers, the Canadian people, and in his latter position he was even doubtless more efficient than in the former one, as he had the chief executive position and greater scope for his abilities. We are thoroughly convinced that it was his great ambition to make the Canadian National Rys. a success, and he went on record, in almost every one of the numerous speeches he made throughout the country from time to time, as being satisfied that government ownership could be successful, provided always that political interference was prevented. He frequently stated that there had been no political interference. Perhaps in doing so, he was ultra-loyal to the Government, and we believe he would have been more correct if he had said that there had been no successful political interference, as we are firmly convinced that it was attempted, particularly of late. In this connection, we wish to absolve the various Ministers of Railways under whom

Mr. Hanna served, Dr. Reid, the late Mr. Stewart, and the present Minister, Mr. Kennedy. We believe they played the game fairly, but some other members of the House of Commons, both Conservative and Liberal, did not. We believe we are correct in saying that under the Borden Union Government, when patronage was in the discard, there was no interference. When Mr. Meighen formed a purely Conservative cabinet, he took in a Maritime Provinces man, and it was a matter of current talk that the latter at once got busy attempting to interfere in the appointment of officials on the Canadian Government Rys. portion of the system, in the operation of the Canadian Government Merchant Marine, and in other matters. When the King Government came into office, many of their supporters, after their party having been out of power for several years, clamored for jobs, and several of the Maritime Provinces members are said to have backed them up. It is stated that one M.P., whose name we have, went so far as to attempt to secure the resignation of section laborers who had voted against him in the last general election, that another M.P. wanted Liberals appointed as gatekeepers, and that there were many other equally glaring cases. If Mr. Hanna could be persuaded to forget his proverbial Scotch caution and careful reticence, and could be induced to tell some of his experiences in this connection, they would probably throw a lurid light on a number of politicians. We believe that Mr. Hanna resisted successfully the attempts to make the National Railways a political machine, and that, as a result, a number of members of the Commons banded together and continually urged the Government not to continue his services. When the present Government came to the Maritime Provinces last summer, it was current talk among Government supporters there, that the M.P.'s could not get appointments made, and that in consequence they were "out to get Mr. Hanna," who was never a politician, and whose political proclivities, if he has any, are not even known to the writer, who has been acquainted with him intimately for over 30 years and who has had frequent conversations with him.

Of course, as the arrangements for the taking over the several railways by the Dominion were started by the Borden Union Government, and carried on by the Meighen Conservative Government, the Liberals attacked the policy at the last general elections, as the Conservatives would doubtless have done had the position been reversed, and, in the making of attacks, Mr. Hanna was spared, some most unfounded statements being made. Unfortunately, the question of the non-retention of his services is being discussed in the daily press largely from a party standpoint, but some of the more independent Liberal papers have come out very strongly, two of which may be quoted. The *Toronto Star* says: "For the last three or four years Mr. Hanna and his board of directors have handled a very big and difficult business with a measure of success that is gratifying to those who believe that public ownership of transportation is the policy of the future. The country, in welcoming the new management, is not unaware of the services given by those who now retire from control." And the *Manitoba Free Press* says: "Mr. Hanna has striven hard and against great difficulties to bring the Government railways out of their unfavorable position. The system is in a much better condition now than it was

a couple of years ago, and there is strong public appreciation of the good work which Mr. Hanna has done."

Mr. Hanna is a man of unimpeachable character, and with a strong personality, he has discharged his exacting duties with ability, energy and enthusiasm, he has given the National Railways a splendid start on the upgrade, and he deserves to be known as a great public servant, who, in our opinion, has been most shabbily treated.

Prime Minister King, in announcing Sir Henry Thornton's appointment, said that the Government had decided not to appoint anyone who had been connected with the Canadian Northern Ry., the Grand Trunk Ry., or the C.P.R., and practically no Canadian. There is no doubt that, in pursuance of this policy, attempts were made to secure the services, one after another, of several U.S. railway officers, but without success, the attempt to secure Sir Henry's refusal being Percy R. Todd, President of the Bangor & Aroostook Rd., in Maine.

The Government has been fortunate in securing Sir Henry Thornton, who undoubtedly has a splendid record, having made good in every position he has occupied. Though only having had the title of General Superintendent on the Long Island Rd., he was practically General Manager of it, and his selection for the General Management of the Great Eastern Ry., in England, was proof that he was an outstanding man. In taking that position, with no knowledge of English railway methods, or of the ways of the country, he was under a heavy handicap, but he quickly overcame any national prejudices that may have existed against him, vastly improved the Great Eastern service, and made himself an important factor among English railway managers, and performed invaluable services for the Empire during the great war.

Sir Henry undoubtedly has a tremendous task before him. It will naturally take time for him to become acquainted with the vast system, and even with its staff, but he is in the prime of life, has good health and physique, and great capacity and energy, and he should prove a success. In the officers and officials of the Canadian National Rys., as now existing, and with the other unit to be added, the Grand Trunk Ry., he will find a thoroughly efficient lot of men. He is reported to have stated, after his recent return to England, that one of his duties will be to select competent men, and that he will make use of those already working on the system." We hope that for every position he may have to fill, he will find a suitable man already in the service of one of the constituent companies, and that he will not consider it necessary to make any importations.

Sir Henry is also credited with stating that the Government had assured him that there would be no political interference, otherwise he would have loved to at the proposition. We hope that he will not be disappointed in this respect. His experience has been altogether on privately owned roads, and he is not acquainted with the average Canadian M.P., especially with the Maritime Provinces variety. Fortunately he has three years' contract with the Government, and can afford to take a firm stand, and we hope and believe that he will strenuously resist any attempts at interference by politicians, in which, as well as in his general duties, he will receive Canadian Railway and Marine World's hearty co-operation and support.

Index to Canadian Railway and Marine World for 1922.

For a number of years, Canadian Railway and Marine World has published, early in each year, a very complete index to the contents of the previous year's issues, which we know has been very much appreciated by the large number of subscribers who bind the paper for reference. Owing to what we consider an arbitrary ruling of the Post Office Department, we have not been allowed to simply enclose the index as a supplement with the regular issue of the paper got out at the same time, but have had to bind it in as part of the issue, making it somewhat difficult to detach for binding with the previous year's volume.

We have therefore decided that the index for 1922, which will be published early in 1923, will not be bound in as heretofore, but will be issued and mailed separately, and will only be sent to those who apply for it. Subscribers who wish to receive copies are therefore requested to advise us as early as possible, so that we may know the number that it will be necessary to print.

Billing Empty Tank Cars.—The Railway Association of Canada has issued the following circular: The Association's attention has been directed to the practice in vogue on certain railways of using standard bill of lading form for the conveyance of instructions from consignor to carrier covering the shipment and routing of empty tank cars without charges. Consequently, misunderstanding has occurred as to the responsibility of the carrier (having signed the bill of lading), for movement of the car in accordance with billing instructions. The standard bill of lading form is intended to be used only in connection with revenue bearing traffic. Billing instructions covering the movement of empty cars, without charges, should be furnished by letter, or form, of which the provisions of bill of lading contract are not a part.

Railway Running Rights in Vancouver.—The Board of Railway Commissioners, at its recent sittings in Vancouver, B.C., had before it the Vancouver Harbor Commissioners' application for running rights over the Vancouver, Victoria & Eastern Ry. & Navigation Co.'s railway, from False Creek to Burrard Inlet, Vancouver. Notice was given that application would be made to the Supreme Court for a ruling as to whether the railway company should be forced to give the Vancouver Harbor Commissioners the running rights asked for.

The Canadian National Railway's Nipigon Trophy for 1922 offered for the person who caught the largest speckled trout in Nipigon waters, with rod and line, has been awarded to C. E. Abbott, of Bessemer, Alberta, who got one weighing 7 lb. 9 oz., 27 in. long, and 15 in. round. It was caught on a single hook, with cockatoo bait.

The American Association of Passenger Traffic Officers' annual meeting at Louisville, Ky., Oct. 10, was largely devoted to receiving reports of various committees, covering ticket paper, standing forms of tickets, digest of fares and divisions, adjustments of passenger fares, etc.

Canadian Railway Club.—Wm. Carter, A.M., A.S.M.E., Assistant General Sales Manager, Canadian Ingersoll-Rand Co., read a paper on some elements of economy in air compression, before the Canadian Railway Club, in Montreal, Oct. 10.

Unfair Government Discrimination Removed.

Canadian Railway and Marine World for October commented on a regulation promulgated by the Customs & Excise Department, at Ottawa, in reference to the issue of license to persons to use cheques with words indicating that the stamp tax thereon had been paid, and requiring that the blank cheques should be sent to Ottawa, either by Canadian Government Railways or Canadian National Express, a requirement which we condemned as unfair and discriminatory to privately owned railways and express companies. We are officially advised that representations in regard to the matter were made to the Minister of Customs and Excise, and that, as a result, the original regulation 10, as published in Canadian Railway and Marine World for October, was cancelled, and the following clause substituted therefor:—

"The blank cheques are to be forwarded to the American Bank Note Co., Ottawa, by express or freight, whichever is the lower rate, charges in all cases 'collected,' with indication on the package of name and address of the shipper, and the shipper will by letter advise the company as to the quantity and description of cheques in the shipment. Note: Shipments from Montreal exceeding 50 lbs.; from Toronto exceeding 60 lbs.; and from Winnipeg exceeding 40 lb. gross weight; should be sent by freight."

This removed the discrimination which we protested against, and of which the Minister was probably not aware until it was drawn to his attention, the regulation, however, doubtless being framed by departmental officials and very probably not having been submitted to the Minister.

Reid Newfoundland Co.—As stated in previous issues of Canadian Railway and Marine World, the Newfoundland Government is financing the opening of the Reid Newfoundland Co.'s railway and steamships up to Nov. 15, as a temporary expedient. No information is available as to what is to be done after Nov. 15, but it is expected that the Colonial Legislature will meet early in November, and that some definite plan will then be announced. It is expected that R. C. Morgan, who has been General Manager for some months, will return to his position as Superintendent, C.P.R. Terminals, at Winnipeg, as soon as he can be relieved at St. John's.

Shipment of Empty Oil and Other Barrels.—The Railway Association of Canada has issued the following circular: In order to minimize the danger of fire, and to avoid damage to other freight, it is recommended that instructions be issued to agents to the effect that empty barrels, which previously contained lubricating or other oils, molasses, tar, paint, varnish, beer, ale or other liquors, etc., must have filling and vent holes properly closed before they are accepted for transportation. These regulations do not apply to empty vinegar barrels.

The Dominion Government has provided for the free travel of anyone escorting a former member of the Canadian Expeditionary Force, who is in receipt of a total disability pension for blindness, or other disability which necessitates an escort. This privilege is intended to apply when the former member of the forces is travelling on a normal holiday or at other infrequent intervals, and is not intended to cover regular travel.

Beer Transportation Restricted.—A recent Windsor, Ont., press report stated that the G.T.R. agent there had received notice not to accept further shipments of beer for transportation by freight. We are advised that Canadian railways received advice from the Chief of the United States Customs Division, at Washington, that shipments of intoxicating liquor for transit through U.S. territory would not be permitted, and were further advised by customs officials, at the frontier, that any shipments received for forwarding through the U.S. in bond, from the railways, would be seized by the U.S. customs. Instructions were therefore issued to G.T.R. agents accordingly.

E. W. Beatty on Athletics.—The Toronto Alumni Association's Montreal branch held its annual dinner, Oct. 20, E. W. Beatty, K.C., President C.P.R., being in the chair. He referred to the prominence of athletics in college lives and expressed the opinion that those who participated in games should do so for the love of the game itself. There is, he was sorry to say, at present too great a tendency to systematize, and because of this the lure is going out of some of our games. The self reliant, thinking athlete is disappearing because there is too much drilling in preparation; the athlete nowadays is becoming merely a part of a machine, and is in fact an automaton.

Intercolonial Ry. Jubilee.—The 50th anniversary of the opening of the Intercolonial Ry. between St. John, N.B., and Halifax, N.S., will occur on Nov. 11. Arrangements are being talked of for a dinner in Moncton, N.B., on that date. The city council is taking the initiative in the matter, and the Moncton Board of Trade has intimated its intention of co-operating. Sir Henry Thornton and other directors of the Canadian National Ry., and some of the officials will be invited to attend.

G.T.R. Rails Orders.—The G.T.R. has given the following orders for open hearth, type A section, steel rails recently:—25,571 gross tons, 100-lb., delivery to be made at Sydney, N.S., commencing early next spring by Dominion Iron & Steel Co.; 1,596 tons 100-lb. for New England lines, to Lackawanna Steel Co., Buffalo; 3,100 tons 90-lb., and 4,757 tons 100-lb. for Western Lines, to United States Steel Products Co., to be rolled at Illinois Steel Co.'s mills in Chicago district.

Railway Lands Patented.—Letters patent were issued during August for Dominion railways lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Alberta & Great Waterways Ry.	19.45
Canadian Northern Pacific Ry.	1,766
Canadian Northern Saskatchewan Ry.	5.82
Canadian Northern Western Ry.	266.89
Canadian Pacific Ry.	5.73
Total	299.626

Canadian Government Grain Elevators.—R. Hetherington, Secretary, Dominion Grain Commission, Fort William, Ont., has reported to have been appointed acting General Manager, Canadian Government elevators, vice J. P. Jones, Dominion Grain Commissioner, resigned, and who included in his duties the management of the elevators.

Whitewashing Return Fences and Cattle Guards.—The Board of Railway Commissioners has asked railway companies to start with the practice of whitewashing the return fences and cattle guards on their lines, the information, being desired with a view to arriving at uniformity of practice.

Railway Wages and Working Conditions in Canada and the United States.

The majority and minority reports presented by the conciliation board appointed to enquire into the dispute between Canadian railways and their shopmen, members of the American Federation of Labor's Railway Employees Department, Division 4, were given in Canadian Railway and Marine World for October, pg. 519, and it was mentioned that both the railways and the shopmen had agreed to reopen direct negotiations on the matter of wages. On Oct. 2, the Railway Association of Canada officially announced that the direct negotiations would reopen in Montreal on Oct. 4, and the shopmen's wage schedule committee, which had dispersed, was summoned back there by Chas. Dickie, secretary for the shopmen's organization. Prior to this, the shopmen had obtained assurances from the Minister of Labor, that, in the event of disagreement in the new negotiations, a new dispute calling for a new conciliation board would not be legally created, and that the shopmen's committee would be legally free to issue the strike call held in abeyance, if it thought it advisable to do so. After three days' negotiations in Montreal, terminating Oct. 6, it was found that no agreement could be reached. The railways remained firm in their intention to place in effect the reduced rates of pay as approved by the conciliation board which had heard the dispute, and have so placed them in effect. Full details of these reductions for the various grades of shopmen were given in preceding issues of Canadian Railway and Marine World. Consequent on the shopmen's failure to have the railways reconsider the reductions which were enforced, a referendum vote to ascertain if the majority of the shop crafts' members were willing to accept the reduced rates were arranged for, and on Oct. 12 ballots were sent out to all members, returnable Nov. 1, to get the men's opinion as to advisable future action.

A Calgary, Alta., press dispatch credited the secretary of the federated shop crafts there with the statement that the C.P.R. and other railways had knowledge of the conciliation board's report some days before it was filed with the Labor Department. This statement was characterized by Geo. Hodge, Assistant General Manager, C.P.R. Eastern Lines, who conducted the negotiations with the shopmen on behalf of the C.P.R., as having no foundation in fact. He stated that the C.P.R. had no knowledge of the board's report until a copy of it was received at the company's offices on Sept. 5, and that instructions to restore, as from Aug. 16, the rates of pay previously put into effect as of July 16, were not issued till Sept. 5.

The course which the shopmen's strike has taken in the U.S. has served to withdraw from the Canadian shopmen a large part of the moral support which, while the U.S. strike was in full swing, apparently backed them up in their effort to have the high wages continued. Another factor which served to make the shopmen more conciliatory was the enforced closing down of the C.P.R. passenger car shops at Montreal and other points, due to the falling off in passenger traffic. Some 3,000 men were thrown out of employment when the shut-down took place on Oct. 6, and on Oct. 12 a conference was held at the C.P.R. offices in Montreal, at which the C.P.R. was represented by Grant Hall, Vice President; C. H. Temple, Chief of Motive Power

and Car Department; and J. Burns, Works Manager, Angus shops, and the shopmen by F. McKenna, Vice President of Division 4, and other federation officers. No date was set for the shops to be reopened, but some hope was held out that the cessation of work would be of but short duration.

Canadian National Ry. Clerks, etc. The conciliation board appointed to deal with the dispute between the C. N. Rys. and their clerical employees, members of the Canadian Brotherhood of Railway Employees, presented its majority report to the Labor Department on Oct. 20, signed by the chairman, F. T. Costello, barrister, Alexandria, Ont., and the employees' representative H. S. Ross, K.C., Montreal. It stated that a reduction in wages of clerks, freight handlers, round-house, store, shop and station employees should not be made, the chief reason given being that a further wage reduction would leave the classes under consideration without adequate means of properly supporting their families. It also pointed out that, as nobody could logically expect the national lines to get on a paying basis quickly, these employees should not be unduly sacrificed to bring that about, and should not be expected to bear more than their share of a financial burden which should be carried by the country as a whole. It was stated that a minority report favoring the proposed wage cuts would be presented by G. D. Kelley, of Ottawa, who represented the N. E. Rys. The wage reductions which it was proposed to place in effect were stated in Canadian Railway and Marine World for August, pg. 402.

C.P.R. Clerks, etc. The conciliation board, of which Daniel Urquhart, Toronto, is Chairman, and on which the C.P.R. is represented by J. T. Arundel, formerly General Superintendent, Ontario District, C.P.R., and the employees by J. G. O'Donoghue, Toronto, appointed to enquire into the dispute between the C.P.R. and various grades of its clerical employees, was reported, in an Ottawa press dispatch of Oct. 23, to have presented a majority report, signed by Messrs. Urquhart and O'Donoghue, to the Labor Department, on that date. No details concerning the report were given, but as it was signed by the chairman and the employees' representative, and as it was also stated in the dispatch that a minority report would be presented by Mr. Arundel, it is to be presumed that the majority report upholds the employees' contention as a whole or in part.

Grand Trunk Ry. Clerks, etc. The conciliation board, of which E. McG. Quirk, Montreal, is Chairman, and on which the railway is represented by U. E. Gillen, Manager Toronto Terminal Ry. Co., and the employees by H. S. Ross, K.C., Montreal, has not, at the time of writing, presented a report. We are officially advised that negotiations for a settlement independently of the board are now going on between the railway and its clerical employees, and that if these are successful, no report will be presented by the board. If the negotiations fail to effect a settlement, however, the board will present a report to the Minister of Labor in the usual manner.

Grand Trunk Ry. Western Lines Shopmen. When the shopmen's strike in the U.S. was called, the shopmen employed by the G.T.R. in Port Huron, Mich., went on strike. On Oct. 9 a meeting was held by the shopmen at which terms for settlement proposed by the railways were

rejected. On Oct. 16, however, after further negotiations, a settlement satisfactory to both the railway and its shop employees was reached, and the men returned to work, although no details of the settlement were made public, it is said that the men returned to work at the rates of pay ordered by the U.S. Railroad Labor Board, and under such terms that their seniority is practically assured them.

Chinese Section Labor in British Columbia. A Victoria, B.C., press report credits the Provincial Attorney General and Minister of Labor with stating that he had asked the railways in B.C. to take on white men in place of Chinamen for section labor, to which request the railways acceded. After a short time, however, he was informed by the railways that they had to take the Orientals back again because white men could not be obtained for the work.

General. Summarizing the railway wage situation in Canada, it is apparent that the country has been fortunate in coming through the past few months without experiencing a disastrous strike such as took place in the U.S., and present indications are that wage troubles will not be very conspicuous in the immediate future. The operation of the Industrial Disputes Investigation Act, combined with a sense of fairness and justice on the part of both railway officers and labor leaders has tended to bring about amicable settlements of practically all disputes, the avoidance of strikes, and consequent suffering by all concerned, is a thing of which the railways, the railway employees and the public at large should be thoroughly appreciative.

United States Situation. The shopmen's strike on U.S. railways is practically a thing of the past, practically all having negotiated settlements with their striking employees on the basis of the "Willard-Jewell agreement," the terms of which were given in Canadian Railway and Marine World for October, pg. 521, while other roads, which consistently refused to take back their striking shopmen, have concluded new agreements with their loyal employees and their new men. Among the larger roads which took back the strikers on the Willard-Jewell plan are the Baltimore & Ohio; the Belt Ry. of Chicago; Boston & Albany; Buffalo, Rochester & Pittsburgh; Chicago, Milwaukee & St. Paul; Chicago & North Western; Chicago, St. Paul, Montreal & Omaha; Chesapeake & Ohio; Cleveland, Cincinnati, Chicago & St. Louis; Duluth, Winnipeg & Pacific; Michigan Central; New York Central; Pittsburgh & Lake Erie; Seaboard Air Line; and Western Pacific. The Erie has concluded an agreement with its shopmen which differs considerably from the Willard-Jewell plan, and its men returned to work during the first week in October. Representatives of the agreements drawn up on the roads which did not see fit to follow the terms of the Willard-Jewell agreement are those on the Union Pacific and the Chicago, Burlington & Quincy. On the Union Pacific the new agreement provides for many different rates of wages, according to the class of work and skill required, and the number of classes among the employees has been largely increased, in both the locomotive and car departments. In the locomotive department the employees are first classified by mechanical groups, and are doing work requiring fully qualified mechanics, and those doing

work not requiring fully qualified mechanics. In the first group there are 28 different classifications, and 26 in the second, and rates of pay vary materially. The highest rates, for the work requiring the most skill are considerably higher than those ordered by the Labor Board for mechanics, and for men doing work requiring less skill, the wages are considerably lower. The same plan is embraced in the agreement on the Chicago, Burlington & Quincy and on other roads, and it is felt that these new agreements will make for more efficient operation in the railway shops, and at the same time be ultimately in the employees' interest, for the simple reason that the more skilled a man becomes at the more capable he is of doing better work, the higher he will be his pay.

The U. S. railways were notified on Sept. 27, by the American Railway Association's Car Service Division, that they need no longer report daily as to the number of new employees taken on in place of strikers. On Sept. 26 the roads as a whole had 376,000 men in service, or over 90% of their normal force.

Maintenance of Way. Canadian Railway and Marine World for October gave particulars of the hearings before the Railroad Labor Board on the demands made by maintenance of way employees for increased wages. The Board went into executive session, to consider these demands, on Oct. 2, and on Oct. 3 it was stated that disagreement among the Board's members had at once taken place. The public members wanted to announce an increase of 2c hourly in trackmen's wages, but the railway members held that trackmen were entitled to no increase, and the labor members held that the proposed increase was insufficient. However, the executive sessions were continued, and the decision was taken Oct. 14 by the railway and labor members agreeing to the public members' views. Accordingly, an increase of 2c an hour was announced. The increase affects 451,911 men employed in the maintenance of way departments on U.S. roads, and it is estimated that it will increase their pay by \$22,125,000 annually. This decision makes the minimum rates of pay for trackmen range from 25 to 37c an hour. About 45% of the men will get 37c an hour, while another 40% will receive over 30c an hour. The Board's decision makes the rates for trackmen one cent an hour greater than those fixed recently by the U. S. Steel Corporation for unskilled labor.

The United Brotherhood of Maintenance of Way Employees and Railroad Shop Laborers held its convention in Detroit during October, and F. H. Fjoldal of Dauphin, Man., was elected President, defeating F. H. Grable, formerly President, by more than 3,000 votes out of 26,000 cast. It was largely through Mr. Grable's influence that the maintenance men were prevented from joining the shopmen in their strike, and it is evident from his defeat that the majority of the membership did not approve of his attitude in that connection. The Brotherhood has brought suit against Allan E. Barker, who was President before F. H. Grable, alleging that he misappropriated \$75,000 of the organization's funds while he was in office. According to Grable's testimony, at a recent court hearing, Barker had agreed to settle the Brotherhood's claim for \$27,000, in Dec. 1920. One claim against Barker is that he sent a cheque for \$50,000 to the Trades and Labor Council of Canada for the purpose of fighting the One Big Union movement.

Signalmen. D. W. Helt, President, Brotherhood of Railway Signalmen, appeared before the U. S. Railroad Labor Board on Sept. 25 to ask for higher wages and more favorable working rules for members of his organization. The wages asked for would approximate those in effect before the last wage reduction, ordered by the Board, and the rules suggested would make the signalmen's working conditions about the same as under the old national agreement. The eastern, western and southeastern railways were represented respectively before the Board at the hearing by J. G. Huber, J. W. Higgins and C. E. Neill, who claimed that the rates of pay being paid signalmen at present are just and reasonable. At the time of writing, Oct. 21, the Board has not rendered a decision.

Locomotive Men and Trainmen. Practically all the U. S. roads have signed contracts with their locomotive men and trainmen continuing for another year at the present rates of pay and working conditions.

The Railroad Labor Board on Oct. 16 made public a decision by which yardmasters on 26 class 1 railways and 6 switching terminals were given an 8-hour day with pay for overtime. This is the first time the Board has established rules and working conditions for yardmasters, who by this ruling are classified as subordinate officials and thus subject to the Board's jurisdiction under the Transportation Act. According to J. S. Eldridge, President of the Railroad Yardmasters of America, an international organization with members in both Canada and the U. S., the yardmasters affected have virtually been given a 25% wage increase by the Board's ruling. The decision also provides that yardmasters required to work 7 days a week shall be given 2 days off each month. The Delaware, Lackawana & Western, the Pennsylvania and the Illinois Central were not affected by the decision, nor were a number of other large roads which have agreements with their yardmasters.

Railway Passenger Fare Reductions in Great Britain.

London, Eng., press cablegram, Oct. 17. —The eagerly awaited announcement of the lowering of railway fares, which were raised 75% during the war, was made today. The railway companies have agreed to bring this increase down to 50%. Rates for perishable traffic on passenger trains will be subject to the same reduction. Henceforth the practice of some companies of charging less than double fare for the return journey will be generally terminated. Third-class fare under the new decision will work out at 1½d. (3c) a mile. Tourist and excursion fares are to be reduced proportionately to ordinary fares, but season tickets will not be affected, as they are now only 50% above the pre-war rate. Workmen's fares are also unaffected.

The companies point out that although fares will rule at 50% above the pre-war level, working costs, especially wages, are still in a far higher ratio. Therefore the hope is expressed that the negotiations with the railway trade unions will result in a further reduction of wages. It is hoped also that an increase of traffic will at least make up the estimated loss of revenue approaching \$10,000,000 annually, which is involved in the present change. The reductions will come into effect at the end of the year.

Railway Rolling Stock Orders and Deliveries.

The G.T.R. is reported to have ordered 250 refrigerator cars from American Car & Foundry Co.

The G.T.R. is having 1000 steel underframe double sheath box cars, series 17,500 to 19,999 rebuilt by National Steel Car Corporation.

The G.T.R. is reported to be enquiring for prices for 3,000 box cars and 700 refrigerator cars for its Canadian lines, and 1,000 box cars and 2,000 automobile cars, for its U.S. lines.

The C.P.R. between Sept. 14 and Oct. 11, received the following rolling stock from its Angus shops:—11 vans, 1 single track steel underframe flanger, and 2 single track snow ploughs.

The G.T.R. has received 3 switching locomotives and 5 steel underframe cabooses from its Montreal shops, and has ordered 25 steel underframe cabooses from its Montreal shops, and one 160-ton steam wrecking crane from Industrial Works, Bay City, Mich.

The G.T.R. was reported recently to have asked prices for 700 refrigerator cars, 1000 automobile cars and 3000 box cars. We are officially advised that while the management is considering the ordering of rolling stock in connection with its programme of improvements for 1923, the amount has not been definitely determined.

The G.T.R. has ordered general repairs to 500 all-wood box cars, by Canadian Car & Foundry Co. They will be equipped with Camel no. 27 door fixtures, mogul ends, Murphy outside metal type XLA roofs, Miner roller side bearings, Schaefer bottom connections and Creco 4-point supports, and 250 of them will have steel side sills and Minors friction A2S draft arms, and the other 250, Bradford draft arms and gear.

Canadian Car & Foundry Co. has sold to Watson Robb & Co., 13 standard all-wood G.T.R. box cars, which have been converted into service cars. Two of them have been made into office cars, 5 into bunk cars, 2 into cook cars and 4 into dining cars. One side door of the converted cars has been boarded up, and the other side door made smaller, and hinged door applied in place of the standard box car door. Four small windows have been put in the sides of the cars, and the cars have been fitted with steel frame bunks, stoves and other accessories, and they are all lined inside with roofing paper. End doors have been built in between the posts.

The Abitibi Power and Paper Co. has received a Mogul (2-6-0) locomotive from the Montreal Locomotive Works. Following are the chief details:—

Weight on drivers	124,500 lb.
Weight on truck	118,000 lb.
Total weight	242,500 lb.
Wheel base, driving	12 ft. 10 in.
Wheel base, total engine	21 ft. 2 in.
Wheel base, total engine and tender	49 ft. 10 in.
Cylinders, diat. and stroke	19 x 26 in.
Driving wheels, diat.	66 in.
Boiler, type	Extended wagon top
Boiler pressure	180 lb.
Boiler, diat. inside	60 in.
Firebox length and width	94½ x 42½ in.
Tubes, no. and diat.	145—2 in.
Flues, no. and diat.	785—8 in.
Heating surface, flues	849 sq. ft.
Heating surface, arch tubes	119 sq. ft.
Heating surface, total	1,289 sq. ft.
Grate	28 sq. ft.
Tractive power	28,700 lb.
Factor of adhesion	4.3
Tank, type	Shoemaker
Tank capacity, water	4,500 U.S. gal.
Capacity, fuel	9 tons
Cab, type	Ventilator

Mainly About Railway People Throughout Canada.

J. W. R. Ambrose, E. M., Chief Engineer, Toronto Terminal Railways Co., won the Toronto Engineers Club's golf tournament at Mississauga Golf Club, near Toronto, recently.

George F. Ancrum, whose appointment as Assistant Treasurer, G.T.R., Montreal, was announced in our last issue, was born at Bristol, Eng., Dec. 9, 1872, and entered G.T.R. service, in June 1888, since when he has been, to 1891, junior clerk, Mechanical Department; 1891 to 1894, clerk, Treasurer's Department; 1904 to 1914, Paymaster; 1914 to 1920, chief clerk to Vice President and Treasurer; 1920 to September 1922, Assistant to Treasurer, all at Montreal.

R. B. Angus, the last of the original directors of the C.P.R., whose death was announced in our last issue, left his Montreal house to his son D. F. Angus, his house at Senneville, Que., to his son, W. F. Angus, and \$10,000 to be divided among his servants in the discretion of the executors, these being his two sons, and R. M. Patterson, son-in-law. The amount of the estate, which is left in trust for his children, has not been made public.

S. T. Blaiklock, son of M. S. Blaiklock, Engineer of Maintenance of Way, G.T.R., was married in Montreal, Oct. 11 to Miss L. M. Molson.

H. P. Borden, C.E., who died at Ottawa, Oct. 19, aged 50, after a long illness, was born in Nova Scotia, and graduated from McGill University in 1902. He was, for some time, in C.P.R. service, and subsequently with Montreal Locomotive Works. He was on the Quebec Bridge Commission staff, which was appointed for the construction of the first Quebec bridge, in 1908, and which collapsed when partly built. From 1916 to 1918, he was a member of the board of engineers for the construction of the present bridge, and from 1919 to 1921 acted as a consulting engineer for the Dominion Government, and subsequently engaged in private practice. He was a member of the Engineering Institute of Canada, and of the American Society of Civil Engineers.

G. M. Bosworth, Chairman, Canadian Pacific Steamships, Ltd., and Mrs Bosworth have been visiting Hot Springs, Va.

W. R. Davidson, who has been appointed General Superintendent, Eastern Lines, G.T.R., Montreal, was born at Eriway, Mo., Nov. 8, 1871, and entered railway service in Jan., 1890, since when he has been in July, 1901, operator, Missouri Pacific Ry., at various points; July, 1901, to Mar., 1904, dispatcher, same road, Wichita, Kan.; Mar. to Oct., 1904, Chief Dispatcher, same road, Wichita, Kan.; Oct., 1904, to Mar., 1911, Trainmaster, same road, Wichita, Kan.; Mar., 1911, to Feb., 1913, Trainmaster, G.T.R., London, Ont.; Feb., 1913, to Mar., 1916, Superintendent, G.T.R., London, Ont.; Mar., 1916, to Sept., 1917, Superintendent, G.T.R., Detroit, Mich.; Sept. 1917, to May 1, 1918, General Superintendent, Western Lines, G.T.R., Chicago, Ill.; May 1, 1918, to Mar. 1, 1920, General Superintendent, Eastern Lines, G.T.R., Montreal; Mar. 1, 1920, to Oct. 10, 1922, General Superintendent, Western Lines, G.T.R., Chicago, Ill.

G. S. Donaldson, General Agent, Chicago and Northwestern Ry., Toronto, was placed on trial at Milton, Ont., Oct. 13, charged with criminal negligence in driving an automobile near Oakville, Ont., in July, when the car overturned, resulting in the owner's death. It transpired in evidence, that he has suffered considerably from loss of memory since his return from active service, that he was not accustomed to driving a car, and that he remembered nothing of the matter from the time he got into the car at Toronto, until his return to consciousness in a hospital some 10 days later. The late owner's parents and widow pleaded for leniency. He was found guilty of manslaughter and sentenced to one month imprisonment.

Knowlson Elliott, who has been appointed District Freight Agent, C.P.R., Edmonton, Dunvegan and British Columbia Ry., and Central Canada Ry., Edmonton, Alta., was born at Gorrie, Ont., June 26, 1884, and entered railway service in Jan., 1903, since when he has been to Oct., 1905, car checker, Michigan Central Rd., Jackson, Mich.; Nov., 1905, to Jan., 1909, clerk, Local Freight Department, C.P.R., Winnipeg; Jan. to Oct., 1909, rate clerk, General Freight Department, C.P.R., Winnipeg; Oct., 1909, to June, 1911, Soliciting Freight Agent, Minneapolis, St. Paul and Sault Ste. Marie Rys., Winnipeg; June, 1911, to July, 1912, Soliciting Freight Agent, C.P.R., Winnipeg; July 1 to Dec. 21, 1912, chief clerk, Division Freight Agent, C.P.R., Winnipeg; Jan. 1, 1913, to July 1, 1914, chief clerk to Assistant Freight Traffic Manager and General Freight Agent, C.P.R., Winnipeg; July 1, 1914, to Sept. 15, 1922, City Freight Agent, C.P.R., Calgary, Alta.

J. M. R. Fairbairn, D.Sc., Chief Engineer, C.P.R., is making an official trip to the Pacific coast.

Robert H. Fish, who has been appointed General Superintendent, Ontario Lines, G.T.R., Toronto, was born at Oakville, Ont., in 1871, and entered G.T.R. service

in 1890, since when he has been, to 1900, locomotive fireman; 1900 to Oct. 1, 1908, locomotive man; Oct. 1, 1908, to Jan. 23, 1913, Road Foreman of Locomotives, London, Ont.; Jan. 23, 1913, to Nov. 14, 1916, Trainmaster, Districts 20 and 21, Ontario Lines, Brantford, Ont.; Nov. 14, 1916 to March 1, 1920, Superintendent, Stratford Division, Ontario Lines, Stratford, Ont.; Mar. 1, 1920, to Oct. 10, 1922, General Superintendent, Eastern Lines, G.T.R., Montreal.

Sir Joseph Flavelle, then Chairman of the Board, G.T.R., Lady Flavelle, W. D. Robb, Vice President and General Manager, G.T.R., and Mrs. Robb, spent a week end, early in October, with W. H. Miner, railway supply manufacturer, Chicago, at his Heart's Delight Farm, Chazy, N.Y.

Edgar Fleming, whose appointment as Assistant to Treasurer, G.T.R. Co., Montreal, was announced in our last issue, was born in London, Eng., May 17, 1884, and entered G.T.R. service July 2, 1900, since when he has been, to April, 1903, office boy; April, 1903, to March, 1913, clerk;

George A. Walton.

General Passenger Agent, Eastern Lines, C.P.R.

By an unfortunate mistake an illustration made from a photograph of C. W. Johnston, Assistant General Passenger Agent, G.T.R., appeared in Canadian Railway and Marine World for October, with the caption G. A. Walton, General Passenger Agent, Eastern Lines, C.P.R., underneath it. The publication of Mr. Walton's photograph above corrects the error.

March, 1913, to July, 1918, Paymaster; July, 1918, to Dec., 1920, Secretary to Vice President and Treasurer; Dec., 1920, to Sept. 1, 1922, chief clerk to Vice President and Treasurer, all at Montreal.

William Edgar Foster, K.C., formerly Solicitor for Ontario, G.T.R., Montreal, died at Belleville, Ont., Oct. 11, after a long illness. He was born there, June 27, 1866, and entered the G.T.R. Legal Department there, Sept. 30, 1884, as clerk and student under John Bell, K.C., then General Counsel, later becoming his assistant, and on Mr. Bell's death in 1905 he was appointed Assistant to General Solicitor, G.T.R., Montreal, on Jan. 1, 1910, Assistant Solicitor for Ontario, and on July 15, 1913, Solicitor for Ontario,

which position he held until his retirement on pension on account of ill health, Dec. 31, 1921. The funeral at Belleville, Oct. 13, was attended by D. E. Galloway, Assistant Vice President, W. C. Chisholm, General Solicitor; J. P. Pratt, Assistant General Solicitor, and other G.T.R. legal officials.

D. E. Galloway, who has been appointed Assistant Vice President, G.T.R., Montreal, was born at Crief, Ont., Aug. 31, 1882, and entered G.T.R. service, Feb. 1, 1901, since when he has been, to Nov., 1901, in Claims Department, Hamilton, Ont.; Nov., 1901, to Sept. 21, 1904, in Claims Department and General Freight Department, Montreal; Sept. 21, 1904, to Jan. 7, 1910, secretary to Second Vice President and General Manager, G.T.R., Montreal; Jan. 7, 1910, to Oct. 2, 1911, secretary to President, G.T.R. and G.T.P.R., Montreal; Oct. 1911, to Oct. 1922, Assistant to President, G.T.R., Montreal.

Gerald Hamilton Griffin, whose appointment as General Agent, Passenger Department, Great Northern Ry., C.P.R., Cleveland, Ohio, was announced in our last issue, was born at Boston, Mass., Aug. 2, 1877, and entered C.P.R. service in April 1902, since when he has been, to June, 1904, clerk, Assistant Traffic Manager's office, New York; June, 1904 to Jan., 1906, Assistant Ticket Agent, New York; Jan. 1906 to Sept. 1908, Travelling Passenger Agent, New York; Sept. 1908 to Jan. 1916, City Passenger Agent, Buffalo, N.Y.; Jan. 1916 to May 1917, City Ticket Agent, Chicago, Ill.; May, 1917 to July, 1918, Travelling Passenger Agent, St. Louis, Mo.; July, 1918 to Sept., 1922, City Passenger Agent St. Louis, Mo.

D. B. Hanna, ex-President, Canadian National Rys., and Robert Hobson, President, of the Steel Co. of Canada, another of the ex-directors, are members of a syndicate headed by Lloyd Harris, of Brantford, Ont., which has "struck oil" near Shreveport, Louisiana. The first two wells bored were not successful, but a third one is said to be good for several thousand barrels a day.

W. R. Harley, who has been appointed Secretary, Minneapolis, St. Paul and Sault Ste. Marie Ry., Minneapolis, Minn., was born at Glasgow, Scotland. He commenced railway service with the Canadian Ry., there, and remained with that company for three years, before going to the U.S., since when he has been, 1884 to 1886, stenographer, General Ticket Department, Chicago and Northwestern Ry., Chicago, Ill.; 1886 to 1909, successively, stenographer, cashier and chief clerk, Wisconsin Central Ry., 1909, following the taking over of that railway by the M.S.P.&S.S.M.Ry., to 1918 District Passenger Agent, Minneapolis, St. Paul and Sault Ste. Marie Ry., Des Moines, Iowa; 1918 to 1920, in office of Federal Manager, U.S. Railways Administration, and from 1920 to the date of his present appointment, chief clerk to President and Assistant Secretary, M.S.P.&S.S.M.Ry.

Sir Arthur Harris, formerly of the C.P.R. Freight Department, and Lady Harris, have left Montreal to spend the winter in Bermuda.

W. H. Hobbs, who for the past 8 years, and until H. G. Kelley's resignation recently was the G.T.R. President's secretary, is acting in a similar capacity for Vice President and General Manager Robb. During the period following the abolition of the London board, while G.T.R. affairs were administered by the board appointed by the Dominion Government, of which Sir Joseph Flavelle was Presi-

dent, Mr. Hobbs acted as Assistant Secretary of the company, performing such corporate duties as arose from time to time. He also acted as secretary for Sir Henry Thornton, the newly appointed President of the Canadian National Ry. during the latter's visit to America recently.

W. T. Huggan, who has retired from the position of District Passenger Agent, Island Division, Canadian National Ry., Charlottetown, P.E.I., was born at Halifax, N.S., May 24, 1851, and served for several years, to Sept. 1913, as Accountant and Auditor, and from Sept. 1913, as Divisional Accountant and District Passenger Agent, Prince Edward Island Ry., latterly, Island Division, Canadian National Ry., Charlottetown, P.E.I.

Hanna, President, Canadian National Ry., for several years up to Mr. Hanna's resignation, recently, has resigned from the C.N.R. service, to enter that of the Canadian Northern Prairie Lands Co., of which Mr. Hanna is President, and will go to Winnipeg shortly as the company's western representative. Officials and other members of the C.N.R. head office staff in Toronto gave him a gold watch and chain on Oct. 21.

George Arthur Staples, who has been appointed City Freight Agent, C.P.R., Calgary, Alta., was born at Durham, Ont., Feb. 28, 1882, and entered C.P.R. service, Mar. 1, 1901, since when he has been, to Aug., 1902, clerk, North Bay, Ont.; Aug. to Dec., 1902, agent and operator, Chapleau, Ont.; Dec. 1902, to Mar. 1903, operator, Winnipeg; Mar., 1903, to Aug., 1907, Freight Agent, Cranbrook, B.C.; Nov., 1907, to Aug., 1911, cashier and chief clerk, Nelson, B.C.; Aug. 1911, to Jan. 31, 1914, Travelling Freight Agent, Nelson, B.C.; Jan. 31, 1914, to Sept. 15, 1922, City Freight Agent, Vancouver, B.C.

Master of Railways and Canals, for a short time in 1921, prior to the defeat of the Meighen Government, died in the Royal Victoria Hospital, Montreal, Oct. 7, of pernicious anaemia, after being there for nearly four months. Prior to entering the House of Commons as member for Lanark, he was, for 14 years, High Chief Ranger of the Canadian Order of Foresters, and was Mayor of Perth for 1900-01 and 1903-04. He was a member of the legal firm of Stewart, Hope & O'Donnell, Perth, Ont., and was largely interested in several industrial concerns.

J. H. Valleau, Secretary-Treasurer, Thousand Islands Ry. and Oshawa Ry., Cananquo, Ont., was married, there, Oct. 15, to Miss Portia Mullen.

Lady and Miss Van Horne returned to Montreal at the end of October, after spending the summer at Ministers Island, St. Andrews, N.B.

John Benjamin Windross, who has been appointed Resident Manager, Prince Edward Hotel, Canadian National Ry., Brandon, Man., was born at Whitehaven, Eng., July 5, 1873, and has been at various times from Aug., 1907, to Feb., 1921, Assistant Manager, Chateau Louise, C.P.R., Lake Louise, Alta.; Assistant Manager, Chateau Frontenac, C.P.R., Quebec, Que.; acting Manager, Chateau Frontenac, C.P.R., Quebec, Que.; Manager, Empress Hotel, C.P.R., Victoria, B.C.; Assistant Manager, Davenport Hotel, Spokane, Wash.; Assistant Manager, Hotel del Coronado, California; from Feb. to Sept., 1921, Manager, Macdonald Hotel, Canadian National Ry., Edmonton, Alta.; from Sept., 1921, relieving Manager of Hotels, Canadian National Ry., and latterly of the Minaki Inn, Minaki, Ont.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Abitibi Transportation and Navigation Co.—We were advised on Oct. 6 that grading on the 16-mile standard gauge logging railway from Iroquois Falls to Hughes, Ont., was 95% completed; that the trestle work was 75% completed, and that 50% of the tracklaying and ballasting had been done. Grenville Crushed Rock Co. is the general contractor.

Belze Paper Co.—We are officially advised that the Belze Paper Co. has nearly completed an industrial railway connecting Metabetchouan Lake and Bostonnais River, near Shawinigan Falls, Que. Construction on the line, which is 4.5 miles long, was started in June, and is expected to be fully completed in November. The line, will, it is expected, be put into operation next spring, and will be used entirely for transferring logs from the lake to the river.

Burrard Inlet Tunnel and Bridge Co.—A tentative contract is reported to have been signed between the Burrard Inlet Tunnel and Bridge Co., and the Northern Construction Co. for the construction of a bridge across the second narrows of Burrard Inlet, Vancouver, B.C., at an estimated cost of \$1,250,000. Some time ago negotiations were being carried on with a Pittsburgh, Pa. construction company which offered to erect a bridge according to a plan submitted for approximately \$1,242,000, but this price was later increased to \$1,400,000. Considerable discussions followed and it was claimed that local contractors were well able to do the work. As a result the present tentative contract has been entered into. The Northern Construction Co. will it is reported, proceed aided by A. D. Swan, the Tunnel and Bridge Co.'s engineer, to secure the necessary data, and to complete the plans for the bridge. The necessary bylaws will be prepared for the confirmation of the contract and the approval of the plan so that they can be submitted to the voters of the several municipalities interested, which form the company. A press report states that J. W. Stewart and Co., Vancouver, are interested with the Northern Construction Co. in the contract.

Cowichan Bay Ry.—We are officially advised that a map has been filed with the British Columbia Railways Department showing the proposed route of this projected railway on Vancouver Island. The construction of two lines is projected. The first from Deerholm, near Duncan, to Cowichan Bay, about 9 miles, and the second is from the Canadian National Ry. line at the east end of Cowichan Bay, southerly and westerly along the west shore of the lake to Bear Lake, about 9 miles. A press report states that surveys have been made under the direction of D. O. Lewis, formerly engineer in charge of construction, Canadian Northern Ry. Vancouver Island line. (Oct. gen. 518.)

Duluth to Fort William and Port Arthur.—Recent press reports gave a good deal of publicity to an alleged project for the construction of a railway from Duluth, Minn., to Fort William and Port Arthur, Ont., by the Duluth and Ontario Ry. Co., which was stated to have been incorporated in Minnesota, with J. W. Bayley as President. Mr. Bayley had been President of the Duluth and Northern Ry. Co., a company having 102.30 miles of track, part of which extended from Knife River, on the Duluth and Iron Range Ry., towards the Canadian boundary. The line was abandoned some years ago and its sale was judicially authorized. The purchaser

at the sale is reported to have been Robert Waldron, Duluth, and it was on the basis of this line that the Duluth and Ontario Ry. was to be constructed. We are advised that while there has been considerable talk in Duluth about the project, it is not expected that anything will come of it, and that it is anticipated that the rails on the D. and N. Ry. will be taken up early in 1923.

Esquimalt and Nanaimo Ry.—The first section of the new Johnson St. bridge, Victoria, B.C., was put into use, Sept. 30, when a freight train was run over it for testing, and the operation of regular passenger and freight trains was begun Oct. 2. The portion in use is the highway section, temporary tracks having been laid thereon, and this section will be used exclusively by the railway until the railway section of the bridge is completed, which is expected to be in May, 1923. The old railway bridge, built by the E. and N. Ry. Co. will now be removed to enable the city, which is building the new railway and general traffic bridge, to complete the main trunion pier which will carry the railway bascule span, which is under construction. This span it is expected be started early in 1923.

Keewatin Lumber Co.—We are officially advised that in connection with the erection of its pulp mill at Kenora, Ont., the Keewatin Lumber Co. has built a spur line for about a mile from the C.P.R. yards to the site. The company, which is controlled by E. W. Backus, of Minneapolis, is building its mill under its contract with the Ontario Government respecting the English River lumber limits, and for developing the Lake of the Woods timber limits, which it has also acquired. In connection with the development of the English River limits the company is under agreement to build a railway of approximately 80 miles. We are officially advised that no construction will be done on this line this year.

Pere Marquette Ry.—We are officially advised in connection with the Board of Railway Commissioners' recent approval of location and detail plans of a station building at Sarnia, Ont., that it is to be built on the north side of Clifford St., and east of the P.M.R. tracks. It is to be a one story building, 33 x 144 ft., with full size basement. The main floor will contain waiting room 22 ft. 7 in. x 19 1-3 ft., with women's and men's lavatories; ticket office 15 x 19 1/2 ft. with agent's office, 15 ft. 10 in. x 21 ft. at the rear; baggage room 13 x 23 1-3 ft.; express room, 20 x 23 ft. 4 in.; government bonded room, 14 1/2 ft. x 23 1-3 ft. and freight room 48 1/2 ft. x 29 ft. 10 in. There will be a hallway from the rear of the government bonded room to the agent's office and the stairs leading to the basement will run off this hallway at the baggage room. Tenders for the construction will be asked at an early date. (Oct. gen. 518.)

Quebec and Chibougamou Ry.—A press report states that representatives of the company have had several interviews with members of the Quebec Government with a view to securing additional subsidies for the construction of the proposed Quebec Railway. The Quebec Legislature has already voted a land subsidy for the construction of a railway in a portion of the territory through which the company proposes to build its line from Quebec to the north of Lake St. John, and then on to Lake Chibougamou. The present application, it is stated, is for a cash subsidy of \$8,000 a mile, in addition to

the land subsidy available. It is stated that the company, which is being financed by British capital, has spent \$250,000 in explorations and surveys. (Aug. gen. 410.)

Vancouver Harbour Ry.—The Vancouver Harbour Commission has, we are advised, let contracts for the construction of a single track railway from the Dominion Government wharf to the site of the new Ballantyne pier at Vancouver. The contract for the embankment, which includes filling and patching up the irregular harbor frontage necessary to give the track a permanent foundation, was let to Grant Smith and Co. and McDonnell; that for the light grading, the supply of ties, track laying and ballasting to the Ryan Construction Co.; and that for the supply of rails, switchstands, etc., to Leith, Murray and Co., all of Vancouver. The work is to be done on with at once, so as to be ready for use in connection with the completion of the Ballantyne pier. The railway will extend from the Great Northern Ry. interchange tracks to the Ballantyne pier. The construction of the line, at an estimated cost of \$85,000, was authorized some time ago by the Board of Railway Commissioners, which also granted running rights over the G.N.R. tracks to the Harbor Commission, but the starting of work was held over, pending the change in the personnel of the harbor commission which was made in September.

We are further advised that the total track work involved on the Burrard Inlet section of the railway is about 5,000 ft., but its completion will give the Commissioners control of approximately 65 miles of terminal railway.

Wigwam Pulp and Paper Co.—We are officially advised that the C.P.R. is negotiating with the Great Northern Ry. U.S.A., with respect to the construction of a spur track to serve the plant proposed to be erected by the Wigwam Pulp and Paper Co., near Elko, B.C.

Grain in Store at Elevators.

Returns received by the Dominion Bureau of Statistics, Internal Trade Branch, show that for the week ended Oct. 13, the grain in store made a net increase of 14,751,316 bushels, or 10% of the previous week. In the western country elevators there was an increase of 8,334,480 bush. The receipts and shipments for the week ended Oct. 6, were, receipts 26,880,550 bush.; shipments 18,544,879. In interior terminal elevators there was an increase of 127,119 bush. The receipts were 504,332 bush. and the shipments by rail were 218,566, and by ship 158,667. The public and private terminal elevators at Fort William and Port Arthur showed a net increase of 4,092,991 bush. The receipts at Fort Fort William from Sept. 1 to Oct. 13, were 70,920,522 bush., and at Vancouver, 739,082. The Winnipeg private terminal elevators showed an increase of 27,424 bush., and at public elevators in the east, there was a net increase of 1,317,966 bush. The total receipts were 5,919,794 bush. by ship, and 1,340,425 by rail. The U.S. grain in store at eastern public elevators was 9,018,345 bush., compared with 8,493,221 for the same period in 1921. The U.S. lake ports, Buffalo and Duluth, showed a net increase of 823,562 bush., and U.S. Atlantic seaboard ports showed a net decrease of 22,231 bush.

Canadian Pacific and Canadian National Railways' August Earnings and Expenses.

C.P.R. gross earnings for August were \$15,918,049, a decrease from Aug. 1921 of \$1,146,216; operating expenses were \$12,971,613, a decrease from Aug. 1921 of \$1,516,513, and net earnings were \$2,946,436, or \$370,297 greater than those of Aug. 1921. These figures show the best monthly result the company has secured for some time. While gross earnings were considerably smaller than for Aug. 1921, this was only to be expected, in view of the lower rates prevailing. The gross was about \$1,500,000 greater than that for any preceding month in 1922. The August operating expenses, in relation to the gross earnings secured, indicate that the company was able, during the month, to bring about a resumption of the large reductions in operating expense which were prevalent early in the year, and which accompanied the large decreases in revenues compared with those of the early months of 1921.

The gross earnings of \$15,918,049 were the greatest monthly gross earnings since Nov. 1921, and the figure has been exceeded only four times in any month since 1920, when business was very active and rates at their high point. Only in two instances in the company's history have there been higher gross earnings in August, these exceptions being in 1920 and 1921. The combination of the relatively large gross earnings with operating expenses, which show a substantial reduction from those of Aug. 1921, produced a gratifying increase of net earnings over those of August, 1921. These net earnings are the best since those of Nov. 1921 with the single exception of those for March 1922.

A short analysis of the results for the first 8 months of 1922 shows that the rate decreases in effect during the period have more than offset what improvement in business and traffic conditions has taken place throughout the year, so far as the company's gross earnings for the period are concerned, and also shows that, for the 8 month period, the reduction in unit railway operating costs has not been sufficient to wipe out the loss of revenue occasioned by rate reductions. Nobody who has followed the trend of railway rates, wages, and material costs, could logically expect that the expense reductions would cancel the rate reductions, and in view of the relationships which have to and do obtain, the results secured by the C.P.R. during the first 8 months of 1922 cannot be viewed as other than surprisingly good. Gross earnings for the period were \$106,677,243 a decrease of \$10,215,623 from those for the first 8 months of 1921; operating expenses were \$91,954,826, a reduction of \$7,357,417, and the net earnings for the period, \$14,722,416, are \$2,858,205 smaller than net earnings for the first 8 months of 1921.

The Canadian National Ry. (Canadian Northern, Canadian Government and Grand Trunk Pacific) had gross earnings for August of \$9,569,779, a decrease of \$805,371 from Aug. 1921; and operating expenses were \$10,399,616, an increase over Aug. 1921 of \$7,361. The result of these changes was that the operating loss for Aug. 1922 was \$812,732 greater than for Aug. 1921, when it was but \$17,195. It was evident that the rate reductions which have taken place affected the Canadian National Railways in the same way as the C.P.R.; that is, they have more than wiped out any benefit secured by

either railway by reason of the slight increase in traffic offering. Analysis of Canadian National figures covering the year to the end of August, however, shows a different state of affairs than the August figures, taken by themselves, indicate. The large reduction in operating expenses which has been accomplished has made the net return for the first 8 months of the year much more favorable than in the corresponding period of 1921, and the figures for August alone, when the railways were doubtless making large expenditures, demanded by preparations for the heavy autumn traffic, cannot be taken as any indication of general conditions.

While the Canadian National Ry. has accomplished a large improvement in their net returns for the first 8 months of the year, it must be borne in mind that the comparatively poor results of former years gave them large opportunity to secure these improvements; an opportunity, or a latitude, which the C.P.R., on account of its former high standard of earnings, has not had. The decrease in C.P.R. net earnings for the first 8 months of this year, compared with the first 8 months of 1921, is for that reason a better indication of the railway industry's state than are the Canadian National Ry. results. They indicate that the railways have had to face conditions so far in 1922 which have been a little more difficult than in 1921; and it is probable that, if these conditions are to be made to their advantage, a complete application of the lower grain and commodity rates, in conjunction with a complete application of the latest wage reductions, must remain to be seen. There is one thing certain, these changes will not have the effect of increasing the railways' net earnings by an unduly large amount. It is probable that their net effect will be the production of a tendency for lower net earnings. On the other hand, though, traffic is becoming much heavier, and with a large crop now being moved, it may be that results in September, October and November will exceed all expectations, and it may be hoped, at any rate, that the large traffic now being moved will contribute to net earnings which will allow the C.P.R. as good a net as secured last year, and which will allow the Canadian National to make real progress toward the accomplishment of earning their operating expenses for a complete year.

United States Railways' Financial Results.

Results secured by the U.S. Class 1 railways in August were not nearly so favorable as in July or earlier months in this year, and were, in fact, the least favorable since May, 1921. The net operating income for the class 1 roads as a whole was \$52,579,690 for August, representative of an annual return of but 2.65% compared with \$90,160,200 for Aug. 1921, which was representative of an annual return on tentative valuation of 4.54%. To earn 5%, which the Interstate Commerce Commission has held that the roads are entitled to, they should have earned \$61,689,000 more than they did in Aug. 1922.

The eastern railways had a net operating income in August of \$14,929,990 compared with \$35,402,300 in Aug. 1921. The western railways had a net operating

income of \$33,031,700, compared with \$50,335,500 in Aug. 1921. The southern railways had a net operating income of \$4,618,000 compared with \$4,422,000 in Aug., 1921.

Operating revenues for class 1 roads as a whole were \$473,877,000, a decrease of 6.3% from Aug. 1921. Operating expenses were \$387,150,000, an increase of 1.3%. During the first 8 months of 1922, net operating income for the roads as a whole was \$471,183,600, compared with \$306,063,600 during the first 8 months of 1921. Operating revenues for the 8 months totalled \$3,528,502,000, a decrease of 3.2% from the first 8 months of 1921, while operating expenses totalled \$2,806,600, were 9.7% less than in the first 8 months of 1921.

The comparatively disappointing results secured in August are due in great part to the rate reduction of 10% which took effect on July 1, and the coal miners' and shopmen's strikes have had an adverse effect on both railway revenue and the U.S. railways are now expending traffic to the limit of their equipment and facilities, however, and improved earnings for the autumn months are in prospect.

Traffic Orders by Board of Railway Commissioners.

Freight Rates on Nova Scotia Lumber.

When the Board sat at Bridgewater, N. S., in Sept., 1921, it heard applications for reductions in local and export freight rates on lumber from Bridgewater and stations on the Canadian National Ry. Bridgewater Division. As the Chief Commissioner and his colleagues at the hearing could not see much in the case, other than that the people naturally wanted cheaper rates, and feeling that sometime in the then near future there would be a reduction in lumber rates, the matter was allowed to stand. Early this summer the rate question having in a large way been settled for some time at least, the evidence and questions at issue were submitted to the Board's Chief Traffic Officer, who reported on them, following which the Chief Commissioner decided, the Assistant Chief Commissioner concurring, that as the rates in both cases are no higher than those generally in effect in Canada, and in many cases much less, the Board would not be justified in making a change, and both applications were therefore dismissed.

Freight Rates on Nova Scotia Fish.

32,989. Oct. 16. Re complaint of Zwicker & Co., Lunenburg, N. S., against alleged excessive freight rate on fish from Lunenburg to Halifax and Yarmouth, N.S. Upon hearing the complaint at Bridgewater, N. S. Sept. 29, 1921, the C.N.R. being represented at the hearing, and Mr. Zwicker appearing in person, and what was alleged, the Board made order that the complaint be dismissed.

Butter Freight Rates.

32,993. Oct. 16. Re complaint of National Dairy Council of Canada, on behalf of Manufacturers' Section of the Alberta Dairymen's Association, against freight rates on butter east and west of Calgary and Edmonton. Upon hearing the complaint at Ottawa, Oct. 23, 1921, in the presence of counsel for the complainant, and the Canadian Pacific and the Canadian National Railways, and what was alleged—the board orders that the complaint be dismissed.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Eastern Ry.—E. B. BARBER heretofore Assistant to President, has been appointed Comptroller, vice A. A. Pinkey, resigned, and his former position has been abolished. Office, Sault Ste. Marie, Ont.

Canadian National Ry.—MAJOR GRAHAM A. BELL, C.M.G., Deputy Minister of Railways and Canals, has also been appointed Vice President and acting Chairman of the Board of Directors of Canadian Northern Ry. Co., and Canadian National Ry. Co. and also Vice President of Finance, succeeding A. J. Mitchell, resigned, in the latter position. He has also been appointed to similar positions in the Grand Trunk Ry. Co.

vice Jas. Clarke, deceased.

R. B. GORDON, heretofore acting Terminal Passenger Agent, Winnipeg, has been appointed Travelling Passenger Agent, there, vice P. A. Rooney.

D. B. HANNA'S resignation as a director and as President, Canadian Northern Ry. Co., and Canadian National Ry., was accepted on Oct. 10.

S. J. HUNGERFORD, heretofore Vice President, Operation and Maintenance, has been appointed ranking Vice President, with the title of Vice President and General Manager, and will exercise the authority and perform the duties exercised and performed hitherto by the President, until Sir Henry Thornton takes up the duties of that office, his jurisdiction including the Canadian Northern Ry. system, the Canadian Government Ry., and the Grand Trunk Pacific Ry. Office, Toronto.

J. A. MCGINNIS, heretofore section

and Grand Trunk Ry. Directorates' Reorganization.

Canadian Pacific Ry.—E. E. BECK, heretofore Assistant Manager, Hotel Vancouver, Vancouver, B.C., has been appointed Manager, vice H. B. Jackson, deceased.

G. S. BEER, heretofore City Passenger Agent, Toronto, has been appointed Assistant District Passenger Agent, Ontario District. Office, Toronto.

K. ELLIOTT, heretofore City Freight Agent, Calgary, Alta., has been appointed District Freight Agent, C.P.R., Edmonton, Dunvegan and British Columbia Ry., and Central Canada Ry., Edmonton, Alta., vice J. H. Fox, appointed District Freight Agent, C.P.R., Vancouver, B.C.

J. H. FOX, heretofore District Freight Agent, Edmonton, Alta., has been appointed District Freight Agent, Vancouver, B.C., vice A. J. Cambie, on leave of absence on account of ill health.

D. E. Galloway,
Assistant Vice President, Grand Trunk Railway.

C. G. Bowker,
Operating Manager, Lines east of Detroit and St. Clair Rivers, Grand Trunk Railway.

W. R. Davidson,
General Superintendent, Eastern Lines, Grand Trunk Railway.

E. H. BROCK, heretofore Assistant Roadmaster, Titchfield, Sask., has been appointed Roadmaster, Melville, Sask., vice H. M. Wilson assigned to other duties.

J. A. M. BROWN, heretofore Roadmaster, Drumheller, Alta., has been appointed Roadmaster, Battle River, Alliance and Scona Subdivisions, Edmonton Division, Alberta District, vice J. Eagleson transferred to Hanna, Alta. Office, Camrose, Alta.

P. W. CLARKIN, Division Freight Agent, Island Division, Charlottetown, P.E.I., has also been appointed District Passenger Agent, there, vice W. T. Huggan, retired.

J. EAGLESON heretofore Roadmaster, Battle River, Alliance and Scona Subdivisions, Edmonton Division, Alberta District, Big Valley, Alta., has been appointed Roadmaster at Hanna, Alta.

T. FRASER, heretofore Night Locomotive Foreman, Parent, Que., has been appointed Locomotive Foreman, there,

foreman, Brandon, Man., has been appointed Assistant Roadmaster, Titchfield, Sask., vice E. H. Brock transferred to Melville, Sask.

L. STEVENS, heretofore hostler, has been appointed Night Foreman, Parent, Que., vice T. Fraser appointed Locomotive Foreman there.

SIR HENRY W. THORNTON, K.B.E., heretofore General Manager and Chief Engineer, Great Eastern Ry. of England, has been appointed, by the Dominion Government, as President and Chairman of the Boards of Directors, Canadian Northern Ry. Co., Canadian National Ry. Co., and Grand Trunk Ry. Co.

A. J. WALSH, Roadmaster, Regina, Sask., has resigned.

J. B. WINDEROSS, heretofore Manager, Minaki Inn, Ont., has been appointed Resident Manager, Prince Edward Hotel, Brandon, Man., vice G. R. Raymond.

Full particulars of the appointments of new directors are given on another page under, "The Canadian Northern Ry.

H. C. JAMES, heretofore on the port staff, Quebec, Que., and St. John, N.B., has been appointed Travelling Passenger Agent, Kansas City, Mo., vice A. D. MacDonald, appointed City Passenger Agent, St. Louis, Mo.

W. A. LOWE, heretofore Travelling Freight Agent, Manitoba District, Winnipeg, has been appointed District Freight Agent, Fort William, Ont., vice J. A. Weegar, assigned to other duties.

A. D. MACDONALD, heretofore Travelling Passenger Agent, Kansas City, Mo., has been appointed City Passenger Agent, St. Louis, Mo., vice G. H. Griffin, whose appointment as General Agent, Passenger Department, Cleveland, Ohio, was announced in our last issue.

T. C. ROBINSON, heretofore chief clerk to Division Freight Agent, Manitoba District, vice W. A. Lowe, appointed District Freight Agent, Fort William, Ont.

G. A. STAPLES, heretofore City Freight Agent, Vancouver, B.C., has been

appointed City Freight Agent, Calgary, Alta., vice K. Elliott, appointed District Freight Agent, C.P.R., Edmonton, Dunvegan British Columbia Ry., and Central Canada Ry., Edmonton, Alta.

Central Canada Ry.—See Canadian Pacific Ry.

Edmonton, Dunvegan and British Columbia Ry.—See Canadian Pacific Ry.

Grand Trunk Ry.—MAJOR GRAHAM A. BELL, C.M.G., Deputy Minister of Railways and Canals, has also been appointed Vice President, acting Chairman Board of Directors, and Vice President, G.T.R. Co., succeeding in the latter position, Frank Scott, retired. He has also been appointed to similar positions in the Canadian Northern Ry. Co., and the Canadian National Ry. Co.

C. G. BOWKER, heretofore General Superintendent, Ontario Lines, Toronto, has been appointed Operating Manager, lines east of Detroit and St. Clair Rivers, and performs the duties heretofore performed by the Vice President in charge of Operation. Office, Montreal.

W. R. DAVIDSON, heretofore General Superintendent, Western Lines, Chicago, Ill., has been appointed General Superintendent, Eastern Lines, vice R. H. Fish, appointed General Superintendent, Ontario Lines, Toronto. Office, Montreal.

R. H. FISH, heretofore General Superintendent, Eastern Lines, Montreal, has been appointed General Superintendent, Ontario Lines, vice C. G. Bowker, appointed Operating Manager, Montreal, Office, Toronto.

D. E. GALLOWAY, heretofore Assistant to President, has been appointed Assistant Vice President. Office, Montreal.

G. C. JONES, whose position, as Assistant to President, has been abolished, will close his office in Toronto on Oct. 31, having been attached to the Vice President and General Manager's office at Montreal, to perform such special work as may be assigned to him by that officer.

T. W. R. McRAE is Chief Claims Agent, reporting to the General Solicitor, Montreal. His name was wrongly mentioned in our last issue, as W. R. McRae.

C. MANNING, heretofore Assistant to Vice President, Transportation, Construction and Maintenance, has been appointed Assistant Operating Manager, lines east of Detroit and St. Clair Rivers. Office, Montreal.

SIR HENRY W. THORNTON, K.B.E., heretofore General Manager and Chief Engineer, Great Eastern Ry. of England, has been appointed by the Dominion Government as President, and Chairman of the Board of Directors, G.T.R. Co., as well as of the Canadian Northern Ry. Co., and the Canadian National Ry. Co.

Pere Marquette Ry.—H. McLAUGHLIN heretofore division foreman, St. Thomas, Ont., has been appointed Supervisor of Track, Canadian Division, vice H. Morris, deceased. Office, St. Thomas, Ont.

Railway Accidents Throughout Canada.—The total number of railway accidents reported to the Board of Railway Commissioners, during September, was 268, resulting in 10 employees and 16 others being killed, and 56 passengers, 205 employees and 52 others being injured. Under "others" are included persons killed, and 33 injured, in 23 crossing accidents. Of these accidents, automobiles were concerned in 15, resulting in 6 persons being killed and 23 injured; other vehicles were concerned in 6, and pedestrians in 2. In 18 cases, the crossings were unprotected, in 4, they were protected by bells, and in 1, by gates.

Railway Finance, Meetings, Etc.

Algoma Eastern Ry.—A press report states that the A.E.R. Co., a subsidiary of the Lake Superior Corporation, has sold some 500,000 acres of timber lands for \$1,300,000. The railway company is stated not to have been in a position to develop the lands, and as they were an unproductive asset, it was decided to sell them. The purchasers will, it is stated, erect a pulp and paper mill on the property, which is adjacent to the railway company's line.

Grand Trunk Pacific Ry. Co.—A London, Eng., cablegram, states that representatives of holders of the G.T.P.Ry. Co's 4½ debenture stock have had an interview with members of the Dominion Government who were visiting London on official business, as to the position of this stock. It was quoted on the London market, Oct. 4, at 47½, an advance of 8 points in two days, and on Oct. 6, a further advance to 50 was quoted on the market.

H. W. Brodie.

Assistant Passenger Traffic Manager, Eastern Lines, Canadian Pacific Railway.

The Dominion Government has, it is stated, completed arrangements for the payment through the Canadian National Ry., from Nov. 1, onward, of interest on the G.T. Pacific Branch Lines Railway bonds, guaranteed by Saskatchewan and Alberta. About 1000 miles of branch lines were built under the guarantee, Saskatchewan guaranteeing \$11,310,026 of 4½ first mortgage bonds, and \$1,881,792 of 4½ terminal bonds, and Alberta \$3,584,113 of 4½ bonds. Interest was paid by the G.T.P.Ry.Co. on these bonds until the lines were taken over by the Minister of Railways as Receiver. The provinces, under the guarantee, subsequently paid the interest, being recompensed by the Dominion Government. Two payments are reported to be due, and under the terms of the guarantee, upon a third default the provinces could take possession of the lines. It was stated that the interest would be paid on Nov. 1, and the provinces relieved of

all further liability.

The Interprovincial & James Bay Ry. and the Canadian Pacific Ry. Cos. will apply to the Board of Railway Commissioners on Nov. 21, for a recommendation to the Governor in council, for the sanction of an agreement between the C.P.R. Co. and the Interprovincial & James Bay Ry. Co., leasing to the C.P.R. the I. & J. B. Ry. Co's railway and undertaking for 99 years, dating from July 1, 1922.

Lake Superior Corporation.—The annual meeting of the shareholders of this corporation, which controls the Algoma Central & Hudson Bay Ry., and the Algoma Eastern Ry., in addition to steel works and other industrial concerns, was held at Camden, N.J., Oct. 5. The following are the officers and directors for the current year: President, W. S. Cunningham; Vice Presidents, H. Coppel, W. C. Franz, and James Harrison; Secretary, A. Taylor; Treasurer, J. Hawson; other directors, S. Mason, H. Gibson, T. D. Wood, J. S. Dale, R. Home Smith, H. I. Underhill, P. McOwen, H. C. Coleman, C. M. Brown, and F. G. Colby.

Minneapolis, St. Paul & Sault Ste. Marie Ry. Co.—A press report states that the directors have decided that no further dividends payable in 1922 will be declared out of surplus until the appeal of two preferred stockholders in the suit over the question of the rights of preferred and common stockholders has been decided. The appeal in the suit is set down for hearing at St. Louis, Mo., beginning Dec. 4. The company declared dividends of \$2 a share on both preferred and common stocks, payable April 15, 1922, out of surplus accumulated up to and including 1920. The payment of these dividends was enjoined by the U.S. District Court until the decision on the appeal as to the rights of the preferred and common stockholders is decided by the courts.

The statement, for the seven months ended July 31, as submitted to the New York Stock Exchange, is stated to show a net loss of \$1,661,347, after interest charges and taxes have been deducted. The figures are as follows: Revenue, \$13,416,111; operating expenses, \$11,682,272; taxes and uncollectible revenue, \$1,207,052; operating income, \$526,787; equipment rents, credit, \$353,789; joint facility rents, debit, \$55,785; net operating income, \$515,133; gross income, \$1,359,552; interest, \$2,698,489; other deductions, \$302,812; net loss for the period, \$1,661,347.

Ottawa Terminal Ry. Co.—The annual meeting was held at Ottawa, Sept. 26, when the following directors were elected.—Sir Joseph Flavelle, Major G. A. Bell, E. L. Newcombe, K.C., A. J. Mitchell, W. D. Robb, J. E. Dalrymple and J. N. Dupuis.

St. John & Quebec Ry.—The St. John-Quebec Trust Co. was incorporated at the New Brunswick Legislature's last session to act as trustee for the St. John & Quebec Ry. Co's bondholders. This railway is owned by the New Brunswick Government, having been taken over from the original company, the trustee for the bondholders of which was the Prudential Trust Co., Montreal. This company has resigned its position, and the St. John-Quebec Trust Co. has taken over the responsibility. The officers of the new company are: President, Hon. W. E. Foster, Premier; Secretary, Hon. J. P. Michaud; Treasurer, Hon. J. P. Byrne. The Premier is reported to have stated that the new company will administer the trust without any cost.

The Newfoundland Railway's Future.

The temporary arrangement for the operation of the Newfoundland Ry., and the allied steamships, made between the Newfoundland Government and the Reid Newfoundland Co., details of which were given in Canadian Railway and Marine World for July, pg. 348, will expire Nov. 15. Under this arrangement, R. C. Morgan was appointed General Manager, and the Government undertook the financing of the railway and steamships. It was stated that a new arrangement was to be discussed and that any agreement reached would be laid before the legislature, which is expected to meet about Nov. 1, so as to ratify the agreement before Nov. 15.

St. John's press reports state that during the recent visit of the Premier and some of the Reid Newfoundland Co.'s directors to London, Eng., the whole situation was discussed and an agreement arrived at. The arrangement, it is said provides for the taking over by the Government of this steam railway, the St. John's Electric Ry., the drydock at St. John's, and the steamships, and the closing out of all Reid Newfoundland Co.'s interests connected therewith. It is also said that the Government will abandon all its claims against the company, and pay it \$2,000,000, and that the company will abandon all claims against the Government.

G.T.R. Strikers of 1910 Get Rights Restored.

W. D. Robb, Vice President and General Manager, G.T.R., has authorized the restoration of pension and seniority rights to G.T.R. trainmen, (conductors, brakemen and baggagemen), who participated in the 1910 strike. This decision affects more than 1,200 men in train service. The strike began on July 18, 1910, following lengthy negotiations on the men's demands for increased pay, pay on a mileage basis and standardization of wages and hours. A conciliation board recommended a gradual increase of pay till the rates were the same as on the C.P.R., an immediate increase approximating five-eighths of that asked, a standardization of working conditions and pay on a mileage basis. C. M. Hays, then President, G.T.R., refused to act on this finding, owing to G.T.R. financial conditions, but proposed an 18% increase in wages. This the men refused, and the strike began. The company notified the 4,500 men on strike that they could consider themselves out of the service, and that their seniority and pension rights were forfeited. After some trouble, the company met with success in operating its trains, and some of its men returned to work. Hon. W. L. M. King, then Minister of Labor in the Laurier Government, offered another board of conciliation, which was at first refused by the men on strike, but to which they agreed later on advice from Jas. Murdoch, then Canadian Vice President, Brotherhood of Railroad Trainmen. Mr. Hays, however, stated that the time for arbitration had passed, and finally the men capitulated, accepting his previous offer of an 18% increase, effective May 1, 1910. In taking back the men, the railway adhered to its position that the strikers had lost their seniority and pension rights.

As stated in Canadian Railway and

Marine World for June, W. A. Boys, South Simcoe, Ont., moved in the House of Commons, on May 3, "That in the opinion of this House, immediate steps should be taken by the Government to restore the pension rights and status of all employees and ex-employees of the G.T.R. who were deprived thereof owing to participation in a strike on the system in 1910, to the end that all such may secure their just rights pursuant to the terms of the settlement made between the parties." Prime Minister King stated that the Government had been negotiating to secure a remedy for what he termed "standing injustice." Action has now been taken to restore the men affected to the runs to be held by them in virtue of their restored seniority.

A Tribute to the Late R. B. Angus.

A Montreal correspondent has sent the Canadian Gazette the following appreciation of R. B. Angus, the last surviving original C.P.R. director, which occurred in Montreal recently:

"So be my passing!
My task accomplished and the long day done—
Let me be gathered to the quiet west,
The sundown splendored and serene—Death."

"Canada and Montreal in particular mourn the loss of Richard Bladworth Angus, the last of that, alas! now historical group who moulded, wrought and developed our great country of today. Those who knew him as a public figure admired his unusual physical perfection, noble serenity, remarkable mental balance, a great citizen of a great city grown and developed during his years of maturity, the last of those whose vision and unshakable faith in the future of Canada conceived and brought to fulfillment that earth-girdling belt of empire the Canadian Pacific Ry. But to those favored with the intimacy of personal friendship R. B. Angus also presented a combination of idealism, sincerity, purity of soul, with gentle yet firm outlook on life, an appreciation of all that is finest in art, painting, sculpture, literature, music—in fact of every form of beauty. Admired by all, loved by his friends, respected at home and abroad, and devotedly ministered to by his entire family whose grief and loneliness will be hard to bear, this grand type of Scottish Canadian passes out from among us. Verily it is a 'sundown splendored and serene—Death!'"

Timiskaming and Northern Ontario Ry. and Nipissing Central Ry. Fire Damage.

The territory through which the Timiskaming and Northern Ontario Ry. and its electric subsidiary, the Nipissing Central Ry. operate, between Haileybury, and South Englishart, Ont., was visited by most serious fires, Oct. 4 and 5, which apparently originated in bush slash on farms which are being cleared all over the territory, and, carried by a strong gale, swept through many square miles of territory, destroying completely the town of Haileybury, North Cobalt, Thornloe, Heaslip, and Charlton villages, and partially destroying New Liskeard and South Englishart. About 6,000 people were rendered homeless in the towns and villages, and in the whole burned area, about 10,000 persons have been made homeless. The latest death list is 43. The question of relieving the homeless was one of pressing importance, and, acting under the instructions of G. W.

Lee, Chairman of the T. and N.O. Ry. Commission, the railway officials at North Bay, and Cochrane got out special relief trains, and carried away the refugees to points of safety and shelter. The Canadian National Rys., the Grand Trunk and the C.P.R., co-operated in this work, and subsequently arranged for the running of special trains, without charge, to carry in supplies of all kinds to meet the immediate necessities.

We are officially advised that the T. and N.O.R. passenger and freight stations at North Cobalt, Haileybury, Thornloe, Heaslip and Charlton were completely destroyed, together with three dwellings at Haileybury occupied by railway employees; and one dwelling at each of the following points:—Thornloe, Heaslip, Charlton and Kenabek. At Kenabek a large timber trestle was burned, causing a suspension of traffic on the Elk Lake branch. The trestle was expected to be rebuilt so as to permit the resumption of traffic on the branch by Oct. 30. Thirty-five freight cars were destroyed at the several stations. The largest amount of damage to the railways was done at Haileybury, and it is estimated at \$500,000. The stations and other buildings will, we are advised, be rebuilt immediately.

The Nipissing Central Ry. was put out of business in the Haileybury-Cobalt section, about three miles of overhead construction being entirely destroyed. Two cars were caught on North Cobalt streets and totally destroyed, the crews barely escaping with their lives. A press report speaks of the rails having been warped, and the road bed otherwise damaged. A press report of Oct. 22 stated that service had been resumed between Kerr Lake and North Cobalt, but that there will be no connection with Haileybury and New Liskeard for some time to come.

Canadian Pacific Railway Construction, Betterments, Etc.

Elora Subdivision Bridge.—We are officially advised in connection with the recent replacement of bridge No. 4, Elora Subdivision, Ontario district, that the work consists of replacing a standard 3-opening trestle bridge with concrete abutments and a 36 ft. reinforced concrete span.

Fort William Freight Shed.—We are officially advised that only the foundation and concrete dock for the freight shed to replace the no. 3 one on the Kaministiquia River, Fort William, was burned, Aug. 23, will be done this year. The erection of the superstructure will be deferred until next spring.

Bengough South Extension.—At a sitting of the Board of Railway Commissioners in Regina, Sask., Sept. 30, a question was asked respecting the position in regard to the construction of a C.P.R. line south of Bengough, Sask., and the Chairman is reported to have stated that what was the position for the extension had been filed with the Board, the company had not asked for its approval.

Medicine Hat Locomotive House.—We are officially advised that the company is building, with its own forces, a 15 ft. extension to the rear wall of the 80 ft. locomotive house.

Victoria Ferrydock Improvements.—A press report states that plans are being prepared for making a number of improvements at the C.P.R. car ferry dock at Victoria, B.C., at an estimated cost of \$150,000. (Oct. pg. 523.)

Death of J. W. Rush.—The Railway Gazette of London, England, had the following in its issue of Sept. 29:—"The death took place last week at Coleraine, Ireland, cottage hospital, after an operation, of John William Rush, late Managing Director of the Intercolonial Railway, Canada. Deceased was a native of the North of Ireland, and leaves a widow who resides at St. John, N.B." Canadian Railway and Marine World has no record of Mr. Rush having held that position mentioned above, and thinks there must be some mistake, as the Managing Director is, as a rule, only used in reference to privately owned companies.

Electric Railway Department

Eglinton Car House and Yards, Toronto Transportation Commission.

On July 19, the Toronto Transportation Commission gave a contract for building a car house and office building on property on which it is also constructing a large yard, the property being bounded by Yonge st., Eglinton Ave., Berwick St. and Duplex Ave. The new house will accommodate cars operating on the Yonge St. run. Yonge St. is the chief north and south street in Toronto, and consequently street car traffic on it is very heavy. Up to the present, the majority of the cars operating on it have been housed at the Yorkville car house, north of Bloor St., but the Commission

shows the location of the property and the arrangement of buildings and tracks. Before construction began, a considerable amount of grading was necessary; material had to be excavated at the north side of the property and a fill was necessary at the south side, which also necessitated a concrete retaining wall at the southwest limits, as shown by the plan. Entrance to the yards is provided from both Yonge St. and Eglinton Ave., there being two entrances from both the north and southbound track on Yonge St., and two from the south track on Eglinton Ave., and one from the north track.

buildings. The tracks east of the repair bay will be used for trailer storage, and the method by which Yonge St. cars will pick up or drop their trailers will provide for smooth and efficient handling and the absence of delay. For example, a car southbound on Yonge St., on the track indicated by the arrows, fig. 1, to which it is desired to attach a trailer, will head in at the switch E, and proceed to the point S, where it will stop; the small switcher to be employed will push a trailer out of the trailer storage yard and couple it to the waiting car, which will then draw the trailer back to Yonge

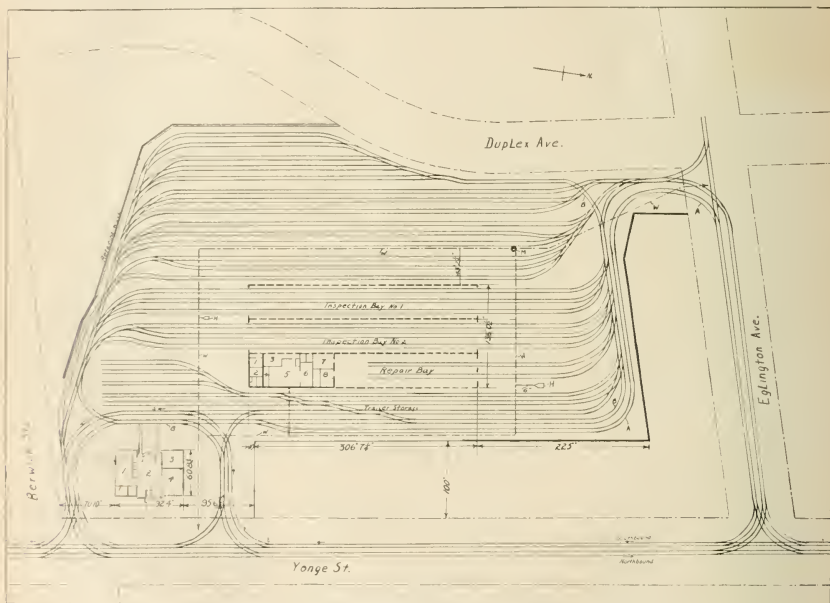

Fig. 1.—Toronto Transportation Commission's Eglinton Avenue Car House, Office Building and Yards.

having extended the Yonge St. line to the city's northern limits, the Yorkville house is no longer sufficiently large or properly located to serve this portion of the expanded system. A new car house and yard was therefore a necessity, and the Commission was fortunate in securing property at the corner of Yonge St. and Eglinton Ave., admirably suited to its requirements from both a traffic and operating viewpoint, on which to locate the new facilities.

The net area of the property used for the new house and auxiliary trackage is 7.27 acres, and the total area occupied by buildings is 47,000 sq. ft. Fig. 1, the general layout of the house and yard,

The trackage is laid out so as to afford the greatest possible facility in car movement, as concerns not only getting cars into and out of the storage tracks, inspection tracks and repair tracks, but also getting cars to and from track it may be necessary to place them in, or release them from, main line service. The track A in fig. 1, leaving the south track on Eglinton Ave., runs around the east side of the yard, to connect with the system of tracks near the Yonge St. entrance, and the run-around track B, completely encircles the yard, and provides for cars being conveniently switched from any point in the yard on to the tracks leading into the inspection and repair

St., as indicated by the arrows, and continue its southbound trip. Examination of the track system will show that the operation of attaching a trailer to a northbound car, or of detaching a trailer from a car bound in either direction, will be performed with equal facility, the system of crossovers in the trailer storage layout providing for free movement of the small electric locomotive, or motor car, which will be used in the switching operations.

The steel in the yard tracks will be 85-lb. C.P.R. standard section T rail, and that in the bays will be 93-lb. T rail, 7 in. high, Lorain section 507. The special work at the street turnouts will be of

140 and 122 lb. section, Toronto Transportation Commission standard type A, solid manganese switches, mates and crosses; certain sections of special work connecting the street turnouts to the yard, which will be run over frequently, will be of 108-lb. section, T.T.C. type D, solid manganese switches and mates, and manganese insert crosses, and the remainder of the special work in the yards will be of 108-lb. section T.T.C. standard type C, solid manganese switches with manganese insert mates and crosses. A very notable feature of the track construction is that by far the larger part of all the special work conforms to previously developed T.T.C. standards, ensuring lower first cost, lower replacement cost, adaptability and changeability.

The greater part of the track is to be put in this year; the small group of tracks immediately south of the repair bay and the cluster at the extreme west side of the yard will not be laid till later. The track schedule for laying this year is as follows: Straight track in yard, 6,440 ft.; track in inspection bays, 1,800 ft.; track in repair bay, 320 ft.; total straight track, 8,560 ft.; type A special work, 2,796 ft.; type D special work, 2,392 ft.; type C special work, 3,818 ft.; total special work, 9,006 ft. This will provide car capacity as follows: Yard tracks, 90; trailer tracks, 30; car

the repair bay will have a Columbia hoist, jib cranes, wheel grinders, and other miscellaneous tools and machines necessary for the efficient and economical carrying out of running repairs. Heating in the main building will be provided by 2 large motor driven fans, with underground ducts, leading through the building. The heated air will be conveyed from the boiler room through a central tunnel running below the level of the pit floors, and distributed through tile ducts to outlets in the pit floors. The main building roof construction is shown in fig. 2, from which it may be seen that the longitudinal skylights, running the full length of the building, will play a large part in furnishing an adequate supply of natural lighting. Portable and stationary electric lighting units will be installed to afford the best artificial lighting possible, in line with a realization of the fact that good light is necessary for good repair work. Ventilation will be secured in the repair shop portion, by the inclusion of standard ventilators in the skylight ridge. No effort has been spared to make the arrangement in the boiler room, shop and stores portion of the building the best possible for efficient and economical operation.

The numbered portions of the office building in fig. 1 are as follows: 1, Office; 2, rotunda; 3, lavatory; 4, recreation

complete equipment from a fire protection point of view.

The strip of land at the north and east sides of the property has been reserved by the Commission, and will presumably be sold and used for the erection of business buildings of various kinds. The buildings shown in the lower right hand portion of fig. 2, as fronting on Yonge St. and Eglinton Ave., are not part of the Commission's work, and are merely indicative of what might be built by private owners. Trees and hedges will be planted around the Yonge St. and Berwick St. entrances to the yards, the office building will be surrounded by well-kept lawns, and a stained board fence will be built around the rear of the yard and along Duplex Ave., the object being to have the entire property present as pleasing an appearance as possible.

The contract for the buildings was let July 19 to Wells & Gray, Toronto, to be completed Dec. 6, under a penalty and bonus clause. The buildings were designed by W. E. P. Duncan, Engineer of Structures, Toronto Transportation Commission, and the track layout by A. T. Spencer, Engineer of Way, under whose supervision it is being laid by Commission forces. At the time of writing (Oct. 16) construction of the buildings is progressing favorably, and good progress is also being made with the track work.

Fig. 2.—Toronto Transportation Commission's Eglinton Avenue Car House, Office Building and Yards, showing proposed commercial stores, etc., in upper right hand corner.

house inspection bays, 30; repair bay, 4; total, 154 cars. The completed installation will have trackage as follows: Straight track in yard, 9,239 ft.; inspection bays, 1,800 ft.; repair bay, 320 ft.; total straight track, 11,359 ft.; type A special work, 2,796 ft.; type D special work, 2,688 ft.; type C special work, 5,487 ft.; total special work, 10,971 ft. Car capacity will then be as follows: Yard tracks, 137; trailer tracks, 36; inspection bays, 30; repair bay, 4; total, 207 cars.

The buildings layout is shown clearly in figs. 1 and 2. The main building, 316 ft. 7 in. x 136 ft., will comprise 2 inspection bays, a repair bay, and a boiler room, shop and stores section. In fig. 1, the numbered portions of the southeast part of the main building are as follows: 1, Locker room; 2, luncheon room; 3, lavatory; 4, valve room; 5, boiler room; 6, coal storage; 7, stores; 8, foreman's office. The main building will be of fire-proof construction, with a reinforced concrete frame, and brick and tile walls, and equipped with sprinkler system throughout. The inspection bays will be equipped with lighted concrete pits, and

room. The office building, of steel frame and tile and brick construction, and with concrete foundations, will be of pleasing appearance. It will be 92 1/3 ft. x 60 2 3/4 ft., and will have a basement under the office portion. It will have artificial stone trim, slate roof, hardwood floors in the office portion and mastick flooring material in the men's portion.

A feature of the layout will be the fire protection system. In fig. 1, the lines marked W show the water connections to city mains, there being 8-in. connections to both the Yonge St. and Eglinton Ave. mains, with valves located to supply the yard and shop system from either one in case of failure of the other. In addition to standard yard hydrants located throughout the yard, there will be large hydrants located as at B, fig. 1, and monitor towers as at M, equipped with hose nozzle, mounted on a swiveling connection constructed on the universal joint principle, by means of which a stream of water may be projected in any direction. The yard protective system, considered in connection with the hydrants protecting the buildings and the sprinkler system, provides most

Canadian Electric Railway Association Meetings.—During the American Electric Railway Association's Convention which was held on the Municipal Pier at Chicago in the first week of October, the Canadian Electric Railway Association's executive committee met in a room on the pier, provided by the American Association. At the conclusion of the executive meeting a general get together meeting of Canadian street railway men attending the convention followed, at which many matters of interest to the members were discussed. This meeting was attended by about 25 members of the Canadian Association and an excellent opportunity was afforded for them to greet old friends and arrange to see more of each other at the American convention. It was thought that this idea should be continued in other years as a great many of the Canadian companies are members of both associations and usually send delegates to the American convention.

Moncton Tramways, Electricity & Gas Co., has ordered 2 one-man Birney lightweight safety cars, from Ottawa Car Manufacturing Co.

The Montreal & Southern Counties Ry. Co.'s annual meeting was held in Montreal, Oct. 4. The following are the officers and directors for the current year: President, W. D. Robb; Vice President, J. E. Dalrymple; Treasurer, J. A. Yates; other directors: Sir Joseph Flavell, Bart., J. N. Dupuis, F. L. C. Bond; General Auditor, J. M. Rosevar; General Manager, W. B. Powell; General Solicitor, W. C. Chisholm; Secretary, J. P. Hudson. The company is a subsidiary of the Grand Trunk Ry. Co. and Joseph Flavell and J. N. Dupuis, whose resignations as G.T.R. directors, have been accepted by the Dominion Government, will probably be replaced by some of the recently appointed Canadian National Ry. directors.

Montreal Tramways Co. An issue of \$500,000 5% perpetual mortgage debentures was offered early in October, at the market. This was part of an authorized issue of \$75,000,000 of which there are outstanding, including the present issue \$17,650,000. This is the first financing to be done by the company since Nov. 1921, when \$1,750,000 first and refunding mortgage, 5% were offered on the New York market. In 1920 the company sold \$150,000 of its 5% debentures and issued \$1,000,000 of its 5% 30-year bonds. During the past year the company redeemed the balance outstanding of its 4½% underlying bonds to the amount of \$2,688,953. In addition it finished paying the arrears of dividends, and is progressing with an extensive programme of improvement and replacement of lines. The proceeds of the new issue are for general purposes.

New Scotia Tramways and Power Co.—A press report states that the gross earnings for August were \$100,143; operating expenses \$70,745 and taxes \$4,827, leaving \$24,571 to meet bond interest after which there was a surplus of \$7,309, against a deficit of \$2,590, for Aug. 1921. Reduction in operating expenses is given as the cause of the company's improved financial condition.

Winnipeg Electric Railway.—

	8 mos. to Aug. 31, 1921	8 mos. to Aug. 31, 1922
Aug. 1922, Aug. 1921	1921	1922
Gross Revenues	\$399,459	\$393,823
Expenses	294,291	268,728
Fixed charges	102,148	125,095
Surplus	31,230	419,741

The Comptroller states that the decrease in the net for Aug. 1922, as compared with Aug. 1921 was due to a decrease in gross operating revenue of the railway and gas utilities, and an increase in the operating expenses of the railway and electric utilities. The decrease in gross operating revenue of the railway was due entirely to a decrease in the number of passengers carried on account of general business conditions. The decrease in the gross operating revenue of the gas utility was due to the gross billing for the month, including

one day less meter readings, than in 1921, and a decrease in the amount of gas consumed by a number of large consumers. The increase in the operating expenses of the railway was due to an increase in the cost of maintenance of ways, structures and equipment representing extraordinary maintenance on account of track repairs, the replacing of trolley on the overhead system, a general overhauling of a certain class of passenger equipment and an increase in the cost of power on account of steam power production. During Aug. 1921, a considerable portion of the expense in connection with maintenance of track and roadway represented deferred maintenance, the cost of which was charged to a reserve that had been created during 1920, thus resulting in a number of the accounts during August this year showing an increase. The increase in the operating expenses of the electric utility was due to an increase in the cost of power, due to steam power production made necessary on account of the gradual building up of power load preparatory to taking over the output of the Manitoba Power Co.'s new plant.

Winnipeg Electric Railway Officials Honor A. W. McLimont.

The Winnipeg Electric Ry. Co.'s heads of departments gave a dinner at the Royal Alexandra Hotel, Winnipeg, on Oct. 11, in honor of A. W. McLimont, on the completion of his fifth year of service with the company, several of the other directors being present. The chair was occupied by J. Whitsell, Operating Manager, and the guest's health was proposed by one of the oldest officials, R. D. Knudsen, Assistant to the Manager. Mr. McLimont, in responding spoke to the company's history, and dealt especially with the efficiency of salesmanship, the removing of the necessity of government regulating bodies, and the removal from politics of the use of public services of the community. He stated that after long negotiations with the city, a point had been reached which indicated that in order to pay obligations and provide money for future capital expenditures and proper upkeep of the property, it was necessary to obtain a sufficient extension of the franchise to enable securities to be issued for a term attractive to the public, and the company and requested that the city desire to take over the property from 1927 to 1937, which would enable the company to secure the necessary money for extensions into localities in need of them, place wires under ground and do other things which would encourage the growth of the city and benefit the people generally. The company is prepared to agree to the introduction of a sliding scale that would reduce fares so that in 1925 the service would be on a 5c fare in all single fare zones, with an adjustment every five years, to see if it would be possible to reduce the fare below that amount.

E. Anderson, K.C., Counsel for the company, proposed the Winnipeg Electric Ry. Co., which was responded to by Mayor Joseph Nanton, Premier, who recalled the days when the four chief officials of the company were the General Manager, Superintendent, accountant and stable boy. F. Morton Morse, Secretary also spoke, and claimed to be the oldest continuous secretary of a street

railway company in the world.

A tastefully printed souvenir menu contained a greeting to Mr. McLimont, outlining shortly, his period of service with the company, the difficulties overcome and the progress made, and paying tribute to his "unceasing anxiety for the company's welfare and untiring efforts to make it prosperous in the face of certain opposition." It also pledged the heartiest co-operation in the tasks which may arise.

A. W. McLimont was born at Quebec, Que., and in 1885 served as a scout in the field telegraph service during the Northwest rebellion. He was subsequently in the Bell Telephone Co.'s service for some time, and later with the Thomson-Houston Electric Co., Boston, Mass., and assisted in building, organizing and operating railway properties, and installing electric light plants in various parts of the U.S., became General Manager and Resident Engineer, Dubuque Light & Traction Co., Dubuque, Iowa, and resigned in 1895 to supervise the construction of 70 miles of overhead work in New Orleans, La. He then entered General Electric Co.'s service, and supervised work in Costa Rica and Cordova, Argentina, and on his return to the U.S., took charge of the construction of a high tension transmission line for the Hudson River Power Transmission Co., and subsequently supervised the building and operation of electric light plants for the Guanajuato (Mexico) Electric Government. He was later engaged in the electrification of the Monterey St. Ry., Monterey, Mexico, and in building and operating an electric railway in Lima, Peru. On again returning to the U.S., he was appointed Electrical Engineer for the Public Service Commission of the First District, New York, N.Y., and resigned on the appointment as General Manager, Chicago & Milwaukee Electric Rd., and a year later was appointed Vice President and General Manager, San Francisco-Oakland Terminal Ry., and later, Vice President and General Manager, Georgia Power Co. He was appointed General Manager, Winnipeg Electric Ry., Oct. 1, 1917, and Vice President and General Manager, in Feb., 1919.

Old Street Cars for Fire Sufferers.—The Toronto Transportation Commission, with the approval of the city authorities, sent the bodies of 85 of the old Toronto Ry. Co.'s cars, 15 motors and 70 trailers, recently to the fire-swept area in Northern Ontario, for use as temporary dwellings. All of them were equipped with stoves, and doors and windows were put in good condition before shipment. The cars, which were stored in the Commission's Coxwell Ave. yards, were loaded by crane, and but little delay was experienced in dispatching them after the message accepting them was received from the northern municipal authorities. They were shipped in two trains, via G.T.R. to North Bay, and T. & N. O. R. to destination, some of the smaller trailers being loaded three on two flat cars, and the remainder, one on each flat car.

The International Ry. Co. is reported to have filed claims against the City of Buffalo, N.Y., for \$3,895,250 damages, because of the city's alleged failure to provide adequate protection for its property and employees during the recent strike of the carmen. Of the amount of claims, \$2,000,000 is for damage to franchise and good will, \$1,800,000 for loss of fares, and \$4,250 for actual damage to property.

The Toronto Transportation Commission's Work.

The track construction and rehabilitation work planned by the Toronto Transportation Commission for completion in 1922 is nearly finished, the only large jobs remaining to be done being the rehabilitation of the track on Bloor St., one of the city's chief east and west streets, and the track construction on Kingston Road, from Columbine Ave. near Queen St., to the city limits. The work to be done on Bloor St. is between Spadina Ave. and Avenue Road, and between Yonge and Church Streets. When this is completed, the Commission's entire reconstruction and rehabilitation programme will have been carried out, and track work in 1923 and for some time thereafter will be confined to normal maintenance and renewal work. At the time of writing, Oct. 13, the Commission is employing approximately 2,200 extra men, but this number will be reduced considerably in the near future.

Yonge St.—The construction of the double track line on upper Yonge St. between Farnham Ave. and the northern city limits, and of the loop at Doncliffe Road, at the city limits, is completed. While construction was proceeding, a service was furnished by the Toronto & York Radial Ry., Metropolitan Division, which operated its cars on a temporary track built on the west side of Yonge St. As construction progressed, the T. & Y. R. Ry. provided a service between the Lawton loop and Farnham Ave., with cars loaned by the Toronto Transportation Commission, on the completed portion of the double track line. This service was then extended north to Eglinton Ave., then to Glencairn Ave., and on Oct. 15 it was extended to the northern city limits, and the temporary track was removed. At the time of writing, Oct. 13, it is expected that the T. & Y. R. Ry. will continue to provide this service until Nov. 1, after which the Commission will operate its own cars on its newly constructed track. At present, the T. & Y. R. Ry. is maintaining its cars by doing the running repair work at temporary sheds at the northern city limits, and any machine work necessary is done at its old shops at St. Clair Ave. and Yonge St., the work being taken to and from the shops by truck. The T. & Y. R. Ry. will have car houses adjacent to the Toronto Transportation Commission's northern loop, a joint transfer platform for passengers will be provided between the Commission's loop and the Radial Ry.'s south end of track.

Bloor St. West.—The question of separating the grade of Bloor St. West from the grades of railways crossing the street, and of building a new section of track on this street, to connect the section now in operation on it, has been long mooted. At a recent joint meeting between the city Board of Control and Commission officers, this was again discussed, but nothing definite was done, pending a report from the City Works Commissioner, who is negotiating with the railways to see if some solution of the problem cannot be arrived at.

St. Clair Line.—The city council has authorized the Board of Control to confer with the Transportation Commission relative to the possibility of extending the car line on St. Clair Ave. West, which would involve the problem of avoiding railway crossings at grade.

New Machine Shops.—The Commission has plans prepared for a large completely equipped repair and machine shop, at Bathurst St. and Davenport Road. The estimated expenditure will

be \$1,500,000. A meeting between the Commission's officers and the Board of Control was held recently; at which details of the proposed shops were gone over. Tenders have not yet been invited, and pending the provision of the funds necessary for the work, no definite date for commencing construction will be set.

Fire Protection in Car Yards. The Commission called for tenders recently for building towers and installing equipment for fire protection systems at the Russell, St. Clair and Danforth car yards. The proposed system will consist mainly of steel platforms, or towers, on top of

building will be vested. The Toronto Hydro Commission offices will be held by that body on a rental basis.

Two-Deck Cars not Suitable for British Columbia.

The Buzzer, issued by the British Columbia Electric Ry., says: "We have received several letters of late suggesting double-deck cars as used in Great Britain. Needless to say, street railways on this continent would welcome with open arms any means of doubling the capacity of their cars at small expense if at all possible. Likewise, it would be very pleasant to be able to ride in the open air of cars whose upper deck was not covered. Smokers would have some accommodation, too. These advantages have been viewed with longing, but, sad to say, there are several obstacles in the way that are so far unsurmountable. The double-deck car was tried a number of years ago in New York, Pittsburgh and elsewhere, and given up. The public did not want it, for the reason that they did not like climbing upstairs. It might be, of course, that the proportion of British population in Vancouver acceptance in that respect, so we will go on to the next point.

The difficulties may be classified under the heads of speed, construction and convenience of operation. In Great Britain the average speed of street cars is 8 miles an hour, with stops averaging 600 ft. apart. On this continent the average speed is between 9 and 10 miles an hour, in spite of more frequent stops. The lower speed of the double-deck cars is the result of the load upon the motors and the time required for loading. Our present motor cars do not haul twice the load and make the same time. A double-deck car obviously takes longer to load than a wide-platform p-a-y-e car. It is impossible to have some cars make 8 miles and some 10 miles an hour on the same system. The fast cars would be slowed down by the 8-mile-an-hour cars, and that is one of the first things the public would kick about.

As far as we can see, to adapt the double-deck car to the p-a-y-e system would entail such reconstruction as to make the scheme impracticable. We might as well build new cars, which would take all the advantage out of the scheme. Of course, the conductor must remain on the platform to operate the gates, and this makes the abandonment of the p-a-y-e principle out of the question.

In spite of all these conditions, it may be asked why double-deck cars won't do here as well as they do in Great Britain. Each city and even each country has different type of car for some cities than others. Here, we need a type of car which takes on a large number of passengers at each stop in a minimum of time, leaves the business district and speeds away. Another city's car may pick up only one or two passengers at each stop, but do so all along its route. That car does not need large platforms. Another obstacle in the way of using double-deck cars, as we have mentioned, is the possible objection to climbing upstairs. We are always glad to have suggestions and opinions from our patrons. May we point out in this case that we would gladly adopt a double-deck car if feasible, but expert opinion says there is no way of doing so.

Canadian Electric Railway Association.

Honorary President, E. A. Robert, President, Montreal Tramways and Quebec Ry., Light, Heat & Power Co.

Honorary Vice President, Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co.

Honorary Council, Thos. Acharn, President, Ontario Electric Ry.; Albert Burrows, Proprietor, Canadian Railway and Marine World; Geo. Kidd, General Manager, British Columbia Electric Ry.; Lt.-Col. J. E. Hutchison, General Manager, Montreal Tramways Co., and director, Quebec Ry., Light, Heat & Power Co.

President, Major F. D. Purpes, Manager and director, Ottawa Electric Ry.

Vice President, H. H. Cousens, General Manager, Toronto Transportation Commission.

Executive Committee, The President, the Vice President, the immediate Vice President (G. Gordon Gale, Vice President) and General Manager, Hull Electric Co.) and Stock, Montreal Tramways Co.; P. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, Vice President, and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; D. W. Houston, Superintendent, Regina Municipal Ry.; A. West, Vice President, Vice President and General Manager, Winnipeg Electric Ry.; R. Mayne-Read, Superintendent, Quebec Railway and Electric Co.; and F. Robertson, General Superintendent of Railways, Hydro-Electric Power Commission of Ontario.

Vice President, W. L. West, Manager, Nova Scotia Tramways & Power Co. Ltd. H. E. Weyman, Manager, Lewis County Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Treasurer, W. S. Hart, Managing Director, Three Rivers Traction Co.

Auditor, Lt.-Col. C. C. Royce, General Manager, Toronto Suburban Ry.

Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry., Ottawa, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

each of which will be mounted a hose nozzle operating on a universal joint, by means of which a stream of water may be directed in any desired direction. A similar installation at the new Eglinton car sheds was covered in the general contract.

Carmen's and Inspectors' Overcoats. The Commission has issued winter overcoats to conductors, motormen and inspectors. Those for the conductors and motormen are made of dark grey Oxford frieze, and those for the inspectors of blue pique. The inspectors are also supplied with blue waterproof raincoats. Conductors and motormen pay for their first overcoat, half the cost of their second, and are furnished free thereafter, the inspectors, who have been long in the service, are furnished free.

The Public Utilities Building. at the northeast corner of Yonge and Front Sts., which contains the Commission's offices, will be according to a recent Board of Control decision, be controlled by the Commission, in which ownership of the

Suit for Royalties on Toronto Transportation Commission Cars.

Consequent on the Canadian Brill Co.'s decision to discontinue business in Canada, and on the alleged commencement of its removal of equipment etc. from the plant at Preston, Ont., which it leased from the Preston Car and Coach Co., application was made by Peter Witt of Cleveland, Ohio, and C. S. Wright of Toronto, in the bankruptcy court in Toronto, recently, for an order forbidding the Brill Co. to proceed with the removal of its physical assets until royalties, claimed by the applicants as due in connection with devices used on cars built by the company for the Toronto Transportation Commission, were paid. The company denied that the royalties claimed, \$50 on each of 50 cars, or \$2,500 in all, were legally due the applicants. The court, however, granted a restraining order under the Bankruptcy Act, and appointed the Union Trust Co. receiver and custodian of the company's property pending a legal decision. On this being done, a Union Trust Co. official, accompanied by T. H. McCauley of Toronto, proceeded to Preston, assumed control of the Canadian Brill Co.'s property, and retained it for two days, when the company's solicitors appeared before the bankruptcy court and deposited \$2,500, to be left in court pending the outcome of the legal proceedings to determine the validity of the claim for royalties. Upon the money being deposited, the court's order was at once vacated.

Hardening Process for Toronto Transportation Commission's Rails.

The Toronto Transportation Commission has had a machine brought out from England for hardening the wearing surface of rails by the Sandberg process. It is the intention to treat the rails on one mile of track, in various locations, this year, and if results are satisfactory, more extensive applications of the treatment will probably be made next year. The treatment will be applied this year to both the 90lb. steel and the new 122lb. sections laid recently. The process consists of the application of a treatment to the head of the rail, by which the steel's structure is changed from the normal pearlite formation to the sorbitic formation. The change in the molecular structure takes place to a depth of from 3-16 to 1/4 in. from the top of the rail, and it is claimed that an effectively hardened or tempered wearing surface is presented to the action of the car wheels. The machine being used by the Commission is capable of treating about 10ft. of rail an hour.

As applied at rail mills, the treatment consists of the application of a cold blast of air to the rail head while at the critical temperature, after the rail has been taken from the finishing roll. The treatment is applied in this case for from 3 to 4 minutes. On the Transportation Commission's lines, however, the in situ treatment will be applied, the rails being treated in place. In this treatment, a flame is carried by a train of burning along the surface of the rail, this flame being followed by the application of a water jet for quenching or cooling.

The process has not been used in Canada previously, but is said to have been used successfully in a number of English cities, where accurate rail meas-

urements indicate that the rail's life has been prolonged two to three times. It has also been used in rail mills in the U.S. The benefits claimed for the treatment are: increased life of rails, elimination of corrugation and consequent reduction of grinding operations and saving of metal, increased life of joints and saving in track maintenance. It is also claimed that the resistance to traction is not adversely affected. Examination of a section of rail which has been treated shows clearly the change in structure which is effected, the line of demarcation showing the treatment's penetration being quite evident.

Electric Railway Notes.

The St. Thomas, Ont., City Council is reported to have agreed to let the year 70 ft. of the street car barn to St. Thomas Metal Signs, Ltd., for \$25 a month, the company to make any necessary alterations.

G. L. Guy, of Winnipeg, Man., who has been engaged by the Fort William, Ont., City Council, to make a survey of the Fort William Municipal Ry. and report thereon, arrived in Fort William, Oct. 1, and began his survey the next day.

The Hydro Electric Power Commission of Ontario, from July 21 to Aug. 14, received 5 safety cars for operation on the Hydro Electric Rys. Essex Division, and 3 safety cars for operation on the Guelph Radial Ry., from Canadian Brill Co.

The trucks for the 50 motor cars, which Ottawa Car Manufacturing Co. is building for the Toronto Transportation Commission, details of which were given in Canadian Railway and Marine World for August, will be built by Canadian Car & Foundry Co.

The Toronto & York Radial Ry. has received 13 flat cars from Canadian Car & Foundry Co. These cars are 38 ft. 3/4 in. over buffer blocks, 8 ft. 9/16 in. over sills, 26 ft. 10 in. truck centers, and have steel underframes of light construction, and are fitted with four 1 1/2-in. diam. truss rods, and Westinghouse KC 812 brakes.

The Shawinigan Water & Power Co. is reported to be planning to develop 150,000 h.p. of electrical energy at the Great Falls of the St. Maurice River, about 6 miles from Shawinigan, Que. The estimated cost is from \$10,000,000 to \$15,000,000, and it is expected that the work will be started in the spring of 1923.

The rule of the road in New Brunswick will be changed, Dec. 1, so as to bring it into conformity with the general practice, to keep to the right. It was intended that New Brunswick and Nova Scotia would put the new rule in operation on the same date, but it was found that the legislation in the latter province was imperfect, so New Brunswick is acting alone.

The Board of Railway Commissioners was called upon at its recent sittings in Vancouver, B.C., to decide two matters arising out of the putting in force of the new rule of the road. This involved the change of the location of the derails and signals at Powell St., the cost of which work was stated to be \$2,700, and work at the George St. crossing, Vancouver. The British Columbia Electric Ry. and the Great Northern Ry. were the parties interested in both matters. The Board reserved decision in the latter case, but decided that the B. C. E. Ry. Co. should pay three-fourths of the cost of the Powell St. work.

The Quebec Public Service Commission, in its judgment respecting the Levis County Ry., in June, a summary of which appeared in Canadian Railway and Marine World for August, pg. 433, provided, among other things, that the municipalities within which the railway operates contribute \$16,000 towards the cost of snow removal on the streets on which the lines are located. The Levis City Council applied recently to the Commission for the right to appoint a special inspector to look after the removal of snow, the cost to be borne by the Levis County Ry. and the municipalities interested. The hearing was set for Oct. 30.

The British Columbia Electric Ry. Co. was sued in the county court at Vancouver recently by Mrs. G. McKnight for \$500 damages, for being ejected from one of the company's cars. The plaintiff alleged that she boarded the car at Cedar Cottage and paid a 10c fare to Cedar Park, while the conductor alleged she got on between Ninth and Fourteenth St., paying a 10c fare, which was sufficient to take her to Collingwood St. She alleged that at this point the conductor took her by the shoulders and pushed her out of the car. As she had no more money with her, she had to walk to Central Park, and by reason of delay in getting there lost an opportunity of doing work. Judge Grant awarded her \$50 damages.

Motor Omnibus Traffic Notes.

There are reported to be 12 motor buses in operation on streets in London, Ont. The fares received are said to total about \$1,400 a week, collected in 5c fares and in tickets sold at 6 and 8 for 25c. The city council is reported to have under consideration the desirability of cancelling all the motor bus licenses in the city, and arranging with the London St. Ry. Co. to operate bus lines on streets not served by the electric car lines.

The Ontario Legislature, at its last session, authorized the appointment of a committee to enquire, during the recess, into the question of motor traffic on the highways and to draft amendments to the Motor Traffic Act. The committee has been visiting numerous centers during the summer, and has collected a large amount of information.

Mr. Justice Riddell, sitting in Toronto recently, awarded \$7,500 and costs to H. J. Allison, Long Branch, and \$600 and costs, to J. McConnell, Lakeview, against Jasper Haight, owner of the Red Bus line, and the Blue Bus Transit Co., for damages arising out of a collision between buses of the two lines at stop 17, Lake Shore Road, Jan. 3. Allison received permanent injuries, and McConnell was out of work for some six weeks.

Nova Scotia Accident Prevention Association.—The executive committee's quarterly meeting was held in Sydney, Oct. 19, C. C. Curtis, General Manager, Cape Breton Electric Co., presiding, and being it he chair. The association's objects are by propaganda and publicity to do all that is possible for the prevention of accidents in individual plants, etc., and to act as intermediary between the companies which it represents and the Workmen's Compensation Board. During 1921, there were 6,134 accidents in Nova Scotia, of which 98 were fatal, and \$948,689.30 was paid out in compensation. The amount of assessments for the Workmen's Compensation Board's work for 1921 totalled \$1,092,267.58, and the amount expended by the Association in the way of prevention of accidents was \$7,621.90.

British Columbia Electric Railway's Vancouver Franchise.

The various matters which have been under negotiation between the British Columbia Electric Ry. Co. and the Vancouver City Council, since the withdrawal from the Dominion Parliament of the Vancouver, Fraser Valley and Southern Ry. Co.'s bill under which it was proposed to amalgamate all the B.C.E. Ry. Co.'s undertakings so as to bring them all under the Board of Railway Commissioners' jurisdiction, are apparently nearing a satisfactory conclusion. The agreement under which the bill was withdrawn in May, provided that the B.C. Government would obtain the legislation necessary for the establishment of a tribunal to settle matters in dispute, and the municipalities agreed to allow fares to remain as they were pending the passing of such legislation. The City of Vancouver stood out against this for some time, but ultimately agreed to permit the council to fix the fares at 6c for the same in the city, pending the completion of further negotiations. The terms of the further agreement have been under discussion all summer and a tentative agreement was approved by the council's special committee. This provides for the reduction of the light rate from 6c to 5c; for the repaving of certain streets; for the extension of the gas plant and the reduction of rates on the completion of the extension; the carrying out of certain engineering matters; the extension for five years of the present cash fare of 6c; and for an arbitration every three years of any matter in dispute between the city and the company.

The city council on Oct. 9, directed that the report should be laid on the table pending the drawing up of a bylaw to confirm it when the whole matter will be considered. It is reported that the agreement probably will be ratified, and that among the improvements to be made by the company, which are specifically mentioned, are the replacement of the present overhead wires by underground cables; the paving between the track on Hastings St., near Carroll St.; and the reconstruction of the track for three blocks on Hastings St., just west of Granville St., and along Fraser Ave., from Kingsway to 25th Ave.

The Attorney General is reported to have completed a draft of a bill to be introduced in the Legislature to deal with the matters agreed upon. A press report gives the following summary of its provisions:—The Government will appoint a commission, or a sole commissioner, under the Public Inquiries Act, to enquire into all matters relating to the nature and quality of the company's passenger service, or to the performance of the service and the rates charged. The Government will appoint such a commission upon written application of a municipal council affected, or from not less than 100 provincial voters residing in a district affected, but within the municipal organization, or from the company.

The commission will have complete jurisdiction over the fares for passenger service. In considering rates, the commission is to have due regard to giving the company a fair and reasonable return and the appraised value of its property and to the protection of the public from rates that are excessive as being more than a fair and reasonable charge for services of the nature and quality furnished by the company and the circumstances existing at the time any former rate was made or fixed, as well as the

circumstances existing at the time of the enquiry are to be considered. The company is not to be allowed to give transportation at rates less than the rate established by the commission. Reduced rates for mileage, commutation tickets, or excursions and for special cars, per hour may be arranged.

The commission shall make its decision upon the real merits and justice of the case and shall not be bound to follow strict legal precedent. The commission is not to be bound by the finding or judgment of any other commission or court.

A substantial compliance with the requirements of the act shall be sufficient to give effect to the order of the commission, and no order shall be declared inoperative, illegal, or void for want of form or for any error or omission of a technical or clerical nature.

Persons who solicit, accept or receive, directly or indirectly, any rebate, concession or discrimination in regard to passenger service of the company in violation of any provision of the act to be liable to fine of from \$20 to \$500. Provision is made for free carriage or reduced rates for company's officers and employees, policemen, firemen and postmen.

Quebec Railway, Light, Heat & Power Co.'s Reorganization.

The recent changes in the Quebec Ry., Light and Power Co.'s directorate and the election of E. A. Robert as President were generally understood to presage a general policy of development in various directions. The first of the changes to be made, of which notice has been given, is the reorganization of the company. The announcement of this reorganization was made by Mr. Robert, Oct. 5, as follows: "Since assuming the office of President, I have made a careful study of the company and its subsidiaries. The success of any public utility company depends primarily upon its furnishing a satisfactory and efficient service in all departments and keeping pace with the growing needs of the population which it serves. Keeping this in view, a detailed survey has been made of all branches of the company's activities to determine its present and future financial position in each branch. As a result it has been decided that it would be in the interest of both the security holders and customers of the company to effect a reorganization having for its object the following: To alter the present system of dividing the various branches of the company's business. To facilitate the future expansion of the company's existing business. To enable the company to considerably extend its activities. To provide means for economically financing extensions and developments. To enable the reorganization of the enterprise to be effected in the best interests of the public and the security holders of the company. As a preliminary step application will be made at the forthcoming session of the Quebec Legislature for the incorporation of three companies, the Quebec Power Co., the Quebec Gas Co., and the Quebec Tramways Co."

Notes of the applications to the Legislature for the incorporation of the several companies appeared in the Quebec Gazette, Oct. 7, the applicants in each case being: E. A. Robert, C. G. Greenshields, Lt.-Col. J. E. Hutcheson, K. B. Thornton and Hon. D. O. L'Esper-

ance, all directors and officers of the Q. Ry., L. and P. Co. The Quebec Tramways Co. is the title under which incorporation is asked for a company to purchase, lease or otherwise acquire and to build, operate and maintain tramways and railways in the City of Quebec and in Saguenay, Lake St. John, Charlevoix, Montmorncy, Quebec, Portneuf, Champlain, St. Maurice, Maskinongie, Berthier, Joliette, Bonaventure, Gaspé, Matane, Rimouski, Temiscouata, Kamouraska, L'Islet, Montmagney, Belleshaie, Lévis, Dorchester, Lotbinière, Mégantic, Beauce, Frontenac, Nicolet, Arthabaska, Wolfe, Compton, Yamaska, Drummond, Richmond, Richelieu, Bagot, Shefford, Sherbrooke, Stanstead and St. Hyacinthe counties, to acquire or build power plants, gas works or waterworks within the same area capable of being operated in conjunction with the company's tramways or railways, to acquire in whole or in part the capital stock, securities and undertakings of the Quebec Ry., Light, Heat and Power Co., the Quebec Ry., Light and Power Co., the Quebec, Jacques Cartier Electric Co., the Quebec County Ry. Co., the Quebec Gas Co., the Frontenac Gas Co., the Canadian Electric Light Co., or any of them, or the stocks and securities of any other company which might be used in connection with the company's undertaking.

For the Quebec Power Co., authority is asked to acquire and develop hydraulic, electric and other powers and to distribute power within the area mentioned above, and to lease, buy or otherwise acquire stock in any of the companies mentioned above and to acquire stock in other similar companies which may be of advantage thereto.

For the Quebec Gas Co. authority is asked to build, develop and operate gas plants, electric power plants and water works within the area first mentioned, and to acquire, in whole or in part, the stock of any of the companies mentioned under the application for the Quebec Tramways Co.

Proposed Toronto-Port Credit-Hamilton-Niagara Falls Electric Railway.

Some progress is being made in connection with the proposal for the construction of an electric railway, under the hydro electric railway legislation, from Toronto via Port Credit to Hamilton and through the Niagara Peninsula. In regard to the Toronto-Hamilton section, the bylaws favoring construction have been re-approved by the councils of Port Credit and Oakville villages, and Toronto, Trafalgar, Bronte and Burlington townships, and the question of re-affirming the bylaws is under consideration by the council of Etobicoke township and Mimico and New Toronto town councils.

F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario, was in Hamilton, Sept. 29, and met representatives of the city council, the harbor commission and the Burlington Board of commission and discussed routes fully with them. The city board of control asked for full details of the whole plan, and as a result Sir Adam Beck visited Hamilton, Oct. 9, and gave the board information on the various points raised, and it was stated that the council could ratify the agreement up to Nov. 15 so that it could be submitted to the vote of the electorate at the municipal elections.

Regarding the Hamilton-Niagara section, Grimsby village council has ap-

proved of the agreement, and the St. Catharines city council on Oct. 15 abandoned the position taken Oct. 1, when there was a tie on a resolution for affirmation, by unanimously passing a resolution affirming the bylaw.

A press report states that 14 out of the 20 municipalities interested have reaffirmed the bylaw.

Montreal Tramways Co.'s Transportation Department Changes.

Arthur Gaboury, Superintendent, Montreal Tramways Co., who is in ill health, has been granted extended leave of absence. He was born at Montreal, April 6, 1875, and entered Montreal Street Ry. Co.'s service, June 4, 1894, since when he has been, to Oct., 1900, conductor and motorman; Oct. to Nov., 1900, Assistant Inspector; Nov. to Dec., 1900, night clerk, Cote St. Barn; Dec., 1900, to Sept., 1903, day chief clerk, St. Denis Street; Sept., 1903, to May, 1906, Claims Agent; May, 1906, to 1907, Assistant Superintendent; and from 1907, Superintendent. He was, early in 1918, appointed, by the French Government, an officer of the French Academy. He was a member of the Canadian Electric Railway Association's executive committee for several years, and was its Vice President, 1918-1919; President in 1920-21, and was its Treasurer, from Mar., 1921, to June, 1922. He is a member of the American Electric Railway Association's committee on Canadian company membership, and in 1919 was elected a member of the executive committee of the American Railway Transportation and Traffic Association, of which he became Third Vice President in 1921, and Second Vice President at the Association's annual meeting early in October.

J. Gadoua, who has been the M.T. Co.'s Claims Agent, for a number of years, has been appointed acting Superintendent of Transportation, and will have general supervision of that Department until further notice. Prior to entering the Claims Department, he served the company as conductor, depot clerk and inspector for a number of years, and for two years he had charge of traffic in Paris, under the late Duncan McDonald.

C. M. Shaw, who has been Assistant to the Superintendent, for several years, has been appointed Assistant Superintendent of Transportation, with direct supervision over passenger and freight car service and traffic.

In giving notice of these changes, Lt. Col. Hutcheson, General Manager, has asked of all members of the staff continued loyalty and co-operation with Messrs. Gadoua and Shaw in the discharge of the Department's duties.

Ottawa Electric Railway Franchise Negotiations.

The Ottawa City Council, following the decision of the ratepayers, some months ago, by a vote of 8,415 to 6,070 in favor of an extension of the Ottawa Electric Ry. Co's franchise for 30 years, appointed a special committee to consider the matter, and to report upon the terms upon which a franchise extension should be granted. The committee appointed R. M. Foster, J. H. Payne, Ind., to make certain investigations, and his report was received by Mayor Plant, Oct. 7. It is stated to cover 47 pages, and to contain a mass of figures and tabulations, which will require considerable study by the committee. A press report gives the following particulars in regard to it: The report deals chiefly with the

company's operating revenue and expenses, returns on investment, expense per mile in operations, passenger revenue, number of passengers carried, and covers 1892 to 1921. Mr. Feustel estimates that for the next five years the city's agreement should provide for the company laying 18 miles of extensions, which he finds are urgently required. He contends that it is possible for the company to maintain a 5c fare and secure an adequate revenue. One mile of the present track can be torn up and eliminated. What section this is not to be divulged by the committee. Mr. Feustel considered its extensions report into five groups, allowing for one extension in each of the next five years. He estimates that 47 new cars are needed. In the rush periods in the summer the company operates 113 cars. His investigations revealed a steady increase in the patronage of street cars in Ottawa, which ranks second among cities investigated by its staff. The patronage in the city was 336 rides per capita per year among the trolley riding public. Toronto was first with 350 rides per capita a year. Reference to the Britannia line is contained in a separate report.

The report has been given some consideration by the committee, which is said to have had a conference with Mr. Feustel, Oct. 14. It is expected that the council's special committee will approach the Ottawa Electric Ry. Co. on the matter as soon as they have fully considered the report.

Electric Railway Passenger Fares.

British Columbia Electric Ry. — The Board of Railway Commissioners, at its recent sitting in Vancouver, heard an application from the City of Vancouver, asking that a 6c fare be put in operation on the company's Boundary Lake interurban line running through the city from Boundary Road to Commercial Drive. The distance between the two points is 2.5 miles, and the cash fare charged was 10c. The city contended that this fare was too high, that on the city lines which paralleled this interurban line for some distance, a 6c fare is charged; and that the high rate retarded the development of the city in the section through which it runs. The company contended that, while the cash fare was 10c, 10 commutation tickets were sold for 70c, thus reducing the fare to 7c; and further that a portion of the distance travelled over is on the company's own right of way. The Board directed that fares within the city limits should be uniform, and directed that the fare to be charged on this section of Vancouver, Fraser Valley & Southern Ry. should be 6c between Vancouver and Horne-Payne and intermediate points.

St. Thomas Municipal Ry.—A press report states that the first month's operation of the line under the 7c fare showed an increase in patronage of 37% over that for August, the last month during which the 5c fare was charged. The operating deficit for September was \$116, against over \$500 in the preceding month, and about \$800 for September, 1921.

Toronto Transportation Commission.

The city board of control has unanimously passed a resolution asking the Commission to reduce car fares during the morning and evening rush hours, the mover contending that the present fares are a burden on the so-called working classes. It is significant that this action has been taken by the controllers suspiciously near the municipal elections.

London Street Railway Situation.

The transportation commission appointed by London, Ont., City Council to consider the transportation situation in the city is reported to have completed its investigations and to have arrived at certain conclusions for submission to the council. It is said that the commission will recommend the submission of three questions to the voters on Jan. 1, 1923. The first would involve the purchase of the London St. Ry. as it stands; the second, the cancellation of the company's franchise and the inauguration of a system of motor busses or trackless trolleys, or both; and the third to grant an extension of the company's franchise.

In connection with the second suggestion, Sir Adam Beck, the mayor, P. Pocock, members of the transportation committee, and A. E. K. Bunnell, the engineer, who has been advising it, visited Windsor, Ont., to inspect the street railway system there and the trackless trolleys operating in it with Sir Adam Beck. He is reported to have stated that the Hydro Electric Power Commission of Ontario would be prepared to take over the London St. Ry. and operate it for the city, but that the thought the line could be handled more economically and advantageously in conjunction with the London and Port Stanley Ry.

Winnipeg Electric Railway Franchise Extension.

The question of granting an extension of the Winnipeg Electric Ry. Co's franchise has been under consideration by a special committee of the city council during the whole of this municipal year. The majority and minority reports were published in Canadian Railway and Marine World for September, pg. 476. The city council authorized the committee to continue negotiations with the company on the lines suggested in the minority report. This decision was followed by the resignation of Ald. Douglas and the appointment of Ald. Sparling as chairman of the special committee. As the municipal elections approach an endeavor is being made, on the one hand, to have the present council settle the question, and on the other to make the matter an issue at the elections. It is claimed that the present council has not had any instructions from the ratepayers as to electric railway matters, and that it is not therefore in a position to decide them. The company, in its Public Service News, urges the franchise question should not become a political issue; that it is purely a business proposition; that it has been before the council and the public for many months, and that the aldermen know the citizens' views on it pretty well.

Speaking, on Oct. 11, at a dinner in connection with the fifth anniversary of his appointment as General Manager, A. W. McLimont, Vice President and General Manager, is reported to have said: "The company has been unable for some time back to offer the investing public securities which would bring the funds to make capital expenditures or pay present obligations, and now we find ourselves in the position of not being able to offer securities to the public by reason of the possible life of our franchise being terminated within 5 years, and a security of such short period is not acceptable to the public. The negotiations have reached the point where it appears that an agreement may be made between the city council and ourselves which will grant

this extension, subject to the ratification of the agreement by a referendum, and I want you men to interest yourselves in everything that is printed, and everything that is procurable, which will explain the exact situation for you. There is no question at the present time of municipal ownership. If an adverse vote occurs the company will not be able to issue securities upon which to obtain new capital, therefore it cannot make such extensions and improvements in its property to enable it to progress in the manner which this young city requires. It simply means 5 years of one great factor being prevented from assisting in the forward movement of the city. Now, what happens if the vote is favorable? First of all, word goes out broadcast through the land, that the street railway, that very important factor in the lives of the people of Winnipeg, has met with broad and fair treatment from the citizens and their authorities. We will be able to issue securities, and we will be taken by the public and funds provided to make extensions into localities that will grow, and, in doing so, will create great activity in the market of all building materials and labor."

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—Alderman Towers is reported to have advised a Vancouver ward ratepayers' association, Oct. 4, that negotiations between the city council and the company, regarding the extension of the Dunbar St. line were nearing a satisfactory settlement. He said that the proposed line would continue down to Fourteenth Ave., and to avoid the sudden dip in the hill, cut across to Twelfth Ave. and Alma road, thus avoiding the hill that otherwise would necessitate the erection of a bridge, at the cost of about \$25,000. In the carrying through of this road, it would be necessary to buy about 20 lots in the city. (Oct., p. 534.)

Hull Electric Co. is, we are officially advised, regrading its tracks on Bridge St., between Gavenau and St. Laurent Streets, and is paving its Bridge St. line between Gavenau and Frontenac Streets, Hull, Que. (Aug., p. 429.)

The International Transit Co. has, we are officially, advised, completed a 900-ft. extension of its tracks in Sault Ste. Marie, Ont., to the new agricultural park in the east end of the city.

Levis County Ry.—We are officially advised that the car house to be built to replace the one burned will be at Point Levis, on the low level line, about a mile from Levis ferry. (Oct., p. 534.)

London St. Ry.—A press report states that arrangements have been completed between the company and the London, Ont., City Council, for taking up the street car line on Oxford St., preparatory to its being paved.

Car traffic on Hamilton Road was reported to have been resumed, Oct. 3, the line having been closed from Egerton St. to the end of the track to facilitate paving operations. (Sept., p. 479.)

Montreal Tramways Co.—Montreal City Council is reported to be considering the desirability of asking the company to build a line from Park terminal in Mercier Ward, up Cadillac St. to Notre Dame de Victoria. (Aug., p. 429.)

The double track extension on Church Ave., Verdun, to connect Wellington St. with the present terminus at the C. C. St. Paul section of the Notre Dame line

about 4,000 ft., construction on which was started early in July, is reported to have been completed and to have been opened for traffic, Oct. 16.

The extension of the Rosemount line to connect with Papineau Ave. is reported to be under construction. (Aug., p. 429.)

Moncton Tramways, Electricity & Gas Co.—We are officially advised that construction has been started on a new car house in Moncton, N.B., to replace the one which was burned. It will be 40 x 70 ft., and of concrete, brick and steel. The contractor is A. Wheeler. (Oct., p. 534.)

New Brunswick Power Co.—The relaying of tracks on the line from St. John to Fairville, is reported to have been completed. (Oct., p. 534.)

Toronto & York Radial Ry.—We are officially advised that plans are nearly completed for the new terminal facilities at Glen Echo Ave. and Doncliffe Drive.

We are further advised that no surveys are being made for a private right of way for the line from Toronto city limits to Newmarket, as stated in a recent report. (Oct., p. 534.)

Windsor, Essex & Lake Shore Rapid Ry.—We are officially advised that track has been laid into the site for the new terminal facilities at Leamington, Ont. Some other work is being done on the site, but the plans for the proposed freight shed are not yet completed (Oct., p. 534.)

Mainly About Electric Railway People.

Johannes C.M. Buntzen, formerly General Manager, British Columbia Electric Ry., died Oct. 3, at Copenhagen, Denmark. He was born there, Dec. 16, 1859, and went to Vancouver in the early nineties. After some time spent as a storekeeper, he became associated with a financial firm which was appointed assignee of the Vancouver Electric Light & Ry. Co. Taking charge of this plant under the assignment, he displayed considerable aptitude for the management, and when, in 1897, the whole of the electric light and traction concerns in the vicinity were absorbed in the British Columbia Electric Ry., he was appointed Controller, and shortly afterwards General Manager. Under his management the company's power plant development was carried through, the Lake Buntzen plant being started in 1902. He retired from the position of General Manager in 1906, and was appointed Managing Director in London, Eng., resigning in Nov., 1908, when he left London to live in Copenhagen, but he retained his position as a director of the company.

Edwin V. Caton, who has been appointed Electrical Engineer, Winnipeg Electric Ry., vice D. K. Lewis, who has gone to Cuba, was, in his earlier days, in service with Vickers, Ltd., Sheffield, England, and came to Canada to superintend the installation of the first five units of the Winnipeg hydro electric system. He was appointed Chief Engineer of the system in 1912, and held that position until September, when he resigned to take up his new appointment. He is a member of council of the Association of Professional Engineers of Manitoba, and was chairman of the Manitoba Branch of the Engineering Institute of Canada.

A. L. Farquharson, Manager, Fort William Municipal Ry., was granted leave of absence for a month from Oct. 1, by the Fort William Public Utilities Committee.

E. J. Fream, Calgary, Alta., is reported to have been appointed a member of the Alberta Public Utilities Commission, to

fill a vacancy which has existed for some time, and in consequence has resigned as Secretary of the United Grain Growers' Association.

Mrs. J. B. Griffith, wife of the Purchasing Agent, Dominion Power & Transmission Co., Hamilton, Ont., is reported to have been left half of the estate of her late brother, H. B. Scott, Vice President, Newcombe & Endicott department store, Detroit, Mich., which it is said will amount to over \$1,000,000. Her son Bruce was left a valuable farm.

F. D. Jackson, Secretary, Public Utilities Commission, Port Arthur, Ont., has also been appointed Treasurer, Port Arthur Civic Ry.

K. B. Thornton, General Manager and Chief Engineer, Montreal Public Service Corporation, has been elected Honorary President, Electric Co-operative Association of the Province of Quebec.

Montreal Tramways Co's Annual Meeting.

At the Montreal Tramways Co's. annual meeting in Montreal, Sept. 26, the president and directors expected to have the year ended June 30, as printed in full on p. 594 of this issue, was presented. The President E. A. Robert, who occupied the chair is reported as stating that the company has passed through its troublous days and with business now almost back to normal its future is assured. The long year is expected to show an improved position to put before the shareholders in 1923. The contract, which is the pioneer one of its kind in America, is working well for the city, the company and the shareholders. It is unique as the company is guaranteed by the community in which it operates and with ordinary prudence and care shareholders need not worry about their holdings. Financial conditions are improving and operating costs are being lessened by reason of the growing cheapness of money.

The directors were all re-elected as follows: E. A. Robert, President; J. W. McConnell and Hon. G. G. Foster, K.C., Vice Presidents; Wm. C. Finley, P. J. McIntosh, W. G. Ross, J. M. McIntyre, Hon. J. M. Wilson and Hon. L. C. Webster. J. E. Hutcheson is General Manager and Patrick Dubee, Secretary-Treasurer.

Preston Car Works.—As stated in Canadian Railway and Marine World for Nov., 1921, Canadian Brill & Co. Ltd., which has a short lease shown incorporated under the Dominion Companies Act, with an authorized capital of \$300,000, and office at Preston, Ont., leased the Preston Car & Coach Co's plant there for a year from Sept. 1, 1921, with the option of buying it, and took over the responsibility of its operation. Before the expiry of the lease on Sept. 1, 1922, an extension of two months was arranged, but the Brill Co. did not exercise its option to buy, and gave up the operation of the plant on Oct. 31. No announcement has been made as to whether it will be operated under other management, the impression is that it will be closed at least as far as car building is concerned.

Tramway Wages in England.—A London press cablegram says that the tramways labor dispute has been settled by the workers voting to accept provisional terms calling for an immediate reduction of wages of 4 shillings weekly. There will be no further adjustments of wages until January next.

Marine Department

Suspension of Coasting Laws on the Great Lakes Asked.

During the early part of the summer, certain interest shippers, millers, etc., made representations to the Dominion Government, that Canadian shippers of grain, from the head of the Great Lakes were being discriminated against, in that the rate from Port William and Port Arthur, to Buffalo, was considerably below those for Port Colborne, and Georgian Bay ports, respectively. The rates then quoted were—to Buffalo, 2c; to Port Colborne 2½c, and to Georgian Bay ports 3c. Following these complaints, several interviews and considerable correspondence took place between the Minister of Trade and Commerce and the Dominion Marine Association, representing the steamship companies, and the facts were placed before the Minister, as of July 8.

At that time, the rates on grain from Port William and Port Arthur, were,—to Buffalo 2½c, to Port Colborne 2½c, and to Georgian Bay ports 3c. It was also pointed out that the rates from the head of the Great Lakes to the seaboard were as follows: All water to Montreal, 9.75c; through Georgian Bay ports, 11.10c, and through Buffalo, 11.35c. It was thus shown that the transportation to the seaboard through Canadian channels was cheaper than through the U.S. Early in the season, it was well known that the Canadian route was considerably congested, due, it was alleged, to shippers utilizing elevator space at Montreal for storage purposes, and also to the very large quantity of U.S. grain shipped by the Canadian route, thus causing a blockade at the outlet, and backing up the flow of grain to the source. Since then, the Montreal Harbor Commissioners have taken steps, which, it is expected, will relieve the situation considerably, whereby practically prohibitive rates are charged for grain allowed to remain in elevators longer than a stated period.

The reason for the lower rate to Buffalo was explained to the Minister, it being stated that U.S. tonnage, which ordinarily enjoys the profitable carriage of coal and ore, found no movement of these commodities this season, sufficient to satisfy requirements, and, as usually occurs in the spring and autumn, when coal and ore are not moving, these ships entered the Canadian grain trade, and were willing to carry grain at 2c, even if they did not make their operating expenses. The moment coal and ore again become available, the low rate will disappear.

Those alleging discrimination, strongly urged the Government to suspend the coasting regulations and allow U. S. ships to enter the Canadian trade, presumably with the view of bringing the Port Colborne and Georgian Bay rates to a parity with that obtaining to Buffalo. It may be mentioned that bulk grain ships from the head of the Great Lakes to Buffalo, are nearly always assured of a return cargo, while those running to Georgian Bay ports invariably return light to the head of the Great Lakes, and this must be considered in relation to the rate.

As previously stated in Canadian Railway and Marine World, the position of the Canadian steamship owners, as outlined above, was fully explained to the Minister, and was, apparently, accepted

as a sufficient answer to the claims made by shippers, and no action was taken towards a suspension of the coasting regulations.

However, during September, further pressure was placed on the Government, and the Minister of Trade and Commerce telegraphed the Dominion Marine Association, as follows: "Representations have been made to this Department of discrimination in freight rates, Port William to Canadian bay ports and Buffalo and also restraint of trade affecting insurance on cargoes. I should like to have conference with representatives of all companies operating grain vessels on the Canadian lakes, and for this purpose invite members of your association to be present in the office of the Minister of Trade and Commerce on Oct. 3, at 11 o'clock. Will you kindly notify all interested and advise me who will attend." The meeting was attended by A. A. Wright, Honorary President; T. R. En-

dian rates, shippers preferred to send their grain through that port. So far as this argument is concerned, figures previously submitted by the Dominion Marine Association show that of approximately 30,000,000 bush. of grain shipped through Buffalo, 27,000,000 were bonded through for export, and of the remaining 3,000,000, 1,000,000 were subsequently sold for export. As shown, the rate to the seaboard through Buffalo was 11.35c, through Georgian Bay ports 11.10c, and all water to Montreal, 9.75c. Therefore, some other argument than the low rate from the head of the Great Lakes to Buffalo must be found to account for this quantity of Canadian grain going to the seaboard, otherwise than through Canadian channels. The Minister also stated that he had been informed that in August, the rate was 2c a bush. to Buffalo, and 3½c to Port Colborne. Another charge made was that shippers were compelled to take insurance from brokers representing the steamship companies at 25c per \$100, when a rate of 15c could be obtained elsewhere.

The Minister having asked for an explanation of the alleged discrimination was reminded that the disparity in rates had been reversed by the increase in the Buffalo rate to 5½c as against only 4c to Georgian Bay and was asked whether Canadian carriers would be considered entitled to charge up to the Buffalo rate. The Minister proposed to confine the discussion to differences alleged at earlier dates, and quoted from a memorandum rates mentioned to him at certain dates as bases for complaint. The discussion then became general, and the Association, through various members, presented as occasion arose the points of which a summary follows:—

1. With reference to the allegation of discrimination during the past summer the following answers were presented: The Buffalo rates cited were the result of very special conditions, and were not entitled to be considered a fair basis for comparison. The United States fleet was fitted out last summer to engage in their profitable trade of coal up and ore down, from which, by the U.S. coasting laws, Canadians are debarred, and when the coal strike stopped the movement of coal, and the ore movement slowed up, because of the over supply at the eastern end of the route, the U.S. ships were put into the grain trade and took cargoes to Buffalo at such rates as they could get, in order to keep moving, and thus ready to engage at opportunity in their regular trade. A distress rate of this kind is no criterion and is in fact below cost of operation. If comparison is to be made in the rates, a fair average, rather than isolated cases, should be taken, and if such a comparison is made it will be found that no complaint can be based upon it against Canadian tonnage. On the contrary such a comparison will satisfy all the requirements now desired of Canadian ship owners, who desire always to provide a rate to the seaboard through Canadian channels that will compare favorably with that through the U.S. No more unjust proposal could be suggested, and none more impossible of practical fulfilment, than that Canadian ships should stand ready to carry, independently of cost or remuneration, at a

Dominion Marine Association.

Honorary President, A. A. Wright, President, Tidewater Shipbuilders, and Vice President, Marine Bureau, Department of Shipbuilding & Repairing Co., Montreal.
President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal.

First Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Second Vice President, G. J. Madden, George Hall Coal Co. of Canada, Ogdensburg, N.Y.

derby, President, and Francis King, K.C., Counsel, Dominion Marine Association; W. H. Smith, Canada Atlantic Transit Co.; W. Crawford, Mathews Steamship Co.; Sincennes-McNaughton Line; G. J. Madden, George Hall Coal Co. of Canada; W. J. McCormack, Algoma Central Steamship Line; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co.; R. B. Teakle, Canadian Government Merchant Marine, and D. B. Hanna, President, Canadian National Ry.s., the Minister of Trade and Commerce being accompanied by J. P. Graham, acting Minister of Railways and Canals, and Major G. A. Bell, Deputy Minister of Railways and Canals. The Minister of Trade and Commerce, in stating the reason for the conference, repeated the complaints of discrimination, which had previously been discussed, and presumed dismissed, and said that it was claimed that with the Buffalo rate being lower than the Cana-

rate momentarily fixed by the convenience or by the necessities of a U.S. ship owner. The reason that any Canadian boats carried to Buffalo, at the low rates available to that port at certain times last summer, can be found in the exigencies of the trade and in the business relations of their owners. No Canadian carries to Buffalo from personal preference, and all prefer to charter to the U.S. if they can get the cargoes promptly, and earn the necessary returns, without serious delays and losses due to congested terminals and other causes. As to this further, it must be remembered that the ship owner does not route the grain. The shipper does that. Canadian owners state that trip statements show their ships lost money on the cargoes in question. Other owners expressed a preference for tying up their ships. The real question should be whether a given rate is exorbitant or unfair, and the Association again submitted this proposition is the proper test, rather than a comparison with a distress rate of Buffalo bearing no necessary relation to cost. If any pledge is required from Canadian ship owners as to the relation rates should bear to each other it should be confined to the all-water rate to Montreal. This should be less than the rate to the Atlantic seaboard via Buffalo, and when complaint was made to ship owners in the summer, at the instance of a prominent miller, this all water rate was only 9.75c a bushel, as against a rate to the seaboard by Buffalo of 11.35c.

Compliance with the request for limitation of the rate to Port Colborne would only benefit the mill there, would not affect the through routing of the grain, and would seriously interfere with the equitable division of earnings between the upper lake boat and those in operation below Port Colborne. The summer freight rate, when little grain is moving, is invariably low in any event, while cost of operation remains as high as ever; and debarred from the profitable ore and coal trade on the U.S. side of the line the Canadian bulk carriers would not be able to keep in operation without fair returns in the early spring and in the autumn, when enough grain is moving to pay a remuneration rate. It is at these remunerative periods before the ore movement begins and after it slackens that U.S. ships break into the only trade Canadian ships enjoy and take a large part of the business offering. This may be quite fair, although it places the Canadian ship at a disadvantage, but it is an additional reason for refusing to require the Canadian ship to carry at a loss in the summer.

The complaints made are believed to be largely at the instance of shippers who have made mistakes in the use of the market, and wish to cover their errors at the expense of the ship owners. There is no substantial complaint from the trade generally. The Montreal Board of Trade was cited to the conference as one of the complainants. Investigation shows that this was apparently an error. The Secretary of the board stated that no such complaint was made by that body. It seems that the acting Secretary of the Montreal Corn Exchange wrote asking for storage cargo privileges for U.S. boats on their last trip this season and that the request went no further.

On the allegation that there exists restraint of trade in the requirement on the part of brokers that shippers permit the broker to arrange to insure on the cargo, it was answered that there is no restraint of trade in this, as it is the general practice, not only with Cana-

dian, but also with U.S. ships in making charters. That no law is entailed by the practice. That the subject is one for discussion with the brokers, who make the stipulation for insurance, as the Dominion Marine Association has nothing to do with it, and as a body knows nothing about it. That in any event the question has no bearing on the coasting laws, and if the law is to be so condemned for any reason a fairer remedy may be devised than the suspension or repeal of the Canadian coasting laws. In fact, no more unfair remedy could well be proposed than this, which would visit the alleged sins of the broker upon the heads of innocent ship owners and shippers, and it would not necessarily be effective to stop the practice, for the Canadian ship owner would simply disappear and the broker could still carry out his plans on the tonnage which would then necessarily be registered under the U.S. flag in order to get any business.

One member of the Association, Canada Steamship Lines, Ltd., was credited with holding a substantial majority of the bulk freight tonnage on the Canadian side of the line. The contrary is the truth. The company holds less than 50% of the upper lake tonnage and less than 40% of that carrying through the Welland Canal.

On the general question of any interference with the coasting laws, the Association repeated its protest against the continued revival and discussion of these proposals, pointing out that the statute took the proper view in according the Governor in council the right to suspend in favor of any country only in cases where that country extended the same privileges to Canadian ships. Such reciprocal suspension took place in the war, and Canadian ship owners cheerfully acquiesced. They are on record as ready to welcome any such reciprocal suspension, and to engage in a fair fight for existence at any time. But they claim that while the barrier is maintained against them in the U.S., a one-sided suspension, or interference with this law would be manifestly unfair, and could only be justified by well-proved flagrant notations of the protecting principle upon which this law was based, a violation which the facts submitted and discussed at the conference fell far short of establishing. The coasting law is the only law of suspension upon which the ship building industry of Canada rests. Destroy confidence in it and you prevent investment in Canadian ships. Without a rigid coasting law to parallel that of the U.S., Canadian tonnage would have to take the only means open to it to enjoy equal rights with that of the U.S. and no more building would take place in Canada. The advantages would have to tremendously outweigh these disadvantages to justify Parliament in inviting U.S. ships to add Canadian trade to what they already enjoy.

As to the proposal for the privilege to U.S. ships to bring storage cargoes to Canadian ports on their last trips the objections were cited and amplified, especially the weakening of confidence in the law and the effect upon ship building. But on more particular grounds it was submitted that Canadian owners who have already chartered for last trips at moderate rates, in the expectation of reasonable ice breaking bills for movement of their winter stores, should be subjected to the greatly increased cost and inconvenience that would be entailed by the addition of U.S. tonnage to the storage fleets in Canadian ports; tonnage

which would charter at sufficiently remunerative rates after the privilege was extended. Provision would have to be made to protect the Canadian owners against this loss. Full use should be made of existing Canadian facilities for Canadian grain, and provision of additional storage and transfer facilities should be hastened, to take care of the rapidly increasing demands of the western crops.

The foregoing is the briefest possible summary of some of the main reasons against the proposal to weaken or destroy that necessary measure of reasonable protection now held by Canadian shipping against the inroads of the powerful and well-nourished U.S. fleet. The argument must not be confused with an argument against fair competition. No one condemns fair competition, and condemnation is directed only against a one-sided arrangement which would place all the advantages with the U.S. ships and sacrifice Canadian shipping, in order to benefit the Canadian public. It is rather a simple one interest which temporarily fails to enjoy the advantages circumstances have thrown for a moment in the way of a neighbor.

The Association's members who were present considered that they had presented conclusively satisfactory answers to the Minister's complaints; and D. B. Hanna, President, Canadian National Ry., supported the Association in its views, both as to the impropriety of the proposal to submit always to the Buffalo rate, which is frequently a distress one, and as to the need of confidence in the coasting laws, and also as to storage cargoes.

The Minister remarked that it was the Government's desire to keep Canadian grain in Canadian channels, and it would be well if Canadian steamship owners would give an assurance that the Buffalo rate would never be exceeded by more than $\frac{1}{4}$ c a bush. On the shipowners' refusing to give such an assurance, the Minister is reported to have said: "The Minister is sorry. In the meantime the Government will consider your statement, and decide what is best for the country as a whole."

Regarding the proposal to suspend the coasting regulations, supposing that to be a remedy for the alleged grievance, the Governor in council can only do so in favor of a foreign country which admits British ships to its Canadian trade. There is no other method by which they may be suspended, except by act of Parliament amending the Canada Shipping Act. As it is unlikely that Parliament will meet until early next year, there is no prospect of any such action being taken, which would be effective during the current Great Lakes and St. Lawrence navigation season.

An Ottawa press dispatch, several days after the foregoing was written, stated: "There will be no suspension of the coastal regulations this season to meet the demand of western shippers who charge the Canadian lake carriers with discrimination against Canadian ports, at times, and want U.S. bottoms to be permitted to come in and compete." It is said that the legal advice submitted is that the present law does not permit of suspension by order in council and enabling legislation is necessary. This cannot be before the next session."

Southampton Dock.—The London & South Western Ry. is reported to have ordered a floating dock for Southampton, Eng., to be 960 ft. long, with lifting capacity of 60,000 tons.

Dominion Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Grounding of s.s. Baluchistan.
Held at Quebec, Que., Sept. 15, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and J. B. Henry, as nautical assessors, into the grounding of the Hindustan Steam Shipping Co.'s s.s. Baluchistan, of Newcastle-upon-Tyne, Eng., about half a mile to the west of White Island light ship, River St. Lawrence, Aug. 26. Evidence was given by the master, Capt. R. Longridge; the pilot, J. H. Talbot; first officer, T. W. Maxfield; third engineer, and T. Maxfield, third engineer. The court expressed the opinion, based on the fact that only payment of pilotage is compulsory, and not the employment of a pilot, the pilot is an adviser to the master, and that the pilot had very little assistance from the master. The ship was enveloped in fog from the time she passed Cape Dogs at about a mile distant. A four point bearing was taken of Cape Dogs, by the chief officer, who gave the distance indicated. The evidence of the chief officer and the pilot, as to the state of the tide, was contradictory, the former stating that the pilot advised him it was ebbing, while the latter asserted it was flood, while the tide half hour that at the time, it was half flood and spring tides. The court therefore wondered how a 4-point bearing could have been taken. If the chief officer was advised that the tide was ebbing, then he established that the speed of the ship was about 10 knots, whereas it was flood, thus reducing the speed to 6 knots. Under the circumstances the position of departure obtained from Cape Dogs could not be accurate. If it was flood tide, with a current of about 2 miles against the ship, why did the pilot alter his course to east, thus offering the side of the ship to the full influence of the tide, with a tendency to drift her westerly. In the court's opinion, such a course could not be adopted if the tide were ebbing. Considering these facts, it would indicate that the evidence of the chief officer that he had been advised that it was ebbing tide, was nearly correct, but the court did not stress this phase of the evidence. Notwithstanding the facts, as stated, full speed was maintained, contrary to the wishes of the Board, and at 16 knots the ship was at full speed when she grounded. Owing to the dense fog, objects only being visible from a cable to a quarter of a mile distant, the speed was unwarranted. The pilot stated that the chief officer was away for 15 minutes, from the time he was ordered to take a sounding, and the ship struck before the report of 12 fathoms was shown. The necessity for sounding was made, but when the report of such sounding was not made within a reasonable interval, the pilot should have reduced the speed. In fact, the speed should have been diminished before, or at the time, the order to take a sounding was given. In view of the foregoing, the pilot erred seriously in not taking ordinary precautions, and was therefore held in default. With respect to the master's absence from the navigating bridge, the court expressed sympathy, on account of any health disability incurred while a prisoner of war in Russia, but felt that if he was well enough to be on the lower bridge prior to, and at the time of, the grounding, he was well enough to be on the upper bridge, near at hand to be consulted, or

to suggest. The chief officer had reported to the master that he was leaving the bridge to sound, and the master's duty required him, at least, to replace the chief officer on the bridge until the latter's return. Such remissness, under the circumstances, deserves the severest censure. The court was impressed with the chief officer's demeanor in giving evidence, and failed to find a flaw in his behavior. The lookout, a boy with three years experience, astonished the court by stating that he had received instructions to report lights, but received no orders to report fog signals. His position on the fore-castle head would have prevented him from hearing unusual sounds, and in this matter, the chief officer was adjudged to have been remiss in not giving instructions to the lookout as to what was expected of him.

The court therefore found that the pilot, J. H. Talbot, was in default. His record of 35 years only contained one slight accident, some years ago, and in view of this, the court, considering the grounding a very serious affair, dealt leniently with him in returning him his certificate, and fining him \$200, to be paid by Oct. 15. The master, Capt. R. Longridge, was severely reprimanded for being away from the bridge under the circumstances, and the chief officer, T. W. Davner, was advised to educate his lookout man, and to issue specific instructions as circumstances may warrant.

Grounding of s.s. Empress.

The Wreck Commissioner's enquiry and judgment in respect of the grounding of the C.P.R. s.s. Empress, at Black Point, near St. John, N.B., is dealt with on other page of this issue, under the heading "Grounding of the C.P.R. s.s. Empress in the Bay of Fundy."

Navigational Lights on St. Lawrence River and Great Lakes.

The Marine Department has given notice that all Canadian lights and fog alarms on Lake Superior will be kept in operation until the close of navigation, except at Caribou Island, which will be closed Dec. 10; Otter Island, Quebec harbor, Davieaux Island and Michipicoten Island, east end, which will be closed Dec. 15; Ile Carisienne, which will be closed Dec. 18; and Garantua, Michipicoten harbor, and Corbelle Point, which will be closed Dec. 20. The lights at Slate Island, Battle Island, Lamb Island, Shaganash, Point Porphyry, Thunder Cape, Welcome Island, Pie Island and Victoria Island, will be closed after the last sailing to or from Port Arthur and Port William.

All Canadian lights and fog alarms on Lake Huron, Georgian Bay, Lake St. Clair, Lake Erie, Lake Ontario and connecting waters, will be maintained in operation until the close of navigation, except the southeast shoal light ship, Lake Erie, which may be removed after Dec. 1, and also Lonely Island light, Georgian Bay, which may be closed before the general close of navigation.

All Canadian lights on the St. Lawrence River will be maintained in operation until the close of navigation.

All gas buoys and other floating aids to navigation will be maintained in position as long as ice conditions will permit, and in cases where it is necessary to remove gas buoys before the close of navigation, the more important points will be marked by spars.

Marine Public Works Contracts.

The Dominion Public Works Department has awarded contracts as follows:—
Aug. 22, dredging entrance channel and basin at Kincardine, Ont., W. Bermingham, Kingston, class B, at 50c a cu. yd., scow measure; Aug. 25, repairs to wharf at St. Alexis, Que., Carey and Frere, L'Islet, Que., at unit prices; Aug. 28, dredging at Montigny, Que., Horace Dussault and Co., Levis, Que., class B, at 50c a cu. yd., scow measure; Aug. 31, removal of Bunker Island light shoal and removal of Bunker Island after its abandonment by Marine Department, Halifax Dredging Co., Halifax, N.S., class B, at 14c a cu. yd., in situ; Sept. 6, dredging at Beaver Harbor, Chocolate Cove, Leonardville, St. Andrews, N.B., J. A. Gregory St. John, N.B., class B, at 60c a cu. yd., scow measure; Sept. 6, deepening of basin at Digby, N.S., J. S. Gregory, St. John, N.B., class B, at 40c a cu. yd., in situ; Sept. 7, clean up entirely all obstacles and materials in bed of St. Marys River, opposite Sault Ste. Marie, Ont., Soc. Dredging and Construction Co., Sault Ste. Marie, Ont., for derrick scow driver \$112.50 a day of 10 hrs., including towing to and from work, for drill boat \$42.50 an hr. for 8 hr. day, and for dredge \$55 an hr. for 8 hr. day, and dynamite at invoice prices; Sept. 8, dredging channel to wharf and through to breakwater at Port Elgin, Ont., W. Bermingham, Kingston, Ont., class B, 70c a cu. yd. scow measure, and \$1800 for gap; Sept. 8, dredging channel at Gobbons Point, Little Current, Ont., C. S. Boone Dredging and Construction Co., Toronto, class A \$4.95 a cu. yd. in situ, class B, \$2 a cu. yd. in situ; Sept. 9, dredging at St. Jean d'Ile, N.B., E. Landry, Anticosti, N.S., at unit prices; Sept. 9, dredging at Lachance, L'Islet, Montreal, class B, \$2.50 a cu. yd. in situ, class B, 60c a cu. yd. scow measure; Sept. 9, dredging channel through shoals between Louiseville and deep water, Riviere du Loup en haut, Que., Lachance Ltd., Montreal, class A \$2.50 a cu. yd. for material to be scowed away, and \$2.50 for material to be overcast, scow measure; Sept. 10, 30c a cu. yd., scow measure for material to be scowed away and 28c a cu. yd. place measure for material to be overcast; Sept. 2, repairs to wharf at St. Michel de Bellechasse, Que., J. R. and J. E. Boulanger, Montmagny, Que., at unit prices; Sept. 12, extension to breakwater wharf at Chinney Corner, N.B., E. Landry, Anticosti, N.S., at unit prices; Sept. 12, dredging of shoal to eastward of Whitman's wharf, Canso, N.S., W. McFaridge, Halifax, N.S., \$100 a day of 10 hrs. and \$5 to be deducted from rental rate for time lost at any one time and amounting to 5 hrs due to stress of weather; Sept. 20, dredging at Newcastle N.B., Micaniche Dredging Co., Newcastle, N.B., class B 68½c a cu. yd. in situ.

Navigational of Amherstburg and Livingstone Channels.—The Marine Department has notified mariners that the temporary modifications of rules and regulations for navigating the Lower Detroit River, which were made effective May 15, 1920, are still in force. The following rule has not been universally observed, with the result that highly dangerous crossings occur above the Detroit River light: "All vessels, upbound for Livingstone Channel, will leave Lake Erie via the channel to the west of Detroit River lighthouse. Violation of the regulations in question" will be reported to the authorities, so that action may be instituted.

Grounding of C.P.R. s.s. Empress in the Bay of Fundy.

The C.P.R. s.s. Empress, running between Digby, N.S., and St. John, N.B., ran on the rock at Black Point, near Partridge Island, and about 4 miles from her western terminal at Reeds Point, St. John harbor, Sept. 29. A dense fog prevailed at the time obscuring all objects within a few feet of the ship. There were 110 passengers on board, mostly women and children. One of the ship's boats was launched within 8 minutes after she struck, and 4 of the crew rowed to Reeds Point for help. The steam tug Neptune was dispatched immediately to the ship and nearly all the passengers were taken off in boats and transferred to the tug. Later a line was attached to the ship by the tug, and the balance of the passengers were transferred, the officers and crew numbering 32, with the exception of the stewardess, remaining with the ship, and the whole of the passengers were landed at Reeds Point within 5½ hours of the accident. The Empress left Digby, at 3.15 p.m. on her usual trip. There was a heavy fog and a high sea running. Immediately land was seen ahead the engines were reversed and the wheel turned hard a port, but the ship struck on a ledge of rock, and remained hard and fast, with her bow standing high out of the water and with a list of about 40 deg. J. H. Boyle, Superintendent, Brownville Division, New Brunswick District, who was acting General Superintendent, New Brunswick District, C.P.R., during the absence of J. M. Woodman, was, with other of the company's officers on board the tug Neptune, and directed operations for the safety of the passengers. On the following day the ship was visited by J. T. Walsh, Manager, Steamship Department, C.P.R., Montreal, J. H. Boyle, acting General Superintendent, N. B. District, L. Atkinson of the C.P.R. Bay of Fundy Steamship Service; Capt. R. J. Mulcahy, port warden, St. John, N.B., and representatives of the London Salvage Co., who studied the ship's position and the possibilities of floating her. Attempts to do so were made on Sept. 30, and Oct. 1, by the tugs Neptune and Margaret A. Hackett, but without success. She was refloated Oct. 4, after portions of the rock on which she rested, and other obstructions had been removed by explosives. It was stated that the damage sustained was not serious. Temporary repairs were made at St. John, N.B., after which she proceeded to Halifax, N.S., where she was drydocked for thorough inspection and repair. It is reported that while in drydock she will be equipped with radiotelegraph installation. The service between Digby, N.S., and St. John, N.B., was suspended for a few days, pending arrangements for another steamship. The Dominion Government s.s. Arammore was subsequently chartered until the repairs to the Empress are completed, and the service was resumed Oct. 11.

An investigation into the casualty was held at St. John, N.B., Oct. 12, before Capt. L. A. O'Neil, and the Dominion Creek Commissioner, assisted by Capt. A. J. Mulcahy and Capt. W. H. Parker, of the Royal Mail Steam Packet Co.'s s.s. Chignecto, as nautical assessors. Evidence was given by Capt. A. McDonald, R. A. Sweeney, chief officer; R. McGrath, quartermaster; G. Copper, sailor; G. R. Kinney, chief engineer, and the s.s. Empress; and Capt. L. Kinney of the C.G.S. Aberdeen. The C.P.R. was represented by F. R. Taylor, K.C., and H. H. Mc-

Lean Jr. The captain was not legally represented.

The evidence showed that, at the time of the accident, the ship was drawing 10 ft. forward and 13 ft. 7 in. aft, and that the usual course was steered and the speed timed. The fog horn on Partridge Island was heard slightly on the port bow. Some contradiction as to the bearing occurred, but it seems that an accurate bearing was not taken of the first sound, nor any of the succeeding ones. However, the course was altered to n. ½ e. The wind had been, and was still blowing fresh from the s.w. striking her on the port quarter, and the evidence of the quartermaster showed that at times the ship would swing to windward about one point, then he would compensate somewhat by letting her fall off the same number of degrees on the opposite side. In view of such steering no dependence

gravity of the violation of that rule. The court could not, in view of the evidence, come to any other conclusion than that, on the part of the master and chief officer, who is there to help the master, ordinary prudence was not observed, and therefore found the master, Captain McDonald, certificate 3,929, in default. Owing to this being his first mishap and being a young man who gave straightforward evidence, the court did not deal with his certificate, but reprimanded him and cautioned him to be more careful in future. Failing to hear the bell buoy it was time to realize or rather surmise that extra prudence was in order. With respect to the chief officer, the court felt that he was remiss in his functions in not taking a more accurate bearing of the sounds and making his reports accordingly. He was also reprimanded and cautioned to be more interested in the

Canadian Pacific Railway s.s. Empress, ashore on Black Rock, Bay of Fundy, at low tide.

could be placed on the exact position of the ship simply by the usual method followed and found satisfactory in previous voyages. The full speed was maintained, the master evidently having in mind to slow down when his distances had been run, and then take a cast of the lead. It appeared to the court that when the sound of the fog horn was heard on the port bow, it would have been the right movement to steer for the sound, instead of altering the course to starboard without having ascertained, except in a cursory manner, the bearing of the sound, and being unable to be positive of the ship's position, which could only be known after successive casts of the lead. It had been demonstrated to the court that on the day in question a strong and unusual set to the n.e. had occurred. This is often met with and is to be expected. Hence the cocksureness as to the position of the ship without having taken means of certitude was inadvisable. The Rules of the Road demand and oblige the moderation of speed in foggy weather. There are no exceptions mentioned. It must be inferred, and it is inferred, that at all times and under all circumstances covered by the rule in question, a moderate speed is compulsory. Hence the master was found in default for maintaining the full speed, which is a violation of the rules. In view of the proofs obtained from an independent witness, that an unusual set had taken place on that day, it served to minimize to some degree the

navigation of the ship and to be a help to his superior officer.

The press had announced that wireless will be installed on the Empress; the court commended this step as one of great import, and one which will prove a basis of assurance that all will be well in future, in view of the facilities provided at St. John in the way of a direction finding station.

The Empress was built at Newcastle-Upon-Tyne, Eng., in 1906, for the Charlottetown Steam Navigation Co.'s service between Summerside, P.E.I., and Point du Chêne, N.B., and is of steel, screw driven by engine of 365 h.p. Her dimensions are,—length 235 ft., breadth 34.2 ft., depth 20 ft., tonnage 1342 gross, 612.

On the Charlottetown Steam Navigation Co. discontinuing business in 1916, the Empress was sold to the C.P.R. for its Digby-St. John service, and the company's other steamship, Northumberland, was sold to the Dominion Government which took over the P.E.I. and mainland steamship service, the Northumberland being subsequently transferred to Lake Ontario for operation by Canadian National Ry.

Castrian Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with \$200,000 authorized capital, and office at Montreal, to own and operate ships, wharves, docks, elevators, etc., and to carry on a general steamship, navigation, wrecking and salvaging business.

Ship Building and Ship Repairing Throughout Canada and Newfoundland.

Fire Tug for Toronto.—Toronto's fire chief recommended the board of control, recently, to accept a tender from the Gibley Co., Penetanguishene, Ont., to supply the city with a fire tug for \$29,875. The controllers deferred action.

North Vancouver Ferry Steamboat.—The city council received notice, Oct. 9, from Napier & Miller, Glasgow, Scotland, that they would be unable to accept the specifications and agreement submitted by the city council for building a steel ferry steamboat for \$13,000, but that they were prepared to carry out a contract on the terms and conditions of their own tender and specification. Any contract made by the council in this connection is subject to ratification by the ratepayers.

Canadian Vickers, Ltd., Montreal, did repair work on the following ships during September: Canadian s.s. *Conqueror*, Canadian Challenger, Canadian Conqueror, Canadian Cruiser, for Canadian Government Merchant Marine, Ltd.; Montrolite, Lalaralie, Torontolite, for Imperial Oil Ltd.; Istria, for George Hall Coal Co. of Canada; Montreal, Lord Dufferin, for Canada Steamship Lines Ltd.; Porsanger, for Westfall, Larsen & Co.; Baluchistan, for Hindustan Shipping Co.; Ville d'Ys, for French Government; Domiva, for Preston Steam Navigation Co.; Gaspesia, for Clarke Steamship Co.; Western Plains, for U.S. Shipping Board; Antonia, Albania, Venusia, for Cunard Line; Victoria, Metagana, Canada Pacific Steamships Ltd.; Concordia, for Donaldson Line; H. K. Waage, for D/S/A/S Fold; Chiswick, for British Steamship Co.; Unitia, for H. M. Wrangell & Co.; Osterdal, for Norwegian owners; Pallas, for Swedish owners; Lishar County, for International Steamship Co.; Albany, for McLean Kennedy Ltd.; Alwaki, for Thos. Haining & Sons.

The company has received an order from the Marine Department for a steel, single screw hopper barge, with propelling machinery, to have 1,250 i.h.p. The hull is to have the following leading dimensions: Length, b.p. 210 ft.; breadth moulded, 35 ft.; depth moulded, 19 ft.; hopper capacity, 950 cu. yd. The barge will be operated in the north channel, below Quebec.

Davie Shipbuilding and Repairing Co., Levis, Que.—Canada Steamship Lines' s.s. *Rapids Prince*, after being re-released, Sept. 9, from Heron Island, below Lachine Rapids, where she grounded July 30, through the breaking of a rudder chain, was taken to the Davie yard, where she was drydocked for repairs. We are advised that the damage sustained was mainly to the bottom of the ship.

Halifax Shipyard Ltd., Halifax, N.S.—The contract for repairing the U.S. s.s. *Bennington*, which ran ashore at Seal Island, near Cape Sable, in August, called for the repairing of 29 plates, the opening up for examination of the main engines, engine room auxiliaries, pumps, etc., the drawing of the tail shaft and repairs to rudder. The repairs were completed and the ship undocked, Sept. 16, two days ahead of contract time, and, after reloading, she proceeded to Montreal. She is an oil burner, carrying fuel oil in her double bottom, and as a number of double bottom compartments were punctured, it was impossible to pump the oil from the compartments before she was docked. In docking her when the water in the dock was pumped

down to the level of the tank top, pressure being released, the oil began to appear in the water in the dock. It was therefore necessary to set up a portable pump to pump the oil from the tanks to tank cars on the dock wall, and thus prevent the oil from going into the harbor.

The Canadian Government Merchant Marine s.s. *Canadian Voyageur*, which, while anchored in Bedford Basin, Halifax, in the autumn of 1921, dragged her anchors during a gale, and went ashore, causing considerable bottom damage, was docked Sept. 18, after having been laid up, owing to the general depression in shipping. The contract provided for the renewal and repair of 31 bottom plates, and the work was completed and the ship undocked, Oct. 4.

Newfoundland Drydocks, Ltd., St. John's, Nfld.—The Neptune Steamships Co.'s s.s. *Neptune* was docked, Oct. 11, for surveys and repairs, after grounding at Catalina when bound from Labrador to St. John's. Considerable damage was done to the keel, and while she was in dock she received a general cleaning, painting and overhauling.

Prince Rupert Drydock and Engineering Co., Prince Rupert, B.C. The receiver for this company, which went into bankruptcy some time ago, is reported to have announced that following conferences with the Deputy Minister of Marine and Fisheries, a settlement may be made with the creditors, at 50c on the dollar.

Prince Rupert Drydock & Shipyard, Prince Rupert, B.C., did the following repairs during September: *Masset* Timber Co.'s steam tug, *Evergreen*, extensive repairs and alterations; steam trawlers, *George E. Foster* and *James Carruthers*, docked, cleaned and painted; *Grand Trunk Pacific Coast Steamship Co.'s* barges 1 and 2, docked, cleaned and painted; 22 fishing ships, docked, cleaned and painted, and a number of other miscellaneous repairs.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C., which was formed to build 4 wooden barquentines under special aid from the Dominion Government, to relieve the unemployment situation, subsequent to demobilization after the war, and which got into financial difficulties before the completion of the first ship, (*S. F. Tormie*) has been declared bankrupt by the British Columbia Supreme Court, on an action by the Washington Bank of Alma. Under the agreement between the company and the Dominion Finance Department, on the failure of the company to complete the ships, the government took over the unfinished *S. F. Tormie* and had it completed and handed over to the Canadian Government Merchant Marine (Halifax) Ltd. for operation. The material which had been bought for the other 3 ships was also taken over under the terms of the agreement, and it was reported that the Government having decided not to proceed with the construction of the remainder, decided to sell this material. Efforts which had been made to force the last Government and the present one to render further financial assistance to enable the ships to be completed, or to guarantee accounts of certain creditors, have failed.

Victoria Machinery Depot Co., Victoria, B.C., did the following work during September: *Trebla*, formerly *Santa Cruz*, 511 tons, Capt. A. Bernquist, tail shaft drawn for inspection, hull and engine repairs, new smoke stack, new towing

winch; *Princess Patricia*, 1,158 tons, C.P.R., propeller repairs; *Chamher*, 1,044 tons, C.P.R., painted, hull and engine repairs, new tail shaft; *Princess Maguina*, 1,777 tons, C.P.R., painted, engine repairs, hull repairs, due to stranding, 17 plates removed; *Otter*, 165 tons, C.P.R., painted, hull and engine repairs; steam tug *Red Fir*, Capt. Bruce, boiler repairs; miler driver scow, *McDonald & Hall*, re-tubing boiler; schooner *Naden*, Naval Service Department, painted; steam tug *Sadie*, Victoria Tug Co.; painted, hull and engine repairs; scow 6, *Victoria Tug Co.*, painted and general repairs.

Yarrows, Ltd., Victoria, B.C., did the following repairs during September: Canadian Government s.s. *Estevan*, 1,101 tons, new bridge wall bearer plates; C.P.R. s.s. *Princess Victoria*, 1,943 tons, drydocked, cleaned and painted, and repairs to tail shaft; s.s. *Princess Royal*, 1,997 tons, fitting ash ejector; Canadian Western Steamship s.s. *Margaret Coughlin*, 5,704 tons, drydocked, cleaned and painted, and repairs to rudder; commercial cable ship *W. J. Restoror*, 3,180 tons, welding repairs; Consolidated Whaling Corporation, s.s. *Gray*, 707 tons, extensive repairs due to stranding, renewed large number of bottom plates, and general repairs; *Bowring & Co.*, s.s. *El Lobo*, 4,800 tons, repairs to rudder, etc., drydocked, cleaned and painted; *Britannia Mining & Smelting Co.*, s.s. *Quadra*, 683 tons, docked, cleaned and painted; *Nippon Yusen Kaisha*, *Take-toyo Maru*, 7,028 tons, new piston rings; *Pacific Salvage Co.*, steam tug *Salvor*, new smoke stack; *W. A. Souter & Co.*, *Sheafmead*, 4,273 tons, drydocked, cleaned and painted, and sundry repairs; *Union Steamship & Co. of British Columbia*, s.s. *Ventura*, 1,011 tons, manganese bronze propeller blades; and steam tugs *Mystery* and *Olive M.*, boiler repairs and new fire bars. In addition to the foregoing, several scows were docked for cleaning, caulking and painting.

Flags for Canadian Merchant Marine and Navy. An order in council passed April 26, has been issued recently prescribing the flag to be flown by Canadian registered ships, viz: the red ensign defaced by the shield of the Canadian coat of arms in the fly. The blue ensign with the Canadian coat of arms in the fly is to be flown by Royal Canadian Navy ships. The white ensign, which has been adopted by the Dominion, it was necessary to issue an order for the replacement of the old coat of arms by it. Flags bearing the old shield may be used up to March 31, 1924.

Panama Canal.—Traffic between the west coast of Canada and Europe, and between the west coast of Canada and the U.S. east coast, increased greatly during the past year. It is somewhat difficult to differentiate in the traffic between the west coast of Canada and the U.S. west coast, as the majority of ships in the Canadian traffic also load and discharge cargo at U.S. ports. **Panama Canal Record.**

The Great Lakes Transportation Co., on Oct. 15, redeemed \$42,000 par value of its bonds, being all its outstanding bonds nos. 99 to 140, inclusive, secured by a mortgage to R. Stone, Detroit, Mich., and dated April 15, 1915. For a portion of the bonds, which actually matured April 15, 1923, payment was made of \$1.02 on the dollar par value, and for those maturing April 15, 1925, \$1.03 on the dollar par value.

Dominion Marine Association's Activities.

The Immigration and Colonization Department having notified shipowners of the imposition of fees for overtime to be paid by shipowners to immigration officers, the Association has decided to oppose the proposal.

The proposal to suspend the coasting regulations as a remedy for an alleged discrimination against Canadian shippers in the Great Lakes grain trade, in which the Association members are actively engaged, is dealt with on another page of this issue.

The Association is again taking up the matter of the compulsory payment of pilotage dues on the St. Lawrence River below Montreal, but was advised by the Deputy Minister of Marine, recently, that no action is possible at present, nor until Parliament meets. The Association will request the assistance of the Shipping Federation of Canada, on the question, and will arrange for an interview with the Minister of Marine, on his return to Canada from Genoa.

With regard to the reduction of shovelling charges on grain, of 35c per 1,000 bush, at railway elevators and other eastern terminals, except Port Colborne, and of 25c per 1,000 bush, at Montreal, as mentioned in our last issue, the Association is asking for further action on the part of Montreal, and is also endeavoring to reopen the question relating to Port Colborne, and has suggested a conference with the Railways Department on the subject.

The application of the St. Lawrence River Power Co., having been filed with the International Joint Commission, for continuance of the submerged weir authorized in 1918 for three years, in the South Sault channel, in the St. Lawrence River, below the inlet of the power canal to the plant at Massena, N.Y., and after enquiry and consultation, it appearing, more particularly from a letter written by the Canadian Chief Hydrographer, that there had been no complaints during the time that the weir has been in position, and that, in fact, navigation has been benefited in periods of low water, although in periods of high water there is some danger to the canal banks, the Association has decided, as there seems to be no present need for the removal of the weir, that the Commission be asked to limit the period of any further approval it may give, so as to compel the company to apply for extensions from time to time.

The new regulations respecting steamboat inspection, which were approved by order in council, March 10, but which have only been published recently, were discussed at a recent meeting of the Association's executive committee, and it was resolved that as far as they apply to ships enrolled in the Association, they are unnecessarily stringent and onerous, and in a great many respects, impracticable, that as it is not possible to comply with their requirements, they should be withdrawn, in order that they may be reconsidered and revised with due regard to conditions of fresh water and in the light of advice from those who have enjoyed practical experience under these conditions. The Association, representing, as it does, almost all the companies owning and operating ships on inland waters between tidewater and the head of the Great Lakes, believes that it should be consulted as to its views in the framing of rules of so much importance to its members' business, and should have an opportunity of presenting reasonable

criticisms and objections before any such rules are put in force, and that the interest of owners in the safety of their ships should of itself entitle their views to some consideration. The Association's members, as owners of the ships, have an additional reason in asking this consideration, as inspection fees, which, in 1903, the Dominion Government declared should be out of public revenue, because inspection was for the benefit of the public, have recently been reimposed, with incidental extra taxes, on the ships' owners.

The Hamilton Harbor Commissioners.

The Dominion Government has appointed Wm. Ainslie, John Newland and W. B. Sheppard as commissioners for Hamilton, Ont., harbor, in place of the former commissioners, W. J. Clark, A. C. Garden and J. Guy. The Mayor of Hamilton, on Oct. 12, communicated with the Marine Department, pointing out that A. G. Garden had been reappointed by the city as its representative, and asking why the Government had appointed three commissioners. The Department is reported to have replied that Mr. Garden was appointed by the city, Dec. 8, 1915, for three years, that this term expired on the same date in 1918, and that the Department has nothing to show that he had been reappointed, and therefore, the Government had, under the act constituting the Hamilton Harbor Commission, made an appointment on behalf of the city. The Hamilton Chamber of Commerce has protested to the Prime Minister against the dismissal of the former commissioners. H. E. Waterman, Secretary of the old Commission, is reported to have resigned.

The Hamilton Harbor Commission was constituted by the statute of 1912, chap. 98, which provides that the corporation shall consist of three commissioners, one of whom shall be appointed by the city council and two by the Governor in council, the one appointed by the city council to hold office for three years, subject to removal, and shall be eligible for reappointment. Sec. 8 of the act reads: "Whenever a vacancy occurs in the office of commissioner appointed by the council of the City of Hamilton, whether such vacancy occurs by expiration of the term of office, or otherwise, the council shall, within 30 days, appoint his successor, and in default of such appointment being made, the city council shall appoint a person in council may appoint a person to fill such vacancy, and the person so appointed shall hold office in all respects as the commissioner in whose place he is appointed would have held it."

Dominion order in council 2,050 was passed Oct. 7, cancelling the order of April 17, 1912, which appointed W. J. Clark and J. Guy as Commissioners, and appointing Wm. Ainslie and John Newlands in their stead, and also appointing W. B. Sheppard in place of A. C. Garden, who was appointed by Hamilton City Council, under bylaw 1,885, Dec. 28, 1915, for three years, and whose term expired Dec. 28, 1918, no further appointment having been made by the city council, under the Hamilton Harbor Commissioners Act, sec. 8.

In 1914 the harbor commissioners adopted a tariff of harbor dues, and following this, the city council made representations to the Dominion Government, and offered a grant of \$4,000 a year in lieu of harbor dues. The commissioners accepted the offer, anticipating that it would build up the harbor business, and

the agreement has been renewed from year to year, but the new commissioners claim that the results obtained have not realized expectations, and they propose to adopt a tariff which will be compiled in the near future, possibly on the basis of the old tariff, as there are heavy engineering expenses which will have to be met, and the grant from the city up to the present is said to have barely covered administration expenses.

A Hamilton press report states that the city council has resolved, as a protest against the Dominion Government appointing a representative on behalf of the city, not to co-operate with the new commissioners.

Shipments of Grain from Fort William and Port Arthur for the Crop Year 1921-1922.

In view of the attempts made to have the Canadian coasting laws abrogated, to permit U.S. ships to carry grain between Canadian ports, in order to eliminate alleged discrimination against Canadian shippers by Canadian steamship owners, which is fully dealt with on another page, the following figures, compiled from a report by the Board of Grain Commissioners, will be of interest. The total amount of all grains, shipped to Canadian ports, was 109,877,962 bush.; sample mixed grain, 56,624,436 lb.; elevator screenings, 13,997 tons. To U.S. ports, all grains, 115,792,072 bush.; sample mixed grain, 115,017,231 lb.; elevator screenings, 19,823 tons. Of these amounts, 616 cargoes were shipped in Canadian ships, as follows: 24,077,333 bush.; sample mixed grain, 81,633,916 lb.; elevator screenings, 16,550 tons. In U.S. ships, 334 cargoes, all grains, 99,592,701 bush.; sample mixed grain, 90,007,757 lb.; elevator screenings, 17,270 tons. The amounts shipped to Canadian ports in Canadian ships, were, all grains, 110,317,681 bush.; sample mixed grain, 56,624,436 lb.; elevator screenings, 13,997 tons. To Canadian ports in U.S. ships, wheat, 413,000 bush. To U.S. ports in Canadian ships, 15,749,642 bush.; sample mixed grain 25,009,474 lb.; elevator screenings, 2,553 tons; to U.S. ports in U.S. ships, all grains, 99,179,701 bush.; sample mixed grain, 90,007,757 lb.; elevator screenings, 17,270 tons.

Grain Shipping Regulations at Montreal.

M. P. Fennell Jr., General Manager, Montreal Harbor Commissioners, and who is also Chairman, Grain Clearance Board, is reported to have stated, Oct. 3, that in view of the large number of ships then in Montreal harbor, and the additional number en route, the Board had been considering the best method to be pursued in loading them for quick dispatch. To assist in doing this, the following regulation had been adopted on Oct. 2, and confirmed by the Montreal Harbor Commissioners: "On and after this date ships taking full cargoes of grain will be required to load in the order in which certificates of readiness to load are issued by the port warden, provided their grain cargo is in the elevators or can be arranged for through the Grain Clearance Board, and loading will be continued until completed. Ships shall lose their turn when their grain cargoes are not ready to load, and their cargo shall remain on turn in their order of readiness. Similarly, ships ready, but wishing to defer their loading, shall retain their position on turn."

Great Lakes Grain Freight Rates.

Press dispatches from Cleveland, Ohio, during October, showed a steady demand for grain tonnage for the Great Lakes, and a general increase in rates over those for September, which had shown a general stiffening from the lower summer rates. Following is a summary:—

Oct. 2.—With tonnage in good demand, 5c was freely offered to Buffalo, for early loading, but, in many cases, cargoes were declined on account of congestion at the elevators. Two large ships placed at head of lakes for loading at 5c, during the following week, on understanding that there would be room at elevators on arrival at Buffalo. Two ships chartered to load at Michigan ports for Georgian Bay, at 3½c, with dispatch guarantee. Rate bid from Duluth and Fort William to Buffalo for the last half of October was 5½c.

Oct. 4.—Grain offered freely, but cargoes not taken for early loading without dispatch guarantee. Three ships chartered at head of lakes at 5c, to Buffalo, with demurrage at \$800 a day for detention over 96 hours. A charter was made from South Chicago to Georgian Bay at 3½c, with demurrage at \$750 a day after 72 hours.

Oct. 9.—Chartering active, with shippers' dispatch guarantees. Charters made at head of lakes for Buffalo at 5½c. Two ships placed, with \$1,000 a day demurrage for detention at unloading port over 72 hrs., and one charter with demurrage at \$1,500 a day after 72 hrs. Two charters from Duluth to Georgian Bay at 5c, with demurrage at \$1,000 a day over 72 hrs., and a charter from a Michigan port to Georgian Bay, at 3½c on same basis. A charter was made to load at head of lakes between Nov. 15 and 25, for Buffalo, at 7c, and some storehouse space was done at that figure.

Oct. 10.—Chartering active. A charter from Fort William to Port Huron, or Toledo, was made at 5c, with dispatch guarantee, and demurrage for detention over 72 hrs.

Oct. 11.—Last trip and winter storage rates quoted at 8c, and three charters made, from Duluth or Fort William, for last half of November, to hold at Buffalo, and another for first week of December, to hold at Erie. Michigan and Georgian Bay ports quoted at 3½c, with dispatch guarantee. Grain carriers reported held at Buffalo a week or more, with no immediate improvement in dispatch expected.

Oct. 12.—Rate from head of lakes to Buffalo steady at 6c, with an advance for late loading tonnage. Two ships placed at 6c for Buffalo, with \$1,000 demurrage after 72 hrs., and another from Fort William to South Chicago at 6c, with \$1,500 demurrage after 72 hrs. The latter grain is for shipment to the Gulf of Mexico by rail, for ocean shipment, on account of congestion at lower lake receiving ports.

Oct. 13.—Rate from head of lakes to Buffalo at 6c, for prompt loading, with dispatch guarantee, and 8½c for last trip and storage.

Oct. 17.—For late November loading and storage, 7½c was bid. The demand for tonnage slowed up, and the rate for congestion at lower lake receiving ports. 6-day loading were shaded. Charters for late loading were made at 5c and 6c, with dispatch guarantee. A charter was made from head of lakes to South Chicago, at 5½c, and \$1,000 a day demurrage over 72 hrs., and to Buffalo at same rate, with demurrage at \$1,000 a day after 96 hrs. Later, a charter was made to Buffalo at 6c, with \$500 a day demurrage over 96 hrs.

Oct. 18.—A ship was placed at Duluth, to load for Georgian Bay, at 5½c, with \$1,000 a day demurrage after 72 hrs., and 5c was bid for Buffalo, with some tonnage on the market at 5½c.

Canadian Pacific Railway Ocean Steamship Services.

The s.s. Empress of Scotland made her last trip of the season on the St. Lawrence route, during the last days of September. She is to be laid up for several months, during which she will be reconditioned in preparation for a Mediterranean cruise of 65 days, sailing from New York, under charter to F. C. Clark, Feb. 3, 1923.

The steamships Empress of India, and Corsican, have been chartered by the British Government for the transportation of troops to the near east. The necessary cargoes in both ships were made at Glasgow, after which they proceeded to Southampton, for orders. It is stated that the first named ship carries about 2,500 men a trip, and the latter, 1,500. The s.s. Scotian is also under charter for the transportation of troops to and from India.

A New York nautical paper of Sept. 23, contained an item headed "C.P.'s New Cargo Fleet," as follows: "The Canadian Pacific is building a great fleet of steel cargo ships. These include the Batsford, Bolingbroke, Bosworth, Boswell, Dunbridge, Holbrook, Mottawa, Methven, Montezuma, Motisfont and others." This item is a little behind the times, as these ships are built as follows: Methven, 1906; Mattawa, 1912; Batsford, 1914; Bolingbroke, Holbrook, Mottisfont, 1917; Montezuma, Dunbridge, 1918, and Bosworth, 1919, and, with others, were bought by the C.P.R. towards the end of the war, in 1918.

Large quantities of German goods are being carried by Canadian liners in bond from Germany to the western states. U. S. customs officials state that this year is the first in the annals of shipments that such goods have been shipped from Hamburg to the U.S. by C.P.R. ships and rail to their destination in the U.S. They claim they get better service and quicker dispatch via this route owing to the perfect organization of the services in Canada and in Europe.—Nautical Gazette, New York.

The s.s. Empress of Britain, shortly after leaving Cherbourg, France, Oct. 13, was struck by the Spanish s.s. Nadia, and her plates penetrated to the extent of about 3 ft. The Empress of Britain was

slowed down for about 10 minutes, to see if the Nadia required assistance, and, as she did not, the run to Southampton was continued.

The s.s. Empress of Scotland, which was reported recently, as about to be converted to an oil burner by the Todd Shipbuilding Corporation, New York, has been using oil as fuel all the time she has been under C.P.R. operation, having been converted to that system before being handed over by former German owners. What is now being done by the Todd Shipbuilding Corporation is the refitting of the ship with that company's style of oil burners.

The s.s. Empress of France is scheduled to sail from New York, Jan. 23, 1923, on 4 months cruise to Havana, Panama Canal, Cocos Islands, San Francisco, Honolulu, Yokohama, Tokyo, Kamsukutsu, Osaka, Kyoto, Kobe, Nagasaki, Hong Kong, Canton, Manila, Batavia, Singapore, Rangoon, Calcutta, Bombay, Kandy, with optional trips to Darjeeling, Benares, Lucknow, Cawnpore, Agra, Delhi, etc. The voyage will be continued through the Red Sea and the Suez Canal, visiting Port Said, Cairo, and calling at Naples, Gibraltar and Havre.

Esquimalt Naval Matters.—It is announced that Engineer-Lieut.-Commander G. L. Stephens, who has been associated with the Royal Naval College at Esquimalt, B.C., for the past two years, has been appointed in charge of the naval department there, vice Engineer-Commander (Clayton), who is stated to have been transferred to H.M.C.S. Patriot at Halifax, N.S. It is also stated that H.M.C.S. Patricia is to be taken to Esquimalt, to be used as a training ship in connection with the formation of a naval militia.

The Icebreaking Steamship J. D. Hazen, originally built for work in the St. Lawrence ship channel, which was sold to the Russian Imperial Government, during the war, for service in the White Sea, and since bought by the Dominion Government from the French Government, is now at Sorel, Que., for the winter, during which she will be overhauled in readiness for her work next spring. The statement, by a Toronto contemporary, that she "was lying idle in the port of Archangel when the Canadian Government purchased her" is incorrect, as at the time negotiations commenced, she was at Cherbourg, France, and had been there for some time. Authorities have been absurdly silent as to how, and when, she got to Cherbourg from the White Sea.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during September, 1922:

Articles		Canadian		
		Canal	U.S. Canal	Total

Canadian Government Merchant Marine Operations, Etc.

Atlantic and Pacific Oceans.

Officers of Steamships.—The following appointments and changes in captains and chief engineers have been made since those published in our last issue: s.s. Canadian Adventurer, Capt. A. M. Wright, chief engineer, W. P. Craig; s.s. Canadian Commander, Capt. R. V. Bennet, vice Capt. D. H. Maclean; s.s. Canadian Engineer, Capt. J. Williams, chief engineer, E. G. Rankin; s.s. Canadian Farmer, Capt. A. J. Edgecombe, vice Capt. W. J. Boyd; s.s. Canadian Navigator, Capt. A. J. Gilbert, vice Capt. D. M. Dickson; s.s. Canadian Pathfinder, Capt. W. Carson, chief engineer, W. Lamb; s.s. Canadian Sailor, Capt. A. Stenson, chief engineer, J. M. Bowden; s.s. Canadian Sovereign, Capt. O. V. Perreval, chief engineer, J. A. Crepeau; s.s. Canadian Squatter, Capt. R. A. Goudey, vice Capt. F. W. Boulton; s.s. Canadian Trader, Capt. R. D. Simpson, chief engineer, L. Lambert.

The s.s. Canadian Cruiser, which arrived on this side recently, with about 8,000 tons of coal from Hong Kong, is one of the largest of the C.G.M. ships. On her eastbound trip she took about 8,000 tons of cargo to London, which was discharged in 4½ working days. She then proceeded to Hull for coal. She attracted considerable attention there, as the largest steel ocean freight steamship built in Canada, and comments on her appearance and equipment were complimentary. Her estimated speed is 12 knots, on 4 boilers, but the captain stated that on that trip, he made 13½ knots on 3 boilers.

The s.s. Canadian Voyageur, which has been laid up at Halifax, N.S., since the autumn of 1921, when she damaged her anchors in Bedford Basin, during a gale, afterwards going ashore and causing considerable bottom damage, was docked at the Halifax Shipyard plant, Sept. 18, for the renewal and repair of 31 bottom plates, which was completed Oct. 4.

Great Lakes Grain Service.—The steamships Canadian Engineer and Canadian Sailor, which have been laid up for some time at Goderich, Ont., and the steamships Canadian Adventurer, Canadian Pathfinder, Canadian Sower and Canadian Trader, which have been laid up at Midland, Ont., have been chartered to carry grain from the head of the Great Lakes to Goderich and Georgian Bay.

Montreal sailings.

Liverpool service.—Canadian Miller Nov. 8, Canadian Mariner Nov. 22.

London service.—Canadian Commander Nov. 11, Canadian Leader Nov. 22.

Cardiff & Swansea service.—Canadian Otter Nov. 15.

Glasgow service.—Canadian Carrier Nov. 15.

Australia & New Zealand service.—Canadian Planter, Nov. 18.

Barbados, Trinidad & Demerara service.—Canadian Coaster Nov. 8, Canadian Harvester Nov. 22.

Haiti, Nassau, Kingston, Belize, Bermuda, Bahamas, Jamaica, British Honduras service.—Canadian Forester Nov. 16.

Newfoundland service.—Canadian Sapper Nov. 18.

Vancouver sailings.

Australia service.—Canadian Highlander Nov. 10, Canadian Skirmisher Nov. 20, Canadian Traveller Dec. 30.

Oriental service.—Canadian Winner Nov. 5.

India service.—A steamship in Jan. 1923.

A general reduction in ocean freight rates to United Kingdom ports, effective Oct. 9, by steamship companies, members of the United Kingdom conference, was announced in New York, Oct. 6. The reductions range from 5 to 40% below previous rates.

The Royal Mail Steam Packet Co.'s motorship Loch Goll, which was launched at Govan, Scotland, recently, is expected to be ready for operation to British Columbia ports during this autumn. She is a twin screw ship of 9,500 tons gross, and engaged for a speed of 12½ knots an hour under full load. Her dimensions are: Length, 502 ft.; breadth, 62 ft.; depth, 35.6 ft.

Vancouver, B.C., press dispatch of Oct. 7, stated that an irregularity had been discovered in the turbine shaft of the s.s. Empress of Australia, and that she had been brought back to port while on her second voyage to the Orient, to have the matter attended to. It was stated that the necessary repairs would probably have to be made in the U.S., owing to the difficulty of finding equipment to lift the shaft.

The White Star Line has announced that it will inaugurate a cabin and third class steamship service, this autumn, between New York and Bremen, with the steamships Canopic and Pittsburg, calling at Halifax, N.S., westbound, and possibly eastbound as well. The Canopic has been operated on the St. Lawrence route during the summer, and the Pittsburg is a sister ship of the Regina, and is new this year. She has accommodation for 600 cabin and 1,700 third class passengers, and burns oil. The first sailing on this route is scheduled to take place from Bremen, Nov. 10, with the Canopic.

Maritime Provinces and Newfoundland.

A whistling buoy, which broke from its moorings off the Nova Scotia coast, near Gysburo, during the winter of 1921-22, has been reported off the coast of Ireland.

The Newfoundland Marine Department gives notice that the acetylene gas light at La Scie, lat. 49° 48' 59", long. 55° 44' 10", has been re-established, and now shows a white instead of a red light.

The Southgate Import & Export Co., Norfolk, Va., is reported to be opening a branch agency at St. John, N.B., and will, it is stated, operate a steamship service from St. John to southern U.S. and West Indian ports.

The U.S. s.s. Lake George, which went ashore on Indian Island, near Petite Riviere, N.S., towards the end of September, was released after two days, by the wrecking s.s. Maggie Marshall, of Halifax. She was en route from Philadelphia to the Great Lakes.

We are officially advised that the Reid Newfoundland Co.'s s.s. Home, which grounded off the Labrador coast at the end of August, was refloated, and continued her voyage with little damage. Press reports, as mentioned in our last issue, indicated that she had been seriously damaged, and was expected to become a total loss.

The ferry revenue at St. John, N.B., for September decreased \$654.58, the total figures being, revenue, \$1,933.54; passengers, 126,972; compared with, revenue, \$2,438.46; passengers, 156,212, for Sept., 1921. The revenue for the month of September, was 7,914, and the revenue, \$692.83, compared with 9,991 and \$841.49, respectively, for Sept., 1921.

The schooner Madeline Constance, of St. John's, Nfld., was abandoned on fire in lat. 48° 03' north, long. 37° 05' west, late in September. The crew were taken off by another ship. The Madeline Constance, which was owned by Job Brothers, was 418 tons gross, equipped with auxiliary power, and inbound to St. John's, from Rotterdam.

Reports at Sydney, N.S., Oct. 11, from three sources, stated that an unknown coal freighter had sunk off Cape Breton, about 2 miles north of Cape North, at the entrance to the Gulf of St. Lawrence. Advice from the Dominion Coal Co. and the Nova Scotia Steel and Coal Co., stated that all their ships were accounted for, and it was thought that it might possibly be a tramp steamship bringing coal from England.

A number of harbor improvement works have been commenced recently at various ports in Newfoundland. These include the breakwater at Twillingate, general improvements at Bonavista, commenced last year, and accommodation for motor boats at English Harbor. The work proceeding at Bonavista includes the construction of a harbor for motor boats, about 300 of which have to be accommodated.

While no definite move is reported in the matter of a steamship service between St. John's, Nfld., and the British West Indies, tenders for which were invited by the Newfoundland Government recently, it is stated that the s.s. Kriton, at present under charter to the Union Trading Co. for a voyage to Mediterranean ports, will, on her return to St. John's, be placed in the West Indian service.

The Red Cross Line's s.s. Sylvia, bought from Russian owners recently, to replace the s.s. Stephano, which was torpedoed by a German submarine, while on her route between St. John's, Nfld., and New York, during the war, is 337 ft. long, 5,000 tons gross, and has a speed of 16 knots an hour. She has accommodation for 150 first and 500 second class passengers. She is being operated on the St. John's, Halifax, New York route, with the s.s. Rosalind, on a weekly schedule.

The s.s. Bay Queen, owned by Mayflower Shipping Co., Halifax, N.S., was reported at the end of September, to have been abandoned in a sinking condition, near Cape Cod, Mass., when bound for Boston, Mass., with a cargo of fish. She sprang a leak when about an hour out, and the crew were compelled to abandon her immediately. She later drifted ashore. She was built at Levis, Que., in 1917, and was screw driven, by engine of 24 h.p. Her dimensions were: Length, 84 ft.; breadth, 12 ft.; depth, 10.3 ft.; tonnage, 99 gross, 42 net.

The O'nease Steamship Co.'s steamboat Dream founded in the St. John River, N.B., near The Mistake, Oct. 20, and 5 out of 7 passengers were drowned, the crew of four being saved. She was built at Newark, N.J., in 1881, and was screw driven by engine of 12 h.p. Her dimensions were: Length, 63.9 ft.; breadth, 14.1 ft.; depth, 5 ft.; tonnage, 66 gross, 45 net. She had been operated in the river service for about 18 months, and was formerly owned by Senator W. H. Thorne, as a pleasure yacht.

The s.s. Strathcona, attached to the Great Lakes and Labrador mission, founded near Cabot's Island, Oct. 2, when on her voyage from St. Anthony to Bay Roberts, Nfld. A few days prior to this, she sprang a leak, during heavy weather, but it was

not regarded seriously. When about 10 miles from St. John's, the water had made such serious headway that she had to be abandoned, and she sank within an hour of the crew having been taken off by the schooner Grace. The Strathcona was built at Dartmouth, England, in 1899, and was screw driven by engine of 30 h.p. Her dimensions were: Length, 90 ft.; breadth, 18 ft.; depth, 5.7 ft.; tonnage, 84 gross, 28 net.

Province of Quebec.

The Sincennes-McNaughton steam tug Spray, has had its name changed to Gerald Morgan.

During September, 48 seagoing ships left Quebec for overseas, carrying 298,159 tons, and 26 coasting schooners also left, with a tonnage of 10,100.

Government advances to the Montreal Harbor Commissioners, for harbor improvements, now total \$20,048,000, out of an authorized total of \$26,055,000. An additional advance of \$627,000 was made recently to cover work done up to the end of June.

The Sincennes-McNaughton Line's tug Matilda struck the s.s. Meropi, which was lying at the jetty alongside elevator no. 2, at Montreal, Oct. 4, and damaged one of her stern plates about 8 ft. above the water line. The damage was repaired without delaying the ship.

The Dominion Government has passed an order in council confirming Montreal Harbor Commissioners' new bylaw 93, fixing rates to be charged for handling grain between ships and elevator, and elevator and ships, at the G.T.R. elevator at Windmill Point.

A number of members of the American Association of Port Authorities, who had been attending the annual meeting at Toronto, Sept. 12-14, and who later, visited Montreal, were the guests of the Quebec Harbor Commissioners during the last week of the month, and inspected the harbor. They were also the guests of the C.P.R. on the s.s. Empress of Scotland, for luncheon.

The s.s. Richelieu, owned by Mrs. J. L. Leclair, Sorel, Que., and operated as a ferry between Verdun and Laprairie, was practically destroyed by fire, at the end of September, while tied to her wharf at Laprairie. She was built at Sorel in 1915, and was screw driven by engine of 13 h.p. Her dimensions were: length 96.3 ft., breadth 22.5 ft., depth 6.9 ft., tonnage 194 gross, 118 net.

It is said that during September, three world's records for unloading and loading grain, was broken at Montreal. In one day, 1,569,393 bush. were loaded for sea, while 800,000 were unloaded, a total of 2,369,393 moved in one day. In another case, a ship arrived in port at 5.30 a.m., was berthed at 7 a.m., delivery of grain commenced at 8 a.m., and the ship put out to sea, the same evening, with 242,000 bush. in her hold.

The Canadian Government ship Arctic, which sailed from Quebec, about the middle of July, for northern waters, returned to Quebec, Oct. 2, having accomplished the objects for which she set out, earlier than was anticipated. It was not expected that she would return until about the end of November. It is said that the object of the voyage, which extended to Ellesmere Land, was to land mounted police at northern points for the maintenance of order, and to prevent the landing of nomad Eskimos from Greenland into Canadian territory.

From reports issued by the Montreal Port Warden, it is anticipated that the

current season at that port will be a record one. Up to Oct. 8, 722 ocean steamships had arrived, against 636 for the same period last year. The tonnage for the 1922 period was 2,618,506, against 2,080,567 for the 1921 period. To the same date, 175 coasting ships had arrived, against 138 for the same period 1921. Of the 722 arrivals, the owning countries and numbers were as follows: Great Britain, 502; Norway, 75; Italy, 39; U.S., France, 3; Denmark, 3; Holland, 3; Spain, 3; Greece, 7; Sweden, 6; Spain, 2; Jugoslavia, Finland and Germany, 1 each.

Ontario and the Great Lakes.

The Mathews Steamship Co. has bought the s.s. Dornoch, formerly Iroquois, from A. B. Mackay, London, Eng., and formerly of Hamilton, Ont., and is having her name changed to Brookton.

The Mathews Steamship Co.'s s.s. Mathews, built for the Port Huron Shipbuilding Co., sailed from Port Arthur, Oct. 8, on her maiden trip to Port McNicoll, with over 400,000 bush. of grain.

Canada Steamship Lines' s.s. W. D. Matthews, which ran aground at Cove Island, Lake Huron, Oct. 7, was released Oct. 10, and proceeded to Port McNicoll with her grain cargo. It was expected that, after unloading, she would be dry-docked at Midland for overhaul.

The Northern Navigation Co. discontinued its passenger service on the Great Lakes for the season, with the sailing of the s.s. Harmonic, westbound, from Sarnia, Oct. 24, Sault Ste. Marie, Oct. 25, and Port Arthur, Oct. 26, and eastbound from Duluth, Minn., Oct. 27, Port Arthur, Oct. 28, and Sault Ste. Marie, Oct. 29.

The masts of the schooner Oliver Mowatt, which was sunk in collision with Keystone Transports' s.s. Keywest, about 1½ miles west of Main Ducks Island, Ont., Sept. 1, 1921, have been removed, and as the wreck is no longer a menace to navigation, the green gas buoy which had marked it has been removed.

Considerable additions have been made during this year to the grain elevator capacity at Fort William. The Northwestern Elevator Co. has built an annex to its elevator for an additional 2,000,000 bush., and it was expected to be ready for use during October. The N. M. Paterson Co.'s 1,000,000 bush. addition was also expected to be ready to receive grain during October.

The U.S. Lake Survey reports the mean stages of the Great Lakes for September, in feet above mean sea level, as follows:—Superior 602.69; Michigan and Huron 580.33; St. Clair 575.19; Erie 572.33; Ontario 246.03. Compared with the average September stages for the past 10 years, Superior was 0.07 ft. below; Michigan and Huron 0.43 ft. below; Erie 0.18 ft. below, and Ontario 0.19 ft. below.

The Northern Navigation Co.'s s.s. Louis Philippe which was placed in the ferry service between Sarnia and Port Huron, in the spring, has been withdrawn owing, it is stated, to a lack of patronage by foot passengers, due to the Port Huron terminal being farther from the center of the city than the Port Huron and Sarnia Ferry Co.'s terminal. The service had been in operation for about 18 weeks, during which, 27,000 automobiles and 160,000 pedestrians were carried.

The Toronto City Council has sanctioned additional repairs to its steam tug G. R. Geary, which is being overhauled at Toronto by the All Weld Co., under

contract, for \$1,806. The additional repairs were considered necessary after an examination of the hull in drydock, when it was found that the frame between the forward and coal bunker bulkheads and also two plates attached to them, were badly deformed.

A. F. Hamelin has been awarded \$625 against Canada Steamship Lines Ltd., under the Canada Shipping Act, by the Superior Court, for wages due while chief engineer of the company's s.s. Syracuse in 1917. He stated that he had been engaged as chief engineer of the Syracuse for the season, at \$1,200, but that after a time he had been changed to another ship, and later dropped from the service. The company pleaded that the contract had been cancelled, provision to that end having been made. The court held that there was no evidence of this.

Th dredging operations, which have been in progress in the southbound channel of the St. Clair River, since June 2, were concluded during October. The entire Middle River channel between Sarnia and Port Huron having been removed to a depth of at least 22 ft. By Oct. 20, the total width of the river was available for ships. Two red and black horizontally striped gas buoys showing occulting red lights were placed on the International Boundary, and a black gas buoy showing an occulting white light near the shore in front of Port Huron. All up-bound ships should hold to the east of the two red lights, making such a sweep above the upper one as to leave ample width for downbound ships, which should use the white light as an approximate location for beginning their down sweep, having available all the water to the west of the two red lights in mid stream for that purpose.

The s.s. Wahcondah has been bought by A. B. Mackay, London, Eng., and formerly of Hamilton, and sold to Capt. J. B. Foote, Toronto, and associates, and placed in service carrying grain from Port Colborne to Montreal. She was built at Glasgow, Scotland, in 1903, with a steel hull, and is screw driven by engine of 148 h.p. Her dimensions are: Length, 280.4 ft.; breadth, 37.1 ft.; depth, 21.8 ft.; tonnage, 1,554 gross, 996 net. She was originally owned by the New Ontario Steamship Co., Hamilton, Ont., R. O. and A. B. Mackay, Managing Owners. She was transferred, with other of the Mackay properties, to the Inland Navigation Co., in 1908, which company was later absorbed by the Richelieu and Ontario Navigation Co., and which, in turn, became one of the constituents of Canada Steamship Lines Ltd. The Wahcondah, which has always been on the British register, was sent overseas, with other of the company's ships, during the war, and has been owned by the Hartlepool-Seaton Steamship Co., West Hartlepool, England, and the Bride Steamship Co., Cardiff, Wales.

Humor in Radiotelegraph Messages.

Sir Thomas Fisher, General Manager, Canadian Pacific Steamships Ltd., who arrived in Canada recently from England, on a business trip, states that the Marconi operators on the C.P.R. ships have many stories to tell of humorous radiotelegraph messages sent by passengers to their friends. The most frequently sent, and which has almost become standard is "Third estate St. John, verses 13 and 14," which read "I have many things to write, but I will not with pen and ink write unto thee, but I trust I shall shortly see thee and we shall speak face to face."

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The Hudson Bay Co's steamboat Liard River, running between Fort Simpson, Fort Nelson and Fort Liard, was wrecked about 20 miles from Fort Nelson, recently, and became a total loss. Owing to the exceptionally low water in the river this year, the boats have experienced much difficulty in navigating. The boiler, engines and other machinery were removed from the hull. She was built at Fort Smith in 1919, and was paddle wheel driven by engine of 3 1/4 h.p. Her dimensions were: Length, 81.8 ft.; breadth, 16.8 ft.; depth 3 ft.; tonnage, 113 gross, 77 net.

Provincial Treasurer Black, of Manitoba, is reported to be looking into the possibilities of the development of northern Manitoba for tourist traffic, and has arranged with Capt. G. Robertson, formerly of the C.P.R. British Columbia Lakes and Rivers Service, for a report on the situation generally. A trip has been made to various points on Lake Winnipeg and tributary waters, on the s.s. Wolverine, and the matter is to be discussed by a committee of Winnipeg business men, with the possibility of forming a company, with headquarters at Selkirk, to co-operate with existing services.

British Columbia and Pacific Coast.

The cable repair steamship Restorer sailed from Esquimalt, recently, after having undergone some minor repairs at Yarrow's Ltd. yard, for Midway Island, to do repair and overhaul work on the Pacific cable.

The Pacific Salvage Co's salvage steamship Algrine was dispatched Sept. 30, to Icy Strait, Alaska, to assist the Alaska Steamship Co's s.s. Ketchikan, which had been beached there following collision with an iceberg.

The navigating season on the lower Yukon River closed Oct. 1, with the sailing of the steamboat Dawson, from Dawson City, for White Horse. The river was reported free from ice, and it was expected that several motor boats would make the trip later in the month.

The Hudson Bay Co's s.s. Baychimo, which arrived at Esquimalt, in the early part of the year, and was operated in the northern trade during the summer, is reported to have been chartered to G. Amsinck & Co., to load lumber at Eureka, Cal., for Belfast, Ireland.

H.M.C.S. Patricia sailed from Halifax, N.S., Oct. 1, for Esquimalt, B.C., via the Panama Canal, calling at Bermuda, Jamaica, Balboa, Libertad and San Pedro. She is due at Esquimalt, about Nov. 1, and will be used for instruction purposes on the Pacific coast.

The Canadian Navigators' Federation is protesting against what it claims to be an infringement of the Canada Shipping Act, by a number of comparatively large ships being operated along the Pacific coast by uncertificated Japanese. The Canada Shipping Act provides that coast steamships of over 500 tons must be commanded by a certificated master.

The ferry steamboat Harvester King, which was operated between Anacortes, Wash., and Sidney, B.C., during the summer, is considered to be too small for the traffic, and it is stated that a larger and faster boat will be built shortly, to be ready for next summer. During the last summer, the boat made 159 trips in 158 days, and carried 3,600 automobiles and 15,000 passengers.

The Vancouver Harbor Commissioners stated recently that a new tug, equipped for fire fighting, to be supplied by the Dominion Government for the harbor, was expected to be ready, on the St. Lawrence River, about the middle of October, and that she would sail thence, about the end of that month, and arrive at Vancouver, about the end of January, or early in February, 1923.

Negotiations are reported in progress by Japanese interests for the purchase of the steamships City of Vancouver and City of Victoria, owned respectively by Vancouver Steamship Co., and British Canadian Steamships, Ltd., both subsidiaries of J. Coughlin & Sons, Ltd., which built them in 1920. Each is screw driven by engines of 26 1/2 h.p. They have the following dimensions: Length, 411.5 ft.; breadth, 54.1 ft.; depth, 27.5 ft.; tonnage, 5,699 gross, 3,530 net.

A board of conciliation, consisting of R. S. Lennie, chairman; E. A. James, for the company, and John Fyfe, for the men, has been appointed to deal with the dispute between the C.P.R. British Columbia Lakes and Rivers Service and its employees, members of the Canadian Navigators Federation and the National Association of Marine Engineers. The number of employees involved is about 55, engaged on steamboats on the Kootenay, Slocan, Arrow and Okanagan Lakes. The actual number of men affected by the dispute is 1,250.

The C.P.R. s.s. Princess Charlotte has been withdrawn from service between Victoria, Seattle and Vancouver, for the winter, owing to the closing of the tourist season. She has been berthed at Victoria, and will be prepared for a general machinery overhaul. The steamships Princess Adelaide and Princess Victoria are continuing on the route, and the night service between Vancouver and Victoria is being carried on by the steamships Princess Alice and Princess Louise. The Alaska service will be continued during the winter by the s.s. Princess Mary.

The British Columbia Towboat Owners Association and the Puget Sound Towboat Owners Association have agreed that tugs with tows from either side of the International Boundary will tow only to the nearest port of entry, and there release the tow to a tug of some concern at that point, which will agree to continue the haul to its destination. The associations also agreed that drift logs picked up on either side of the boundary and belonging to parties on the other side shall be collected and towed to the line and turned over to tugs of the country in which the owners are located.

J. H. Troup, Manager, Capt. G. D. Neudorfer, Marine Superintendent, of British Columbia Coast Service, C.P.R., W. H. Snell, General Passenger Agent, and H. G. McNab, Division Freight Agent, C.P.R., Vancouver, are stated in a press report to have visited Sidney and the neighborhood early in October, to consider the establishment of a new short ferry line between the mainland and Vancouver Island. It is stated that the mainland point to be selected will probably be Bellingham, Wash., and that Sidney will likely be the island terminus. The plans for a ferry steamboat are said to be well forward, and it is expected that a contract for its construction will be given in the near future.

The Dominion Public Works Department received tenders to Oct. 24, for the construction of a training wall 4,100 ft. long, opposite buoy 30 in the Woodward channel of the Fraser River, near Stevenson. This wall will occupy the south side of the King Edward cut in the main

channel, and is intended to confine the flow of water, so as to maintain the work now being done by dredge 303. The estimated cost of the construction is \$100,000. This work is stated to be a portion of a comprehensive scheme for the improvement of navigation in the Fraser River. It is stated that tenders will be asked for shortly for completion of the last 1,000 ft. of the jetty at the sandheads. The original contract was awarded to J. S. Connell Co., Vancouver, but was abandoned owing to unfavorable weather, after about 2,000 ft. had been built.

Dangers of Cargo Shifting.

The British Board of Trade has issued a warning to shipowners and masters, in regard to the dangers occasioned ships and crews by the shifting of cargoes, and this warning has been embodied among the notices to mariners, issued by the Dominion Marine Department, as follows: Cases have been brought to the Board of Trade's notice, where ships have been lost or abandoned through the shifting of the cargo or ballast. These accidents would not have occurred if the cargo had been well and carefully stowed, and if proper steps had been taken to prevent shifting. The following kinds of cargo and ballast are particularly liable to shift: Sludge, iron ore or bog ore; flint stones; coal, especially anthracite (neats) and small nuts; shingle ballast. Where these or similar kinds of cargo or ballast are loaded, shifting boards should be fitted fore and aft at the middle line of the ship, extending from the keelson, or ceiling, to a reasonable height above the cargo (if a.c.). It is the duty of those concerned with sending British ships to sea to see that proper precautions are taken to prevent the cargo or ballast from shifting, and it will be remembered that under the Merchant Shipping Acts, a heavy responsibility is incurred by any person who sends, or is a party to sending, a British ship to sea in such a condition that the life of any person is likely to be thereby endangered.

James Bay & Nottaway River Development & Navigation Co.—A Detroit, Mich., press dispatch recently said: "Capt. Ben Tripp, Vice President and General Manager, James Bay & Nottaway River Development & Navigation Co., has return from England, where he went with plans and specifications for two new steamships to be built for African West and South Coast trade. One of them will ascend the rivers and collect various kinds of raw material, conveying it to the coast, to be stored in warehouses until loaded on the larger ship for delivery at port of destination." Canadian Railway and Marine World has no information as to any company of the name mentioned, nor has it been able to obtain any from any of the shipping people it is in constant communication with. It has been impossible to secure any confirmation of the dispatch, and we think that the statements contained in it should be taken with a grain of salt. Capt. Tripp was, many years ago, in command of the old s.s. Chicora, when she ran on the upper lakes.

T. H. Angell, chief engineer, Canadian Government Merchant Marine's s.s. Canadian Harper, writes: "I am pleased to tell you I am receiving Canadian Railway and Marine World quite regularly, and I enjoy the contents very much. There is certainly a pile of news in it. You must be an energetic bunch of fellows to get it all together."

Mainly About Marine People.

Hugh Allan, formerly of Allan Steamship Line, and Mrs. and Miss Rachael Allan, returned to Montreal, early in October, after spending the summer in England.

John Russel Binning, Manager for Canada and Newfoundland, Furness, Withy and Co., died at the Royal Victoria Hospital, Montreal, Sept. 30, after a prolonged illness. He was born at Hamilton, Scotland, Aug. 16, 1866, and was for some time, engaged in shipping business in Scotland. He came to Canada in 1888, and entered C.P.R. service in the Foreign Freight Department, at Montreal, of which he became chief clerk. He entered Furness, Withy and Co.'s service in 1898, as Assistant Manager, and in 1903 was appointed Manager at Montreal, and in 1920 Manager for Canada and Newfoundland. He was Treasurer of the Shipping Federation of Canada, a member of the Montreal Board of Trade and the Montreal Corn Exchange. His son, A. R. Binning is with Furness, Withy & Co. The Shipping Federation of Canada, at a general meeting, Oct. 9, adopted a resolution, in sympathy with his relatives, and expressing appreciation of his services to the shipping trade, pointing out that he was one of the incorporators of the Federation, and served as a member of the executive committee, and, as Treasurer, was responsible for its successful financing.

St. George J. Boswell, B.A.Sc., who resigned his position as Chief Engineer, Quebec Harbor Commission recently after 46 years service, has been superannuated, but will continue to act as Consulting Engineer to the Commission. He has been succeeded as Chief Engineer by Brigadier-General T. L. Tremblay, who is also one of the commissioners.

Capt. J. W. Christie, formerly commander of the s.s. Canada, who has retired from the White Star-Dominion Line's service after 51 years at sea, sailed from Montreal on the s.s. Campania, at the end of September, as a passenger, and will make his home at Weston-Super-Mare, Eng. He went to sea when 10 years old, and in 1877 as an apprentice served on the old sailing ship *Seaforth*, which carried the famous Hudson's Horse from India to the Dardanelles, at the time of the Russo-Turkish war, and landed the troops under Turkish fire at close range. During the recent war he served on the steamships *Manxman*, *Irishman*, *Canada* and *Dominion*, and with the last named ship was in charge of the conveying of low powered ships sailing out of New York. In 1914 he was presented with a silver loving cup by the King, for saving the crew of the schooner *Banshee*, which had been wrecked in the North Sea. In addition to the two wars named, he also served on transport duty during the Erythraean War of 1882 and the Boer War 1898-1902.

E. L. Cousins, General Manager and Chief Engineer, Toronto Harbor Commission, is reported as contemplating resigning, to engage in a private practice, but it is said that he will probably also act as Consulting Engineer to the Commission.

P. A. Curry, Manager, White Star-Dominion Line, who returned to Montreal, Oct. 7, after a six weeks trip to Great Britain, expressed the opinion that the shipping business generally was improving there. He announced that the new s.s. *Doric*, which is being built at Belfast, Ireland, will, most likely, be

ready to sail on her maiden voyage to Montreal, May 12, 1923. He also stated that the company intends, as soon as traffic shows sufficient signs of improvement, to build another steamship of about 17,400 tons, to replace the s.s. *Laurentic*, which was torpedoed by the Germans during the war.

G. J. Desharats, C.M.G., B.Sc., C.E., Deputy Minister of the Naval Service, has been appointed acting Deputy Minister of Militia and Defence, the Deputy Minister, Major General Sir Eugene Fiset, C.M.G., D.S.O., having been granted a year leave of absence, on the expiration of which he will be superannuated. On the formation of the National Defence Department, which will come into existence on the proclamation of the act providing for its organization, the Militia and Defence Department, the Naval Service Department and the Air Board will cease to exist, and will be merged in the National Defence Department.

Lieut. - Commander C. P. Edwards, Superintendent, Radiotelegraph Service, Marine and Fisheries Department, left Ottawa early in October, with Mrs. Edwards, for England, expecting to return early in December.

Miss Grace Harling, daughter of Thos. Harling, steamship agents, etc., Montreal, was married there, Oct. 7 to Lt. Col. W. C. Nicholson, D.S.O., M.C.

A. W. Hepburn, who died in London, Eng., Oct. 3, aged 66, following an operation, was born at Montreal, and at an early age, was taken to Scotland, and returned to Canada in the early '70s, when he engaged in steamboat, lumbering and milling business at Picton, Ont. For some years he operated the steamboats *Alxander* and *Empress*, between Montreal and Rochester, N.Y., by way of the Bay of Quinte. He also owned the steam barges *Argyle*, *Rob Roy*, *Reid* and *Water Lily*. He subsequently organized the business as the Ontario & Quebec Navigation Co., which formed one of the constituents of Canada Steamship Lines Ltd. The body was brought to Canada by the s.s. *Montcalm*, and was buried at Picton.

A. Johnston, Deputy Minister of Marine and Fisheries, who left Ottawa, Sept. 7, for the Pacific Coast, returned early in October, after having visited Vancouver, Victoria and Prince Rupert.

G. W. Kite, M.P. for Cape Breton South and Richmond, N.S., was appointed by the Dominion Government to represent Canada at the international fishing schooner races at Gloucester, Mass., recently.

Walter Lambert, M.I.N.A., naval architect, Montreal, has been instructed by United States interests to prepare plans and specifications for 2 steel tugs to be used in U.S. waters.

A. B. Mackay, ship owner, formerly of Hamilton, Ont., who has been living in England for several years, visited Canada recently for some weeks.

J. Robitaille, formerly Superintendent of Construction, Quebec Harbor, died at Lake Edward sanitarium, Que., Oct. 6.

W. J. Sargent, who retired as Superintendent Engineer, Canadian Pacific Steamships Ltd., Liverpool, Eng., recently, was presented with a mahogany bureau and bookcase and wardrobe, and Mrs. Sargent with a gold brooch, by the Liverpool staff. He had been connected with seafaring for 54 years. He served as an apprentice with the Northumber-

land Steamship Co., and later entered the service of T. and J. Harrison, Liverpool, with which firm his father served for 47 years, and he remained there for 25 years, rising through the various grades and sailing as chief engineer on a number of the firm's ships. Of the 25 years, about 14 were spent at sea, and the remainder in superintending the construction of ships. He was appointed Superintendent Engineer, Allan Line Steamship Co., in July 1899, and was of great assistance in putting into service the first two turbine driven ocean going mail steamships, the *Victorian* and *Virginian*, in 1904. He continued in the service when the Allan Line was taken over by the C.P.R., and was associated with designing and construction of the later C.P.R. ships.

Robert Smith, K.C., Cornwall, Ont., who has been appointed a judge of the Superior Court of Ontario, a member of the High Court Division, and ex officio member of the Appellate Division, vice Mr. Justice Sutherland, deceased, was Secretary-Treasurer, a director, and one of the largest stockholders in the Montreal & Cornwall Navigation Co.

R. Brock Thomson, whose appointment as Secretary, Canada Steamship Lines, Ltd., Montreal, was announced in our last issue, was born there, Sept. 5, 1886, and was, from Sept., 1903, to Apr., 1907, clerk, Canadian Bank of Commerce; Apr., 1907, to Feb., 1911, clerk, Royal Trust Co.; Feb., 1911, to June, 1917, accountant and transfer officer, Prudential Trust Co.; June, 1917, to Nov., 1918, Assistant to Comptroller, Canada Steamship Lines; Nov., 1918, to Feb., 1920, Assistant Treasurer, same company, all at Montreal; Feb., 1920, to Aug., 1921, representative, same company, London, England; Aug., 1921, to Sept., 1922, Assistant to Managing Director, same company, Montreal.

Senator Lorne C. Webster, President, Webster Steamship Co., Montreal, Mrs. Webster, Right Hon. Arthur Meighen and Mrs. Meighen, made a motor trip from Montreal to Lake Placid, N.Y., recently.

Franco-Boston Navigation Co.—A Boston, Mass., press dispatch recently stated that a bill in equity had been filed in the Superior Court there, on behalf of Canada Government Ry.s., asking the appointment of a receiver for Franco-Boston Navigation Co. The bill states that the company was organized in 1919 with capital stock issued for \$25,400, and that the only assets consist of the schooner *Addie P. McFadden*, which was wrecked off the Azores, two months after the company's organization. It is claimed that \$15,000 was paid by the insurance company on account of the loss, and the possession of that amount is in dispute, it being held by an independent party. It is stated that half of the stock is owned by Canadian Government Ry.s., and the other half by A. Farvaque, St. Malo, France, who has given his consent to the filing of the bill, and who, with the C.G.R., claims the insurance.

G.T.R. Windsor-Detroit Ferry.—A press report states that G.T.R. engineers have made surveys at Windsor, Ont., and Detroit, Mich., with a view of securing landing places for a ferry to operate between those points. The matter was taken up with the Minister of Railways by the Windsor City Council, which is dissatisfied with the Detroit and Windsor Ferry Co.'s service.

Canadian Notices to Mariners.

The Marine Department has issued the following—

51. Aug. 26.—142, New Brunswick, Bay of Fundy, St. John harbor and approaches, chart issued. 143, Canada, Atlantic coast, Cape Race to Cape Sable, new edition of radiotelegraph direction finding chart. 144, Nova Scotia, south coast, south entrance to Gut of Canso, wreck no longer a menace to navigation. 145, Quebec, St. Lawrence, entrance to Bersimis River, shoal, buoys established.

52. Aug. 30.—146, Nova Scotia, south coast, vicinity of Port Medway, changes in buoyage. 147, Nova Scotia, south coast, Pearl Island, fog horn to be established. 148, Quebec, Lower St. Lawrence River, Serpent Reef, Cloridorme and Magdalen Bay, shoals, change in position of buoy.

53. Sept. 6.—149, New Brunswick, St. John River, Musquash Island, light to be discontinued. 150, Nova Scotia, south coast, Barrington Passage, radiotelegraph station discontinued. 151, New Brunswick, Gulf of St. Lawrence, South Tracadie, light to be re-established.

54. Sept. 8.—152, Ontario, Lake Ontario, Main Ducks Island to Presqu'ile, new edition of chart. 153, Ontario, Lake Ontario, west end, Burlington, changes in lighting. 154, Ontario-Michigan, lower Detroit River, rules and regulations for navigating the Amherstburg and Livingstone channels not being observed, warning to mariners.

55. Sept. 13.—155, General, warning to ship owners and ship masters, danger of cargo shifting. 156, New Brunswick, Northumberland Strait, Richibucto harbor entrance, change in positions of bar and channel range lights. 157, Quebec, St. Lawrence River, below Quebec, The Traverses, new edition of chart.

56. Sept. 14.—158, New Brunswick, Bay of Fundy, St. John harbor entrance, positions of gas buoys to be changed. 159, Nova Scotia, Northumberland Strait, Merigomish harbor, French River, stakes placed. 160, Quebec, Gulf of St. Lawrence, St. Maurice de L'Echourie, light established. 161, Quebec, Saguenay River, Chicoutimi, lighthouse destroyed, temporary light.

57. Sept. 16.—162, Ontario, Great Lakes and River St. Lawrence, dates to which lights will be kept in operation.

58. Sept. 26.—163, Nova Scotia, south coast, Cockerwith passage, Woods harbor, color of light to be changed. 164, Quebec, Gulf of St. Lawrence, channel north of Anticosti Island, uncharted shoal.

59. Sept. 27.—165, British Columbia, Burrard Inlet, English Bay, False Creek, berths in channel. 166, British Columbia, Observatory Inlet, Granby Bay, False Arm and approaches, new edition of chart. 167, British Columbia, Chatham Sound, Tree Bluff, character and color of buoy.

60. Sept. 29.—168, Ontario, Lake Ontario, east end, between False Ducks and Main Ducks Islands, wreck no longer a menace to navigation. 169, Ontario, Lake Ontario, entrance to Niagara River, character of buoys to be changed temporarily. 170, United States, St. Clair River, southbound channel in front of Port Huron to be opened to navigation. 171, United States, St. Mary River, Kains Island shoal, spar buoy replaced by gas buoy.

61. Oct. 6.—172, Ontario, Lake Erie, Rondeau harbor, Shrewsbury wharf, light to be discontinued. 173, Ontario, Georgian Bay, Collingwood harbor, changes in buoyage.

Canal Statistics for August.

The Dominion Bureau of Statistics, Transportation Branch, has issued the following summary for August:—

Sault Ste. Marie.—Total traffic through the Canadian and United States locks at Sault Ste. Marie increased 2,787,476 tons, or 37%, despite the fact that practically no coal moved west during the month. The increase was due to heavier shipment of grain and iron ore, while copper salt, and stone, also increased over August 1921. Passenger traffic declined 61%.

Welland.—Total traffic increased 13,121 tons, or 3% over August 1921, the principal increases being in wheat, iron, steel and pulpwood. Soft coal moves in both directions, 9,703 tons being upbound, and 7,100 tons down. For the season, soft coal decreased 331,150 tons, while hard coal shipments were only 45 tons as against 9,269 last year.

St. Lawrence.—Cargoes of corn and coal decreased, but practically all other commodities increased, the net increase being 51,273 tons or 9% over August 1921. Wheat increased 93,330 tons, or 77,760 bush., iron and steel increased 11,404 tons and pulpwood 25,016 tons, while no hard coal moved, and soft coal decreased 52,700 tons. There were 53,982 tons of soft coal passed through the canals, 45,326 west bound and 8,656 east bound. Passenger traffic increased 4,367 passengers or 19%.

Scotch Shipbuilding Trade's Conditions.

D. S. Cole, acting Canadian Trade Commissioner, Glasgow, Scotland, writes as follows:—Clyde shipbuilders have at least four contracts for new ships, as well as some reconditioning, and it is understood that work on these is commencing shortly. At present there is no information regarding further new orders. A tram ride along Dumbarton Road indicates that in some of the yards on the upper reach of the Clyde there are two and in some cases three ships ready for launching. When these are put into the water, their berths it is understood will be empty, and the firms state they have nothing to lay down. In the vast majority of the yards there is nothing but long stretches of empty berths. In the lower reaches there are very few ships on the stocks. Work has been closed down for about 9 months, Yarrow & Co. announce their intention to re-open their boiler department immediately apparently on a contract for some boilers for the Far East.

Speed on Trans-Pacific Voyages.—Complaints are reported to have been made to the U.S. Shipping Board, regarding the restrictions placed on its passenger ships on the trans-Pacific route, it being stated that by the limitation placed on them regarding speed, the best possible advertisement is being missed. The record for the fastest trans-Pacific passage at present, held by the C.P.R. steamships, and these are also being operated under certain restrictions, as to speed, and times for making quarantine in order to avoid delay. Indications point to the retention of this record by the C.P.R. ships, on merit, and it would be unfortunate if such voyages were to degenerate into a series of races across the ocean. Speed is excellent as an advertisement, but if safety be endangered by taking chances in the course of a race, the advertisement would be of the wrong variety.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturer, if, of course, the article referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our pages, or to pay for its insertion. Advertiser contracts will not be taken with any condition that accepting them will obligate us to publish reading notices, in other words, that our reading columns are not for sale, either to advertisers or others.

Metal & Thermit Corporation, 120 Broadway, New York, N.Y., has issued the fourth edition of its Thermit locomotive pamphlet 21, which is of special interest to railway superintendents of motive power, general foremen, blacksmith foremen and Thermit welders. It contains many revisions since the last edition was published, chief among which are instructions for applying improvements in practice in Thermit welding which have been developed by exhaustive research. The drawings and instructions illustrating and describing making Thermit welds in various parts of locomotive frames and other locomotive and railway equipment have been revised to conform with the improved practice.

B. F. Sturtevant Co. of Canada, Ltd., has been granted Dominion supplementary letters patent, increasing its capital stock from \$50,000 to \$200,000, the increase to consist of 1,500 shares of \$100 each.

The Universal Directory of Railway Officials, for 1922, which has just been issued, is the 28th annual volume, and gives the names and addresses of directors, chiefs, chief assistants, divisional and district officials in the department of all railways in the world, including not only the great systems, but also the thousands of small lines of various types, and those tramways which are technically railways. Particulars are also given of associations and other organizations, foreign and home, British, connected with the railway industry. In the respective sections the numbers of railways covered are: England and Wales, 431; Scotland, 73; Ireland, 60; Europe, 1,100, classified in accordance with the changed international situation and with particulars as complete and up-to-date as practicable in the case of Russia and other unsettled countries; Asia, 368; Africa, 64; Australasia, 26; North America, 189; Central America, Mexico, etc., 101; South America, 217. In each case a few statistics as to mileage, gauge, numbers of locomotives, etc., are given. The indices to countries covered and to individual railways and tramways include about 2,700 entries, with a personal index to railway directors and officers, 190 pages, 22,000 entries. The book is substantially bound with a view to frequent office reference. It is published by the Directory Publishing Co., 33 Tophill St., Westminster, London, S.W., England, price, 1s net.

Calder's St. Croix Shipping Co. Ltd. has been incorporated under the Dominion Companies Act, with authorized capital of \$50,000, and office at Welchpool, N.B., to carry on business as common carrier by water and land, to act as agent and representative in Canada for importation of European products, and to own and operate ships in or out of Canada. The proposed directors are: A. Calder, transportation manager; F. E. Calder, ship operator, Welchpool, N.B.; D. H. Spence, Glasgow, Scotland, A. Holland, Miami, Fla., and W. R. Banton, St. Stephen, N.B.

Montreal Tramways Company.

Report of President and Directors for the year ending June 30th, 1922.

To the Shareholders:—Your Directors beg to submit their seventh Annual Report, accompanied by the Financial Statement, which shows the following results:—

REVENUE	
Allowance from Contract	\$ 2,377,417.55
Other Revenue	64,061.28
Gross Revenue	\$ 2,441,478.83
EXPENSES:	
Interest on Bonds and Loans	\$ 1,043,099.61
Interest on Debentures	\$ 57,500.00
Other Expenses	16,875.18
Total Expenses	\$ 1,917,475.09
Net Income	\$ 524,003.74
Less Dividends for the current year:	
2½% for the quarter ending Sept. 30, 1921	\$ 98,819.50
2½% " " " Dec. 31, 1921	99,864.00
2½% " " " Mar. 31, 1922	99,884.25
2½% " " " June 30, 1922	99,864.25
Total	\$ 397,432.00
Surplus for the year	\$ 126,571.74
Add Surplus at June 30th, 1921	916,709.35
Total	\$ 1,043,281.09
From which has been appropriated for:	
Deferred Dividend paid on Common Stock	
2½% quarter ending June 30th, 1919	\$ 98,819.50
2½% quarter ending Sept. 30th, 1919	99,565.30
	198,384.80
General Surplus	\$ 844,896.09

The Gross Revenue received by the Company after providing for all Operating Charges under the provisions of the Contract amounted to \$2,377,417.55, which, added to the other Revenue received outside the Contract of \$64,061.28, makes a total Gross Revenue for the year of \$2,441,478.83. The Expenses amounted to \$1,917,475.09, leaving a net income of \$524,003.74, from which there has been declared four quarterly dividends of 2½% each, amounting to \$397,432.00, leaving a balance carried to the credit of the General Surplus Account of \$126,571.74, which, added to the amount of \$916,709.35 at the credit of this account last year, makes a total of \$1,043,281.09, from which there has been appropriated the sum of \$198,384.80 on account of the two remaining deferred dividends paid during the year, leaving a balance at the credit of the General Surplus Account of \$844,896.09.

FINANCIAL.—Your Directors desire to point out that for the first time since the coming into force of the Contract, viz., February 10, 1918, the Revenue has been sufficient to meet the requirements of the said Contract for the year and to provide a Surplus of \$187,947.51 as shown by Statement of

Operations under the Contract. Said Surplus has been applied to the reduction of the shortage accruing from previous years, which amounted to \$1,967,834.44, leaving an accrued shortage amounting to \$1,779,886.33 at the close of this year, which consists of accruals for City Rental and the Contingent Reserve Fund as provided under the terms of the Contract, which amounts are payable only when the revenue received by the Company is sufficient to pay these charges after payment of all prior charges.

ISSUE OF BONDS.—During the year the Company disposed of \$1,750,000.00 of its 5% Thirty Year Gold Bonds, One Million Dollars of which were Bonds issued last year and held in the Treasury, and \$750,000.00, representing Bonds issued against Capital Expenditures made from November 1, 1920, to October 31, 1921, in conformity with the Trust Deed, which provides that Bonds can only be issued to the extent of 75% of the Capital Expenditures.

REDEMPTION OF UNDERLYING BONDS.—During the year the Company redeemed the balance outstanding of two issues of its 4½% Underlying Bonds maturing on May 1, aggregating \$2,688,953.33. Of this amount, \$763,700 was for the balance outstanding of the issue of \$1,500,000.00 Canadian Currency Bonds, and \$1,925,253.33 for the balance outstanding of the issue of \$460,000.

GUARANTEE FUND.—Under the terms of the Contract the Company has to provide from its own funds a Guarantee Fund amounting to \$500,000.00, in amounts of not less than \$100,000.00 per year. Your Directors beg to report that the sum of \$100,000.00 has been paid into the Guarantee Fund since the close of the Company's fiscal year, making \$400,000.00 now in said Fund, according to the terms of the Contract.

DIVIDENDS.—During the year the Company paid its usual quarterly dividends on its Common Stock, at the rate of 2½% per quarter, and also paid the remaining two quarterly dividends in arrears for the quarters ended June 30, 1919, and September 30, 1919.

GENERAL.—Your Directors are pleased to report that two additional units in the Sub-Station at Cote Street referred to last year were put into operation during the year, which complete the equipment of this Station, which has a total capacity of 10,000 Kilo Watts.

In conclusion, your Directors desire to place on record their appreciation of the valuable and faithful services rendered by the Officers and Employees of the Company.

Respectfully submitted on behalf of the Directors.

E. A. ROBERT, President.

**"SHIP THIRTEEN FOUR TENTHS MILES
ELECTRIFICATION TODAY SURE"**

There are plenty of examples of successfully electrified tunnels, main trunk lines, mountain divisions, suburban sections and yard tracks.

But it is not possible—never will be possible—to wire for "thirteen and four-tenths miles of Type K Electrifications complete."

The contact system (overhead or third rail), the transmission line, the method of rail bonding—all these are of first importance. Each presents broad opportunity for inventive ability in the solution of the special problems of the particular road which is being electrified.

The O-B organization welcomes demands on the knowledge and experience gained through contact with most of the projects already developed.

No User of Oxygen or Dissolved Acetylene Should Make Arrangements for the Year's Supply Without First Securing Our Prices

THE Dominion Oxygen Company's policy of maintaining a definite schedule of prices based on consumption works to your advantage.

Prices are now appreciably lower than a year ago due to the price reductions as the volume of sales increased.

If you are not familiar with the Dominion Oxygen policy which provides for a liberal contract, prompt shipments, modern cylinders, friendly relations with customers, and the lowest prices obtainable, we will be glad to tell you about it.

Save Money and Improve Service

C-G-E Oxide Film
Lightning Arrestor

C-G-E Type H Transformer
"The Standard of Quality"

C-G-E Automatic Substations Produce Results

Automatic Railway Substations start up and shut down as the demand for power appears or disappears. The expense for operators is eliminated so that cost for attendance is minimized.

Automatic Substations can be more closely spaced because of the lower cost of operation. This saves feeder copper and improves the trolley voltage. By shutting down under no load "running light losses" are saved for a large part of the day.

Let the automatic station engineer in the nearest C-G-E office tell you how much your savings would be with C-G-E automatic control.

A Document that insures protection

THE Galena Guarantee Contract places lubrication upon the sound, substantial basis of fact. It removes the uncertainty of "oil buying" and substitutes therefor the certainty of "lubrication buying." In other words, it represents not only the sale, but the delivery of service—and it is lubrication service, not oil, that the railroad uses.

The responsibility of securing efficient and economical results is lifted from the shoulders of the railroad and assumed by our Lubrication Service Department, an organization that has never failed to produce results of the most satisfactory nature. The value of Galena Service is quickly apparent in a smooth operating efficiency that is simply unattainable with wrong oils or methods.

The Galena Contract insures protection to the pocketbook, not only through its obligation to deliver stipulated units of service for a low cost, but in preservation and full life to equipment, through the protective qualities of the highest grade lubricants that can be manufactured. The conservation in power resulting through lessened friction where Galena Oils are used, means a fuel saving that alone amounts to a big proportion of the oil bill.

COLD WEATHER DEFIED

ALL the troubles of the antiquated car journal friction bearing are accentuated in cold weather. Congealed oil, frozen packing, trains "frozen to the track"—all these combine to reduce tonnage ratings.

Stafford Car Truck Roller Bearings end these conditions. The 90% re-

duction in journal friction which they accomplish, facilitates traffic and produces savings in warm weather—and these savings are surprisingly increased in rigorous winter weather.

Start now investigating the performance of Stafford Roller Bearings in actual service on car trucks. They are guaranteed for three years.

Scientific*Water Treatment**Dearborn*

REG. U.S. PAT. OFFICE

Look Ahead a Little

Thirty-five years ago, scientific water treatment was "another crazy dream."

You remember other dreams about that time. Marconi had one, the Wright Brothers were drawing diagrams, some "nut" was trying to get a wagon to go without a horse. There were many.

And today—each of these improvements is literally forced into use by the world demand to improve transportation, communication and production efficiency.

Where will the old ideas be a few years from now—where are they now? Ask if men will ever fly. Ask today, if the automobile will ever amount to anything.

The Dearborn Chemical Company knows that the railroad that pays the premium in extra coal, replacements, and labor due to unscientific water treatment, is carrying a needlessly heavy load—to the joy of its competitors and its own detriment.

Why not hasten the day when your road attains the maximum efficiency in treating feed water. WRITE US NOW. PUT THE BURDEN OF PROOF UPON US.

Supreme in Service and in Results

SAFER Railroading—the ideal which twenty years ago inspired this Company to produce railway signals a little better than those then in use, materialized so universally that today the use of G-R-S Railway Signals is resulting in *safer* and *more efficient Railroading* all over the world. Through tunnels under mountain or river, on bridge over canyon or ravine, on the many “Iron Trails” traversing continents, G-R-S Signals unfailingly give warning of danger ahead. This unfailing service they render, no matter how severe the weather, is the finished product of invention, science, craftsmanship and experience. It has created a lasting faith in the General Railway Signal Company.

THE map above shows the location of the 49 foundries in the United States and Canada, represented by the Association of Manufacturers of Chilled Car Wheels.

Thermit weld made on wheel press, before removing risers and pouring gate metal.

**Im-
por-
tant**

**Im-
prove-
ments**

Have enabled us to reduce the amount of Thermit required in Thermit welding over 10% for average sized and smaller locomotive frames.

This reduction in cost is of untold value to shops where Thermit has been used on heavy frames, while other methods have been used on light frames, even though it was realized that in actual efficiency they could not be compared with the results obtained in Thermit welding. It was simply a matter of cost and of taking chances. Now, however, we can show conclusively that Thermit is just as cheap on these smaller sections as any other welding process, and when its superior efficiency is considered will be found to be very much cheaper in the long run.

Let us send you an expert operator to demonstrate actual proof of the above statements.

Westinghouse SME Straight Air Brake

With Automatic Emergency Feature

Toronto Transportation Commission's New Car, equipped with Westinghouse SME Straight Air Brake with Automatic Emergency Feature.

For single car operation, or for two motor cars, or motor car and trailer, train operation.

The SME Brake combines the flexibility of the straight-air brake in service application and release, with the reliability of the standard automatic air brake in emergency. It is equally effective and reliable whether used normally on a single car, or on a two-car motor or trailer train, affording a greatly increased factor of safety, under ordinary service conditions.

The SME Brake Equipment can be furnished at a price not materially greater than that of the most improved type of straight-air apparatus.

Full Steam Pressure All the Way

LONGER locomotive runs are logical to secure greater service from the locomotive investment.

But keeping locomotives longer on the road involves keeping their fires clean. Here is where the Franklin Steam Grate Shaker fits in.

When a fire becomes over 8 inches deep, little air gets through the grates to assist combustion.

A man firing heavily has no time to stir the fire by hand; so coal impurities collect on the grates to form clinkers and the fire grows steadily worse.

But with grate shaking made easy by the Franklin Steam Grate Shaker, just a touch of a lever shakes the grates by power and keeps the fire free and clean.

Limiting locks prevent any possibility of the grates dumping when the fireman only wants to stir the fire.

When you try longer locomotive runs, as you will, use a Steam Grate Shaker engine.

This will help keep full steam pressure all the way.

FLANNERY

F.B.C. WELDED FLEXIBLE STAYBOLTS

Building for the Future

Today, locomotive performance is influenced and measured more definitely by boiler efficiency than by any other one factor.

This is proved by the records, which show that 40% of the locomotives held out of service require boiler repairs, a large proportion of which is due to leaky and broken staybolts.

Installations of Flannery "F.B.C." Welded Flexible Staybolts are building for the future in a twofold sense—they increase revenue hours and cut down the cost.

Reduce Store- keeping Costs

At central or local storehouses where oils are drawn almost constantly, speed is an important factor.

Years ago Bowser engineers recognized this and designed the Bowser quick return pump. The double cog rack assures easy operation whether light or heavy oils are handled. Quick return gears carry the return stroke—one turn being equal to five on the discharge. This feature alone cuts the pumping time in half.

A meter built into the pump head assures an accurate check on store records at all times. The sturdy construction assures dependable service for years.

Write today for Booklet C-14 and let Bowser engineers give you facts and figures from other railroads who have reduced store-keeping costs with Bowser Equipment.

PORT HOPE - ONTARIO

Little Giant

PATENTED FEBRUARY 4, 1913

the *NEW* pipe wrench:

does what no other
pipe wrench can—

Here at last is a real "he-man" pipe wrench that every plumber, steam-fitter and mechanic will appreciate the minute they see it. When you see its utter simplicity and realize its greater usefulness, you'll want one at once.

Look at those end-opening jaws. They reach right in and grab onto pipe right up against a wall or down in a corner, and stop or turn it instantly without any lost motion.

Not only is the "Little Giant" more useful than any pipe wrench you ever used—but it has only three parts—handle, jaw and nut—not a spring or delicate part in its make-up. The handle is longer than on the conventional wrench of the same size, which means greater leverage.

For rusty joints or when greater leverage is required, a length of pipe can be slipped on the handle right up to the head, which eliminates the possibility of a bent handle.

If your jobber has not the 8, 10 and 14-inch sizes in stock now, write us direct, giving his name.

Not always the cheapest in first cost but always in the end

CHILLINGWORTH GEAR CASES for electric railway motors are stamped in two single pieces from special deep drawing steel which means that they are seamless and rivetless.

—they fit accurately and are grease and dust-tight.

—they are light, yet very strong and less expensive to repair than other makes.

—they are the cheapest in the long run.

December, 1922

Reclamation of Railway Steel Rails.

By E. J. McVeigh, General Storekeeper, Grand Trunk Railway.

The rails used by American railways have gradually increased in weight from the standard of 40 years ago of 56 lb. to the yard until today railways are using a rail of 100 lb. to the yard, and to a limited extent even heavier; but due to the fact that all rails, both light and heavy expand and contract in the change of temperature, they must be laid with a space between the ends to allow for this expansion and contraction. To allow this space naturally introduces a hammer-blow on the end of the rail, by the wheel passing over it. Also due to the practical impossibility of having a coupling to join the rails that will fully equal the strength of the rail section, the joint of the rail is the weakest point in it. This results in the pounding down of the ends of the rail, so that while the remainder of the rail may be, to all practical purposes, unworn, the end of the rail, and for some inches back of it, is rendered unfit for use. American railways have disposed of enormous quantities of such rails at a scrap price, replacing them with new rails.

The reclaiming of these rails, by the removal of the battered end, is not altogether a new thing, as it has been done spasmodically, and to a limited extent, for a number of years, but only recently has it received the attention that it deserved, and the railways have taken the matter up systematically, and are carrying it out as a regular policy. One reason for this is that the light rails, formerly in use, were naturally considerably worn by the time the ends were battered, rendering the rails totally unfit for use, and the rail being much cheaper than the heavier section, it was not considered advisable to spend money reclaiming. A second reason for the non-reclamation of rails in past years was the fact that the railways were gradually changing to the heavier rails, being forced to do so to keep the permanent way in step with increase in weight of equipment. As the use of heavier rails became more general, this condition changed, and the 100-lb. rail of today, while still battered at the end, is much less worn in other parts, and, being more costly, there is more reason for reclaiming it by the removal of the battered end.

The Grand Trunk Ry. has adopted the policy of reclaiming rails, and is probably the best equipped road on the continent for carrying out this work, as it now has three rail sawing plants in operation in the provinces of Quebec and Ontario, viz., at Montreal, Belleville and London. The idea of putting in a number of plants was to save the hauling of the rails to and from the point where they are to be sawn and drilled. The cost of hauling will soon eat up the value of rail sawing plants. The first road in America to adopt the sawing of rail as a regular policy, erected a very costly plant and hauled its rails a great distance, but this was found to be a mistake. Other roads experimented with the portable plant, and while this was an improvement on the large central plant, it was not altogether satisfactory, and the best

thought today is that a number of compact and comparatively inexpensive plants, situated permanently at proper intervals on the railway, would best serve the purpose, as it is in carrying out this idea that the G.T.R. now has the three plants mentioned above, their aggregate cost being less than one-half of the first extensive rail sawing plant mentioned. By adopting electric current as power for the operation of the plants, instead of the cumbersome and costly steam outfit, the cost of the operation has been reduced to a minimum.

The reclamation of rails fits in naturally with the larger question of general reclamation. The operation of any single and special unit on a railway, something that does not co-ordinate with something else, leads always to more or less "lost motion," which, in the mechanical world, as elsewhere, means loss of money. The use of a portable rail sawing outfit would be such a thing, and the movement of the plant from place to place, the setting up and taking down, etc., would be the lost motion. The haul is, of course, not entirely eliminated on rails sawn by a portable plant, and none of the handling, and such a plant would naturally be a steam or gasoline driven affair if it is to be at all portable, and it is not possible to secure full efficiency by the use of steam or gasoline for this class of work.

The organization of a rail sawing unit, even as a permanent nature, at a point isolated from other activities, would also lead to loss, as it would be practically impossible to keep the supply of rails continuous, and with no other work for the rail sawing men to take up, we would have loss of time, for which the railway would have to pay in order to keep its force intact. On the other hand, with the rail sawing plant situated in a general scrap and reclamation yard, and the plant operated by electric current, you have no lost motion whatever, as the plant is ready at all times to stop, or start, work at a moment's notice, and the men are in the interval when there is no rail, in unloading, loading and sorting of scrap material. To an isolated portable or permanent rail sawing outfit you could send only rails that were to be resawn, while to a plant situated in the general scrap and reclamation yard you would send all of your rails, and when they are sawed in sawing plants on the main line, you can select from your scrap rail large quantities that may be sawn in shorter lengths, and be most valuable for terminal yards.

As an example of how this business of reclaiming rails works out, we will say that a railway has 200 miles of rails that have been in use for a sufficient length of time for the ends to become battered as described, and, in order to secure a good riding track, these rails must be removed and replaced by new rails or reclaimed rails. Instead of buying 200 miles of rails and selling the old rails as scrap, they buy 20 miles of new rails, and at two points on this 200 miles they replace 10 miles of battered rails with new rails, sending the released 10 miles from

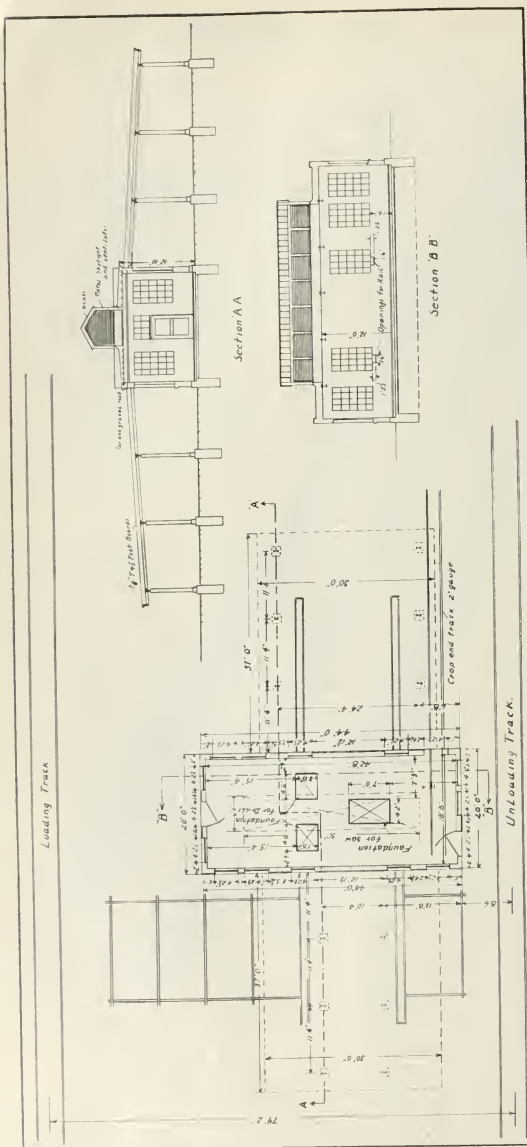

each point to the nearest sawing plant. These rails are sawn, redrilled and returned to where they came from, being used to release a further 10 miles, and this is repeated until the rails for the entire 200 miles have been replaced by 20 miles of new rail and 180 miles of the sawn rail. Two plants such as the G.T.R. now has in operation will handle the above job in about 200 days, or during the season when work of the kind may be best handled in Canada. This might leave the railway with a surplus of 20 miles of rails, but this 20 miles is required for replacement of rail lost by sawing. To provide for emergency we have the 5 or 6 miles of rails on racks that must be changed from 33 ft. to 30 ft. as the work proceeds.

It is found that at least 98% of such rails as described above requires to have 18 in. sawn from each end, so that a standard 33-ft. rail is sent back from the mill in 30-ft. lengths, while a 30-ft. rail goes back into use as a 27-ft. When rails have to be cut shorter than this, they are diverted to use on subsidiary lines or yards.

Experience has taught us many interesting things in connection with rail reclamation. For instance, it was generally supposed that, after a rail was sawn, it would be necessary to caliper the rail and match it up, in order to get a smooth riding road, but having the rail come out of the track in continuous lengths, not being mixed at the mills, where they never touch the ground and pass through the mill, and the rail, after being frequently on the same car, the rail is naturally matched, as it is invariably worn equally in any given territory, and it goes back into the track quite as evenly and in many cases more evenly than new rail, and it actually gives a smoother riding rail than will the new rail when first put in, and the life of a rail, after sawing, will be quite equal to that of a new rail, that is, the main body of the rail may still be in good condition when the ends require a second sawing.

Another interesting development is the fact that the scrap value of the crop ends removed from the rail and sold at the low figure of \$13 a ton as scrap will reimburse the railway for the entire expense of handling the rail at the mill, that is, unloading, sawing, drilling and reloading. The expense of removing from the track and haulage will, of course, be about equal to the expense of the handling of the new rail, so that these items, balancing each other, may be dropped from the calculation. This operation put down in figures would give us the following example:

To 200 miles of new rails, \$1,428 tons @ \$114.260	
Cost of sawing 200 miles of rail \$17,112	
Plus value of \$13 a ton as scrap will reimburse the railway for the entire expense of handling the rail at the mill, that is, unloading, sawing, drilling and reloading. The expense of removing from the track and haulage will, of course, be about equal to the expense of the handling of the new rail, so that these items, balancing each other, may be dropped from the calculation. This operation put down in figures would give us the following example:	
Cost of 10 track miles of new rail	638,560
141,435	
\$817,137	\$17,112
By sale of crop ends	\$897,123
Net gain on 200 track miles (\$3,271 per track mile)	\$654,265

Grand Trunk Railway Rail Reclaiming Plant—Plan and Sections.

In the foregoing example we use an average price for crop ends, their value changes almost every month.

The handling of the rails, that is, the removing from track, hauling and replacing in track, is omitted, for the reason that whether you replace by new rails or sawn rails, the haul, removal from track and replacing is about equal, except that you may, by using the sawn rails, save freight charges on new rails. If these charges were taken into account, they would add to our net gain.

It may be objected that we now have a second-hand rail in place of a new rail, which might offset our net gain, but this has no weight, as the 100-lb. section rail, sawn the first time and replaced in track, is as good, if not better, than the new rail, first, because it is now a proved and tested rail, all culls and weak rails having been eliminated. The sawn rails give a smoother riding track than new rails, and their life, which is controlled by the end of the rail, or joint, will be just as long as would be that of the new rails. It will, in fact, be longer, as rail hardens in use, and wears more slowly as it becomes older. It remains to be seen how many times the 100-lb. section rails may be sawn and used in main line. Judging from what we now know of this matter, they should stand at least a second cutting, and go back to main line, but they can, without question, be cut a second, and even a third, time and still be a good rail for side lines, and after that for sidings and yards, so that our claim of a net saving of \$654,263 on the 200 miles of rail may easily be only one-third of the eventual saving on 200 miles of rail so handled.

The accompanying plan gives a fair idea of the rail sawing plants in use on the G.T.R. These plants were designed by, and erected under the direction of the company's General Storekeeper, and operate under the jurisdiction of the Supply Department as part of the larger general reclamation plant, and they are the only ones of the kind in use in America. They occupy small ground space, and are, by comparison with others, very efficient. The machinery consists of one large friction saw, two heavy drill presses, and one small tool sharpener, each run by independent electric motor, at much less cost than the fuel required in a plant using steam power, to say nothing of fireman's wages, upkeep of boiler, engine, etc., etc.

The rails go in to the mill on flat cars and are pushed off on to a sideway, where they are inspected and marked for sawing; from the sideway they pass to the railway and are pushed up to the saw by hand. One end is cut off, and the rail travels past the saw, stopping to have the second end cut off, then forward a few feet, to clear the wall of the building, and then on to the second sideway where the fin left by the saw is knocked off with a hammer; then to the drill railway and up to the first drill, where the two holes are drilled by the use of a gig, then forward to the second drill, where holes are drilled in the other end of the same rail, while a second rail coming along behind is having its first end drilled. By this method two ends of rail are always being drilled at the same time, but not both ends of the same rail. The sawing of both ends of the same rail by the setting up of drills the exact distance required apart has been tried, and this plan may work when all the rails are of equal lengths, and require the same number of inches removed in all cases, but there is no such condition, and the machines set up as they are in

the G.T.R. plants will handle rails of any length, from 10 to 33 ft., without the slightest change or decrease of efficiency, except that, with shorter rails, there is the same number of rails, but less tonnage, turned out in a day. After leaving the second drill the rail passes to the loading skid, where it is again inspected, and then on to the outgoing car. This may be on the same track it came in on, or a second track on the opposite side.

One very important item in the sawing of rail, as described herein, is the disposal of the crop in with the minimum cost. The old saw mill man of years ago would tell you that he had no trouble in sawing lumber, but that the disposal of the debris was always a problem, and so it is with sawing of rail. If your plan does not provide for this, you are sure to have trouble. The G.T.R. plants provide for the handling of the crop ends in what we believe to be the most efficient manner. A 2-ft. gauge track leaves the building from in front of the saw table; on this track are one or more small cars; the crop end is slipped from the saw table to the car, and the short pieces of rail are run out clear of the millways, and loaded later by crane and magnet.

When the first of these plants was designed, the movements of rails through the plant from car to car was figured out on a basis of seconds, and they have done just what was expected of them. This does not mean that each mill turns out an equal number of rails each day, and all at the same cost. These things are governed by conditions apart from the machinery, but where they fall below the mark set there is a reason. There is no reason for lost motion here, the machines are timed to follow each other without a pause, and if a man on saw or drill has to stop and wait a few seconds some one must take his place. To make this possible we might have to pay a spare man, and it would be economy to do so if we had to, but the saw itself, the cutting blade, must be changed at least once every five hours, for trimming of the burred face, and the man who does this trimming and sharpening of the drills is always available for relief.

When laying out plants of this kind attention should be given to the matter of shunting, and matters should be so arranged that the use of engine and crew be reduced to a minimum, as these cost money. On the G.T.R. the mills and sidings are so arranged that in their operation only one shunt a day is required. This is one of the reasons why a second siding is recommended, even though the mill may be operated with one only, but this is contingent on all cars coming in with loads for the mill being in condition to take out a load; unfortunately many of them are "duds" and would have to be shunted out of the way if we had only the one siding; with two sidings this is not necessary.

The Grand Trunk Ry's management is fully alive to the importance of reclamation in all its phases, and may be relied on to check enthusiasm that might lead us across the line that divides paying reclamation from reclamation for reclamation's sake, and it will be interesting to watch this rail reclamation project in the coming years. If, as seems likely, the railways can save \$500,000 or over on 200 miles of road after new rails have been in use 5 to 7 years, and repeat this with the same rails in another 6 or 7 years, and at the end of a third period still have the rails fit for sidings and yards, it should mean much to American railways.

Railway Rolling Stock Orders and Deliveries.

The G.T.R. is reported to be in the market for 20 switching locomotives.

The C.P.R., between Oct. 12 and Nov. 13, received a new track snow plough from its Angus shops, Montreal.

The Timiskaming and Northern Ontario Ry. has given the National Steel Car Corporation an order for rebuilding 50 steel underframe, single sheathed, box cars.

The G.T.R., during October, received 14 steel underframe caboosees from its Montreal shops, and 1 Industrial steam wrecking crane, 160 tons capacity. It has on order at its Montreal shops, 11 steel underframe caboosees and 5 transfer type locomotives.

A recent press report stated that the G.T.R. had invited tenders for 700 forty-ton refrigerator cars and for 1000 to 3000 steel frame, 40-ton, box cars. Another report stated that tenders for 9,000,000 to 15,000,000 ft. of lumber for use in these cars had been asked. The decision as to orders to be given will rest with the new President, Sir Henry Thornton, and his co-directors and the matter will doubtless be dealt with at an early meeting of the board, as well as the Canadian National Rys. requirements.

Donaston Breakey, Breakeyville, Que., has ordered from Montreal Locomotive Works a 4-wheel switching locomotive (0-4-0). Following are the chief details: Weight on drivers.....79,000 lb. Wheel base, driving.....7 ft. 6 in. Cylinders, diam. and stroke.....14 x 22 in. Driving wheel diam.....40 in. Driving wheel journals.....7 x 8 in. Boiler, type.....Straight top. Boiler, pressure.....225 lb. Firebox, length and width.....46 1/2 x 50 1/2 in. Tubes.....112-2 in. Heating surface, tubes.....680 sq. ft. Heating surface, firebox.....60 sq. ft. Heating surface, total.....740 sq. ft. Grate area.....16.2 sq. ft. Tractive power.....17,100 lb. Factor of adhesion.....1:4.5 Tank, type.....Saddle Tank capacity.....1,700 gal. Fuel capacity.....1,500 lb.

The G.T.R. has ordered, for the Chicago, New York & Boston Refrigerator Co., 250 refrigerator cars, from American Car & Foundry Co. Following are the chief details:—

Length over end sills.....37 ft. 2 1/2 in. Works a 4-wheel plate.....37 ft. 11 1/2 in. Height, rail to top of running board.....13 ft. 5 1/2 in. Height, rail to eaves.....12 ft. 6 1/2 in. 16 in. Height over eaves.....9 ft. 9 1/2 in. Wheel base.....34 1/2 in. Length inside.....35 ft. 3 in. Width inside.....7 ft. 7 in. Height inside.....7 ft. 9 1/2 in. Length between bulkheads.....23 ft. 8 in. Length of floor rack to under side of ceiling.....7 ft. 4 1/2 in. Cubic capacity.....1,893 cu. ft. Journal boxes.....5 x 9 in. Compress.....A.R.A. type D 6 x 8 in. Air brake.....Westinghouse K.C. 1012 Tank capacity.....60 x 7 1/2 in. Draft gear.....Miner A-18-8 Side bearings and door fixtures.....Miner Factor of adhesion.....1:4.5 Tank, type.....A.R.A. 2 Underframe.....A.R.A. 2 Roof.....Outside metal

The Essex Terminal Railway Co. has ordered from Montreal Locomotive Works one locomotive. Following are the chief details:—

Weight on drivers.....115,000 lb. Weight, total.....115,000 lb. Weight of tender.....98,000 lb. Wheel base, driving.....16 1/2 ft. Total engine.....10 1/2 ft. Cylinders.....20 x 26 in. Driving wheel.....39 x 39 in. Driving journals, main.....9 x 12 in. Driving journals, front.....9 x 12 in.

Boiler, type.....	Straight top
Diam. first ring.....	64 1/2 in.
Boiler pressure.....	180 lb.
Firebox, length.....	62 1/2 in.
Firebox, width.....	65 1/2 in.
Tubes.....	110-2 in.
Flues.....	22-2 in.
Heating surface, tubes.....	984 sq. ft.
Heating surface, flues.....	425 sq. ft.
Firebox.....	113 sq. ft.
Arch tubes.....	12 sq. ft.
Total heating surface.....	1,534 sq. ft.
Grate area.....	28 1/2 sq. ft.
Tractive power.....	31,860 lb.
Factor of adhesion.....	1:4.5
Superheater.....	Locomotive Superheater
Reverse gear.....	Also standard type E
Tender frame.....	Steel channel
Tender iron wheels.....	40 in.
Tender journals.....	5 x 9 in.
Tank type.....	U shape
Water capacity.....	4,500 U.S. gal.
Coal capacity.....	8 tons

President Beatty Speaks in Toronto.

E. W. Beatty, K.C., President, C.P.R., was the principal guest at a luncheon given by Lieutenant Governor Cockfield, at Government House, Toronto, Nov. 18, and in speaking, said that the C.P.R. does not attempt to exert any political influence. He knew of no corporation that exerted what influence it had less frequently. He repeated what he had told a meeting of the Empire Club in Toronto in 1919, that the C.P.R. would not project itself into any controversy in connection with the establishing of electric railways radiating from Toronto. The company had kept aloof from the controversy about the radial railway entrance, and had not said or done anything to attempt to influence the people's decision for or against any scheme submitted in that connection. In referring to charges in a Toronto newspaper that the C.P.R. owned or controlled a Toronto paper (The Mail & Empire), he said emphatically that there was not one dollar of C.P.R. money at stake in any Toronto newspaper. If the company had any protests to make, they would be made frankly, honestly and publicly, and the people could determine the merits for themselves. Political intrigue and machinations are not a part of the C.P.R. policy, because it lives by the sale of transportation. He reviewed briefly the Toronto waterfront grade separation history. He had suggested to the Government some time ago that the situation in regard to the waterfront was intolerable, and that it devolved on someone to bring about a situation under which the most handsome and most expensive station in Canada could be made use of by travellers. The Government has said that its own railway organization was undergoing change, and that it did not feel it could act without executive and expert advice at a time when the former officials were leaving and had not been replaced. The promise was made that when the changes were effected the problem would receive immediate attention. The general railway situation in Canada is unique, involving as it does two great railway systems, one owned by the Government and one owned by private interests. He expressed confidence that the transportation problem would be solved, because both lines, the C.P.R. and the Canadian National, are, in themselves, essentially national in character. He could not conceive anything more national than the C.P.R. In the war it had been a real adjunct to the British and Dominion Governments in carrying out war work. Sixty-five per cent of the stock is held in Great Britain and Canada and 85% of the other securities are held in Great Britain.

Self Propelled Cars on Steam Railways.

Canadian National Railways' self propelled cars are, or very soon will be, assigned to service as follows: No. 15,800, the gasoline-electric car, which has been operating for some time between Winnipeg and Transcona, Man., will be withdrawn from service and remodelled, probably at the Transcona shop. Thorough overhauling of the motor is necessary. It will be replaced by storage battery car 15,802, one of those received from the Cambria and Indiana Rd. No. 15,801, the storage battery car which has been furnishing satisfactory service between Bathurst and Campbellton, on the Maritime District, is operating between Toronto and Beaverton, Ont., 64.3 miles, on the Muskoka Subdivision, Nipissing Division, Ontario District. The first trip was made Oct. 15. It was originally intended to give the service between Toronto and Washago, 89 miles, but in view of the latter place receiving adequate service without the car, the Toronto-Beaverton run was decided upon. The car handles a large milk traffic, in addition to local passenger traffic, and operates daily except Sunday, leaving Beaverton as train

and illustrated herewith, has been placed on the Bathurst-Campbellton run, on the same schedule as the storage battery car operated there heretofore. Particulars of this schedule have been given in preceding numbers of Canadian Railway and Marine World. No. 15,810, the small gasoline car with the Winton engine, is still in operation between Souris and Elmira, on Prince Edward Island. Particulars of this run were given in Canadian Railway and Marine World for August, pg. 418. No. 15,811, the first gasoline car to be received from Ledoux, Jennings, Ltd., Montreal, is still in service between Cross Creek and Stanley, N.B., 5.74 miles, on the Nashua and Stanley Subdivisions, Edmundston Division, Maritime District. Gasoline car 15,812 is in service between Brockville and Westport, Ont., but will be replaced by car 15,803, as stated, after which it will be kept as a spare on the Trenton-Pictou-Napanee run. Gasoline car 15,813 has been sent to the Pacific coast, where it will operate between Victoria and Sooke, some 22 miles out of Victoria, on the Victoria-Alberni line. Gasoline car 15,814 is in service on the Ottawa Divi-

vice to be afforded by any car built according to the said plans, and the substitution thereof of other service."

We understand that the Canadian National Rys. are about to order an additional gasoline rail motor car from Ledoux, Jennings, Ltd.

Full details as to the operating costs of the various self-propelled cars are not available. It may be stated, however, that they have been running between 20c and 40c a car mile. In 1921, the average train mile operating expense on the Canadian railways as a whole was \$4.02, but this of course, covered all items of expense. What the average cost per passenger train mile is, is impossible to determine, although from time to time some railway accountant announces that he has devised a method of segregating operating costs as between freight and passenger service. It is evident that such a distribution of expense would at best be but a scientific guess. At all events, while exact costs and savings are not yet available, it may be stated that the self-propelled cars on the Canadian National Rys. have demonstrated their ability to economically pro-

Self Propelled Steam Car, Canadian National Railways.

316 at 8.30 a.m., and arriving at Toronto Union Station at 11.30 a.m., and leaving Toronto as train 315 at 3 p.m., and arriving at Beaverton at 6.05 p.m. Power for charging the batteries is available at both Toronto and Beaverton. Contrary to the original intention, car 15,802 will not be remodelled at the Niagara, St. Catharines & Toronto Ry. shops at St. Catharines, Ont., but at the Transcona shops, near Winnipeg. The baggage compartment will be fitted up as a smoking compartment and a few other small changes will be made. Storage battery car 15,803, also from the Cambria and Indiana Rd., is being rehabilitated at the Niagara, St. Catharines & Toronto shops at St. Catharines. New batteries are being put in, the car is being rewired, and equipped with locomotive bell, seats in the baggage compartment, standard headlights and marker lights, and a lavatory, and generally is being made to conform with the Board of Railway Commissioners' requirements. When hydro power becomes available, this car will run between Brockville and Westport, 44.4 miles, Brockville Subdivision, Ottawa Division, Ontario District. Steam car 15,805, described in Canadian Railway and Marine World for October,

Ontario District, between Pictou and Trenton, 30.6 miles, on the Pictou Subdivision; between Trenton and Trenton Jct., 1.6 miles, on the Maynooth Subdivision, and between Trenton and Napanee, 34.6 miles, on the Rideau Subdivision. Battery cars 15,801 and 15,802 are equipped with Edison storage batteries, which have proved satisfactory in every way. Battery car 15,803 will be equipped with ironclad oxide batteries.

The Board of Railway Commissioners passed order 32,842 on Sept. 9, authorizing the operation of gasoline car 15,813, as follows: "The Board orders that the Canadian National Rys. be authorized to operate the passenger car known as the Ledoux, Jennings gas car, propelled by gasoline, and constructed according to the detail plans approved under order 32,224, March 25, 1922. The Board reserves the right, at any time hereafter, upon the report of its Chief Operating Officer or its Mechanical Appliance Specialist, to order any change or improvements in the said plans, or in any car constructed thereupon, which it may seem necessary for the safety and convenience of the public or the employees of the applicant; and the Board further reserves the right, at any time to direct the discontinuance of the passenger ser-

vice services that steam trains could not provide except at a large loss.

The two storage battery cars bought by the Canadian National Rys. from the Cambria & Indiana Rd. were in service formerly between Colver Heights and Nant-Y-Glo, Pa., 13.1 miles, making two round trips daily. It was decided by the Cambria & Indiana management to get rid of them, owing to the high cost of power, which was 5c per k.w.h. The cost of operating the cars was as follows: current, \$400; attendant for storage battery charging plant, \$110; and repairs, labor and materials, \$115 monthly; making a total of \$715 monthly. The cars were replaced by a service gasoline motor car.

We are informed that the Board of Railway Commissioners has decided to require air brakes on all self-propelled cars put in service in future. All of the Canadian National Rys. self-propelled cars are equipped with air brakes except 15,810; 15,811; 15,812 and 15,813.

Grand Trunk Ry. The National Steel Car Corporation, Hamilton, Ont., is preparing plans for a gasoline car for the G.T.R. The Boards of Trade of Kitchen, Galt, Doon and Waterloo, Ont., recently petitioned the Railways Department for a gasoline car service on the

G.T.R. Galt-Elmira branch. A Kitchener press report of Sept. 25 stated that the Department had decided to grant the request. As this is a matter which cannot conceivably be under the Department's jurisdiction, but is one for the railway management's determination, the press report is probably in error. We are officially advised that the car will be tried on several G.T.R. branch lines.

The Toronto Mail and Empire in referring recently to the proposal to operate a gasoline car on the G.T.R., said: "Why not put rubber tires on it and have a truck for road operation? It would probably be much more useful." The Mail and Empire, like many other daily papers, does not offer much encouragement to the men who are trying to reduce transportation costs, to the end that railway rates may be reduced. Besides, its remarks were silly.

Greater Winnipeg Water District Ry. gasoline motor car operation has shown the service gasoline car with which it is being carried on to be satisfactory, according to Chief Commissioner W. M. Scott. A Winnipeg press report quotes Mr. Scott as stating that, as the Commission had been given the option of using the car for 6 months by paying only the interest on its cost, with the right of returning it if unsatisfactory, and as the car had been satisfactory, he recommended that it be bought outright and that the first payment on its total cost of about \$23,000 be made. This car was described and illustrated in Canadian Railway and Marine World for May, pg. 231.

Quebec Central Ry. gasoline railway motor car 1, which was loaned to the C.P.R. for operation between Highlands and Cote St. Paul, 5.85 miles, on the Lasalle Road Subdivision, Montreal Terminal Division, Quebec District, was, at our last advice, still in the latter railway's possession. Car 2 was delivered by Ledoux, Jennings, Ltd., on C.P.R. tracks at Montreal on Sept. 20, and ran under its own power to Sherbrooke the same day. It was placed in Q.C.R. service as trains 9 and 10 between Levis and St. George, on Sept. 24, and has been operating on that run since then. Train 10 leaves Levis at 2.45 p.m., arrives Scotts Jct. at 4.05 p.m.; leaves Scotts Jct. at 4.08 p.m., arrives Valley Jct. at 4.35 p.m.; leaves Valley Jct. at 5 p.m., and arrives at St. George at 6 p.m. Train 9 leaves St. George at 6.40 p.m., arrives at Valley Jct. at 7.45 p.m.; leaves Valley Jct. at 8.12 p.m., arrives at Scotts Jct. at 8.40 p.m.; leaves Scotts Jct. at 8.43 p.m. and arrives at Levis at 10.10 p.m. The distance between Levis and St. George is 36 miles. We are officially advised that, while it has not been decided whether the gasoline cars will operate on the Q.C.R. during the winter, it is not expected, in view of the severe winter conditions, that operation will continue after Dec. 15.

Quebec, Montreal & Southern Ry. The gasoline railway passenger car acquired by the Quebec, Montreal & Southern Ry. was described and illustrated in Canadian Railway and Marine World for October, pg. 527, and the schedule on which it is operating was given in full. Since that description and accompanying data were published, we have been officially advised that during September the car made 5,830 miles, the receipts being at the rate of 36¢ per train mile, the out-of-pocket cost of operating the car being 18.69¢ per train mile, and the earnings being 15.70¢ per train mile above out-of-pocket cost of operation. During the month, the car carried 2,206 passengers, and passengers carried one

mile totalled 56,127. The revenue per passenger was 90.89¢, and the revenue per passenger mile 3.57¢. The car operated satisfactorily and maintained schedule throughout.

Timiskaming & Northern Ontario Ry. —A recent Swastika, Ont., press report stated that mining and business men in Swastika and Kirkland Lake, as in the Cobalt district greatly desire self propelled car service on the T. & N.O.R., as an auxiliary to the steam train service, and that G. W. Lee, Chairman of the T. & N. O. R. Commission, had stated that money had been appropriated for purchasing a railway motor car, but that the actual purchase was deferred. We are officially advised that, while the Commission has been giving serious consideration to the self propelled car question, the necessary investigations have not been completed, and that pending their completion no decision will be made.

Lord Shaghnassy on Canadian Immigration Problems.

Lord Shaghnassy, Chairman of the Board, C.P.R., spoke on immigration matters at a Kiwanis Club luncheon in Montreal, Nov. 16. He said that nothing in the Kiwanis' programme was of greater importance than its campaign for the promotion of a sound, sane immigration policy for the Dominion, to be promulgated immediately, and carried out with intelligence and vigor. Practically nothing had been done during the last eight years to attract immigration. In 1911 Canada had a population of 7,200,000, and the census returns for 1921 show a total population of 8,700,000. But in that period the vital statistics show that there was a natural increase of 1,836,000, and immigration into Canada from other countries of 1,975,000. Had Canada received no immigrants at all, the natural increase should have given a population of 9,000,000, so that in these 10 years we apparently not only lost the equivalent of all the immigrants who came in, but did not even maintain, according to the census returns the increase due to natural increase after making full allowance for war losses. The burden of carrying the present Dominion debt is too great for a population of 8,700,000 people. There are ample assets to meet all the liabilities, provided the natural resources of the country are developed by industry. Canada's policy should therefore be to bring information of the great resources of Canada under the notice not only of the people of Great Britain and the United States, but also of many of the European Continental countries as well. There should be some amendment to the immigration laws and regulations, and there should be appointed, without delay, a thoroughly capable enterprising Minister of Immigration and Colonization. The Interior Department, which now has charge of immigration matters, is overburdened with work, and should be relieved of immigration questions. The Minister of Immigration should have a capable staff of assistants, not only at headquarters, but also in Great Britain, the United States and on the European Continent, and the Minister should be empowered to take whatever steps may be necessary to see that the settlers on arrival in Canada are advised, directed properly and cared for. In working along such lines as this the Government would have the active co-operation of the C.P.R. and other transportation companies,

who expended such vast sums of money in co-operation with the Government to secure colonists a few years ago. With the proper machinery in operation there could be little doubt that selected and directed settlers would come in large numbers with all the resultant advantages to the country.

Freight and Passenger Traffic Notes.

Shipments of apples from Halifax, N.S., to the United Kingdom during this season to Sept. 30, were 134,839 barrels, against 69,249 for the same period of 1921.

The Canadian National Ry. are reported to have handled 36,803 cars of wheat, totalling 46,352,000 bush., from Sept. 1, to Oct. 5, and the C.P.R. is reported to have handled 35,484 cars, totalling 51,180,789 bush., in the same period.

Eighteen steamships, with 173,000 barrels of apples, are reported to have sailed from Halifax, N.S., during October, making a total of 309,799 barrels shipped during this season, against 230,787 barrels for the corresponding period of 1921.

The Canadian National Ry. are reported to have handled, during October, 11,420 cars of coal from Alberta mines, against 5,650 in Oct., 1921. This increase shipment is stated to be almost entirely due to the enlarged area over which the coal is shipped.

The C.P.R. has been acting as host to five members of the Baseball Writers' Association of the United States on a moose hunting trip in Nova Scotia. The party, elected by their fellow members, proceeded with guides to Kedemakooke Lake, south of Annapolis Royal.

The Board of Railway Commissioners passed order 32907, Sept. 30, rescinding order 32685, July 31, reducing train service on the G.T.R. between Doucet's Landing Subdivision and Victoriaville, Que., owing to the urgency of the coal situation, which has since been relieved.

The Canadian National Ry. has, a press report states, arranged to operate a weekly train service from Pas, Man., to mile 120, on the Hudson Bay Ry., near Herb Lake, to provide accommodation for the mining population there. From that point to mile 214, the fortnightly service will be continued.

A. Chard, Freight and Traffic Supervisor for the Alberta Government, is reported to have asked the Canadian National Ry. for a substantial reduction in coal rates from the Alberta coal fields to eastern points. The present tariff from the mines to Ontario is stated to be \$12.70 a ton.

The Canadian National Ry. discontinued its double daily, except Sunday, car ferry service between Prince Edward Island and the mainland, Oct. 28, and put in force on Oct. 30, a single daily service except Sunday, leaving Borden, P.E.I., 9.10 a.m., arriving at Tormentine, N.B. 10 a.m., leaving Tormentine at 2.50 p.m., and arriving Borden at 4.45 p.m.

The Canadian Pacific and the Canadian National Ry. have announced that special return fares will be put in operation on their lines from the prairie provinces to the Pacific coast on certain dates in December, January and February. The C.N.R. tickets will for small additional charge give passengers the opportunity of going to, or returning from, Vancouver, via Prince Rupert.

Locomotive Stoker Applications on Canadian Railways.

Canadian National Rys. — Canadian Railway and Marine World for October, gave particulars of the application of duplex locomotive stokers to C.N.R. locomotives at Moncton, N.B., and Transcona, Man. We are officially advised that the 10 Santa Fe locomotives have been equipped at Moncton: viz., 4025, 4026, 4027, 4029, 4031, 4032, 4033, 4034, 4036, and 4040. At Transcona, work is proceeding on the application of stokers to 10 mikado locomotives and 5 heavy consolidations.

In the application of the stokers, an illustration of one of which is given herewith, to the Santa Fe locomotives at Moncton, two holes had to be cut through the boiler back-head and fire-box door sheet, one on either side of the fire door, and 12 in. diam. tubes were

provided with an opening 18 in. wide, extending from the coal gates to the tank's slope sheet. The opening is covered by slides 20 in. long. After the coal passes through the opening to the trough below, it is conveyed by the helicoid conveyor screw, through the crusher zone to the transfer hopper, where it is divided, equally or unequally, according to the position of the dividing rib, between the two elevators. The elevator screws elevate the coal and drop it into tubes fitted with elbows, the tubes extending through the holes in the back-head on each side of the fire door. Constant steam jets in the elbows blow the coal through the tubes, the ends of which form distributors, which deflect and spread the coal over the fire. The elevating screws are driven by gears, which mesh with a

Regulative Proposals.—A memorandum prepared jointly by the legislative representatives of the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen, dealing with the application of power grate shakers and automatic locomotive stokers to locomotives, was submitted some time ago to the Board of Railway Commissioners, as part of a list of railway operating conditions for which consideration and regulation were asked. Among other things it asked for an order requiring the equipment of coal-burning locomotives, weighing over 140,000 lb. on drivers with automatic stokers and power grate shakers. The matter was listed for hearing at Ottawa on July 4, but a request was made by the Brotherhood of Locomotive Firemen and Enginemen's legislative representative for a postponement, which was made until Sept. 19, but on a further request by the legislative representative the hearing was postponed indefinitely to allow negotiations to take place with the railway managements.

A Liberal M.P. on the Canadian National Railways.

S. W. Jacobs, K.C., who represents the George Etienne Cartier Division of Montreal, in the House of Commons, in addressing the Westmount, Que., Women's Liberal Club, recently, referred to the railway situation. He is reported to have said it had been part of the Liberal party's avowed policy to give national ownership of railways a fair trial. How long the trial could go on, without landing the country into bankruptcy, was the question. He did not believe in national ownership. He thought that, if the present effort to deal with the situation did not succeed, the Government should formulate some other plan. He considered that operation of the railways by a private corporation—whose business it was to run railways—under Government control, was the most promising. If it was found necessary ultimately to turn the national railways over to some private enterprise, he thought the C.P.R. Co. the most capable of conducting them successfully. He hoped that the newly appointed directors would make a success of the operation of the Canadian National Rys., but he had doubts, and added that it was possible Lord Shaughnessy's suggestion would be given consideration in the not distant future.

Canadian National Railways Revaluation.—Hon. T. A. Crerar in addressing a meeting of Progressive members of the House of Commons at Winnipeg, Nov. 10, in announcing his retirement from their leadership, said, "The improvement in the situation of the national railways gives good promise that these roads will in a few years emerge from their difficulties. I have long advocated that the national railway system should be revalued, and a fair opportunity given to the management to make good on a fair basis of capitalization. The time is opportune to do that now, when a new board and new management are assuming control. The national railways must have a full and fair trial, and if they are given this, there is no question of their success. There is no reason why they should not become a great unifying influence in Canada, affording a common bond of interest to our population."

Locomotive Stoker arrangement.

applied by electric welding, to accommodate the stoker's distributing tubes. The foot plate casting had to be cut away in one or two places, to clear the stoker mechanism, and the cab had to be reconstructed at the bottom, to clear the conveyor trough and drive shaft, a new cab bracket being used on the right side, and a substantial plate applied to brace the cab together at the back of the foot plate. Two 20 x 22½ in. openings were made in the top of the cab, directly above the elevators, to facilitate lifting them, if necessary, for repairing, and the cab window was extended down to clear the conveyor trough. The tenders had been equipped previously with horizontal coal chutes. In installing the stokers, the coal pushers were removed and the tanks cut out, and side plates and support angles and brackets were applied to take the stoker conveyor trough. The shovel sheet on the locomotives is

rack reciprocated by the driving engine, and the conveyor screw is driven by a driving shaft also meshed into this rack. The driving engine has a cylinder of 11 in. bore and 17½ in. stroke. The steam to supply it is taken from the locomotive turret, reduced in pressure by throttling through a ½ in. globe valve. The operation of the cylinder piston is controlled by valves in a main cylinder head, similar to the top head used on the standard 11 in. Westinghouse air compressors.

Canadian Pacific Ry.—We are officially advised that Santa Fe type locomotive 5813 has been equipped with a duplex locomotive stoker at Angus shops, for experimental purposes.

Grand Trunk Ry.—We are officially advised that the G.T.R. has ordered 12 automatic locomotive stokers from the Elvin Stoker Co., to be applied to mikado locomotives, 6 at the company's Montreal shops and 6 at its Stratford, Ont., shops.

Mountain Observation Cars, Canadian National Railways.

The Canadian National Rys. recently converted two sleeping cars, which had seen long service, into observation cars for use in the Rocky Mountains, the work being done at the Leaside shops, Toronto. Their dimensions are as follows:—

Length over buffers.....	78 ft. 3 in.
Length over end sills.....	70 ft. 6 in.
Length between truck centers.....	54 ft. 6 in.
Length of interior compartment.....	44 ft.
Length of exterior compartments.....	15 ft. 5 in.
Width over side sills.....	9 ft. 8 in.
Width at eaves.....	9 ft. 10 1/2 in.
Width over grab irons.....	10 ft. 1 1/2 in.

thus given the underframe was to make it as strong and rigid as possible. Reinforcing angles, $3 \times 3 \times \frac{3}{4}$ in., continuous from end to end of car, placed one on top and one below each side sill, were provided, incidentally still further reinforcing the underframe, and to these longitudinal angles, connections for the side posts were furnished by using $6 \times 6 \frac{1}{2}$ in. angles, riveted to the top longitudinal angle, and bolted through the side sill to the bottom one, two angles to each side post. The longitudinal angles also

each corner, and end and side railings are provided on the platforms at each end, with end and side gates. The railings are of steel bar and 5-in. tubing construction.

The interior of the cars is finished in British Columbia cedar, stained mahogany, and as is shown by the illustrations, the arrangement, particularly as regards the window position and area, is such as to permit an unobstructed view by travellers from a natural and comfortable position in their seats. The windows are

Mountain Observation Car, Canadian National Railways.

Height, rail to top of roof.....	13 ft. 2 in.
Truck wheel base.....	10 ft. 6 in.

As shown by the accompanying plan, these cars consist of an enclosed central interior portion, with an open observation platform at each end. In constructing them, the sleeping cars from which they were made were stripped, all superstructure being removed, and the underframes were used as the underframes for

provided connections for riveting the steel side sheets to the side sills.

The entire car side framing is of steel, and in order to economize in superstructure construction, certain sizes of second-hand angles and shapes, the length of which were suitable for the work, were used. The posts are $3 \times 3 \times \frac{7}{16}$ in. Z bars and T shapes, made up of $2 \times 2 \times \frac{3}{4}$ in. angles, back to back. The sheathing

4 ft. 5 in. high by 28 in. wide, having two panes of glass 24×24 in., one above the other. They compare with the commonly accepted railway standard of 28 in. high by 25 in. wide, so it is evident that, with 16 such large windows in each side, the facilities for viewing the scenery are all that could be desired. The windows used were originally on the sleeping cars from which the observation cars were

Floor plan, Mountain Observation Car, Canadian National Railways.

the observation cars, the same trucks also being used. The sleeping car underframes were reinforced by plates and angles, and the longitudinal spaces between the center and intermediate sills were filled with 2 long wooden sills, continuous from end to end of car, making practically two continuous 16×8 in. center sills in the observation cars' underframes. In addition, the underframe was strengthened by the inclusion of 4 flitch plates of $\frac{3}{4} \times 6 \frac{1}{2}$ in. material, one at each side of the underframe, extending from the end of car to the needle beams, and a flitch plate of similar material extending across each end. The side and end sills were tied together by 10 in. channel forged angle shapes at each corner, and the whole frame was tied together with tie rods, plates and angles. The result of the reinforcement

is of $3/16$ in. plate, riveted to the angles on the side sills and the upright posts. The bolt rail is $2 \frac{1}{2} \times 2 \frac{1}{2}$ in. steel plate under the side windows. The carlines were constructed of $2 \times 2 \times \frac{1}{4}$ in. angle irons, and connected to the top of each side post with gusset plates. The roof extends over the entire car, and nailing strips, bolted to the angle carlines for fastening roof to same, were employed. The roof is of the plain arch type, of 10 ft. radius, and is of wood and canvas construction. The cars are equipped with double floor, the lower course being laid diagonally, and the upper course longitudinally, with tar paper between. Below the floor proper, a deafening floor is provided, the space between this and the diagonal layer of flooring being filled with shavings. The cars are equipped with C.N.R. standard 4-tread steps at

built, but on the observation cars the windows were used one above the other, instead of one outside the other, as on the sleeping cars. In addition to the side windows, the interior compartment has two windows of the same dimensions at each end, one on each side of the exit door. The interior compartment is equipped with 8×24 in. ventilators, and there are 16 double seats arranged transversely on each side of the central aisle, providing seating capacity in the interior for 64. The cars are wired and equipped with electric lights and standard shades, but are not equipped with generator or batteries, current being supplied from the car ahead by a wire connector.

The cars are equipped with 5 steel trucks, 10 1/2 ft. wheelbase, with 36 in. steel tired wheels and 5×9 in. journals. All running gear conforms with M.C.B. stan-

dards, and standard passenger equipment air brake apparatus is applied. An advantage of the double-end feature of the construction is that the necessity of turning the cars at each end of the run is obviated.

The cars are to be used in transcontinental passenger train service between Jasper and Kamloops, B.C., 275.1 miles, the run from Jasper to Red Pass Jct., 44.2 miles, being on the Tete Jaune Sub-division, Edison Division; from Red Pass Jct. to Blue River, 58.7 miles on the Alberta Sub-division, Kamloops Division, and from Blue River to Kamloops, 142.2 miles, on the Clearwater Sub-division, Kamloops Division of the British Columbia District. The cars were built at the Leaside shops, Toronto, under the supervision of G. E. Smart, Mechanical Assistant, Car Department, to Vice President, Maintenance and Operation, and H. J. White, General Car Foreman.

Illinois Central Railroad Electrification.

In accordance with an agreement entered into by the Illinois Central Rd. and the city of Chicago, providing for the electrification of the I.C.R. terminals, President C. H. Markham, of that railway, appointed a commission in Dec., 1920, to report upon the matter in its entirety, and this commission has recommended the adoption of the 1500-volt direct current system, with overhead current collection. The commission considered the possibility of using a 3-phase alternating current system, requiring a double overhead contact, which was quickly eliminated on account of complicated construction; it also considered a 750-volt direct current system, with third rail, 3000-volt direct current, with overhead current collection, and 11,000-volt alternating current with overhead contact, the third rail system being eliminated on account of its undesirability, and the latter two systems being demonstrated as inferior, by thorough study of the matter, to the 1500-volt direct current system, with overhead contact, as finally selected.

According to the agreement, the suburban passenger service is to be operated electrically by 1927, and the entire freight service within the city by 1935. The suburban passenger service will demonstrate the main line from Chicago to Matteson, 28 miles; the South Chicago Branch, 4.5 miles; and the Blue Island Branch, 4.4 miles. The total track mileage involved will be 125. Last year the I.C.R. bought 20 all-steel suburban cars which will be suitable, with few small alterations, for electric operation. The cars are being operated in steam train service out of Chicago. It is estimated that an additional 240 electrically equipped cars will be required, for multiple unit train operation.

The expense of this electrification project will be very heavy, as the amount of work preliminary to the starting of actual electrification will be very large. A great deal of track depression and elevation will be necessary, and in addition to this, there will be the construction of additional sewers, power house and sub stations, a new through passenger terminal at East Roosevelt Road, a new suburban passenger terminal at Randolph St., new interlocking plants, and a new signal system, while changes and additions to present stations and platform will be required, much trackage will have to be rearranged, and grade crossings with other railways will be eliminated. Con-

siderable of this preliminary work is under way.

It is evident that this work, involving, as it does, a large suburban passenger service, freight transfer and switching movements in congested yards, and finally the through passenger service within the terminal area, will constitute one of the greatest problems in railway electrification yet met with, but the plans provide for an efficiently-operated electrified terminal, with adequate provision for future growth, and the mention of the fact that money is prepared to spend its money in the project indicates its belief that the resulting economies to be secured will make the investment well worth while.

Stewart and McDonnell's Gold Coast Colony Railway and Harbor Contract.

Major James McGregor, D.S.O., C.E., formerly Superintending Engineer, Halifax Ocean Terminals, Canadian Government Rys., now Chief Engineer for Stewart and McDonnell, who are consulting constructional engineers for the Crown Agents for the Colonies; in connection with railway and harbor construction in the Gold Coast Colony, British West Africa, has written *Canadian Railway and Marine World* from Sekondi, as follows:—"You will no doubt be pleased to learn that the monthly copies of *Canadian Railway and Marine World* as they reach here are eagerly read and much appreciated by the Canadians on my staff, and also by many others, who, like myself, spent many pleasant years on railway and marine work in Canada before coming here to carry out the new Takoradi deep sea harbor and railway works at Accra.

"Takoradi is about six miles southwest of Sekondi, and it will form the main seaport of the Gold Coast Colony, Ashanti and the Northern Territories, and also the principal railway terminus. Good progress is now being made with the railway works and the first section of the harbor works, which are estimated to cost \$8,000,000. The water supply has been extended to the new harbor and townsite. A large area of land has been acquired by the Government, and surveyed in great detail, and plans for the new town, which is to be model one for West Africa, are being prepared. A splendid new highway 100 ft. wide, is being built from Sekondi to Takoradi. An excellent headquarters camp, to accommodate 60 Europeans, has been constructed at Sekondi, and further camp accommodation is being provided at Takoradi, where, except for two native fishing villages, the whole area of the proposed townsite, was, until recently, covered with the dense tropical bush and undergrowth so characteristic of West Africa. Medical and sanitary services, and the layout and design of the new European and native hospitals for Takoradi, (matters of supreme importance in tropical Africa), are in the personal direction of Lt. Col. R. H. Ker, M.D., of Vancouver, B.C. Up to date there has been remarkably little sickness among Europeans and hindrance to the works on that account.

The improvement works at Accra are in charge of the Assistant Chief Engineer, J. C. Craig, D.S.O. They include import buildings and railway shed with a floor area of over two acres, and are being built of concrete and steel, with tiled roofs. They also include new road and railway connections, and an im-

proved marshalling yard and approaches. These improvement works are estimated to cost \$500,000 and are to be completed early next year.

"The harbor and railway works at Takoradi and Accra are being carried out by the Chief Engineer of the new Government Harbor Works Department, and under the direction and supervision of Stewart & McDonnell, consulting constructional engineers, Westminster, London, Eng., and Vancouver, B.C., the two principal partners of the firm being Major-Gen. J. W. Stewart, C.B., C.M.G., and Col. the Hon. Angus McDonnell, C.B., C.M.G., who are well known in Canada as railway and harbor builders."

Freight and Passenger Traffic Notes.

The Canadian National Rys. winter time table, which went into effect Oct. 1, shows that operation of trains had been extended over certain recently completed extensions of lines as follows:—The service on Regina-Swan River Line has been extended from Lintlaw to Kelvington, Sask., 13.6 miles; on the Humbolt-Melfort route from Melfort to Ridgedale, Sask., 26 miles; and on the Brazeau line from Red Deer Jct. to Red Deer, Alta., 6 miles.

The Board of Railway Commissioners at its Winnipeg sittings recently heard Lakeview rural municipality's complaint as to the service on the Canadian National Rys. Oakland branch, which it was proposed to reduce. C.N.R. officials stated that while the freight traffic on the branch was satisfactory, the passenger traffic could be handled by one train in two weeks. The total earnings of the branch were so low that a tri-weekly service was not warranted, particularly in summer. The Chairman stated that strong reasons should be given for reducing a three-times a week service, and that railways should not reduce any service without obtaining adequate reasons.

The C.P.R. is reported to have decided to abandon its car ferry service across the Detroit River between Windsor, Ont., and Detroit, Mich., and to run all its freight trains through the Michigan Central Rd. tunnel, as its passenger trains have been for some time. It is stated that the C.P.R. car ferries Ontario and Michigan have been laid up for several months, and are in need of considerable repairs. At present C.P.R. freight cars are being moved across the river by the Pere Marquette Ry. car ferries. Since the foregoing was put in type, we have been officially advised that no arrangement has been made to run all C.P.R. freight trains through the M.C.R. tunnel, nor is it in contemplation.

The C.P.R. is reported to have handled 79,365 cars of grain from Western points to Fort William, Ont., from the commencement of this crop year to Nov. 15, against 53,492 cars in 1921, an increase of 13.4%. The approximate quantity of grain handled during the period was 118,000,000 bush., of which 82,923,908 were sent out by steamship, and 3,598,971 bush. by rail. The C.P.R. also carried 2,915 cars of grain from prairie points to Vancouver during the same period. The Canadian National Rys. in the same period handled 61,855 cars containing 79,948,000 bush. to Port Arthur, against 51,583 containing 66,173,000 bush. in the same period of 1921. There were reported to be in store at the head of the lakes on Nov. 15, 25,441,000 bush. of grain, against 13,377,000 bush., on Nov. 15, 1921.

Automatic Train Control Recommended in Great Britain.

A committee, appointed in Oct., 1920, to enumerate the possible functions of automatic train control, to examine devices under trial, and to form conclusions as to adoption, has recently reported to the British Ministry of Transport. The committee considers that the disadvantages of continuous control, i.e., apparatus subject to application or release at any point in the section, outweigh the advantages, and that the non-contact type, i.e., by induction, necessitates the use of somewhat complex electrical arrangements and is comparatively costly. Speed control and devices with time relays were not considered suitable to British conditions. The benefits of train control in fog are alluded to, but it was decided that no case was made out for its use on single lines where the token system is in use. The committee calculated that the first cost of completely equipping the passenger routes on which there are two or more lines would be \$4,660,000, and the annual charge would be \$407,000.

The committee's conclusions are as follows: 1. The committee are of opinion, after careful examination and analysis of statistics during the past 10 years, that automatic train control presents the only reliable method of preventing a large proportion of train accidents directly occasioned by failures of locomotive men to obey signals, which amounts to about one-third of the total. 2. They consider, therefore, that a case for the installation of control upon British railways has been made out, and recommend its gradual adoption, in accordance with the list of requisites given. 3. They consider that the system likely to prove most suitable to prevailing conditions will be of the contact type, designed to operate in conjunction with existing methods of signalling. 4. They regard it as essential that the system of control should be uniform in character, and that all working parts should be of standard design, in order to facilitate replacements and to ensure interchangeability. Non-working parts, i.e., connections between the locomotive apparatus and framing, may be varied to suit individual requirements, subject to the provisions of requisite no. 2. 5. They are of opinion that a complete system of automatic train control should include a train-stop device at selected stop signals, and train control generally at distant signals. They are satisfied, from their investigations, however, that control at stop signals is of first importance, as a means for providing additional safety. 6. If, therefore, owing to financial considerations, the complete scheme cannot at present be entertained, the committee consider that the preliminary step should be the introduction of control at selected stop signals. They point out, however, that such a partial system would be of comparatively little benefit in places where, except for the general rules 3 and 4 of the regulations for train signalling by block telegraph are permitted, and where the necessity for the warning arrangement cannot be obviated by the provision of outer home signals. 7. They recommend the immediate formation by the railway companies of a committee of experts, to determine and standardize track and locomotive apparatus, having regard to differences in structural and loading gauges, and the position of conductor rails on electrified railways.

The requisites recommended, as mentioned in conclusion no. 2 above, are as follows:—

1. The control apparatus to be constructed to work in conjunction with any system of fixed signalling, mechanical, power worked or automatic.

2. To be so constructed in respect of both track or train elements as to ensure the unimpaired effects being produced upon locomotives when running upon either home or foreign lines in Great Britain.

3. The control to be capable of producing three alternative effects, viz.: danger, warning, clear. (a) The danger effect to be produced at a 2 or 3-position stop signal, when this indicates, or should indicate, danger, and to consist of a full application of the power brake. In the case, however, of purely automatic signals, the danger effect is required to be produced only when the signal correctly indicates danger. The brake application to be capable of release by the driver, only by an action entirely distinctive in character from that required for the release of the warning brake application.

(b) The warning effect to be produced at a 2-position distant signal or at a 3-position signal, whenever these indicate or should indicate caution, and to consist of an unmistakable brake application and audible warning. The brake application in this case to be capable of immediate release by the driver. The action for brake release in respect of both danger and warning effects must necessarily re-set the locomotive apparatus in the normal receptive position. (c) The clear effect to be produced at a 2-position distant signal, or at a 3-position signal, when these correctly give the clear indication, and to consist of a signal or signals distinct from that required for the warning effect. The control of this locomotive apparatus to be in the hands of the driver, so that he may render it operative or inoperative at will. The clear effect shall be produced only when this condition is indicated both by the signal concerned and by the position in the frame of the corresponding signal lever; and in the case of automatic or semi-automatic signalling also by the condition of the corresponding track controls. In all other circumstances either the danger or the warning effects, as the case may be, shall be produced.

4. To be so constructed that the correct position of all track and train elements of the device shall be assured under all conditions of speed, atmosphere, weather, wear, oscillation and loading; and that the device shall operate under all conditions which permit of traffic movements.

5. The track apparatus, in event of failure of any of the actuating mechanism, electrical energy, or connections, and in the event of other electrical faults, to assume the danger or warning condition, as the case may be, and give the corresponding indication. The integrity and correct position of all moving parts of the track apparatus, which are designed to come in contact with the locomotive apparatus, must be continuously indicated to the signal man or detected in the case of automatic signalling. Failure in any portion of the locomotive control apparatus, which prejudicially affects the brake control in connection with the danger or warning effects, to give an unmistakable application of the power brake.

6. To be capable of operation upon locomotives fitted with air, vacuum, steam or other power brakes, or any combination thereof.

7. The locomotive apparatus to be such as not to interfere with or impair the efficiency of the normal working of the power brake.

8. The apparatus to be such that it will be operative when the locomotive is running in forward or backward gear, without involving any action additional to that normally necessary for reversing the direction of travel of the locomotive.

9. The apparatus to be inoperative automatically in respect of the danger effect, when a train passes a signal not applicable to the direction of its movement.

10. To be of simple standardized construction, with easily interchangeable parts, so that maintenance, inspection and tests to ensure efficiency of all the parts shall be easily carried out. Any part of the apparatus which is liable to be destroyed, by shock of impact, must be capable of rapid replacement.

11. To be so constructed and installed as not to constitute a source of danger to railwaymen or passengers.

12. Where there are a number of signals at any point applicable in the same direction to one road, the track apparatus for that road must be capable of operation in conjunction with any one of the signals in question.

Railway Carriers' Liability Fixed by Bill of Lading.

The Quebec Superior Court heard an action, recently, in which Hatfield & Scott Co. sought to recover \$2,087.73 from the C.P.R., claiming the value of three car loads of potatoes shipped by the plaintiffs over the C.P.R. for delivery to W. Vipond, Belleville, Ont., and not delivered. Two of the cars were shipped from Bonaventure, Que., and the third from Caplin, Que., and all three were refused by Vipond on their reaching Belleville. Notice of the refusal to accept was served by the railway company on the plaintiffs as well as on Vipond, under the Railway Act, sec. 356, but neither party paid any attention to it. The railway company, having kept the potatoes in storage for some time, finally sold them to a third party, and the charges, and claimed that it had acted in a proper and legal manner, and that there was no lien de droit between plaintiff and defendant in the matter. It was shown that one of the conditions of the bill of lading was that the amount of any loss or damage for which the carrier might be liable was to be computed on the value of the goods at the time and place of shipment. Mr. Justice MacLennan said there was no evidence of the value of the goods at the time and place of shipment, and therefore it was not necessary to express any opinion upon the other questions raised, and the action was dismissed with costs.

From Ballynea to Ballyfar in Ireland the railway is a single track. The station-master at Ballynea once started the train without consulting any one. While he was watching it disappear in the distance, the signalman stuck his head out of his box and said, "Did ye start her?" "I did," replied the other. "An' ye just callin' the wan from Ballyfar?" cried the signalman. The other rubbed his hands, saying, "Be gor, she'll meet her match!"

British Press Opinions of Sir Henry Thornton.

Canada, London:—"The choice, seems to be an excellent one. Sir Henry is a railwayman of experience and eminence. His American training was of great assistance in reforming the workings of the Great Eastern line, with its heavy suburban traffic and important continental services. His work during the war has also given him valuable experience that will stand him in good stead in his new post. Had he not accepted the offer made to him at Ottawa, he would have been the obvious head of the Eastern Group of English railways under the scheme of amalgamation."

Great Eastern Gazette, London:—"For the Great Eastern he worked wonders. In all departments of the line his individuality and enterprise were felt. He revolutionized the suburban traffic of the line, which is said to be the largest in the world, he brought prosperity to the holiday resorts on the East Coast, and was lately engaged in improving continental traffic, which has not yet recovered from the disorganization due to the recent war."

Morning Post, London:—"Under Sir Henry Thornton, the Great Eastern Ry's suburban service was brought to a standard unequalled in the world by steam trains. In the opinion of those best qualified to judge, he did all that ever can be done in the handling of vast suburban traffic by steam operated trains in and out of a London terminal. The results obtained at Liverpool St. station prove that the solution of the great suburban traffic problem is no longer the frequency of the service, as much as the speed with which trains and platforms can be emptied. Steam has been shown capable of giving the frequency at present required, and the Great Eastern has saved the expense of installing electric traction. Sir Henry's name was recently mentioned as a likely nomination for the post of controller of the eastern group of railways when the scheme of amalgamation is completed."

Railway Gazette, London:—"A few weeks ago a leading railway officer remarked to us that in his opinion it would be little short of a calamity if the services of Sir Henry Thornton were lost to British railways. That calamity is about to take place, for Sir Henry has accepted the position offered to him of President of the newly formed Canadian National Ry's. system. Lord Claud Ham-

ilton's speech at the annual meeting of the Great Eastern Ry. in Feb. 1914, announcing the appointment of an American General Manager, and the reasons which led the directors of that company to make the appointment, raised the controversy. Starting with such a 'wet sail', many smaller personalities would have accomplished little. Considered at first as an intrusion, Sir Henry Thornton has come to be regarded as an institution in the British railway world. Everyone now quite understands why the General Superintendent of the Long Island Division of the Pennsylvania Rd. made such an impression on Lord Claud Hamilton. If the latter had not done anything else in his thirty years' chairmanship of the Great Eastern this one act would always be a striking example of his perspicacity.

"Within a few months of Sir Henry Thornton's Great Eastern appointment came the outbreak of the Great War in Aug., 1914. His services during the war are recorded elsewhere in this issue. He became a naturalized British subject and so to speak, burnt his bridges behind him, and most of us thought that his genial personality, always suggestive of fresh breezes from the west, would long continue to be a powerful force in the counsels of those responsible for British railway management and operation. What he has already accomplished on the Great Eastern even in the difficult period subsequent to the war, has been the subject of many articles in our columns. He had no abhorrence of anything new because it happened to be new. His attitude towards labor and labor leaders sometimes made those of the older school shake their heads.

"In his conception, one of the most important functions of a railway general manager, president, managing director, or whatever may be his title, is to make his line popular with the public, and never to let supposed grievances rankle. In fact, we have heard him described as an ideal publicity agent. Those who made this criticism, if criticism it was intended to be, overlooked that it was quite in their power to do the same, but it was the fact that he was at the top, and yet always accessible, and not afraid to speak, that gave him his public. Though instinctively a diplomat, Sir Henry is by no means superficial. A student of labor problems, a good engineer and a

trained operating officer, he can talk in the vernacular on any of these subjects. Evidently an admirer of Napoleon, he would sometimes speak of that great Frenchman's wonderful sense of leadership and how he would inspire thousands who had never seen him face to face, and how that same spirit must dominate both the officers and the rank and file of the four great railway groups, unless they are to be conducted on the slothful, lethargic and promotion-by-seniority principles, which characterise so many Government departments. Undoubtedly Sir Henry Thornton's personality has dominated the Great Eastern these last few years and the officers and rank and file regard his impending departure as a personal loss.

"There is no point in ignoring the fact that although such speculations are in railway parlance, quite premature, Sir Henry Thornton had been freely mentioned as a possible general manager or joint general manager of the great railway company into which the Eastern Group of railways are to be amalgamated and absorbed. But evidently the potentialities of the newly-formed Canadian National system have appealed to his imagination. He has remembered the old adage about a bird in the hand being worth two in the bush, and has accepted the Presidency of the new system, which is a combination of the old Grand Trunk, the Grand Trunk Pacific, the Canadian Northern, the Intercolonial and other Canadian Government railways. The total mileage of the system is something over 22,000, and its annual gross earnings over £25,500,000. It owns 3,217 locomotives, 3,302 passenger vehicles, and 129,121 freight and service cars. It is interesting to compare these figures with the totals of the railways which will shortly comprise the Eastern Company. The total mileage will be 6,700; and the annual gross earnings are about £90,000,000. It will own 7,500 locomotives, 20,500 passenger vehicles, and 302,000 freight wagons. Thus, two great experiments are being entered on; judging from its present position, the Canadian proposition is the more difficult of the two. Sir Henry Thornton's temperament and qualifications will make him an excellent President of the Canadian National Railways. This country's loss is Canada's gain, but all here will wish him the best of good fortune."

Sir Henry Thornton's Farewells in England.

Sir Henry W. Thornton, who was appointed President, Canadian National Ry's. on his arrival in Ottawa on Oct. 4, and who sailed from New York on the s.s. Olympic, Oct. 14, after his brief visit to Canada and some points in the United States, arrived at Southampton, Eng. Oct. 21, accompanied by Lady and Miss Thornton, and was met there by S. A. Parnwell, Assistant General Manager and Land Agent, Great Eastern Ry., who has since been appointed General Manager. On reaching his office at Liverpool St. station, London, Sir Henry found himself practically inundated with invitations for a number of farewell dinners, etc., of a semi public nature, and with many private invitations which were far too numerous to be accepted in the short time at his disposal.

The Canada Club entertained Sir Henry

at dinner at the Savoy Hotel, London, on Oct. 21, over 100 guests being present including Lieutenant Governor Nichol, of British Columbia; Sir George E. Foster, Canadian Senator; Hon. Rodolphe Lemieux, Speaker of the Canadian House of Commons; the Permanent Under-Secretary for the Colonies; the United States Ambassador and the U.S. Consul General to Great Britain; the Agents General of British Columbia, Nova Scotia, Ontario and Quebec; several directors of the Great Eastern Ry.; the general managers of the Great Central, the Great Western, the London & South Western, the Midland, and the North Western Ry's.; a number of Great Eastern Ry. officials, and the following Canadian National Ry's. and Grand Trunk Ry. officials: Wm. Phillips, European Manager; A. H. Conyngham, Assistant Local Secretary, G. E.

Cowie, General Freight Agent, United Kingdom Traffic; P. A. Clews, General Freight Agent, European Traffic, and E. J. Wearing, European Express Agent, Canadian National Express Co. Hon. P. C. Larkin, Canadian High Commissioner in London, who presided, read a telegram received by Wm. Phillips, European Manager, Canadian National Ry's., from R. P. Ormsby, Secretary, C. N.R., Toronto, as follows: "Directors very much interested in Canada Club's dinner in honor of Sir Henry Thornton, the President and Chairman of Board of Directors of the Canadian National Ry's. Sir Henry may feel assured that, on his arrival in Canada, he will receive a hearty welcome and loyal support from directors."

Mr. Larkin said: "It gives me a great deal of pleasure to propose the health of

our guest, who we can welcome as a new citizen of the Dominion. Sir Henry comes from the great nation to the south—brothers in blood, and, indeed, in all that constitutes brotherhood. He rendered his native country great service, and since has worked hard and successfully for the land of his forefathers. The position which he is now assuming in Canada is one of vast importance to Canadians, and, indeed, to the world." Mr. Larkin then gave some particulars of the Canadian Northern and Grand Trunk systems, and said: "I have good authority for saying that this year, the two transcontinental systems will more than cover operating charges, but there will still remain the enormous deficit caused by the dividends to be paid to debenture and share holders, liabilities which were undertaken in the goodness of its heart by the Canadian Government. The task of bringing the roads to such a state of efficiency that they will earn their fixed charges lies with our guest, Sir Henry Thornton. I think it is due to my friends, Sir Joseph Flavelle and D. B. Hanna, to say a word as to the great public service they have rendered the Dominion. Sir Joseph, well known as a great public servant, at the request of the Government, abandoned his own private affairs to take the Chairmanship of the Grand Trunk Ry., which, from the financial point of view, was in a most deplorable state, its operating loss being enormous. This year, under his management, leaving out the fixed charges, it will show a profit. Very much the same pleasant story can be told of the management of the Canadian National Rys. by Mr. Hanna, and all Canadians owe those two gentlemen a deep debt of gratitude. Sir Henry Thornton enters his new office in the most favorable year that the Dominion has ever experienced. Crops have been most bountiful, which will react on all kinds of business; the Imperial Government has concluded to remove the embargo on Canadian cattle, which will provide traffic for at least 200,000 head annually; our finances are in a healthy state, in spite of the enormous drain of the war. At one time our currency was at a discount of 20%, compared with the United States dollar; for days past it has been at a premium—showing the recuperative power of a people willing and able to produce wealth."

E. R. Peacock, President, Barcelona Traction, Light & Power Co., one of the Bank of England governors, and formerly of Toronto, supported the toast.

Sir Henry Thornton, in replying, paid a tribute to his predecessors in Canada, and those who had made the Canadian Pacific the magnificent property it is. He hoped if there was any rivalry it would consist of giving the people of Canada an efficient and adequate transportation system. He agreed with previous speakers that the chief problem confronting the Dominion in its development is population. There is no country which beckons so alluringly to the man of courage and industry and enterprise. In a country where there are so great natural resources and where the temperament of the people is based upon what is greatest and best in the French and Anglo-Saxon races there could be no doubt about its future. He was proud that he had been given an opportunity to cast in his lot with such a people. The Canadian National Rys. proposed to lend every effort to encourage emigration on the part of those from the old country who would make self-respecting and self-supporting citizens. It seemed to him they should

pursue a policy of intensive and selective emigration. They must avoid the mistake which was made in the United States in throwing down the barriers and allowing every sort of emigrant to enter the country. They wanted so to develop their immigration that they should have in Canada a united people, of common stock, and common tradition, and common aspirations, and not a mixture of all the nations of Europe. The Canadian people had embarked on what might be characterized as an adventure in the Government ownership of railways. Such adventures have not usually been successful in other countries, but there was no reason why the government administration of railways should not be successful if it was done on a businesslike basis, and if politics were kept out of it. He had the assurance of the Prime Minister, an assurance which any government would give, and which every government must maintain, that there was to be no political interference in the administration of the Canadian railways, and he wanted to make it just as emphatic that there was not going to be any interference. It was the only basis upon which they could hope to make a success of their administration. Quoting Lincoln, he said they proposed to give to the Canadian people a railway administration which was of the people, by the people, and for the people. The board and himself were at the service of the people of Canada, and they hoped to administer the railways in the interests of no section, but in the interests of all. In every large undertaking two things were essential for success: correct organization, and an able and loyal personnel. There must be responsibility and responsible contact with the employer and the public. Both the employees and the public expected their difficulties to be dealt with in a speedy and responsible fashion. That could only be done through a proper local responsible representation. The responsible officers of the railway system must also know accurately what its performance was, and there must be a speedy and effective control of expenses. Lastly, there must be a knowledge of the needs and conditions of each region served by the company. He was satisfied there were on the Canadian railways a sufficient number of men to officer the system adequately in an efficient fashion. There would be no place on the Canadian National Rys. for the vicious, incompetent, or dishonest there were, but every advantage and inducement would be held out for those who faithfully and honorably served the company and the people of Canada. Sir Henry said he was not so foolish as to imagine that he was the only man who could successfully operate the Canadian National Rys., but he had been asked to accept responsibility, and he proposed to see it through.

The U.S. Ambassador, who responded to the toast to the visitors, in referring to a remark made by Mr. Peacock that the U.S. had never been able to produce a transcontinental railway, said that did not bother his countrymen at all. They were prepared to accept any reason for not working railways through the Government. In alluding to the attempts to bring about reciprocity between the U.S. and Canada, he said that, outside politics, there had been a good deal of reciprocity between the two countries, particularly in men. "You gave us that great railway man, James J. Hill; we gave you Sir William Van Horne," he said, "and now that we have given you

Sir Henry Thornton I think Canada, like most other countries of the world, is in our debt, but as long as you tell us you will pay, we will give you plenty of time to pay it in." He said Sir Henry had ignored the usual advice to go west; from Indiana he had come east, where, among other activities, he had added Pennsylvania girl to his system; now that he was returning west he wished him every success.

The Great Eastern Ry. Musical Society held its opening meeting, for the 1922-1923 season, in London, on Nov. 1, Lord Claude Hamilton, Chairman of the company and President of the society, being in the chair. H. T. Bailey, one of the company's directors, in proposing a vote of thanks to the chairman, paid a high tribute to Sir Henry Thornton, who, in expressing thanks for the kind and appreciated remarks, said he owed more to Lord Claude Hamilton than to anyone else. The Musical Society had done much to promote not only that harmony which is pleasing to the ear, but also the harmony which promotes esprit de corps. He hoped to be able to transfer some of the harmony found on the Great Eastern Ry. to the Canadian National Rys.

The Great Eastern Ry. officials, and members of the staff, bade farewell to Sir Henry, Lady and Miss Thornton at the Abercorn Rooms, Liverpool St. Hotel, London, on Nov. 2, when they were all the recipients of gifts, and Sir Henry was given the National Union of Railway Men's gold medal, by its General Secretary, J. H. Thomas, who said that he had proved to be one of the best general railway managers England had ever known. During his short stay he had broken down class barriers and hatreds, and would leave behind him a record of fair play and fair dealing that other general managers would be compelled to live up to in the days to come.

Personal friends.—Sir Henry was entertained at dinner at the Savoy Hotel, London, on Nov. 2 by a number of his personal friends. Wilson Cross, Chairman of the American Society of London, presided. Lord Dewar, in wishing Sir Henry God speed, said that all who knew him respected and revered him. An acute, well stored, mind had gained him the confidence of his friends, and the respect of the whole community. It was their hope that when he was supervising the destinies of the 20,000 miles of railways in the west, he would retain a kind thought for the old mother country. Other speakers were Lord Riddell, Sir Guy Granet, director, Midland Ry., and Sir Herbert Walker, General Manager, London & South Western Ry.

The general managers of British railways entertained Sir Henry at dinner in London on Nov. 10, when he was given souvenirs by the General Managers' Conference. Frank Tatlow, General Manager, Midland Ry., said Sir Henry had a difficult and arduous task before him, but one he could and would face up to, and if he was given fair play, and freedom from political influence and interference, Canadians would find they had placed their national railways under the control of a man capable of seeing the thing through.

Canadian Railway Club.—Grafton Greenhough, Vice President, Railroad Locomotive Works, Philadelphia, Pa., addressed the club in Montreal on Nov. 14, on some recent developments in locomotive construction.

Sir Henry Thornton in Canada.

Sir Henry Thornton sailed from Southampton, Eng., on Nov. 22, for New York, by the s.s. Olympic, and arrived there, Nov. 28, when he stated that he would probably leave for Ottawa within a couple of days. The G.T.R. business car Bonaventure was sent to New York for him, and Hon. G. P. Graham, acting Minister of Railways and Canals, and Major Graham A. Bell, went there to meet him. Officials have been taken for him on the sixth floor of the Jackson Building, 122 Bank St., Ottawa. Canadian Railway and Marine World is advised that these offices have been taken for a temporary purpose, probably until the question of permanent headquarters has been settled. The Canadian National Ry. Co's Act, 1919 provides that its head office shall be at such a place as the Governor in council may from time to time determine. Members of the Government have stated that the selection of headquarters will be left to the board, but, of course, in the final analysis, the decision rests with the Government, as provided in the act.

It is probable that a meeting of the C.N.R. directors will be held as soon as possible after Sir Henry reaches Ottawa, to take action in regard to ordering rolling stock, rails, etc., for the Canadian National Ry. as now constituted, and for the G.T.R., and to decide on some at least of the construction and betterments for next year, after which Sir Henry will probably make an extended inspection of all the lines to be co-ordinated.

Sir Henry has already accepted several invitations from public bodies, including a luncheon by the Ottawa Board of Trade, a dinner by the Montreal Board of Trade, and a luncheon by the Empire Club, Toronto. It is stated that he will be invited to attend a dinner to W. D. Robb, Vice President and General Manager, G.T.R., in Belleville, Ont., on Dec. 11.

Traffic Orders by Board of Railway Commissioners.

Freight Rate on Box Shooks.

General order 371. Nov. 3.—Re Canadian Lumbermen's Association, Dominion Cannery, et al, against proposed change published in tariffs of various railways to be applicable on box shooks, in carloads. Upon reading the submissions filed in support of the complaints, the Board orders that the changes in tariffs or supplements filed by the railways qualifying the words in the items providing for box shooks, in carloads, by stipulating that the same will not apply on material cleated, or glued together, or otherwise made up, and providing on such material the box shook minimum weight and rate plus 4c per 100 lb, be disallowed, as from Nov. 1, 1922, pending hearing on a date to be fixed by the Board.

Express Classification of Oysters in Glass Jars.

33,021. Oct. 23.—Re complaint of Connecticut Oyster Co., Toronto, relative to express classification of oysters in glass jars. Upon hearing the complaint at Ottawa, July 5, 1922, the complainant and the Express Traffic Association of Canada being represented at the hearing, and what was alleged, and upon the report of its Assistant Chief Traffic Officer, the Board orders that the complaint be dismissed.

Express Rates on Oysters.

33,056. Nov. 8.—Re application of the Express Traffic Association of Canada

for approval of Supplement 3 to Express Classification for Canada 5, providing for a weight allowance of 15% from the gross weight on shipments of oysters, in glass, when packed in ice. Upon reading the submissions filed, and the report and recommendation of its Assistant Chief Traffic Officer, the Board orders that the said supplement be approved.

Maritime Coal, Railway & Power Co's Tariffs.

33,088. Nov. 14.—Re application of the Maritime Coal, Railway & Power Company, under sec. 331 of the Railway Act, 1919, for approval of its standard freight tariff, C.R.C. 1. Upon the report and recommendation of its Assistant Chief Traffic Officer, the Board orders that the said tariff be approved.

33,089. Nov. 14.—Re application of Maritime Coal, Railway & Power Company, under sec. 334 of the Railway Act, 1919, for approval of its Standard Passenger Tariff, C.R.C. 1. Upon the report and recommendation of its Assistant Chief Traffic Officer, the Board orders that the said tariff be approved.

33,090. Nov. 14.—Re application of Maritime Coal, Railway & Power Co., under sec. 323 of the Railway Act, 1919, for approval of bylaw R, passed Oct. 11, 1922, authorizing Norman T. Avar, General Manager of the company, to prepare and issue freight and passenger tariffs of the tolls to be charged in respect to the railways owned and operated by the company, and to specify the persons to whom, the place where, and the manner in which such tolls shall be paid. Upon the report and recommendation of its Assistant Chief Traffic Officer, the Board orders that the said bylaw be approved.

The Privy Council Judgment in the G.T.R. Arbitration Case.

When the Imperial Privy Council's Judicial Committee gave judgment in July, dismissing the G.T.R. shareholders' appeal, against the arbitrators' award, declaring that the company's preferred and common stock had no value, it was stated that the reasons for arriving at that conclusion would be given later. These reasons were set out in a judgment delivered Nov. 10 by Lord Birkenhead, who presided at the hearing. He stated that the court had no right to enquire into the merits of the arbitrators' award but only to determine whether they were so erred in law that their finding should be set aside. There were two main objections raised against the arbitrators' action. In regard to the first point that the arbitrators were wrong in excluding evidence of the physical assets value, the court pointed out that the system was to be taken over as a going concern and at the value to the holders of the stock in a going concern.

The success of a railway depended in its position, traffic management and organization, and the court thought it futile to attempt to draw conclusions from the value of physical assets. The conjecture that the Board of Railway Commissioners would, in fixing rates for the future, have regard to replacement cost, was not supported by any evidence. The committee came to the conclusion that any attempt to estimate future profits by reference to the firm's value was doomed to failure, and accordingly found that the arbitrators were justified in refusing to embark upon an enquiry which would have occupied many months, and which would

have had no legitimate bearing on the question they had to determine. The second point was that the chairman of the arbitration board relied on evidence given by the President of the G.T.R. before a Royal commission on railways and not repeated at the arbitration proceedings. The committee held that all the material facts were really in the correspondence and other documents filed and made evidence in the arbitration proceedings, and that they, therefore, could not advise the setting aside of the award on the ground of the chairman's action. The appeal was therefore dismissed.

A London, Enr., cable of Nov. 22, stated that the committee of G.T.Ry.Co's shareholders which has been considering the position since the Privy Council's judgment had come to the conclusion that no further legal action could be taken to obtain compensation from the Dominion Government.

Edmonton, Dunvegan and British Columbia Railway's Finances.

Attention was directed to the financing of the Edmonton, Dunvegan & British Columbia Ry., and its affiliated line, the Central Canada Ry., by the recent filing of a caveat in the Land Registration office at Edmonton, Alta., by the Union Bank, which advanced considerable sums to the J. D. McArthur Co., during the construction of the lines. When the Alberta Government took over the properties and turned them over to the C.P.R. Co. for operation, the bank accepted second mortgage bonds as a guarantee of its claims. It was also arranged that the bank was to be consulted in the event of any new expenditures or extensions which would have the effect of increasing the amount of first mortgage bonds, and consequently affecting the bank's second mortgage securities. The Government arranged to finance the construction of an extension of 12 miles, from near Peace River to the Waterhole District, and an extension of 15 miles westward from Grand Prairie. So far the bank has not approved of these extensions, nor has it objected to them, but it desires to have some better security or guarantee for its claim. The bank's General Counsel is reported to have stated that the proceedings have been taken as a precautionary measure, to protect the bank's interests in connection with money advanced for the operation of the line by the McArthur interests. The bank's security consists, among other things, of the specified mortgaged lands in 1919 covering the company's terminals and lands. There is said to be no intention of attempting to realize on the security, and possibly nothing will be done until the expiration of the five-year operating agreement with the C.P.R.

The C.P.R. has, we are officially advised, opened new offices in Philadelphia, Pa., at Locust and 15th Streets, a ground floor corner site, more conveniently located in the heart of the business district than the former one. The offices are fitted up in the most modern style. The lines and services represented are:—C.P.R., railway and steamship lines; Minneapolis, St. Paul and Sault Ste. Marie Ry., Duluth, South Shore and Atlantic Ry., F. T. Goodman, District Freight Agent, has jurisdiction over freight matters, and R. C. Clayton, City Passenger Agent, is in charge of passenger matters.

Canadian Railway AND Marine World

ESTABLISHED 1896

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir, Donald F. Keir and
Edwin Winfield.

United States Business Representative,
A. Fenton Walker, 143 Liberty St., New York.

Member of
Associated Business Papers, Audit Bureau of Circulations,
Canadian National Newspapers and
Periodicals Association, Canadian Press Association.

Authorized by the Postmaster General for Can-
ada, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British Pos-
sessions (except Australia), and to Mexico, \$2 a
year. Extra postage to United States, 60c a year;
to other foreign countries, except Mexico, \$1.50
a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.

ADVERTISING COPY must reach the publishers
on or 10th of the month preceding the date of
the issue in which it is to appear.

TORONTO, CANADA, DECEMBER, 1922.

George Stephen's Return to the C.P.R.

In referring to George Stephen's resignation from the Canadian National Rys. Freight Traffic Department, to enter that of the C.P.R., the Toronto Globe's Ottawa staff correspondent said recently: "Within the last few days a change of great value and service to the Canadian National Rys. has been taken over by the C.P.R. with the aid of a generous increase in salary. What makes it a matter for grave concern on the part of those directly and indirectly interested in the success of the people's project is that his responsibility for a large measure of the remarkable gains in business made by the Canadian National Rys. in Western Canada is considered the chief reason for the assiduity with which the C.P.R. went out after this official. So far, it is known, the Canadian National System has played fair with the C.P.R., and has been well satisfied to meet it on an open and even terms. The Government took E. W. Beatty, K.C., at his word when he declared not so many months ago at Thorold, that he welcomed national competition, that fair rivalry would prove of benefit to the country as a whole and to the users of the railways in particular. Now it is believed that this new policy of undermining the personnel of the Canadian National System will cause more losses to the public enterprise. The position of those entrusted with making the National road a profitable undertaking, rather than a drain on the public purse, to use Sir Henry Thornton's words, is understood to be that they are quite prepared to play in the open and on equal terms with the C.P.R., but if the latter adopts other tactics the new Canadian National board may be compelled to take a new course which could not help but be entirely effective. It is pointed out here that every recognition will be given those in the Canadian National System who show merit, that politics will never show its hand in the conduct of its business, and that the only men it is letting out, or will let out, are those of advanced years who are entitled to superannuation."

Whether the matter quoted above was simply a correspondent's effort to fill space, or whether it was inspired from an official source, we do not know, but, whatever its origin, it was excessively silly. To speak of the C.P.R. securing Mr. Stephen, as part of a policy of undermining the Canadian National System, is in our opinion absolutely without foundation. In view of certain changes the C.P.R. management wanted to make in its Traffic Department, it required an additional official of high capacity, and what more natural than that it should offer the position to Mr. Stephen, who had been in its service before. It is proved that he was the ablest freight traffic man in the country, and is simply, as he expressed it, returning to his first love.

Suppose that the Dominion Government, instead of first trying to get a President for the Canadian National from the United States, and then going to England for one, had decided to offer the position to Great Hall, or some other high C.P.R. official, would anyone doubt for a moment that it would have gone after the man it might have picked on, and would doubtless have resented, and very properly so, a charge that it was endeavoring to undermine the C.P.R. The

Government did not hesitate to offer the position to several United States railway presidents and other high officials, nor did it hesitate to approach Sir Henry Thornton. It is not in the interest of railway officials that they should be tied to any one road, or that other roads should be debarré from offering them positions, and they should be at full liberty to take advancement whenever offered them by any road, if they think it is to their interest to do so.

A considerable portion of the Canadian Northern Ry. official staff, which was passed on to the Canadian National Rys., was taken from the C.P.R., and we have no recollection of hearing that the C.P.R. charged its young rival with attempting to undermine it. Of the Canadian National Rys. three Vice Presidents who had previous railway service, S. J. Hungerford, Vice President and General Manager, was Superintendent of C.P.R. shops in Winnipeg when the Canadian Northern secured him in 1910; M. H. MacLeod, Vice President of Construction, was Chief Engineer and Superintendent of the C.P.R. Crownstee Pass Branch, when he entered the Canadian Northern service; and R. C. Vaughan, Vice President of Purchases and Stores, started his railway work with the C.P.R., then going to the G.T.R., and from the latter to the Canadian Northern. A. E. Warren, General Manager, Western Lines, also started with the C.P.R. and the Canadian National Traffic Department has a number of officials from the C.P.R., notably R. Creelman, Assistant Passenger Traffic Manager at Winnipeg and W. G. Manders, Assistant Freight Traffic Manager at Winnipeg. An examination of other Canadian National departments would doubtless furnish numerous other similar examples of transfers from the C.P.R. to the Canadian Northern.

We do not believe that there is the slightest cause for endeavoring to create the impression that the C.P.R. has departed from the policy of fair rivalry which President Beatty spoke of, nor any occasion for the dire threat that the Canadian National board may be compelled to take a new course which could not help being entirely effective. Sir Henry Thornton, of course, was not a party to such a threat, which was published in his absence, and we do not believe that he would endorse it.

Index to Canadian Railway and Marine World for 1922.

For a number of years, Canadian Railway and Marine World has published early in each year, a very complete index to the contents of the past year's issues, which we know has been very much appreciated by the large number of subscribers who bind the paper for reference. Owing to what we consider an arbitrary ruling of the Post Office Department, we have not been allowed to simply enclose the index as a supplement with the regular issue, but have had to bind it at the same time, but have had to bind it in as part of the issue, making it somewhat difficult to detach for binding with the previous year's volume.

We have therefore decided that the index for 1922, which will be published early in 1923, will not be bound in as heretofore, but will be issued and mailed separately, and will only be sent to those who apply for it. Subscribers who wish to receive copies are therefore requested to advise us as early as possible, so that we may know the number that it will be necessary to print.

"An Eastern Official on an Inspection Trip."

The Toronto Globe, during the Canadian National Rys. directors' recent trip from Montreal to Lucerne, B.C., and back to Quebec, published, under the heading quoted above, the following from its Ottawa staff correspondent:—"Much significance is attached here to the fact that L. S. Brown, Assistant Manager of the Eastern Lines of the Canadian National System, with headquarters at Montreal, is accompanying the new Canadian National board on its trip of inspection over the entire system, which began in Montreal."

Before Hon. W. C. Kennedy, Minister of Railways and Canals, contracted his present illness, a deputation from the east waited upon him and urged that Mr. Brown be given control of Eastern Lines, and be promoted to the position of Manager, he having come up from the bottom on the Intercolonial, and having proved his high ability as a railway executive. It is understood that Mr. Kennedy expressed himself as sympathetically inclined to granting the demand, and Mr. Brown's presence on the present inspection trip is believed to signify pending promotion."

The foregoing is a sample of the twaddle which daily newspapers frequently palm off on their readers as "news." As a matter of fact, Mr. Brown is not Assistant Manager at Montreal, but Assistant General Manager at Montreal. From the heading it would be inferred that he made a special inspection himself, and, from the body of the dispatch, that he was the principal, or only, official who accompanied the directors, and that he went over the whole system with them. His presence on the trip was owing to instructions from the Vice President and General Manager, Mr. Warren, that the General Manager of the Eastern Lines, and the General Manager of the Western Lines, should accompany the party over their respective territories, and that they should take with them in each case their Assistant General Manager, Chief Engineer, General Superintendent of Rolling Stock, and General Master Mechanic. Mr. Brown, therefore went, with General Manager Kingsland, from Montreal to Port Arthur, and H. H. Brewer, Assistant General Manager, Western Lines, went west from Port Arthur with General Manager Warren. The names of the various officials accompanying the party were given in Canadian Railway and Marine World for November. If the fact of their having been on the trip was an indication of approaching promotions, it would be pleasant news for all of them, and cause rejoicings all along the line. In the reorganization of the Canadian National staff, which will no doubt take place in the near future, when the G.T.R. is coordinated, Mr. Brown, as well as other officials, may receive promotion, but it was not because of any then impending promotion that he was one of the many officials who went on the directors' trip.

Canadian Railway and Marine World has never suggested railway officials for promotion, or given currency to rumors regarding them. It has known of many cases where persons in certain positions have not been given them, on account of premature publicity, and it would strongly advise the press and the politicians, not only in the Maritime Provinces, but elsewhere, to allow Sir Henry Thornton to make his appointments without their suggestions.

If the Minister of Railways did receive a deputation from the east, and express himself as sympathetically inclined to granting their "demand"—mark the word "demand"—the oft repeated statement that there is no political interference with the management is clearly disproved. The receiving of deputations by the Minister, or other members of the Government, in regard to Canadian National Rys. matters, of any kind, and of any class, should be referred to the President or some other general officer. We hope that Sir Henry Thornton will insist on this.

A Serious Charge Against a Canadian National Railways Director.

The Renfrew, Ont. Mercury, a Liberal newspaper, said in a recent issue:—"At the Lanark County Conservative convention held at Carleton Place, recently, Sir Henry Drayton, a responsible parliamentarian and public man, who was formerly Finance Minister of Canada, had some criticism to make of the personnel of the new National Railways' Board. One can afford to pass by his slighting remarks about Mr. Sinclair, as just so much cheap campaign stuff. We were not aware that advanced years was any bar to public service. Sir Henry's own successor, Mr. Fielding, is 76, but we know of no one in Canada who can fill the position as Finance Minister any more capably, nor do we know of anyone who retains to a greater degree the confidence of the business men of the Dominion."

"The charge which Sir Henry Drayton gave publicity to in regard to Frederick Dawson, of Prince Rupert, is far more serious and one which the Government cannot afford to ignore. He intimates that Mr. Dawson is a bootlegger on a large scale and is referred to by members of his own party as the 'King of the Bootleggers.' The King Government cannot afford to ignore the published statement of Sir Henry Drayton. If Mr. Dawson is now a bootlegger, he should receive no office at the hands of the people of Canada, and his resignation should be asked for at once. If he is not a bootlegger, Sir Henry Drayton should be asked to apologize. Let there be no quibbling. We never heard of Mr. Dawson before. We don't know yet whether he is a Liberal, a Conservative or a Progressive, nor do we know, but if he is bootlegging, or in other words, enriching himself by defying the laws of the land, he should only be left on the National Railways Board long enough for Premier King to get a telegram to him asking for his resignation, and if it is not forthcoming he should be summarily dismissed."

The article quoted above is specially significant owing to the fact that the Renfrew Mercury's proprietor and editor, W. Rupert Davies, besides being one of the leading men in the Canadian Weekly Newspaper Association, is on very intimate terms with Hon. T. A. Low, M.P. for South Renfrew, Ont., and a member of the Dominion Government. Canadian Railway and Marine World unhesitatingly endorses the Renfrew Mercury's stand on this matter. The correctness or otherwise, of Sir Henry Drayton's charge should be clearly established. If Mr. Dawson is not what Sir Henry charges him as being the latter should withdraw his statements and apologize. If the charge is true and Mr. Dawson does not have the wisdom to resign he should be dismissed, as if he is what Sir Henry

Drayton describes him to be it would be an insult to Sir Henry Thornton and the other directors to have him forced on them as a colleague.

Has the Lesson Been Learned?

According to a special report issued by the U. S. Interstate Commerce Commission, the twelve class 1 railways in the U.S., with operating revenues above \$25,000,000 annually, which in the first seven months of 1922, have shown the lowest operating ratios—the lowest proportion of operating expenses to revenues—are as follows: Elgin, Joliet & Eastern, 59.7; Missouri, Kansas & Texas, 64.4; Norfolk & Western, 66.9; New York, Chicago & St. Louis, 70.4; Union Pacific, 70.6; Atlantic Coast Line, 71.3; Michigan Central, 71.9; Cleveland, Cincinnati, Columbus & Toledo, 72.2; Southern Railway, 72.5; St. Louis & San Francisco, 73.4; Long Island, 74.2; Denver & Rio Grande, 74.3.

The monthly summaries of the U.S. railway operating results appearing in Canadian Railway and Marine World have shown that there has been, in 1922, as compared with 1921, large improvement in the railway situation in that country, and it may be taken for granted that these more favorable results, coupled with just as favorable prospects for the future, have had a lot to do in influencing U.S. railway managements to place the large equipment orders which have been given recently in that country. The manner in which the U.S. public demanded and the various regulating commissions limited the profits made by the railways over a period of years, is well known, and it is now pretty generally admitted by students of the situation that this shortsighted policy had a most adverse effect on the country's welfare, through the cessation of railway development, and through the railways' inability to properly secure industry in times of hard business. The favorable operating ratios above noted would lead one to believe that the regulating authorities in the U.S., and the U.S. Government itself, have come to a realization of the fact that unduly severe and restrictive regulation of railways is false economy, and ultimately a very expensive procedure. It would seem that the costly lesson of Federal control, and the great car shortage in the last period of good business, have taught the U.S. people the lesson that public utilities cannot operate without adequate revenues and that transportation cannot be obtained over a period of time for less than its economic value, and that, without this, deteriorating in quality and becoming more costly than ever.

Another article in this issue reviews Canadian railway operating results for August. Canadian railways as a whole in that month had an operating ratio of 88.57. The Canadian National operating ratio was 88.67, the Canadian Pacific, 81.90, and the Grand Trunk, 85.07. Are those in authority in Canada going to maintain railway regulation so restrictive that we will ultimately have the same expensive experiences that the U.S. had, or will they, possibly, realize that if railway development is slowed up by inadequate revenues, the ultimate result will be higher costs to the public for transportation than there would be if the railways are given an opportunity to derive earnings which will provide for development of, and additions to, their facilities, in such a way that the greatest efficiency and economy in operation may be secured.

The Necessity of Correct Valve Setting.

Canadian Railway and Marine World's attention has been called to tests made with Pacific type locomotives, which demonstrate the necessity for correct valve setting, and for thorough maintenance of the valves and their actuating mechanism. It is stated that, prior to the tests, an examination of the valve gear showed a number of minor defects; the lead in forward motion was about $\frac{1}{4}$ in. on both sides, but in back motion was only $\frac{1}{32}$ in., while the lap on one side was $\frac{1}{32}$ in. greater than the design called for, and $\frac{1}{16}$ in. too great on the other side. There were also errors in the length of radius rods and eccentric rods, and in the throw of the eccentric crank. The net result of all these errors was that the proper sequence of valve events was not obtained, and indicator cards taken showed that at certain speeds the horse-power at the end of the cylinder was a third greater than at the other end, the cards being very unsymmetrical and badly distorted. After the tests with the valve gear in this condition, the required alterations were made, with the result that the locomotives steamed much more freely, less coal was burned, and the indicator cards were as they should have been.

It is well known that incorrect valve setting is the cause of enormous fuel waste, and it is probable that the uneven applications of power have a very injurious effect on locomotives, necessitating more frequent shoppings and making higher maintenance costs. A "lame" locomotive cannot go over a division without proclaiming to everybody within hearing that it is wasting money for the company, but in addition, it may be imagined, in the sound of its exhaust is contained a message to the mechanical men concerned, to the effect that if its valves were squared and trued, the loss from this source would be stopped, and the proclamation contained in the exhaust blasts of varying intensity would disappear automatically.

The Ideal Railway Organization.

Guy Morrison Walker, in his recently issued book, "The things that are Caesar's," says: "Some men have imagination, vision, initiative, daring, executive ability, call it what you will, but it is that which leads them to dare and to do, while the great mass of men refuse to do anything unless somebody else takes the responsibility for it. The greatest and oldest game in the world is 'passing the buck.'"

A railway organization should be such that, among other things, authority should be so clearly defined and responsibility so definitely placed that "passing the buck" would become an impossible thing, while at the same time opportunity for the display of individual initiative should not be limited. To conform to this requirement, railway organization must necessarily receive all the best thought that can be expended upon it, but if it does so conform, it may be accepted as axiomatic that the result will be not only to the benefit of the railway and the public it serves, but also to the benefit of the railway employees, for the simple reason that not being able to "pass the buck" they have to "hit the ball."

Last Minute Items, Too Late for Classification.

Trent Canal.—F. R. Wilford, Lindsay, Ont., has been given a contract by the Railways and Canals Department to rebuild the dam at Youngs Point.

The Norwegian Steamship Nordfield, bound from Sunderland for Gaspe, is reported, in a St. John's, Nfld., press dispatch, to have gone ashore on Flower Cove ledge, Newfoundland, on the north side of Belle Isle Strait, on Nov. 23, the crew being saved, but the ship being regarded as probably a total loss. Flower Cove is $\frac{3}{4}$ of a mile from Flower Island lighthouse, where there is also a fog explosive. The cove extends northeastward nearly a mile, with a width of $\frac{1}{4}$ mile at the entrance, narrowing to the head. A rocky islet lies in the middle of the entrance, and there is shoal water between it and the northern shore. The Newfoundland & Labrador Pilot, last edition, says: "It is reported that Flower Cove has shoaled and that there are 24 ft. less water than charted."

German Street Railways.—A Berlin press dispatch says that street railway companies are going out of business all over Germany. Already traffic has been stopped completely in 55 towns, because of the enormous increase in running expenses and the decreased revenue. The Berlin street railway companies have been forced to cut traffic in half and all the cars now running are without the usual trailers as the people cannot afford to pay the fare, 30 marks or $\frac{1}{2}$ cent. The deficit in the companies' finances is still increasing and the directors have decided to dismiss 3,500 employees at the end of December.

Suspension of Coasting Laws.—Acting Minister of Trade and Commerce Stewart, in the statement quoted on page 633 of this issue, said that the Government had come to this conclusion, that the grain congestion could be materially assisted by allowing other than Canadian ships to load and store grain cargoes and to discharge the same at Georgian Bay ports during the winter or early spring. But the Customs Department has gone much further, as it has officially advised us that Customs' collectors at Canadian ports on the upper lakes and the St. Lawrence, between Port William, Port Colborne, Georgian Bay ports and Kingston east to Montreal, have been instructed that U.S. ships may be permitted to load grain for winter storage at their ports, or to carry such grain on the last trip of the ship to an eastern Canada port, on condition that the grain shall be unloaded at such Canadian port after the close of navigation. This condition is to be noted on the ship's clearance, and copy of the clearance is to be mailed to the collector of Customs at the eastern Canadian port. The Government's action is a most flagrant violation of the Customs Act, as it allows something which is absolutely prohibited by statute, and practically instructs its officials to wink at such violations.

H. S. Carmichael.—The Holland-America Line has announced that it has formed a company named Holland-America (London), Ltd., to represent it as General Passenger Agent in Great Britain and Ireland and has appointed Hugh Strain Carmichael, formerly Passenger and Freight Manager, Canadian Pacific Ocean Services Ltd., as Passenger Manager,

with office at 18 Pall Mall, London, S.W. I. Mr. Carmichael was born at Glasgow, Scotland, Mar. 7, 1874, and entered transportation service in Mar., 1889, since when he has been, to Apr. 7, 1891, in Passenger Department, State Line, Glasgow; Apr. 7, 1891, to Dec. 12, 1895, in Passenger Department, Allan Line, Glasgow; Dec. 13, 1895, to May 18, 1903, in Freight and Passenger Department, C.P.R., Glasgow; May 19, 1903, to June 30, 1905, in Passenger Department, C.P.R., Liverpool; July 1, 1905, to Apr. 14, 1907, Passenger Agent, C.P.R., Liverpool; Apr. 14, 1907, to Dec. 31, 1915, General Passenger Agent for Great Britain and Europe, C.P.R., London, Eng.; Dec. 31, 1915, to June, 1919, Passenger and Freight Manager, Canadian Pacific Ocean Services, Ltd., London, England.

A Canadian Contractor's Peruvian Railway Concession.

The Peruvian Legislature was, a press report states, informed recently by the President of the Republic of the details of the agreement entered into between the Government and R. W. Dunsuir, of Victoria, B.C., and his associates for the construction of a considerable railway mileage in Peru. The contract, which the Legislature is being asked to ratify, provides for the construction of about 2,400 miles of railway at an estimated cost of \$120,000,000.

The existing railways, in Peru, with the exception of half a dozen short independent and mining railways, are owned by the Peruvian Corporation, but are operated by independent companies. They consist of eight separate railway lines, one of which terminates on Lake Titicaca, which is partly in Peru and partly in Bolivia, and in which the Peruvian Corporation carries on a steamship service from Puno to Guaquil, from which point it also operates a railway to La Paz, the Bolivian capital. With the exception of the Southern Ry. of Peru from Mollendo to Juliaca, thence northerly to Cuzco, and southerly to La Paz, 465 miles; and the Central Ry. of Peru, from Lima to Huancayo with three branches, 382 miles; the other lines are short varying from 20 to 100 miles in length and do not penetrate the Andes range. These lines run inland from the Pacific Ocean, the republic coast line, having an approximate length of 2,000 miles. The railways are mostly built and will connect up practically the whole of the lines owned by the Peruvian Corporation. They are stated to be as follows:—from Huacho to Lambayeque; from Lima to Pisco; from Huancayo to Ayacucho; from Ayacucho to Cuzco; from Pisco to Huancavelina; from Chucibana to Jaen; passing through Cajabamba and Cajamarca; from Chimbote or nearby port to Tambo del Sol in the neighborhood of Cerro de Pasco; from Tambo del Solvin Pachitea to Pulpana on the Ucayali. Of these railways there is reported to be at present about 168 miles already built or under construction, and the contract calls for the completion of not less than 233 miles of line a year. The surface rights of 50,000,000 acres of land are granted in perpetuity, and the oil and mineral rights thereunder are granted for 33 years, the Government also surrenders the tobacco monopoly on the payment of about \$5,000,000. The income of the tobacco monopoly is calculated to yield about \$3,375,000 a year, and is to be used to aid in financing the undertaking.

Railway Mechanical Methods and Devices.

Slotting Keyways in Brake Masts.

The accompanying illustration shows the method in use at the C.P.R. Angus shops, Montreal, for slotting the keyways for the ratchet wheels in freight

as could be secured from any journal lathe. The air motor is a variable speed machine, and in finishing of journals advantage is taken of this feature. The use of this device, in the effort to keep the wheel work up to date, during the

Slotting keyways in five brake masts in one operation.

car brake masts. The work is done in a milling machine, five brake masts being slotted at a time. The five masts are placed through the holes in the holder bolted to the bed of the machine, and vertical set screws hold them in position. The keyways, about 3/16 in. deep and 5 in. long, are milled out while the masts pass under the milling cutters once only. The proper length of keyway is secured by the necessary adjustment for the travel of the bed of the machine.

A Substitute for a Journal Lathe.

The accompanying illustration shows a unique method, adopted on account of the regular journal lathe being temporarily out of commission, of turning up journals of wheels in the G.T.R. Toronto shops. As will be seen, the face plate has been removed from the right of the wheel lathe, and the two dead centers of the lathe are utilized to support the pair of wheels, and act as centers for the journal centers. Instead of power being transmitted to the lathe to operate it, power is transmitted to one wheel, to revolve the pair of wheels, a little giant motor, mounted as shown, and supplied with air through hose from the shop line in the usual manner, being used. The belt connection from the motor pulley to one of the wheels is as shown. The tool holder is shown at the right. The feed is by hand.

The results secured in journal work in this way have been uniformly satisfactory, the finish on every journal turned out with the device being fully as good

time repairs were being effected on the journal lathe was in the highest degree successful. For information concerning it we are indebted to J. Smith, General Foreman, G.T.R. Toronto shops.

Arrangement for turning journals.

chuck, for turning up the ends, and once it is set, as many as desired may be machined without changing position. We are indebted to E. M. Green, Locomotive Foreman, Q.C.R., for the information.

Driving Brass Chuck.

The accompanying illustration shows a chuck devised in the Quebec Central Ry. locomotive shops at Sherbrooke, Que., for use in connection with driving brass work. The way in which the brass is held is shown in the illustration. The chuck is made of cast steel, and is used in planing and facing off the brasses. The set screw, passing through the cen-

Driving brass chuck.

tral lug in the upper part, bears down against the brass, to hold it in place. In this position the chuck is bolted on to the bed of the shaper by the lugs, two on each side, as at B B. The longitudinal lug C keeps the chuck lined up. In the lathe the brass is set centrally in the

Steam Railway Operating Revenues, Expenses and Other Statistics for August.

The following comparative table for August, 1922 and 1921, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There is a slight increase in the number of roads included under this heading, so that the data for 1922 and 1921 is not directly comparable with previous reports.

As the Canadian Government, Canadian Northern and Grand Trunk Pacific Railways are under one management, and operated as one system, the monthly operating reports for 1922 contain a consolidated report for these railways, under the heading "Canadian National Rys.," which includes the old Canadian Government Rys., viz., Intercolonial, Prince Edward Island, National Trans-

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.; the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government; and the Grand Trunk Pacific Ry.

The column headed "Canadian Pacific" includes also the Montreal and Atlantic and Esquimaux and Nanaimo Rys.

The column headed "Grand Trunk" includes all the G. T. R. Co. of Canada lines, including 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Provincial Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair Rivers.

Items 1 to 6 in the table include rail

lines revenues only. Previous to this year they included water lines. Operating income items have been added. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. In former years the total of mixed train miles was added to both freight and passenger train miles when computing averages. Total train miles included freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, excess baggage, parlor cars, etc., whereas previous reports gave an average per train mile of passenger receipts only. The number of employees is also a new feature of this year's reports.

The Railways' Operating Results for August.

Canacoin railway operating results for August show conclusively that net railway operating revenue was seriously restricted by the rate reductions which applied during the month, and by the delay in placing compensating wage reductions into complete application. Despite an increase in freight traffic of 1,205,955 ton miles, freight traffic revenue decreased \$1,430,475, and with an increase in passenger traffic of 7.4%, passenger traffic revenue fell off by \$682,694 or 7%. While there was no general decrease in passenger rates to bring about this change, as between Aug. 1921 and Aug. 1922, the fact that a largely increased number of harvesters were carried to western Canada at low rates may have had a lot to do with the decreases in gross passenger traffic revenue. While the decreased passenger earnings cannot be clearly explained, the smaller gross return on the larger freight traffic handled may be readily accounted for. In addition to the freight rate reduction effective Dec. 1, 1921, rates on grain and grain products west of Fort William were reduced by between 20 and 25%, while effective Aug. 1, rates on basic commodities were reduced by about 6%, and the increase in rates on coal, as granted effective Sept. 15, 1921, were removed. The net effect of these freight rate reductions was that the average receipt per revenue ton mile was but 1.259c in Aug. 1922, compared with 1.335c in Aug. 1921. The average rate per revenue passenger mile was 2.396c in Aug. 1922, compared with 2.767c in Aug. 1921. These rate decreases, despite the increased traffic brought about a 6.2% decrease in gross revenues for the month.

An examination into operating expenses for the railways as a whole indicates that maintenance of way and structures, and maintenance of equipment, were carried on during the month to the same high standards as in the past. Although the actual amounts expended on both accounts were somewhat smaller than in August 1921, it must be taken into consideration that the maintenance employees were receiving the recently reduced wages throughout August this year, while many railway shopmen were being paid at the reduced rates during a part of the month. As the 1921 wage reduction took place July 16, the general wage level in both maintenance departments was lower in Aug. 1922 than in Aug. 1921, so it is reasonable to believe that, despite the smaller total amounts spent, as much actual maintenance work was done.

The reduction in transportation expense for Aug. 1922, however, was not so great as in previous months of 1922, compared with corresponding months of 1921. This is due to the fact that train service employees' wages were cut July 16, 1921, but were not cut this year. The reduction in transportation expense which was accomplished, was gratifying, however, in view of the increased traffic handled, and speaks well for the efficiency of railway operation.

Examination into the factors indicating operating efficiency shows that the decrease in the average car loading, amounting to 2.8 tons, was more than made up by the increased number of loaded cars per train, so that better train loading of revenue freight was secured. The decrease in the average number of

empty cars per train was also a favorable factor. With train loading figures showing 22.3 loads and 8.6 empties, in Aug. 1922, compared with but 19.8 loads and 11.5 empties in Aug. 1921, it is evident that a much more favorable condition existed in August of this year. The increased number of passengers carried per passenger train mile was an additional favorable factor in the month's operations.

Canadian National Ry. had an increase of 21% in passenger miles for the month, although passengers carried increased but 1.4%, and passenger revenues decreased 3.8%. The harvest traffic previously referred to seems the only cause for these strange results. This road's freight revenue ton mileage decreased 2.4%, but train loading increased by 33.7 net tons and freight train mileage decreased 12.8%. Transportation expenses were reduced 11.8%. Total revenues were reduced by 7.8%, and operating expenses were practically the same as in Aug. 1921, resulting in an operating deficit of \$812,742. The pay roll decreased \$68,199, although this year's figures included \$54,255 back pay, which means a reduction of \$122,454 in the monthly pay roll with an increase of 1,700 employees.

Canadian Pacific Ry. freight traffic increased 2.3% and passenger traffic increased 3.4%. Operating revenues, however, showed an appreciable reduction due to the lower rates. Expenses were reduced 8%, maintenance of way expenses being reduced 11.2%, maintenance of equipment expenses 17.8% and transportation expenses 2.5%. Average train loading and average car loading decreased 40 and 4.1 tons respectively. The pay roll increased \$229,378 or 3%, with an increase of 5.5% in the number of employees.

Grand Trunk Ry. freight traffic increased 3.6% and passenger traffic increased 4.8%, but, due to lower rates, freight revenue increased only 1.2% while passenger revenue decreased 1.3%, total revenue decreasing 1.5%. Despite the heavier traffic, freight and passenger train mileage were reduced 3% and 3.5% respectively, and transportation expenses were reduced 6.2%. Average car loading decreased 17 tons, but average train loading increased 25.8 tons.

Preliminary returns for September and October indicate that the railways during these months, on account of an extraordinarily large freight traffic, derived gross earnings in excess of those for Sept. and Oct. 1921. The net result secured in August, however, as expressed by an operating ratio less favorable than that secured in Aug. 1921, indicate that the railways need all the traffic they can get, if the results for the complete year 1922 are to be as good as for 1921. There is no doubt that the rate reductions, when considered in relation to the wage reductions, which, while not appearing moderate to the employees experiencing them, are nevertheless moderate when their results to the railways are taken in relation to the results of the rate reductions, are acting to cut into railway operating revenue to a large extent. As further wage reductions in the near future seem altogether unlikely, and as material prices show no signs of further decline, but, on the contrary, are exhibiting some tendency to increase, it would seem that reductions in railway operating expenses are not to be obtained by cheaper labor

and materials. And as, so far as revenues are concerned, it seems unlikely that rate increases are to be introduced in the near future, it appears that the Canadian railway industry's only salvation in the near future lies in increased traffic. It is not likely that any traffic increase which may be experienced in the next two or three years will restore the railway operating ratio to what it was in 1916 and 1917, other conditions remaining as they are, but the fact remains that every additional passenger mile and ton mile of traffic which the Canadian people, encouraged by the comparatively low rates which the railways are now affording, can offer, will have the effect of improving the railways' operating position and furnishing just that much more justification for the low transportation charges.

Heavy Freight Loadings in the United States.

The American Railway Association reports that in the week ended Sept. 30, there were loaded with merchandise and miscellaneous freight 589,098 cars. This is the greatest number in the history of the roads. It was 36,735 in excess of the same week last year, and 39,061 cars more than the corresponding week in 1920, in which year the volume of all traffic handled by the railways was the heaviest in their history.

The number of cars loaded with coal in the week ended Sept. 30, was 189,349, an increase of 1,455 over the week before or only about 10% less than in the corresponding week of 1920, in which year coal loadings were the heaviest on record, and in which there were no coal miner's or shopmen's strikes, immediately preceding the heavy autumn traffic. The coal loadings for the week exceeded those of the corresponding week of 1921 by about 9,000 cars.

The loading of all commodities, except coal, for the week ended Sept. 30, was 809,032 cars, which was the heaviest loading, excluding coal of any week in the history of the railways.

The total loading of all commodities in the week ended Sept. 30 was 15,090 cars in excess of the preceding week. The total for the week exceeded the same week last year by 83,550 cars, and was only 3,502 cars short of equalling the corresponding week in 1920, in which year the railways hauled the heaviest traffic on record.

G.T.R. Freight Claim Prevention.—The G.T.R. management states that its freight claim prevention campaign has met with great success, figures for a recent 30 day period showing that, while freight revenue was approximately \$5,000,000, less than \$25,000 was paid in freight claims, or only half of 1%. It also states that freight claims on the G.T.R. are, in proportion to earnings, the lowest of any railway on the North American continent, that employees are doing their utmost in the careful handling of shipments and cars, and in other ways to prevent loss and damage; that the campaign has been most enthusiastically supported; that employees from various sections of the railway are meeting together each month to discuss new ways of claim prevention, and that specially trained inspectors are working on each division, to instruct and supervise men engaged in handling freight.

Railway Wages and Working Conditions in Canada and the United States.

Canadian National Rys. Clerical Employees' Wages.—The conciliation board appointed to enquire into the dispute between the C.N.R. and the clerical employees presented a majority report, signed by R. T. Cost, chairman, and H. S. Ross, K.C., Montreal, the employees' representative, as summarized in Canadian Railway and Marine World for Nov., pg. 563. The minority report, which found in favor of the proposed reductions, was submitted Nov. 10, by G. D. Kelley, the railway's representative on the board. Mr. Kelley contended that the other members of the board were mistaken in considering the clerical employees the lowest paid class, and said: "Comparing the actual, but not theoretical, earnings of the general body of locomotive engineers, fireman, conductors and brakemen, with the actual earnings of the employees now before us, and appreciating the difference between the qualifications required in each case, one is forced to the decision that the class of employees with which we are now dealing is not one that is properly described as being paid less in proportion than other C.N.R. employees." While a further conference between these employees, the majority of whom are members of the Canadian Brotherhood of Railway Employees, and the C.N.R. management, is in prospect, it is the management's intention to place the reduced wages into effect as from Nov. 16.

Canadian Pacific Ry. Clerical Employees.—The conciliation board appointed to enquire into the dispute between the C.P.R. and its clerical employees, of which D. Urquhart, Toronto, was chairman, and on which the railway was represented by J. T. Arundel, formerly General Superintendent Ontario District C.P.R., and the employees by J. G. O'Donoghue, Toronto, presented a report signed by Messrs. Urquhart and O'Donoghue, advising against the proposed wage reduction. Mr. Arundel, shortly after, presented a report recommending the proposed reduction, and stating that if the employees accepted the reductions they would be advancing their own interests in the long run. The C.P.R. management then wrote the Labor Department, pointing out that industrial conditions inevitably require the reduction of labor costs on the railways, for which reason the C.P.R. intended to place the proposed wage reductions in effect. The letter expressed a willingness on the railway's part to confer with the employees, but with a view to adjusting inequalities of various kinds which had been brought up at the hearings before the board. The wage reductions have been placed in effect.

Grand Trunk Ry. Clerical Employees.—The conciliation board appointed to enquire into the dispute between the G.T.R. and its clerical employees, of which E. McG. Quirk, Montreal, is chairman, and on which the railway is represented by U. E. Gillen, General Manager, Toronto Terminal Ry. Co., and the employees by H. S. Ross, K.C., Montreal, has not presented a report at the time of writing, Nov. 20. We are advised that the proposed wage reductions will be placed in effect as from Nov. 1, although further negotiations between the railway and employees is in prospect.

Canadian Railway Shopmen.—The progress of the dispute between the various Canadian railways and their shopmen, members of American Federation of

Labor, Railway Department, Division 4, was reviewed in preceding issues of Canadian Railway and Marine World to the point where, as stated in our November number, pg. 563, the shopmen's officers had sent out hunters to determine whether the men wanted to strike or to have their committee resume negotiations with the railways, to see if more favorable wages than those approved by the conciliation board could be secured. It was announced by R. J. Tallon, President of Division 4, that the results of the voting would not be made public. A London, Ont. press report of Nov. 14, stated that practically all the railway shopmen there had voted to have their officers resume negotiations with the railways, so it is evident that if the vote in London can be taken as any indication of the feeling among shopmen at other points, a strike seems very remote. The result of the shopmen's strike in the U.S. has been such as to indicate that the wage reductions placed in effect by the Canadian railways, similar to those placed in effect by the U.S. railways on the Labor Board's orders, will be accepted by Canadian shopmen.

Canadian Maintenance of Way Employees.—It will be remembered that the maintenance of way employees on Canadian railways accepted the tentative wage reductions proposed by the Railway Association. As stated in Canadian Railway and Marine World for November, pg. 564, U.S. maintenance of way employees were given a 2c an hour increase by a Labor Board order. Consequently on this, Canadian employees asked the Canadian railways for a like increase, and on Nov. 21, the men's representatives and railway representatives in Montreal to reach a final agreement on wages. The railways were represented by Geo. Hodge, Assistant General Manager, Eastern Lines, C.P.R.; M. S. Blacklock, Engineer Maintenance of Way, G.T.R.; A. E. Crilly, Assistant to General Manager, Eastern Lines, Canadian National Rys., and C. P. Riddell, General Secretary, Railway Association of Canada. The men were represented by A. McAndrew, of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers; W. Aspinall, Secretary; W. Dorey, General Chairman for the brotherhood on C.P.R. lines; P. Woods, General Chairman for Canadian National Rys. lines; B. Johnston, representing Canadian National Rys. Eastern Lines employees; and G. Gerdali, representing G.T.R. employees. At the close of the meeting on Nov. 21, arrangements were made to continue the discussion later.

General.—The proposed merger between the Canadian Brotherhood of Railway Employees and the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees was discussed at a meeting in Montreal, some weeks ago, by many officers of both organizations. A further conference was held at Ottawa early in November, when the possible amalgamation was further discussed. The Canadian brotherhood has a membership of some 27,000, and the international organization's membership is several hundred thousand.

The United States Situation.—The shopmen's strike in the U.S. is now practically a thing of the past. According to statements given out by the Railroad Labor Board, several large roads have entered into independent agreements

with shopmen's system unions, these agreements being along the same lines as those for the Union Pacific, and Chicago, Burlington & Quincy Rds., as outlined in Canadian Railway and Marine World for November, pg. 563. On these roads are the Southern Pacific, Missouri, Kansas & Texas; Lehigh Valley, Great Northern, Illinois Central, Central of Georgia, and New York, New Haven and Hartford. On other roads, as stated in our November number, the Willard-Jewell plan of strike settlement was placed in effect, and on still other roads shop operations are being carried on with employees who remained loyal, and the new employees hired. Relations have been re-established between the American Federation of Labor's Railway Employees' Department, representing the shop employees on the roads where the original union is recognized, and the Labor Board, the first move being made by R. J. Jewell, President of the Department, when he approached Chairman Hooper, of the Labor Board, in connection with a dispute between the New York Central and its shopmen, involving piece work.

A publication issued by the Association of Railway Executives quotes the Labor Board as having said: "The shopmen's strike was an egregious blunder. It has burdened the railways with an unjust expense, has inflicted great losses upon the public, especially the food producers, and has resulted in approximately \$177,535,524 loss to the strikers. For all this, the men on strike have won nothing". The same publication points out that the maintenance of way men, who withheld their strike and appealed to the Board, received \$137,000,000 in wage increases. The shopmen's strike was on, and in addition received an increase in wages of about \$20,000,000 annually.

Living Wage Theory Rejected.—In reviewing the various wage adjustment cases before the Labor Board, Canadian Railway and Marine World has called attention to arguments advanced by labor organization economists in support of the so-called living wage method of fixing wages. It was contended by these representatives that a certain wage should be set as a minimum for a specified average family, with higher wages graduated according to various factors. In reply to these arguments, it was pointed out by railway representatives that if such a method of setting wages were employed, national production would be unable to provide for their payment. In supporting opinion attached to the Labor Board's decision on the maintenance of way employees' application for higher wages, concurred in by all railway and public members, it was stated "The fundamental difference between this decision and the dissenting opinion" (that of A. O. Wharton, labor member of the Board) is based upon the Transportation Act and the latter upon a fantastic theory, the very essence of which its own proponents expressly characterized, in the hearing before the Board, as a guess and a makeshift. The theory of the dissenting opinion, if carried to its legitimate conclusion, would wreck every railroad in the United States, and, if extended to other industries, would carry them into communistic ruin." It was also said:—"This" (the living wage theory) "constitutes a bit of mellifluous phraseology, well calculated to deceive

the unthinking. It has frequently been demonstrated that a melodious slogan contains more possibilities of danger and destruction than a dynamite bomb."

Possible Additional Railway Labor Legislation.—Since the shopmen's strike began on the U.S. roads, there has been much discussion in U.S. railway circles as to the possibility of additional railway labor legislation, chiefly in connection with the proposal to put teeth in the Transportation Act, as it relates to labor matters. It is stated that the Secretary of Labor desires to see the Railroad Labor Board abolished. While President Harding has indicated his desire to have some form of anti-strike legislation passed, no definite indication has been given of what will be done in this direction at the next session of Congress.

M. of W. Brotherhood Funds Ordered Returned.—The suit brought by the maintenance of way employees' organization against A. E. Barker, a former President, to compel him to return funds alleged to have been wrongfully appropriated, was noted in Canadian Railway and Marine World for November, pg. 504. On Nov. 10 a judgment was given ordering Barker to return \$177,000 to the organization, and to account for \$40,000 additional which he was shown to have expended in excess of that accounted for by the organization expenses. Barker was not present during the trial, and the organization has not decided what steps to take in an effort to secure return of the funds.

U.S. Labor Board has no authority on U.S. roads in Canada.—By a Labor Board decision, in a case in which it was called upon to decide a dispute arising between the Great Northern Ry. and some maintenance employees engaged in track work in Canada, the Board held that it had no authority over the rates of pay and working conditions for railway employees engaged exclusively in work outside the U.S. boundaries and consequently was unable to provide a settlement for the dispute.

Canadian Railway Board of Adjustment No. 1 Decisions.—As showing the types of disputes Canadian Railway Board of Adjustment No. 1 is called upon to decide, the following cases decided recently, are of interest:—

Case no. 127 was in connection with claims advanced by Canadian National Rys. conductors and trainmen that all time occupied between Port Arthur terminal limits, as defined in schedule, should be paid for as terminal detention for all trains. The railway contended that the schedule rule providing for terminal detention applies to freight trains only, and has no reference to mixed or passenger trains, including passenger extras. The Board's decision upheld the employees' contention only in so far as trains on which freight rates are paid are concerned.

Case 128 involved a Canadian National Rys. conductor's claim for terminal detention when his train, bound from Edmonton to Edmonton north yard, was held at the E.D.B.C. block to meet a west-bound train coming out of the yard. As the point at which the train was held is within the Edmonton north yard limits, the Board allowed the conductor the terminal detention claimed.

Case 129 had to do with a claim by a Canadian National Rys. train crew which had been called to clean Atikokan yard of snow, on Feb. 25 last. The crew claimed yardmen's rates for the work, as per rule 14 in the trainmen's schedule, which states "Trainmen required to perform yardmen's work in any one yard in

excess of 5 hours in any one day will be paid yardmen's rates per hour for the actual time occupied". The railway claimed that the work performed was purely work train work, and that no regular switching crew was assigned to Atikokan at that time. The Board denied the employees' claim.

Case 130 had to do with a Canadian National Rys. conductor's dismissal for refusing to go out when he was called. Investigation disclosed that his reason for refusing to go out was that he considered the railway officers to be in error in sending out his car. Agreement was reached between the railway and the Brotherhood of Railroad Trainmen, representing the conductor, and the case was withdrawn.

Case 131 concerned the alleged theft of blankets from the Canadian National Rys. by a switch foreman. After dismissal from the service he was tried before a jury and found innocent, upon which the Brotherhood of Railroad Trainmen claimed that he should be restored to service and paid for time lost. Upon further evidence being presented to the Board, reinstatement was refused.

Case 132 concerned the dismissal of J. W. Dickinson, Canadian National Rys. yardman at Saskatoon, for refusing to take charge, as foreman, of an extra crew being set up by the night yardmaster at Saskatoon. It was contended by the railway that the night yardmaster had a perfect right to order Dickinson to take charge of the crew, and that in refusing to do so, he was guilty of insubordination. It was contended by the Brotherhood of Railroad Trainmen, representing Dickinson, that article 8, clause B of the yardmen's schedule, gave Dickinson his preference to work. The Board held that while the rule may technically have supported the yardman's action, there was no definite information to show that there was a junior qualified man available for the foremanship, and while Dickinson's reinstatement was authorized, he was not allowed pay for time lost.

Case 133 concerned the dismissal of G.T.P.R. brakeman J. H. Manley, for refusing to act as baggage man when called for that duty, and for refusing to attend an investigation into the matter when ordered to do so. Upon being held out of service, he telegraphed the General Manager, asking him to investigate his case. The Board upheld the railway in dismissing him.

Case 134 dealt with a claim by Canadian National Rys. and Grand Trunk Pacific Rys. conductors and brakemen, that switching rates should be paid for all switching performed at Lucerne by G.T.P. crews and at Jasper, B.C. by C.N. crews. It was contended by the C.N.R. management that, so far as the G.T.P. crews were concerned, Lucerne is simply a way station, while Jasper is but a way station for the C.N. crews, thus bringing payment for switching at these points under the ordinary rules. The Board upheld the conductors' claims, and the trainmen's claims for points covered by their schedule.

Case 135 dealt with a G.T.P. conductor's claim for terminal detention in addition to road mileage. The time claimed was spent in picking up a train in Fort Rouge yards, and the railway claimed that he was entitled to the straight 12 mile an hour for the time between terminals. The conductor's contention was upheld, on the ground that Fort Rouge is a bona fide terminal under the schedule, any crew passing through

being entitled to time for switching and detention, as per article 5 of rule 9 of the schedule.

Case 136 dealt with the dismissal by the G.T.P.Ry. of brakeman W. B. Donahue, for insubordination. The Board ordered the brakeman's reinstatement without pay for time lost.

Case 137 was concerned with two Canadian National Rys. switchmen's claims for time lost between Dec. 7, 1921 and March 10, 1922, when they were held out of service for alleged theft of tobacco from cars. A trial by jury found them not guilty, and they were reinstated by the railway. The Board ordered that their claim for time lost be paid.

All of the above decisions were issued over the signature of Geo. Hodre, Chairman, and Ash Kennedy, Vice Chairman of the Board.

Grand Trunk Railway Construction, Betterments, Etc.

Brantford Station Buildings.—We are officially advised that it was arranged recently to dispose of the old station building on Colborne St., Brantford, Ont., and to replace it with a shelter for use as a flag station. This structure, which was expected to be completed by the end of October, consists of a one-room shelter and platform with canopy over the platform.

Ford Subway.—Ford, Ont. Town Council is reported to have under consideration plans for the construction of a subway under the G.T.R. tracks there, which would link up Ottawa St. and Edna St.

Harvey Freight House.—A press report states that tenders have been received for the erection of a 2-story brick freight house, 20 x 32 ft. at Harvey, Ill. (Aug. pg. 425.)

Kitchener Yards.—In connection with the proposed construction of a subway under the G.T.R. tracks at King St. Kitchener, Ont., it was reported to the city council, recently, that the company was asking the Dominion Government for an appropriation of \$94,000 for laying out a new shunting yard north-east of Lancaster St., and west of the main line and that if this appropriation should be given and the yard laid out at least 50% of the shunting over the King St. crossing would be eliminated, and the necessity of doing away with the level crossing would be largely removed. The company laid before the council a plan for the elimination of all crossings in the city from Strang St. to Lancaster St. which would involve the raising of the track by 6 ft., and the building of subways at Strang, Tuerk, King, Edward, Aherns, St. Leger, and Lancaster Streets, estimated to cost \$1,000,000 exclusive of property damages. The council decided to postpone the further consideration of the matter to wait the outcome of the proposal to provide a new shunting yard.

London Level Crossings.—A press report stated recently that the rates at the level crossings in London, Ont., which are operated by compressed air, are to be replaced by gates operated by electricity, an electric installation at the crossing of Waterloo St. during the summer having proved satisfactory. We are officially advised that neither the operating or engineering departments know of any such intention.

The level crossings in the London yards are being improved by the substitution of drives of crushed stone mixed with tar preparation, in place of the old timber drives.

Canadian Pacific and Canadian National Railways September Earnings and Expenses.

C.P.R. gross earnings for September were \$18,149,528, compared with \$19,476,631 in Sept., 1921; operating expenses were \$13,563,591, compared with \$15,174,712 in Sept., 1921; and net earnings were \$4,585,933, compared with \$4,320,000 in Sept., 1921. While gross revenues decreased \$1,345,233, operating expenses decreased \$1,611,116, resulting in an increase in net earnings of \$265,883. For the 9 months period ended Sept. 30, C.P.R. gross earnings were \$124,856,771, a decrease of \$11,560,627 from the first 9 months of 1921, and operating expenses, \$105,518,422, were \$8,968,534 smaller than those in the first 9 months of 1921. This resulted in the earnings of \$19,308,349 for the first nine months of 1922, being \$2,592,322 smaller than in the corresponding period of 1921.

September is the second consecutive month this year in which the C.P.R. has been able to show an increase in net earnings over those for the same month of 1921. The increase in August was \$369,297. The encouraging showing in September was the result of the comparatively large gross earnings resulting from the heavy traffic handled, in combination with the success in restricting operating expenses, the gross earnings being over \$2,000,000 greater than in any previous month in 1922, and the operating expenses being over \$1,500,000 less than in Sept., 1921.

There has been, since the September earnings statement became available, considerable speculation in railway and financial circles as to whether the C.P.R. will be able to equal, in 1922, the net earnings obtained in 1921. On the one hand, as stated above, net earnings at the end of September were \$2,592,322 less than at Sept. 30, 1921, but on the other hand, business conditions generally are much better than at this time last year. The company was engaged throughout October and November, and is still engaged, in handling one of the largest crops the country has experienced, and in addition the gratifying decrease in operating expenses in August and September give rise to the hope that this relative decrease in expenses may continue. To equal the 1921 record in 1922, it is evident that the company will have to increase net earnings for each of the remaining three months by an average of \$800,000 over those of the corresponding three months of 1921. While the results secured in the last three months of 1921, particularly October, when net earnings were \$6,711,486, set a high mark for the company to aim at this year. Preliminary statements for October show that the gross earnings for that month were some \$959,000 greater than in Oct., 1921, and a preliminary statement for the first week in November shows that gross earnings were \$503,000 greater than in the first week of Nov., 1921. If traffic conditions remain as favorable during the remainder of the year as during October and the first week of November, the company would seem to stand a good chance of equalling its 1921 net earnings.

The Canadian National Rys., including the Canadian Northern, Canadian Government, and Grand Trunk Pacific Rys., steam lines only, had gross earnings of \$11,726,459 in September, an increase of \$3,565,510 over Sept., 1921. Operating expenses were \$11,123,750, an

increase of \$221,486 over Sept., 1921. Net earnings for the month were \$602,709, an increase of \$136,024 over Sept., 1921. In view of the relatively unsatisfactory financial results attending Canadian National Rys. operation in August, when gross earnings decreased and operating expenses increased, as compared with Aug., 1921, resulting in increasing the operating loss by \$812,732 over Aug., 1921, the September results must be regarded as particularly gratifying. The fact of the National lines being able to secure net operating revenue in excess of \$600,000 on a single month's operation, when favored with heavy traffic, demonstrates that the system's one and only need is increased traffic, to enable it to earn net operating revenues consistently. Like the C.P.R., the Canadian National Rys. experienced larger gross earnings in October of this year, and in the first week of November, than in corresponding periods in 1921. According to preliminary statements available, the increase in gross in October was \$1,712,246, and in the first week in November, \$105,581.

It does not require very searching analysis to discover that the remarkable increase in freight traffic density has been the salvation of both the C.P.R. and the Canadian National Rys. during recent months, for it would be idle to attempt to deny the obvious fact that if traffic had not shown the large increases it has exhibited, the railways, laboring under the handicap of rate reductions, greatly handicapping the earnings effected through wage reductions, superimposed upon the primary handicap of being unable to proportionately reduce operating expenses to accord with reduced gross earnings, because of low traffic density, would have been in an unenviable financial position. As in the past, so in the future, if traffic is maintained at a good level, we may expect that the railways will continue to enjoy net earnings which may be described as reasonable; if traffic falls off to any great extent, when the bulk of the crop is moved, we may expect to see C.P.R. net earnings slump and Canadian National results again characterized by operating deficits. The present relationship between railway rates and railway operating expense is such that a very heavy traffic is required for the railways to obtain favorable results, and in view of the probability that this relationship will obtain for some time, it is evident that continued favorable railway financial results will be dependent on continued high traffic density.

Freight Car Thief Punished.—A. E. Shand, a former C.P.R. employee has been sentenced to 7 years in Kingston, Ont., penitentiary for stealing from freight cars, and 7 years for receiving goods stolen from freight cars, the sentences to run concurrently. He pleaded guilty to receiving. The property stolen consisted of tobacco and cigarettes, and it was shown that Shand received \$900 as his share of the money obtained from the stolen goods.

Armistice Day and the Railways.—The Canadian National, Canadian Pacific and Grand Trunk Rys. stopped trains on their lines throughout Canada, and ceased work in all departments for two minutes, from 11 a.m., on Armistice Day, Nov. 11.

The Bad Order Car Situation.

The Railway Association of Canada reports the total number of freight cars on Canadian lines for the period ended Nov. 1, as 199,875. The allowance for bad order cars on the A.R.A. basis, which assumes a total of 7% of the cars in bad order, was 13,991, and the actual number in bad order was 12,227, which is 1,764 less cars in bad order than the American Railway Association standard would require. The figure 12,227 represents a percentage of 6.1 of bad order cars. The car shortage is given as 7,967 cars, compared with 7,667 at Oct. 1.

The American Railway Association's Car Service Division reports that the total number of freight cars on line in the U.S. class 1 railways on Oct. 1 was 2,276,046. Of these, 291,654, or 12.8%, were in bad order, compared with 13.4% on Sept. 15. Out of 1,047,037 box cars, 131,963, or 12.6%, were in bad order; out of 55,014 refrigerator cars, 6,999, or 12.7%; out of 955,193 gondolas, 127,408, or 13.3%; out of 83,126 stock cars, 9,978, or 12%; out of 93,885 flat cars, 12,042, or 12.8%, were in bad order. A statement received by Canadian Railway and Marine World from the Car Service Division on Nov. 10, stated that on Oct. 21, the number of bad order cars had been reduced to approximately 11% of the total, and that the U.S. class 1 railways reported shortages of 81,734 box cars, 46,575 coal cars, and 166,349 freight cars of all kinds, for the week ended Oct. 23.

Analysis of the figures above given, covering the Canadian situation, shows that Canadian railways have succeeded in bringing the percentage of bad order cars to a very low figure. In view of the fact that the American Railway Association has decided that it is a difficult matter for a railway to have more than 93% of its freight equipment in good condition at any time, the Canadian railways' performance in the matter of equipment condition is very creditable. It is evident that any car shortage which is being experienced throughout the country cannot be caused by delay in repairing bad order freight cars. The figures given above covering the U.S. situation show that on U.S. roads also the condition of equipment is improving, although there is room for a lot of improvement yet before the Canadian record is equalled. U.S. roads were left a large percentage of bad order equipment on the condition of equipment on Oct. 1, inadequate earnings throughout 1921 served to continue this condition, and when earnings did begin to pick up in 1922, so that deferred maintenance of equipment could be gone ahead with, the shopmen's strike served to delay matters further. The reduction of the bad order car percentage from around 15 to 11 is a move in the right direction, however, and it is to be hoped that further progress will be made by the U.S. roads in this connection, so that the car shortage in the U.S. will be relieved, which would automatically tend to relieve the shortage in Canada.

M.C. Minister of Railways.—Hon. J. D. McLean, Minister of Education and Provincial Secretary for British Columbia, has also been appointed Minister of Railways. Premier Oliver, in relinquishing the Railways Department, stated that the new minister would, within the lines of policy decided upon by the Legislature, have a free hand in administering the department.

Birthdays of Transportation Men in December.

Many happy returns of the day to:—
A. G. Albertsen, Manager, Royal Mail Steam Packet Co., San Francisco, Cal., born at Copenhagen, Denmark, Dec. 31, 1887.

T. R. Ancrum, Assistant Treasurer, G. T.R., Montreal, born at Bristol, Eng., Dec. 9, 1872.

J. H. Barber, Division Engineer, Toronto Terminals Division, Ontario District, C.P.R., Toronto, born at Cobourg, Ont., Dec. 20, 1856.

W. E. G. Bishop, District Freight and Passenger Agent, Canadian National Rys., Cochrane, Ont., born at Central Clarence, N.S., Dec. 4, 1888.

H. E. Bissell, Right of Way Department, Canadian National Rys., Winnipeg, born near Noyan, Que., Dec. 31, 1867.

N. E. Brooks, ex-Engineer, Maintenance of Way, Western Lines, C.P.R., now at Sherbrooke, Que., born there, Dec. 25, 1866.

C. W. Butler, President, Canadian Car & Foundry Co., Montreal, born at Danville, Ohio, Dec. 9, 1862.

J. M. Cameron, General Superintendent, Alberta District, C.P.R., Calgary, born at Lochaber, N.S., Dec. 18, 1867.

W. E. Campbell, Chief Traffic Officer, Board of Railway Commissioners, Ottawa, Ont., born at Mount Vernon, Ont., Dec. 19, 1882.

W. C. Casey, General Agent, Passenger Department, Ocean Traffic, C.P.R., Winnipeg, born at Moncton, N.B., Dec. 12, 1882.

G. W. Caye, General Purchasing Agent, G.T.R., Montreal, born at Malone, N.Y., Dec. 1, 1865.

J. J. Foreman, Foreign Freight Agent, Canadian National-Grand Trunk Rys., Montreal, born at Toronto, Dec. 31, 1878.

A. H. Foster, Manager, Brantford Municipal Ry., Brantford, Ont., born at Guelph, Ont., Dec. 24, 1888.

W. H. Gardiner, City Freight Agent, C.P.R., and District Freight Agent, Esquimalt & Nanaimo Ry., Victoria, B.C., born there, Dec. 6, 1859.

J. Gorrie, ex-Superintendent District 1, Transcontinental Division, Canadian Government Rys., Quebec, now of Toronto, born at Raith, Kirkcaldy, Scotland, Dec. 10, 1868.

F. P. Gutelius, Vice President and General Manager, Delaware & Hudson R.R., Albany, N.Y., formerly General Manager, Canadian Government Rys., born at Mifflinburg, Pa., Dec. 21, 1864.

J. T. Hallisey, Superintendent, Halifax Division, Maritime District, Canadian National Rys., Truro, N.S., born at Beaver Bank, N.S., Dec. 29, 1862.

D. B. Hanna, ex-President, Canadian National Rys., Canadian Government Merchant Marine Ltd., etc., Toronto, born at Thornliebank, Scotland, Dec. 20, 1858.

R. W. D. Harris, ex-Trainmaster, Moose Jaw Division Saskatchewan District, C.P.R., Moose Jaw, now of Tappan, B.C., born at Victoria, B.C., Dec. 12, 1879.

H. E. Heal, Canadian Passenger Agent, Pennsylvania Rd., Toronto, born at Bowmanville, Ont., Dec. 17, 1891.

W. J. Hennig, District Freight Agent, Great Lakes Transportation Co., Windsor, Ont., born at Topeka, Kan., Dec. 21, 1884.

C. E. Jenney, General Agent, Passenger Department, Canadian National-Grand Trunk Rys., New York, N.Y., born at Ferris, Ont., Dec. 31, 1875.

W. J. Kelly, Superintendent of Telegraphs and Telephones, Timiskaming & Northern Ontario Ry., North Bay, Ont., born at Renfrew, Ont., Dec. 17, 1875.

L. S. Landers, Division Engineer, Canadian National Rys., Edmonton, N.B., born at Farnham, Que., Dec. 15, 1888.

J. G. Legrand, Bridge Engineer, Western Lines, Canadian National Rys., and Grand Trunk Pacific Ry., Winnipeg, born at Sompis, France, Dec. 24, 1861.

J. M. MacArthur, Superintendent, Medicine Hat Division, Alberta District, C.P.R., Medicine Hat, Alta., born at Toronto, Dec. 8, 1885.

A. McCowan, Master Car Builder, Canadian National Rys., Western Lines and Grand Trunk Pacific Ry., Winnipeg, born at Perth, Scotland, Dec. 5, 1868.

J. T. McGrath, ex-Master Mechanic, G.T.R., Battle Creek, Mich., now of Bloomington, Ill., born at Toronto, Dec. 6, 1869.

A. T. McKean, Division Freight Agent, C.P.R., Calgary, Alta., born at St. John, N.B., Dec. 18, 1886.

R. McKillop, Superintendent, Bruce Division, Ontario District, C.P.R., Toronto, born at Perth, Scotland, Dec. 26, 1884.

A. D. MacTier, Vice President, Eastern Lines, C.P.R., Montreal, born at Blairgowrie, Scotland, Dec. 27, 1867.

Alfred Price, ex-General Manager, Eastern Lines, C.P.R., Montreal, born at Toronto, Dec. 6, 1861.

W. J. Radford, Assistant Manager, Toronto Suburban Ry., Toronto, born at Boldre, Hants, Eng., Dec. 23, 1870.

G. D. Robinson, ex-European Freight Agent, Canadian Pacific Ocean Services Ltd., Montreal, born at St. John, N.B., Dec. 7, 1877.

H. J. Russell, Superintendent, Eastern Division, and Assistant to General Manager, Road Newfoundland Co., St. John's, Nfld., born at Musgrave Harbor, Nfld., Dec. 24, 1891.

H. W. Sharpe, Master Mechanic, Quebec District, Canadian National Rys., Quebec, Que., born at Campbellton, N.B., Dec. 6, 1869.

G. E. Smart, Mechanical Assistant (Car Department) to Vice President, Operation and Maintenance, Canadian National Rys., Toronto, born at Edinburgh, Scotland, Dec. 23, 1873.

M. F. Tompkins, General Freight Agent, Eastern Lines, Canadian National Rys., Moncton, N.B., born at Margaree, N.S., Dec. 6, 1878.

H. H. Vaughan, ex-Assistant to Vice President, C.P.R., now consulting engineer, Montreal, born at Forest Hill, Essex, Eng., Dec. 25, 1865.

R. C. Vaughan, Vice President, Purchases, Supplies and Stores, Canadian National Rys., Toronto, born there, Dec. 1, 1883.

A. P. Walker, Assistant District Engineer, Ontario District, C.P.R., Toronto, born at West Hartlepool, Eng., Dec. 9, 1860.

E. B. Walker, Electrical Engineer, Canadian National Rys., Toronto, born there, Dec. 15, 1879.

J. B. Way, Freight and Ticket Agent, C.P.R., Sault Ste. Marie, Ont., born at Port Hope, Ont., Dec. 10, 1865.

Railway Lands Patented.—Letters patent were issued, during October, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Canadian Pacific Ry.	Acres
Canadian Northern Western Ry.	2.69
Kettle Valley Ry.	249,655
Total	253,355

Canadian Railway Operating Results in 1921.

Canadian Railway and Marine World for April, 1921, contained on page 181, a table giving operating revenues, expenses and statistics for the calendar year, 1921, for Canadian railways having annual operating revenues of \$500,000 or over, as a whole, and for the Canadian Government, Canadian Northern, Canadian Pacific, Grand Trunk and Grand Trunk Pacific railways individually. The Dominion Bureau of Statistics has now issued a preliminary report of railway statistics for the year 1921 for all Canadian steam railways, irrespective of annual operating revenues. Following are some of its principal features.—

Mileage.—The total number of miles of road operated in 1921 by Canadian steam railways was 39,771, compared with 39,384 in 1920.

Capitalization.—Stock had increased to \$172,541,165 at the end of 1921, an increase of \$48,839,203, over that outstanding at the end of 1920. Funded debt, standing at \$792,142,471 at the end of 1921, was \$54,181,695 less than at the end of 1920.

Revenues and Expenses.—Operating revenues for all roads during 1921 were \$458,008,891, compared with \$492,101,104 in 1920. Operating expenses were \$422,581,205 compared with \$478,248,154 in 1920. Net operating revenues were \$35,427,686, compared with \$13,852,950 in 1920. The operating ratio in 1921 was 92.26, compared with 97.17 in 1920.

Traffic.—The railways did not handle nearly as much freight nor as many passengers in 1921 as in 1920. The number of tons of freight carried one mile in 1921 by all railways was 26,621,630,334, compared with 31,894,411,479 in 1920. The number of passengers carried one mile in 1921 was 2,960,853,955, compared with 3,522,494,856 in 1920. As would be expected, in view of the figures for freight and passenger traffic density, train mileage was reduced considerably. Revenue freight train mileage for all railways was 52,454,742 in 1921 compared with 62,195,802 in 1920, and passenger train mileage was 45,015,951 in 1921, compared with 47,383,411 in 1920.

Fuel consumed by locomotives in train and switching service was decreased about in proportion to the decrease in train mileage, being 8,993,514 tons in 1921, compared with 10,742,718 tons in 1920.

Employees.—The number of employees also reflected the decrease in business, there being 167,627 in 1921, compared with 185,177 in 1920. The compensation paid employees reflects not only the decreased number of employees, but also the wage reduction taking effect July 1, 1921, the total compensation being \$247,756,138 in 1921 compared with \$290,510,518 in 1920.

Despite the rate reductions which took place, and which decreased the railways' operating revenues in greater proportion than they would have been decreased by the reduction in traffic alone, the figures given demonstrate that the reductions in operating expenses secured enabled the railways as a whole to secure somewhat better net results than in 1920.

Pacific Great Eastern Ry. Reports.—Premier Oliver of British Columbia states that the cost of the Sullivan, Dennis, Hinton reports on the Pacific Great Eastern Ry., summaries of which were published in Canadian Railway and Marine World for November, cost \$7,939.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Buffalo, Rochester & Pittsburgh Ry.—W. B. MALLON, heretofore rate clerk, Passenger Department, Rochester, N.Y., has been appointed Canadian Traffic Agent, reporting to General Freight Agent, and General Passenger Agent, Rochester, N.Y. Office, 69 Yonge St., Toronto.

Canadian National Rys.—OTTO N. BAIRD, Air Brake Inspector, Island Division, Maritime District, Charlottetown, P.E.I., has been retired on the Provident Fund, and the duties of the position will be attended to by a mechanic, under the supervision of the Division Shop Foreman.

C. H. BRISTOL has been appointed apprentice class instructor, Fort Rouge, Man. This is a new position.

L. DAVIDSON, foundry foreman, Fort Rouge, Man., has been transferred to Transcona, Man.

W. H. FLEMING has been appointed Roadmaster, Edson, Alta., vice A. Anderson, who is now in the service.

D. H. FORD, heretofore Roadmaster, Hanna, Alta., has been appointed Roadmaster, Drumheller, Alta., vice J. A. M. Brown, whose appointment as Roadmaster, Camrose, Alta., was announced in our last issue.

R. B. GORDON, heretofore acting Terminal Passenger Agent, Winnipeg, has been appointed Travelling Passenger Agent for Manitoba and Ontario west of Port Arthur and Armstrong, vice P. A. Rooney, Office, Winnipeg.

J. W. GRAHAM has been appointed Bridge and Building Master, Prince Albert, Sask.

R. M. HORNE-PAYNE, London, Eng., has resigned his position as Financial Representative, Canadian Northern Ry. Co., after occupying it for 23 years.

J. A. MCGINNIS, heretofore Assistant Roadmaster, Titchfield, Sask., has been appointed Roadmaster between Bengough Jct., and Hodgeville, Sask. Office, Avonlea, Sask.

J. A. MILLER, machinist, has been appointed acting Shop Foreman, Island Division, Maritime District, Charlottetown, P.E.I., A. J. Houle, General Shop Foreman, having been retired on the Provident Fund.

R. NELSON, heretofore dispatcher, Edmonton, Alta., has been appointed Chief Dispatcher, Prince Albert, Sask.

T. E. NELSON has been appointed Assistant Foreman, Car Shop, Fort Rouge, Man., vice E. S. Reeves, appointed Passenger Car Foreman, Paddington, Man.

F. L. NORMAN heretofore Commercial Agent, Canadian National-Grand Trunk Pacific Rys., Seattle, Wash., has been appointed General Agent, Freight Department, Canadian National-Grand Trunk Pacific Rys., and Grand Trunk Pacific Coast Steamship Co. there. Office, 902 Second Ave.

J. D. OUELLET, heretofore leading hand machinist, has been appointed Assistant Foreman, St. Malo, Que.

E. S. REEVES, heretofore Assistant Foreman, car shop, Fort Rouge, Man., has been appointed Passenger Car Yard Foreman, Paddington, Man., vice G. S. Clark, resigned.

F. SCOTT, heretofore Assistant Roadmaster, Fort Rouge, Man., has been as-

signed to other duties, and his position has been abolished.

H. H. SPARLING, heretofore dispatcher, has been appointed Night Dis-

George Stephen.

Assistant Freight Traffic Manager, Western Lines, Canadian Pacific Railway.

R. H. Fish.

General Superintendent, Ontario Lines, Grand Trunk Railway.

Dispatcher, Sioux Lookout, Ont., temporarily, during the heavy grain shipping season.

GEO. STEPHEN, Freight Traffic Manager, having resigned to accept service with the C.P.R., communications here-

tofore addressed to him are to be addressed to C. A. Hayes, Vice President, Traffic Department, Toronto.

C. S. WAINWRIGHT, General Agent, Freight Department, G.T.R., Los Angeles, Cal., has been appointed to act in the same capacity also for Canadian National Rys., Grand Trunk Pacific Ry., and Grand Pacific Coast Steamship Co., there. Office, 325 Van Nuys Building.

JAMES WAUGH, heretofore Commercial Agent, Grand Trunk Ry., Canadian National Rys., Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., San Francisco, Cal., has been appointed General Agent, Freight Department, Canadian National-Grand Trunk Pacific Rys., and Grand Trunk Pacific Coast Steamship Co. there. Office, 689 Market St.

Canadian Pacific Ry.—J. A. BRASS, heretofore chief clerk, General Superintendent's office, Saskatchewan District, Moose Jaw, has been appointed chief clerk of Vice President's and of the General Manager's offices, Western Lines, Winnipeg, vice C. R. Claydon, deceased. F. DAVEY, heretofore Car Foreman, Hochelaga, Que., has been appointed Car Foreman, Glen Yard, Montreal, vice R. Weldon appointed Car Foreman, Hochelaga, Que.

A. J. FLEMING, heretofore chief clerk, Import Freight Department, Montreal, has been appointed Assistant Foreign Freight Agent, Montreal, vice A. W. Snell, resigned to enter Furness, Withy and Co's service.

D. L. JONES, heretofore Locomotive Foreman, London, Ont., has been appointed Locomotive Foreman, Windsor, Ont., vice A. A. Sheppard, appointed Locomotive Foreman, London, Ont.

Major W. M. KIRKPATRICK, M.C., heretofore Assistant Freight Traffic Manager, Western Lines, Winnipeg, has been appointed General Foreign Freight Agent, Atlantic and Pacific Ocean lines, vice E. N. Todd, appointed Freight Traffic Manager, Rail Lines. Office, Montreal.

W. B. LANIGAN, heretofore Freight Traffic Manager, Rail Lines, has been appointed General Freight Traffic Manager, all lines. Office, Montreal.

C. W. NELSON, chief clerk, Division Freight Agent's office, Calgary, Alta., is reported to have been appointed Assistant Freight Agent, San Francisco, Cal.

THOS. C. ROBINSON, heretofore chief clerk to Division Freight Agent, Manitoba District, has been appointed Travelling Freight Agent, Manitoba District, vice W. A. Lowe, appointed District Freight Agent at Fort William, Ont. Office, Winnipeg. This appointment was incompletely stated in Canadian Railway and Marine World for November.

A. A. SHEPPARD, heretofore Locomotive Foreman, Windsor, Ont., has been appointed Locomotive Foreman, London, Ont. vice D. L. Jones, appointed Locomotive Foreman, Windsor, Ont.

GEORGE STEPHEN, heretofore Freight Traffic Manager Canadian National Rys., Toronto, has been appointed Assistant Freight Traffic Manager, Western Lines, C.P.R., vice Major W. M. Kirkpatrick, appointed General Foreign Freight Agent, Atlantic and Pacific Ocean Lines, Montreal. Office, Winnipeg.

E. N. TODD, heretofore General Foreign Freight Agent, Montreal, has been appointed Freight Traffic Manager, Rail Lines, vice W. B. Lanigan, appointed

General Freight Traffic Manager, all lines. Office, Montreal.

O. TREMBLAY, heretofore Traveling Passenger Agent, North Bay, Ont., has been appointed District Passenger Agent, Rail and Steamship Lines, Algoma District. Office, North Bay, Ont.

R. WELDON, heretofore Car Foreman, Glen Yard, Montreal, has been appointed Car Foreman, Hochelaga, Que., vice

F. Davey, appointed Car Foreman, Glen Yard, Montreal.

Grand Trunk Ry.—Miss MILDRED LOW has been appointed Literary Editor, General Advertising Department, Montreal.

Guelph Junction Ry.—Alderman HARRY MAHONEY is reported to have been appointed Business Agent at Guelph, Ont., to succeed T. F. Savage.

Michigan Central Rd.—E. W. BRUNCK, heretofore one of the three Assistant General Freight Agents at Detroit, Mich., has been appointed Assistant General Freight Agent, vice F. R. Newman, resigned to take service with another company. Office, Detroit, Mich.

S. W. CARDER has been appointed Assistant General Freight Agent, vice W. D. McVey, promoted. Office, Buffalo, N.Y.

The International Freight Car Situation.

Some publicity has been given during the past month to the fact that there are more Canadian cars on U.S. lines than there are U.S. cars on Canadian lines. This is due entirely to natural and traffic conditions. Traffic southbound out of Canada consigned to U.S. destinations for domestic consumption or export is generally of a bulky nature, and many cars are required to handle it, while traffic northbound from U.S. points to Canadian destinations is of such a nature and volume that fewer cars are required for it. The result of this is that when Canadian railways supply Canadian shippers with cars for freight consigned to the U.S., the cars get down there, and are stranded there without return loads. A natural tendency toward delay in getting the cars started back home is established. The Canadian railways find themselves in the position that the more cars they furnish Eastern Canadian shippers, the more they lose temporarily to the U.S.

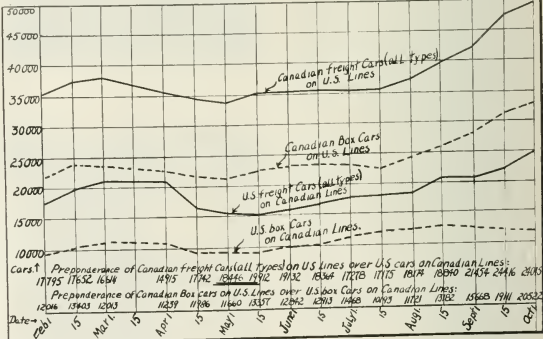

The seasonal increase in traffic which develops every autumn tends to intensify this condition. This year, the improvement in business and economic conditions which has taken place, combined with the effect of the coal miners' and shopmen's strikes in the U.S., has produced a genuine car shortage, and the margin of Canadian cars on U.S. lines over the U.S. cars on Canadian lines has increased considerably. The accompany charts trace the situation from the first part of the year up to the beginning of October. Fig. 1, for all freight cars, shows that, beginning with the usual seasonal revival in traffic, the margin has been rapidly increasing. On Oct. 1 there were 24,045 more Canadian cars on U.S. lines than U.S. cars on Canadian lines, compared with 18,174 on Aug. 1. The increase in the number of U.S. cars on Canadian lines is due chiefly to the revival in the coal movement, but the unfortunate part of this increase in all classes of U.S. cars on Canadian lines is that the gondolas and hopper bottom coal cars which make up the greater part of the increase are unsuitable for Canadian traffic. The diagram covering the box-car situation shows that the number of Canadian box cars on U.S. lines is much greater than the number of U.S. box cars on Canadian lines, and in the fact that the great demand in Canada at present is for box cars, is to be found the worst feature of the existing situation.

The code of car service rules, effective March 1, 1920, as amended July 1, 1921, and now in force, provides for the interchange of freight cars among railways as follows: "1. Home cars shall not be used for the movement of traffic beyond the limits of the home road, when the use of other suitable cars under these rules is practicable. 2. Foreign cars at home, on a direct connection, must be forwarded to the home road, loaded or empty, except as provided in paragraphs 3 and 4. If empty at junction with the home road, and loading at that point via the home road is not available, they

must, subject to rule 5, be delivered to it at that junction, unless an exception to the requirement be agreed to by roads involved. Otherwise, cars under this rule may be (a) loaded via any route so that the home road will participate in the freight rate, or (b) moved locally in the direction of the home road, or (c) moved locally in an opposite direction from the home road, or delivered to a short line or a switching road, if to be loaded for delivery on, or movement via, the home road, or (d) delivered empty to home road at any junction point, subject to rule 5, or (e) delivered empty to road from which originally received under load at the junction where received, if such road is also a direct connection to the delivering road when handled in switching service and owner is not a direct connection in that switching terri-

quires return of empty cars to home road, via the junction at which cars were delivered in interchange under load, the home road may demand return of empty cars at such junction, except that cars offered a home road for repairs, in accordance with Division 5-Mechanical (M. C. B.) rules, must be accepted by owners at any junction point."

A deputation, consisting of C. P. Ridel, General Secretary, Railway Association of Canada; G. P. Clark, acting Superintendent of Car Service, Canadian Ryss., Toronto; C. R. Moore, General Superintendent of Car Service, G.T.R., Montreal, and A. Hatton, General Superintendent of Transportation, C.P.R., Montreal, visited Washington recently, and conferred with the American Railway Association's Car Service Division officials, on the car situation, as between Canadian and U.S. lines. It was shown

tory. 3. Foreign cars at home on other than direct connections must be forwarded to the home road, loaded or empty. Under this rule cars may be: (a) Loaded via any route so that the home road will participate in the freight rate, or (b) loaded in the direction of the home road, or (c) moved locally in an opposite direction from the home road, or delivered to a short line or a switching road if to be loaded for delivery on, or movement via, the home road, or to a point in the direction of the home road beyond the road on which the cars are located, or (d) delivered empty to road from which originally received, at the junction where received, if impracticable to dispose of them under paragraph (a), (b) or (c) of this rule. 4. Empty cars of 50 a mile, plus bridge and terminal arbitraries, with a minimum of 100 miles for each road handling the car, the road requesting the services to pay the charges. 5. If a movement of traffic re-

how the existing situation is adversely affecting the Canadian railway industry, but on the other hand the difficulties besetting U.S. railways in the way of equipment shortages, and the nature obstacles to getting the Canadian cars started back to their home roads, were made evident. The conference was very satisfactory, and both parties obtained a thorough understanding of each others' difficulties, the U.S. officials undertaking to do all possible in the way of returning Canadian equipment promptly.

Canadian shippers, who are confronted with delayed delivery of freight equipment for loading should bear in mind that the railways which are serving them are facing traffic and other conditions which make prompt supply of cars at this season of the year extremely difficult, altogether apart from the demands made on their equipment reserves by the western crop movement, and they should realize that the railways are doing all in their power to supply cars to meet the demand.

Mainly About Railway People Throughout Canada.

Miss Grace Bell, sister of G. T. Bell, Passenger Traffic Manager, G.T.R., Montreal, died at London, Ont., recently.

Harry Walter Brodie, whose appointment as Assistant Passenger Traffic Manager, C.P.R., Montreal, was announced in our last issue, and whose portrait appeared in that issue, was born at Fredericton, N.B., June 8, 1874, and entered C.P.R. service Jan. 1, 1895, since when he has been, to July, 1895, stenographer, Passenger Department, St. John, N.B.; July to Aug. 1895, stenographer, Passenger Department, Boston, Mass.; Aug. 1895, to Feb. 1898, stenographer, Passenger Department, Toronto; Feb. 1898, to Oct. 1899, chief clerk, Passenger Department, Toronto; Oct. 1899, to Feb. 1903, chief clerk, Passenger Department, Winnipeg; Feb. 1, 1903, to Nov. 1, 1910, Assistant General Passenger Agent, Western Lines, Winnipeg; Nov. 1, 1910, to Sept. 12, 1922, General Passenger Agent, lines west of Revelstoke, B.C., Vancouver, B.C. These biographical particulars appeared partly in our last issue, but a few lines were omitted and the matter is therefore given here complete.

Sir George McLaren Brown, K.B.E., European General Manager, C.P.R., London, Eng., and Lady Brown, were guests at Government House, Quebec, Que., for a few days early in November, and Sir George sailed for England on the s.s. Montcalm, Nov. 17, after having visited his father, Adam Brown, at Hamilton, Ont.

William B. Bulling, formerly Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, died at the Homewood Sanitarium, Guelph, Ont., Oct. 31, after a long illness. He was born at Montreal, Sept. 16, 1858, entered G.T.R. service in 1872, and resigned in 1880 to enter Chicago and Northwestern Ry. service in Chicago, Ill., where he only remained a short time, returning to the G.T.R., and remaining with that company until 1883. He was from 1883 to 1889, chief clerk, General Freight Department, C.P.R., Montreal, 1889 to 1892, District Freight Agent, C.P.R., Montreal; 1892 to July, 1902, General Freight Agent, Eastern Division, C.P.R., Montreal; July 1902 to Aug. 1911, Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal. He was compelled to retire from active service in Aug. 1911 on account of ill health, after which he lived at Knowlton, Que. for several years.

Pierce Butler, of St. Paul, Minn., who has been nominated by President Harding as Associate Justice of the U.S. Supreme Court, acted as counsel for the Canadian Northern Ry. Co., in the arbitration to decide the amount to be paid by the Dominion Government for the common stock; also for the Dominion Government in the arbitration as to the value of Grand Trunk Ry. stocks; and has been for some time engaged as one of the counsel for the Toronto Ry. Co., in the arbitration to decide the amount to be paid for its property by the City of Toronto.

A. E. H. Chesley, General Accountant, Dominion Atlantic Ry., Kentville, N.S., represents the transportation interests on the Nova Scotia Accident Prevention Association's general executive committee.

George Cowie, station agent, G.T.R., Allandale, Ont., for the past 35 years, retired from active service at the end of October, after 50 years with the com-

pany. He was presented with two chairs and a smoking coat by the local staff.

D. Crombie, Transportation Assistant to Vice President, Operation & Maintenance Departments, Canadian National

W. B. Lanigan,
General Freight Traffic Manager, Canadian Pacific
Railway.

E. N. Todd,
Freight Traffic Manager, Canadian Pacific Railway.

Rys., Toronto, addressed the Toronto Electric Club at its luncheon, on Nov. 22, on the Canadian National Rys. System.

Robert H. Fish, whose appointment as General Superintendent, Ontario Lines, G.T.R., Toronto, was announced in our

last issue, was born at Oakville, Ont., June 12, 1873, and entered G.T.R. service, March 28, 1891, since when he has been, to Dec. 9, 1891, on construction work, Toronto; Dec. 9, 1891, to Dec. 1, 1893, in motive power shops, Toronto; Dec. 1, 1893, to Jan. 29, 1900, locomotive fireman, Toronto; Jan. 29, 1900, to Oct. 1, 1908, locomotive man, Toronto; Oct. 1, 1908, to Jan. 22, 1913, Road Foreman, Locomotives, London, Ont.; Jan. 22, 1913, to Nov. 1, 1916, Trainmaster, Brantford, Ont.; Nov. 1, 1916, to March 1, 1920, Superintendent, Stratford, Ont.; March 1, 1920, to Oct. 10, 1922, General Superintendent, Eastern Lines, Montreal.

R. H. Fish, appointed recently as General Superintendent, Ontario Lines, G.T.R., Toronto, was entertained at dinner by a number of the officials of the Eastern Lines, at Montreal, Nov. 16, on his removal to Toronto, after being General Superintendent, Eastern Lines for several years.

F. H. Fljoldal, who was elected General President of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, at Detroit, Mich., recently, as stated in Canadian Railway and Marine World for November, has been Roadmaster of Mango and Togo Subdivisions, Dauphin Division, Saskatchewan District, Canadian National Rys., since Feb., 1920.

E. Fitzgerald, C.M.G., formerly Assistant General Purchasing Agent, C.P.R., and now Deputy Chairman, Canadian Advisory Committee, Hudson's Bay Co., returned to Canada, Nov. 4, on the C.P.R. s.s. Melita, and proceeded to Winnipeg.

D. H. Gemmell, of Smiths Falls, Ont., a C.P.R. conductor, and Vice President of the Brotherhood of Railway Trainmen, was unanimously chosen Progressive candidate for the Dominion Parliament in the Lanark, Ont., by-election, the vacancy being caused by the death of Hon. J. A. Stewart, Minister of Railways and Canals, in the last government. Announcement was made later that he had withdrawn from the contest.

G. E. Graham, General Manager, Dominion Atlantic Ry., was entertained at dinner at the company's Cornwallis Inn, Kentville, N.S., on Nov. 1, by the company's other officials, on the seventh anniversary of his appointment, and was presented with a gold watch, on their behalf, by F. G. J. Comeau, General Freight and Passenger Agent. A. E. H. Chesley, General Accountant, was toast master.

D. B. Hanna, ex President, Canadian National Rys., left Toronto Nov. 25, via Chicago, Ill., St. Paul, Minn., and Seattle, Wash., for the Pacific Coast, intending to return via Victoria and Vancouver, B.C., and Winnipeg, and expecting to be back about the middle of December.

W. B. Heath, foreman, erecting shop, G.T.R., Ottawa, Ont., died there suddenly, of apoplexy, Nov. 5, aged 36.

H. Irwin, Consulting Right of Way Agent, C.P.R., Montreal, celebrated his 73rd birthday, recently, by walking 17 miles along the shore of Lake St. Louis. He still goes out surveying in the Province of Quebec.

Hon. W. C. Kennedy, M.P., Minister of Railways and Canals, who underwent two operations for gall stones in the Royal Victoria Hospital, Montreal on Aug. 20 and Sept. 20, left there Nov. 22 for his home at Windsor, Ont. He will

probably take a trip south before returning to his office.

Major William Macpherson Kirkpatrick, M.C., who has been appointed General Foreign Freight Agent, Atlantic and Pacific Ocean Lines, C.P.R., Montreal, was born at Kingston, Ont., Oct. 8, 1874. He is a son of the late Sir George Kirkpatrick, at the time, a director of the C.P.R. He entered C.P.R. service March 7, 1892, in the Vice President's office, and up to July 1899, filled various positions in the Chief Engineer's office, and Foreign Freight Department, Montreal, and General Freight Agent's office, Toronto; July 1899 to Dec. 1902, clerk, Fourth Vice President's office, director of the C.P.R. from April 1905, Assistant General Freight Agent, Pacific Division, Vancouver, B.C.; April 1905 to Feb. 1907, Export Freight Agent, Montreal; Feb. to Dec. 1907, General Freight Agent, Atlantic Division, St. John, N.B.; Dec. 1907 to April 1911, General Freight Agent, Through Traffic, Ontario Division, Toronto; April to Aug. 21, 1911, General Freight Agent, Eastern Lines, Montreal; Aug. 21, 1911 to 1915, Assistant Freight Traffic Manager, Eastern Lines, Montreal. In 1915 he received a commission in the 87th Battalion (Grenadier Guards) and went overseas with the 3rd contingent. During his war service he rose to the rank of Major and was awarded the Military Cross for conspicuous gallantry in action, and was mentioned in dispatches as having made two trips to the front line under very heavy shell fire, and obtaining most valuable information. He returned to Canada at the close of the war, and was appointed Assistant Freight Traffic Manager, Western Lines, C.P.R., Winnipeg, which position he held to Nov. 15, 1922, the date of his present appointment.

William Blackstock Lanigan, who has been appointed General Freight Traffic Manager, C.P.R., Montreal, was born at Three Rivers, Que., Oct. 12, 1861, and educated at the Protestant Academy, and St. Joseph College, Three Rivers, and Stanstead College, Quebec. He entered railway service in 1879, and has been, to 1880, telegraph operator, Quebec, Montreal, Ottawa & Occidental Ry., Three Rivers, Que.; 1880, telegraph operator, Montreal Telegraph Co. Montreal; 1880 to 1881, telegraph operator, Hamilton Power Co., Beloeil, Que.; 1881 to 1884, telegraph operator, G.T.R., Montreal; 1884 to 1885, night operator, C.P.R., Sharbot Lake, Ont.; April 1885 to Sept., 1885, day operator, C.P.R., Tweed, Ont.; Sept. 1885 to Oct. 1886, relieving agent, C.P.R., Toronto; Oct. to Nov. 1886, agent, C.P.R., Claremont, Ont.; Nov. 1886 to June 1887, agent, C.P.R., Myrtle, Ont.; June 1887, to July 1888, agent, C.P.R., Dundalk, Ont.; July 1888 to Aug. 1891, agent, C.P.R., Galt, Ont.; Aug. 1891 to May 1900, Travelling Freight Agent, C.P.R., Toronto; May 1900 to July 1901, Assistant General Freight Agent, C.P.R., Toronto; July 1901 to March 1908, General Freight Agent, Western Lines, Winnipeg; March 1908 to Sept. 1918, Assistant Freight Traffic Manager, Western Lines, C.P.R., Winnipeg; Sept. 2, 1918, to Nov. 15, 1922, Freight Traffic Manager, C.P.R., Montreal.

Miss Mildred Low, who has been appointed Literary Editor, General Advertising Department, G.T.R., Montreal, of which H. R. Charlton is chief, is a daughter of the late Canon George J. Low, D.D., of Ottawa. For some time as "Marise" she edited the Ottawa Free Press' women's page and wrote special

articles, and she was on the Montreal Star's editorial staff for some time. In 1913, she went to Edmonton, Alta., to attend the Canadian Women's Press Club's triennial convention, and remained in the west to edit the Vancouver Daily Sun's Sunshine Society Department.

Miss Emma MacInnes, daughter of W. R. MacInnes, Vice President, Traffic Department, C.P.R., Montreal, is one of the season's debutantes there.

Sir William Mackenzie, ex President, Canadian Northern Ry., returned to Canada, Oct. 9, after a trip to England.

Sir Donald Mann, ex Vice President, Canadian Northern Ry., returned to Canada, Oct. 29, after a trip to England.

Charles Manning, whose appointment as Assistant Operating Manager, lines east of Detroit and St. Clair Rivers, G.T.R., Montreal, was announced in our last issue, was born at New Swindon, Eng., Nov. 8, 1862, and entered railway service June 1, 1878, since when he has been, to Oct. 1, 1883, in various offices, Mechanical Department, Great Western Ry., Swindon, Eng.; Nov. 1, 1883 to July 1, 1898, clerk, Mechanical Superintendent

Major W. M. Kirkpatrick, M.C., General Foreign Freight Agent, Canadian Pacific Railway.

dent's office, G.T.R., Toronto; July 1, 1898 to July 1, 1917, chief clerk, General Superintendent of Motive Power, G.T.R., Montreal; July 1, 1917 to July 1, 1919, Assistant to Vice President, Mechanical Department, G.T.R., Montreal; July 1, 1919 to Oct. 10, 1922, Assistant to Vice President, Transportation, Construction and Maintenance, G.T.R., Montreal.

Mrs. E. M. R. Maynes, wife of A. Maynes, Division Master Mechanic, C.P.R. R., Toronto, died there suddenly, of acute heart disease, Nov. 1.

F. L. Norman, who has been appointed General Agent, Freight Department, Canadian National-Grand Trunk Pacific Rys., and Grand Trunk Pacific Coast Steamship Co., Seattle, Wash., was born at Kansas City, Mo., Jan. 30, 1879, and entered railway service Feb. 1, 1906, since when he has been, to Feb. 1, 1907, Soliciting Freight Agent, Rutland Rd., Michigan Central Rd., and Ontario Central Despatch Lines, Kansas City, Mo.; Mar. 1, 1907 to June 1, 1910, Soliciting Freight

Agent, G.T.R., Kansas City, Mo.; June 1, 1910 to June 30, 1918, Commercial Agent, G.T.R., Seattle, Wash.; July 1, 1918 to Sept. 8, 1920, Commercial Agent, Grand Trunk Pacific Ry. and Grand Trunk Pacific Coast Steamship Co., Seattle, Wash.; Sept. 8, 1920 to Nov. 15, 1922, Commercial Agent, Canadian National-Grand Trunk Pacific Rys., Seattle, Wash.

II. Campbell Oswald, Assistant Secretary, C.P.R., visited the Pacific coast recently.

S. A. Parnwell, Assistant General Manager and Land Agent, Great Eastern Ry. of England, is reported to have been appointed General Manager, vice Sir Henry W. Thornton, K.B.E., appointed President, Canadian National Rys.

H. D. Reid, President, Reid Newfoundland Co., arrived in Canada, from Great Britain, Nov. 9, by the C.P.R. s.s. Empress of France.

J. W. Reid, Inspector of Railway Safety Appliances, Board of Railway Commissioners, Calgary, Alta., was born at Harvey, N.B., Nov. 15, 1892, not Nov. 12, 1872, as stated in Canadian Railway and Marine World for November under "Birthdays of Transportation Men in November", the error having been caused by somewhat illegible figures supplied us.

J. W. Rusk—Canadian Railway and Marine World, in quoting in its November issue an item from the Railway Gazette of London, Eng., stating that Jno. Wm. Rush, late Managing Director of the Intercolonial Ry. of Canada, had died at Coleraine, Ireland, after an operation, said that it had no record of Mr. Rush having occupied the position mentioned and that there must be some mistake, as the title Managing Director is, as a rule, only used in reference to privately owned companies. Enquiry at Moncton has elicited the information that Mr. Rusk, who was born in Aug. 1852, held the following positions on the Intercolonial:—July 1872 to Jan. 1873, porter and baggage man, Moncton, N.B., Jan. 1873-1876 freight checker, St. John, N.B., July 1876 to July 1882, clerk, St. John; July 1882 to Aug. 1922, foreman of freight shed, St. John. He died Aug. 27.

Frank Scott, whose retirement as Vice President and Treasurer, G.T.R., was announced in a recent issue, was presented with a pair of silver carafes and an illuminated address by the staffs of the financial and treasury departments at Montreal, Nov. 9, the presentation being made by J. A. Yates, now Treasurer, G.T.R.

J. G. Scett, ex-General Manager, Great Northern Ry. of Canada, and Quebec and Lake St. John Ry., has resigned the Quebec Board of Trade transportation committee chairmanship.

Lord Shaghnessy, Chairman, C.P.R. Co., addressed the Montreal Kiwanis Club, Nov. 16, on selected and directed immigration.

A. B. Smith, Passenger Traffic Manager, Northern Pacific Ry., St. Paul, Minn., has been elected President, American Association of Passenger Traffic Officers.

Arthur W. Snell, heretofore Assistant Foreign Freight Agent, C.P.R., Montreal, has been appointed Assistant Manager, Furness, Withy & Co., Montreal, vice J. W. Nicoll, appointed Manager.

W. H. Snell, who was appointed General Passenger Agent, lines west of Field and Kootenai Landing, C.P.R., Vancouver, B.C., recently, was entertained at dinner, and presented with a travelling case and umbrella, by a number of his

associates, at Montreal at the end of October, on leaving there, where he had been General Passenger Agent, Eastern Lines, C.P.R., for a number of years.

George Stephen, who has been appointed Assistant Freight Traffic Manager, Western Lines, Canadian Pacific Ry., at Winnipeg, was born at Montreal, July 5, 1876, and entered railway service in 1889, since when he has been, to 1899, clerk, C.P.R., 1899 to 1900, chief clerk to Assistant General Freight Agent, C.P.R., Winnipeg; 1900 to 1901, Travelling Freight Agent, Manitoba Lines, C.P.R.; 1901 to 1903, Contracting Freight Agent, C.P.R., Nelson, B.C.; 1903 to Jan. 1907, chief clerk to General Traffic Manager, Canadian Northern Ry., Winnipeg; Jan. 1907 to May 1909, Assistant General Freight Agent, C.N.R., Winnipeg; May 1909 to Dec. 1915, General Freight Agent, C.N.R., Winnipeg; Jan. 1 to Nov. 6, 1916, Assistant Freight Traffic Manager, Western Lines, C.N.R., Winnipeg; Nov. 1916 to Dec. 1918, Freight Traffic Manager, Western Lines, Canadian Northern Ry., Winnipeg; Dec. 1918 to Aug. 24, 1920, Freight Traffic Manager, Canadian National Ry., Toronto; Aug. 24, 1920 to Nov. 18, 1922, Freight Traffic Manager, Canadian National-Grand Trunk Pacific Rys., and Grand Trunk Pacific Coast Steamship Co., Toronto.

Sir Campbell Stuart, who has been confirmed in his position as Managing Director of the London Times by the new owners, is a grandson of the late C. J. Brydges, who was appointed Managing Director of Great Western Ry. of Canada, in 1853; General Manager, Grand Trunk Ry., in 1864; one of the commission for building the Intercolonial Ry., in 1868, and subsequently General Superintendent of the Intercolonial and Prince Edward Island Rys.

Major Lewis Thomas, O.B.E., Director, Jamaica Government Ry., visited his brother in Montreal recently.

Edwin Newman Todd, who has been appointed Freight Traffic Manager, Rail Road, C.P.R., Montreal, was born at Huntingdon, Que., Oct. 17, 1879, and entered C.P.R. service May 7, 1896, since when he has been, to May 1, 1898, clerk and stenographer, Foreign Freight Department, Montreal; May 1, 1898 to June 1, 1903, import clerk, same department, Montreal, and West St. John, N.B.; June 1, 1903 to May 1, 1904, contract clerk, Assistant Freight Traffic Manager's office, Toronto; May 1, 1904 to May 1, 1905, Contracting Freight Agent, Foreign Freight Department, Toronto; May 1, 1905 to Jan. 1, 1909, Assistant Export and Import Freight Agent, Toronto; Jan. 1, 1909 to Sept. 1, 1911, Export Freight Agent, Montreal; Sept. 1, 1911 to Sept. 20, 1915, Division Freight Agent, Montreal; Sept. 20, 1915 to Mar. 15, 1919, General Freight Agent, Montreal; March 15, 1919 to Nov. 15, 1922, General Foreign Freight Agent, Montreal.

Leonard O. Tremblay who has been appointed District Passenger Agent, Rail and Steamship Line, C.P.R., North Bay, Ont., was born at Calumet Island, Que., June 19, 1885, and entered railway service Feb. 5, 1903, since when he has been, to March 31, 1905, clerk, C.P.R., March 31, 1905 to April 5, 1907, ticket clerk, C.P.R.; April 5, 1907 to July 4, 1912, joint ticket agent, C.P.R., G.T.R., and Timiskaming and Northern Ontario Rys.; July 4, 1912 to Nov. 1, 1915, Travelling Passenger Agent, C.P.R., all at North Bay, Ont.

James Waugh, who has been appointed General Agent, Freight Department, Canadian National-Grand Trunk Pacific

Rys., and Grand Trunk Pacific Coast Steamship Co., San Francisco, Cal., entered G.T.R. service in 1891 as clerk in the Commercial Express Line office at Milwaukee, Wis., since when he has been, from 1894 to 1900, Soliciting Freight Agent, same line, Chicago, Ill.; 1900 to July 1, 1905, Travelling Freight Agent, same line, Detroit, Mich.; July 1, 1905 to July 1908, Michigan State Agent, Reading Dispatch Line, Detroit; July 1908 to Oct. 31, 1911, Travelling Freight Agent, G.T.R., Philadelphia, Pa.; Oct. 31, 1910, Commercial Agent, G.T.R. System; 1911 to July 1915, Commercial Agent, G.T.R., Omaha, Neb.; July 1915 to Oct. 25, 1920, San Francisco, Cal.; Oct. 25, 1920 to Nov. 15, 1922, Commercial Agent, Grand Trunk Ry., Canadian National-Grand Trunk Pacific Rys., and Grand Trunk Pacific Coast Steamship Co., San Francisco, Cal.

Longlac-Nakina Cutoff, Canadian National Railways.

The Canadian National Rys. management has invited tenders to be sent in by Dec. 4, for the work of clearing, grading, culverts, timber bridging and substructures for bridges, on the proposed connection between the Canadian Northern Ontario Ry., near Longlac, and the National Transcontinental Ry. near Nakina, Ont., approximately 29½ miles long.

Longlac, from which the cutoff will start, is on the Canadian Northern main line from Montreal to Winnipeg, 480.7 miles northwest of North Bay. Nakina, at which the cutoff which join the National Transcontinental, is 272.25 miles west of Cochrane, and as Cochrane is 252.3 miles from North Bay, by the Timiskaming and Northern Ontario Ry., Nakina is 524.55 miles northwest of North Bay, by Cochrane.

The original reconnaissance survey was made in 1917 by H. K. Wicksteed, then Chief Engineer of Surveys, Canadian Northern Ry., and his assistant, H. T. Morrison, and in 1919 Mr. Morrison made trial and location surveys under Mr. Wicksteed's direction. This year, Mr. Morrison, who is now Locating Engineer, Canadian National Rys., made a revised location survey, under the direction of H. T. Hazen, Chief Engineer, Canadian Northern Ry. Lines, East of Port Arthur.

The country to be traversed is generally fairly flat. At the south end there is a considerable quantity of rock, and on the balance of the line there are long stretches of spruce swamp, with clay subsoil. The north middle portion of the line is partly sand and gravel, and at the north end the country is again swampy. The maximum grade in each direction will be 0.4%, compensated for curvature, and the maximum curvature will be 4°.

The principal bridges will be at the crossings of the Komaie River at mile 6, the crossing of Devilfish Lake, mile 13.7, and the crossing of McDonald Creek, mile 28.8, at each of which places a plate girder span will be erected on concrete abutments. In addition to these there will be 6 small pile trestles. The line being generally near the height of land, the drainage areas of the greater part of the line is swampy.

The principal object in building the line is the saving in distance to be effected over all existing routes and doing away with the necessity of dropping down from the height of land to Lake Superior level and then rising again to Winnipeg,

as is now the case on the Canadian Northern route. It will also enable the Canadian National Rys. to discontinue running any trains over the Timiskaming & Northern Ontario Ry., between North Bay and Cochrane.

The lengths of existing routes and as they will be when the cutoff is built, are as follows:

Canadian National Rys., Toronto to Winnipeg.....	Miles 1399
Via Capreol and Port Arthur.....	1296.6
Via North Bay and Cochrane.....	1207
Via Capreol and Longlac cutoff.....	1282.4
Canadian Pacific Ry., Toronto to Winnipeg.....	1282.4
Canadian National Rys., Montreal to Winnipeg.....	1409.2
Via Capreol and Port Arthur.....	1372.2
Via North Bay and Cochrane.....	1387.5
Via Hervey Jet. and N. T. Ry.....	1387.1
Via Longlac cutoff.....	1405.1
Canadian Pacific Ry., Montreal to Winnipeg, via M. & O. short line.....	1411.6
Canadian National Rys., Quebec to Port Arthur.....	1172
Via Joliette, Ottawa and Capreol.....	1073.2
Via N.T.R., Longlac cutoff and C.N.R. to Canadian Pacific Ry. Junction and Hull.....	1139.4

As far as Canadian Railway and Marine World can ascertain, although tenders have been invited, no decision as to building the cutoff has been arrived at, nor will it be until Sir Henry Thornton has looked into the matter thoroughly.

The Canadian National Rys. present transcontinental service is routed as follows: Train 1, from Montreal to Vancouver, runs via G.T.R., from Montreal to Ottawa; Canadian Northern Ry., Ottawa to North Bay; Timiskaming & Northern Ontario Ry., from North Bay to Cochrane; and the National Transcontinental Ry., from Cochrane to Winnipeg. Train 2 runs east over the same line. Train 3, from Toronto to Vancouver, runs over the Canadian Northern, from Toronto, via Capreol and Port Arthur, to Winnipeg, and train 4 runs east over the same lines. A sleeping car is carried on G.T.R. train 47, from Toronto to North Bay, where it is attached to train 1 for further westward movement. Eastbound, the sleeping car is set off from train 2 at North Bay and moved from there to Toronto on G.T.R. train 46. These cars will continue to be operated between Toronto and Edmonton until March 31, after which they will be operated between Toronto and Winnipeg, and additional cars will operate between Winnipeg and Edmonton.

Custody of Liquor in Transit.—There was deposited in the customs warehouse at the Canadian National Rys., Port Frances, Ont., station, towards the end of June, some 76 cases of Scotch whiskies in transit. Someone broke into the warehouse, and the night of June 28 and stole the whiskey. On that night a circus train was being dispatched, in addition to the regular train for Duluth, Minn., and one of the company's special service men was on duty at the station, until after the Duluth train was sent out at 2.50 a.m. The warehouse was found, some hours later, June 29, broken into. The Canadian National Rys. was held liable for \$3,040, the value of the whiskey, and \$1,460.81 duty thereon, by an Ontario court and this judgment was upheld in the Ontario Divisional Court at Toronto.

Steel Rail Orders.—Canadian Railway and Marine World for November gave particulars of orders for 3,001 tons of spring delivery. The Canadian National Rys. are expected to be in the market in the near future for considerable tonnage also.

The Newfoundland Railway Situation.

The agreement made early in the year between the Reid Newfoundland Co. and the Newfoundland Government provided for the operation of the railway and steamship lines, with R. C. Morgan as General Manager, up to Nov. 15, by which date it was expected to have a new agreement completed to provide for their future operation. The Legislature was called to meet on Oct. 30, mainly to consider the proposed new agreement, but on Oct. 23, a proclamation was issued for the proroguing the Legislature until Dec. 20.

During the summer the Premier and the Attorney General went to England, where they met the President and several other directors of the Reid Co., and representatives of Sir W. G. Armstrong, Whitworth & Co., to discuss the proposed Humber River development proposals, which are in some respect linked up with the railway matters. Press reports as to the negotiations are somewhat conflicting. One states that an agreement covering both railway and steamship and Humber power development matters has been arrived at, and that the British Trades Facilities Board is guaranteeing \$9,000,000 of the \$18,000,000 required for carrying out the project; and that all differences between the Government and the Reid Co. have been adjusted. Another report states that an agreement, which was signed Nov. 6, provides for an immediate carrying out of the Humber River development plans to the extent of £2,000,000, of which £1,000,000 is guaranteed by the British Trades Facilities Board, and the other £1,000,000 is to be guaranteed by the Newfoundland Government. In connection with this report it is to be noted that no mention is made of the railway or steamship services.

Canadian Railway and Marine World's private advices from Newfoundland are that the agreement between the Government and the Reid Co. for the operation of the railway and steamships, has been extended for three months from Nov. 15, until Mr. C. Morgan is continuing as General Manager, in the meantime at least, and that he will probably go home to Winnipeg for Christmas.

Canadian Traffic League's Annual Meeting, Etc.

The Canadian Traffic League, which is composed of over 100 traffic directors, managers, commissioners, and other officials in charge of traffic for industrial and commercial organizations, has for its objects, as stated in its constitution, to promote a better understanding by the public, provincial and Dominion governments, of the needs of the traffic world; to secure modifications of present laws, regulations and rulings where they are harmful to the free interchange of commerce; to advance fair dealing; to promote, conserve and protect commercial and transportation interests; to co-operate with the Board of Railway Commissioners for Canada, other organizations, and the transportation companies, thus bringing about better conditions.

The annual meeting was held in Toronto, Nov. 1, the President, A. H. Thorpe, Traffic Manager, Wm. Davies Co., Toronto, being in the chair. Reports from the various committees and a number of other important matters were dealt with. The following officers, etc., were elected: President, W. H. Dickie, Traffic Depart-

ment, Imperial Oil, Ltd.; Vice President, W. R. Ingram, Traffic Department, Swift Canadian Co.; Secretary-Treasurer, H. W. Blahout, Traffic Manager, Dunlop Tire & Rubber Goods Co.; Executive Council, A. H. Thorpe, Traffic Manager, Wm. Davies Co.; A. W. Bell, Traffic Manager, General Motors, Ltd.; F. W. Dean, Traffic Manager, Steel Co. of Canada; W. S. Campbell, Traffic Manager, Canadian General Electric Co.; S. B. Brown, Assistant Manager, Traffic Department, Canadian Manufacturers' Association; R. J. Fitzgerald, Traffic Manager, F. W. Woolworth Co.

In the evening the League held its annual dinner in the Toronto Board of Trade restaurant. The retiring President, A. H. Thorpe, who occupied the chair, spoke on "The Educated Traffic Men." The other speakers were: Lt. Col. W. G. McKendrick, who gave a very interesting address on Allenby's campaign; A. W. Bell, Traffic Manager, General Motors Ltd.; Jas. Mayor, Sheet Metal Products Co.; C. A. Hayes, Vice President, Traffic, Canadian National Rys.; W. W. Williamson, General Auditor, Canadian National Express Co.; G. C. Martin, General Freight and Passenger Agent, Toronto, Hamilton & Buffalo Ry.; W. H. Ferry, Traffic Manager, Dominion Express Co.; and Acton Burrows, Proprietor, Canadian Railway and Marine World.

Railway Finance, Meetings, Etc.

Algoma Central & Hudson Bay Ry.—Earnings for August are reported as \$196,737, against \$223,823 for Aug., 1921. Boston & Maine R.R.—There was filed with the Secretary of State at Ottawa, Nov. 4, a lease dated Nov. 1, from the Northern National Bank, Boston, Mass., under the Boston & Maine R.R. trust agreement of Aug. 1, to the Boston & Maine R.R., of 22 switching locomotives and 2 Mallet switching locomotives.

Canadian Northern Ry.—Notice was given Nov. 4 that the Canadian Northern Ry. Co., would, on Dec. 1, redeem all the 5% land mortgage debentures outstanding, and which in the ordinary course would not mature until June 1, 1923. The debentures are payable in London, Eng., and we are advised that their redemption is being arranged for partly because of the present favorable rate of exchange.

Canadian Pacific Ry.—A dividend of 2½% on the common stock, for the quarter ended Sept. 30, and at the rate of 3% a year from special income account, payable on Dec. 30 to shareholders of record Dec. 1, has been declared by the directors.

Grand Trunk Pacific Branch Lines Co.—A London, Eng., cable of Oct. 26 stated that the Lloyd's Bank had been advised not to pay the interest due on Nov. 1 on the £738,600 of G.T.P. Branch Lines Co's bonds, but it was subsequently stated that this notification was made because the Dominion Government had decided to pay the interest through the Bank of Montreal, which was done. These bonds are guaranteed by the provinces of Saskatchewan and Alberta, in respect of the lines within those provinces, and the interest, when it was not otherwise provided for has been met by the provinces.

The Timiskaming & Northern Ontario Ry. Commission has, we are officially advised, paid the Ontario Government \$350,000 on account of net earnings of the railway for the year ended Oct. 31.

Pacific Great Eastern Ry.—The accounts for the year ended June 30 sub-

mitted to the British Columbia Legislature, Nov. 3, 1922, stated to show gross earnings of \$384,182.57, and operating expenses of \$871,365.63. The deficit for the year was \$487,183.06.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues, total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry. System, Grand Trunk Pacific Ry., and Canadian Government Rys., all including the Intercolonial Ry., Prince Edward Island Ry. and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government:

	Revenue	Expenses	Net	Deficits
	1922	1921	1922	1921
Jan.	\$8,210,401	\$10,433,545	\$2,223,183	\$2,863,068
Feb.	7,650,743	10,026,572	2,375,829	2,986,958
March	9,115,100	10,897,547	979,447	2,532,969
April	7,804,322	9,153,773	1,349,451	2,848,839
May	9,678,996	9,726,020	47,055	2,554,540
June	8,235,008	10,199,592	1,963,588	2,696,267
July	8,877,770	9,110,778	1,233,002	1,334,669
Aug.	9,369,780	10,399,617	829,837	171,005
Sept.	11,726,459	11,123,750	*602,709	*467,685
	\$81,172,490	\$91,971,178	\$10,719,129	\$17,058,440
Decr.	\$7,069,260	\$13,323,571	\$6,264,311

*Net revenue.
Approximate gross earnings for October, \$14,657,445, against \$12,925,305 for Oct., 1921.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses, and net operating revenues, with those for 1921. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Equinault & Naininau Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World.

	Gross	Expenses	Net	Decreases
	1922	1921	1922	1921
Jan.	\$1,317,357	\$1,810,844	\$49,877	\$157,948
Feb.	1,116,693	1,626,206	65,448	160,994
March	1,384,627	1,427,120	2,420,597	80,402

Incr.			\$3,302,697			
Decr.	\$1,537,102	\$4,840,099		

*Deficit.
Approximate gross earnings for September, \$9,384,284, against \$9,623,222 for Sept., 1921, for October, \$10,156,568, against \$9,332,332 for Oct., 1921.

Pere Marquette Ry. in Canada.—A recent St. Thomas, Ont., press dispatch stated that negotiations were in progress between the Pere Marquette Ry. and the Michigan Central Rd. for P.M.R. passenger train operation rights over the east end of the M.C.R. Canadian Division, and that the P.M.R. had in view the construction of a new west end entrance in to St. Thomas, if a lease was secured. Canadian Railway and Marine World is officially advised that the report in regard to the P.M.R. wishing to operate passenger trains over the M.C.R., between St. Thomas and the frontier, is unfounded, and that no consideration has been given to such a matter.

Freight Car Location on Canadian Railways.

The Railway Association of Canada has issued a report on the location of freight cars on N. Y., based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Central Vermont, in Canada; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Michigan Central, in Canada; Napierville Jct.; Pere Marquette, in Canada; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo; Wabash, in Canada, as follows: Cars owned by reporting railways, 221,677; home cars on Canadian foreign lines, 20,601; home cars on U.S. lines, 52,462; home cars on home roads, 148,614; Canadian owned foreign cars on home lines, 19,873; U.S. owned foreign cars, home lines, 51,388; total cars on lines, 199,875; per cent. on lines to total owned, 90.2; deficiency on lines to total owned, 21,802; home cars in bad order, 11,807; foreign cars in bad order, 420; total cars in bad order, 12,227; per cent. in bad order, 6.1; privately owned U.S. cars on lines, 2,523; privately owned Canadian cars on lines, 997.

United States Railways' Financial Results.

As stated in Canadian Railway and Marine World's monthly review of the financial results secured by the U.S. class 1 roads, published in the November number, the August results were very disappointing, as net operating income earned by class 1 railways was only \$52,579,690, or at the rate of but 2.6%, on the Interstate Commerce Commission's valuation of the railway property, this being \$61,698,000 short of the 5.3% prescribed as a fair return. September results were not a great deal better, as the net operating income, \$58,428,000, represented an annual return of but 2.88% on the tentative valuation. In Sept., 1921, the net operating income was \$87,534,000, representative of an annual return of 4.52%.

Gross operating revenues for class 1 roads in September were \$49,879,000, an increase over Sept., 1921, of 0.4%, while operating expenses, \$408,315,500, were 8.2% greater than in Sept., 1921. Lower rates have had the same effect on U.S. railways as on Canadian lines, as is shown by the fact that despite the negligible increase in gross earnings, the loads carried over 10% more freight in Sept., 1922, than in Sept., 1921.

In September, eastern U.S. railways had a net operating income of \$18,389,000, compared with \$35,163,000 in Sept., 1921; gross operating revenues being but 3.7% more than those of Sept., 1921, while operating expenses were 13.7% greater. The southern railways' net operating income was \$3,903,900, compared with \$7,189,000 in Sept., 1921; gross operating revenues being 3.8% greater than in Sept., 1921, and operating expenses but 0.3% greater. Western railways' net operating income was \$31,735,000, compared with \$45,182,000 in Sept., 1921. Their gross operating revenues were 4.2% smaller than in Sept., 1921, with operating expenses 3.7% greater.

Notwithstanding the unfavorable results in August and September, the good

returns secured in preceding months this year resulted in class 1 railways securing a net operating income of \$529,415,000 for the first 9 months of 1922, compared with \$393,793,000 for the same period in 1921. This represents an annual rate of return, on tentative valuation, of 3.96%, compared with 2.95% in the first 9 months of 1921.

A large part of the operating expenses in September was expended in placing freight cars in condition to operate. During the month, the U.S. class 1 roads spent \$120,000,000 for this purpose, with the results stated in the article dealing with the freight car bad order situation, on another page of this issue. There is no doubt that operating expenses were further increased through the shopmen's strike, but even with these influences taken into consideration, it is evident that U.S. roads, handling the extraordinarily large traffic which they have been handling, should be deriving better net earnings than they had in August and September. In view of the results secured, it would seem that the condition of affairs on U.S. railways is about the same as on the Canadian lines, as the rate reductions ordered have been such as to more than balance reductions in operating expenses secured by the railways.

Food Transportation Specialist Wanted.

The Civil Service Commission has given notice that applications will be received from persons qualified to fill the position of a fruit transportation specialist, Fruit Branch, Agricultural Department, Ottawa, at an initial salary of \$2,520 a year, which will be increased upon recommendation for efficient service to \$3,120 a year, until a maximum of \$3,000 has been reached. This salary will be supplemented by whatever bonus may be provided by law. Duties.—To have charge, under the Fruit Commissioner, of all activities of the Fruit Branch, which have to do with the transportation of fruit; to investigate, report upon, and deal with fruit transportation problems; to attend meetings of fruit growers, sittings of the Board of Railway Commissioners, and conferences with traffic representatives; and to do other related work as required. Qualifications.—High school graduation and preferably graduation from a university recognized standing; at least five years of experience in transportation work; preferably experience in fruit growing or fruit inspection work; good address and ability to speak in public. While a definite age limit has not been stated, age may be a determining factor when making a selection. Examination.—A written examination and oral examination will be given from the sworn statements submitted by applicants on their application forms. To those who qualify, an oral examination may be given, if necessary.

Among the Express Companies.

The Canadian National Ex. Co. has closed its office at Ballantrac, Ont.

The Canadian National Ex. Co.'s Winnipeg office has reported the theft of 40 blank money order forms, nos. E2888 to 96310 inclusive, from a business office in the city.

The Canadian National Ex. Co. has opened offices at Coleman, McNeill's Mills, Northam and Richmond, P.E.I.; Graham,

Ont.; St. Boswell, Sask., and Stewart, B.C., and has closed its office at Beresford, N.B., and Henslip, Ont.

A number of Dominion Ex. Co.'s officials were entertained at dinner at Hamilton, Ont., recently, by the Brotherhood of Dominion Express Employees local members.

The express companies have filed tariffs covering rates on gold bullion, per \$1,000, from Porcupine and Swastika, Ont., to Ottawa, Ont., New York, N.Y., and Denver, Col. Following are the old and new rates,—

To	Porcupine		From Swastika	
	Old	New	Old	New
Ottawa, Ont.	\$2.37	\$2.10	\$2.00	\$1.80
New York, N.Y.	3.35	3.00	3.25	3.00
Denver, Col.	6.05	5.45	5.75	5.15

Frederick Stevens who recently completed 40 years of continuous service with the Dominion Ex. Co., was born at Montreal, Sept. 29, 1859, went west in 1882, and has the distinction of having written the first tariff issued in Western Canada by the company. He has held the positions of cashier at Winnipeg, route agent of Western Canada, agent at Vancouver, B.C., and during the last few years has been actively connected with the distribution of financial paper throughout the company's western division. He was entertained at luncheon by a number of the Winnipeg officials and employees, Nov. 1, in the Superintendent's office, when H. N. Simpson, Assistant Superintendent, Western Division, read a letter from W. S. Stout, President, and other senior officials, conveying to Mr. Stevens a very hearty appreciation of his long and faithful services. He was also presented with a bouquet of money by his fellow employees, and Mrs. Stevens received a bouquet of chrysanthemums.

Telegraph, Telephone and Cable Matters.

Canadian National Telegraphs have opened offices at Agate, Bankfield, Hariston, Huronian and Pas Lake, Ont., Beechy, Kelvington, Kuroki and St. Boswells, Sask., and Bonar, Lyalta, Red Deer, Waskatenau, Alta., and have closed offices at Griffin Cove, and Shigawake, Que., Oscar, Ont., Beaconia, Man. and Port Kells, B.C.

The Canadian Marconi Co. is reported to be considering the erection of what will probably be the largest and most powerful radiotelegraph station in the world, for direct communication with Australia and the east. It is said that the construction, if carried out, will be in co-operation with the parent company in England, and will depend largely on the attitude of the British and Dominion Governments.

Canadian National Telegraphs and C. P. R. Telegraphs resumed the cable letter service to Great Britain and Ireland, Nov. 1, which was discontinued in 1914, on account of the war. Cable letters may now be sent for delivery at destination by noon of the following day, and week end cable letters filed up to midnight Saturday, will be delivered at destination the following Monday morning. An additional charge of 2c a word is made for delivery in Great Britain, outside of London and Liverpool, as British telegraph lines are used. It is stated that the service will probably be extended to other European countries as soon as the necessary consent can be secured from the various governments concerned.

Electric Railway Department

Toronto Transportation Commission's Track Extension on Upper Yonge Street.

The Toronto public was given a demonstration in 1921 of how rapidly and efficiently the rehabilitation of an under-maintained street railway system can

Electric Power Commission of Ontario for operation, and by which it was made possible for the Toronto Transportation Commission to build and operate a double

Yonge St., on which a temporary standard gauge track with passing sidings, was laid, to provide for continued operation by the radial cars in the first stages of construction. This temporary line was cut in to the original radial railway line at different points, the operation of the radial cars being transferred from the original radial line to the new temporary line, in stages, the original radial line being released, so that excavation to provide for the foundation for the new double track line could be undertaken, as follows: Aug. 26, between Merton St. and Eglinton Ave.; Aug. 29, between Lawton Blvd. and a point 300 ft. south of belt line railway crossing; Sept. 2, from a point 300 ft. south of belt line crossing to Merton St.; Sept. 3, from Eglinton Ave. to Glenview Ave.; Sept. 5, from Heath St. to Lawton Blvd.; Sept. 10, from Lymstone Ave. to Melrose Ave.; Sept. 13, from Glenview Ave. to Lymstone Ave.; Sept. 15, from Melrose Ave. to Deloraine Ave. These streets are shown on the accompanying location map, fig. 3. During this period, the radial cars maintained service by using the unreleased portions of their original track and the portions of the temporary track between, connections between original and temporary track being maintained as needed, until the original track was all released and operation entirely transferred to the temporary track by Sept. 15.

The original radial railway track was not released between Lawton Blvd, loop

Fig. 1.—Looking south on Yonge St., near Farnham Ave.

be gone ahead with even under heavy traffic and other adverse conditions, and by last summer the speed with which large intersections were installed and other difficult jobs accomplished no longer aroused unusual interest, as the Toronto Transportation Commission's efficiency in track work had come to be taken for granted. However, the surprising rapidity with which the Commission accomplished its largest individual undertaking, viz., the construction of a double track line containing 37,100 ft. of single track, on upper Yonge St., between the original terminus at Farnham Ave. and the northern city limits, constituted an achievement so outstandingly remarkable that wide-spread favorable comment was a logical result.

The Toronto and York Radial Ry's Metropolitan Division single track line down the west side of Yonge St. from the northern city limits to its terminus near Farnham Ave., had long been inadequate and a source of danger, about which complaints were bitter and numerous, while the condition of the street itself, due to the postponement of repairs until a decision was reached as to trackage for future rail traffic, was extremely bad. For these reasons, the laying of a double track street car line, and the re-surfacing of this portion of the city's main north and south artery, had been eagerly looked forward to by Toronto citizens. The beginning of the Yonge St. work was contingent upon the consummation of the transaction known as the "clean-up deal", under which the Toronto & York Radial Ry's Metropolitan Division north of Toronto city limits is being turned over to the Hydro-

Fig. 2.—Standard types of track construction, Toronto Transportation Commission.

track line from Farnham Ave. to the north city limits, this new line replacing the portion of the T.&Y.R.Ry's Metropolitan Division within the city limits. After many delays, the deal was completed, and on Aug. 26 work on the new line was begun.

Prior to the commencement of actual construction, a temporary grade had been prepared at the extreme west side of

and Heath St. until Sept. 5. South of Heath St. the original radial line remained in service and did not interfere to any great extent with excavation, and when work was begun by the Transportation Commission on Aug. 26, steam shovels were put to work north from Farnham Ave. On the following day excavation was in progress at four different points between Farnham and Eglinton

ton Aves., and by Sept. 5 the excavation between these two avenues had been completed. The total depth of excavation below finished grade of top of rail was 2 ft., and the width 18½ ft., which affords some idea of the material to be removed. In many places the amount was increased as some grade revision was introduced. Pneumatically operated drills were used to break the old road paving at the excavation side limits, while the excavation was done by steam shovel and the removal of the material by motor trucks. After Sept. 5, excavation quickly proceeded northward, and Radial Ry. service was at all times maintained by using the temporary track and unreleased portion of the original radial track till this was all released, when the temporary track was used exclusively, as stated above. Closely following the excavation came the laying of the foundation for the new permanent double track. By Sept. 8 the stone foundation was laid, the ties laid and tamped, and the steel in place, between Farnham Ave. and the Lawton Blvd. loop.

The track between Farnham Ave. and the Lawton loop was built to the Commission's 122-S-G standard, which includes broken stone foundation, 122 lb. steel and granite block surfacing. North of Lawton loop, the Commission's type 122-C-G construction was used, having concrete slab foundation, 122 lb. steel and granite surface. Cross and longitudinal sections of both types are shown in fig. 2, and detailed descriptions of both were given in Canadian Railway and Marine World for Dec. 1921, pg. 656. Between Lawton Blvd. loop and Eglinton Ave., the concrete slab foundation was in place by Sept. 6; by Sept. 9, it was in place between Eglinton Ave. and Glencair Ave., and by Sept. 25 the foundation was completed over the whole section, from Farnham Ave. to the northern city limits.

During the first part of the work's progress, the radial railway cars were able to use their original barns south of St. Clair Ave. for repairs. By Sept. 7 the 122-S-G double track line had been completed from Farnham Ave. to Lawton Blvd., and on that date the Radial Co. began operation, with some cars furnished by the Toronto Transportation Commission, on the new double track line from Heath St. to Farnham Ave. Removal of the original radial track south of Heath St. was not commenced till Sept. 24.

With a service maintained by the Radial Co.'s own standard gauge cars operating on the temporary track from the north city limits to Heath St., and the 4 ft. 10 7/8 in. gauge cars furnished by the Transportation Commission operating on the new permanent line south from Heath St. (4 ft. 10 7/8 in. being the gauge of all Toronto Transportation Commission lines), completion of the remaining portion of the new double track line was soon accomplished. As stated above, the new track was completed from Farnham Ave. to the Lawton Blvd. loop by Sept. 7. By Sept. 13 it was completed from the Lawton loop to Eglinton Ave.; by Sept. 20 between Eglinton Ave. and Glencair Ave., and by Sept. 29 the entire section between Farnham Ave. and the turnout to the loop at the north city limits had been completed. On Sept. 24, the Radial Co. began to operate the cars furnished by the Transportation Commission on the new track from Eglinton Ave. to Farnham Ave., allowing the temporary track to be removed between those points, while the temporary track

Fig. 3.—Location of track construction on upper Yonge St.

between Eglinton Ave. and the north city limits remained in operation.

Accompanying the laying of the main line track, the installation of required special work proceeded rapidly. A permanent cross-over was installed near Farnham Ave. on Aug. 31. A double track 3-part Y was put in at the intersection of Yonge St. and St. Clair Ave. on Sept. 9. The loop near Lawton Blvd. was completed Aug. 31; to be used for turning cars which, on account of lower traffic density at the northern end of the line, will not proceed to the city limits. At Berwick St. two units of special work for the Eglinton car house entrance were completed on Sept. 26 and 28, the main line portions having been installed some days previously. The special work at Yonge St. and Eglinton Ave. was completed Sept. 21, the main line portions being completed Sept. 15. The Yonge St. portion of a Y at Glencair Ave., an additional facility for short-routing some cars, was installed Sept. 21, and by the end of September the construction of the loop at the northern city limits was in progress. This loop is being built east of Yonge St., on Glenelch Road and Doncliffe Road. The T.&Y.R.Ry.'s Metropolitan Division will have its southern terminus immediately adjoining this loop.

The Commission introduced a new factor in its electric railway construction in Toronto by laying, as an experiment and with special construction, 0.95 mile of double track with steel ties. Of this distance 0.45 mile was laid with International steel twin ties and the remainder with Carnegie sec. M 24 steel ties.

The following statistical information in connection with the work is of interest: number of steam shovels used, 4; concrete mixers, 4; air compressors, 5; welding machines, 8; motor trucks, 100; number of men, 500 on day and 500 on night shift; steel rails on straight track construction, 122 lb. section, 1,343 tons; special work, 251 tons; number of welded joints, 1200; standard wooden ties, 32 ft. b.m. per tie, 14,325; special ties, 30,500 ft. b.m.; international steel twin ties, 800, or 108,000 lb.; Carnegie steel ties, sec. M 24, 2600 ties or 160,550 lb.; excavation, 30,000 cu. yds.; concrete for track base, 7714 cu. yds.; concrete for paving base, 1386 cu. yds.; granite blocks for wearing surface, 1,097,000.

Fig. 1 gives a good idea of the work's nature, showing the new double track line at the south end of the section, with the ties and rails laid on the stone foundation. An indication of the depth and width of excavation, and the work still necessary to obtain a surface between rails and tracks is also given. The original radial track is at the right.

As stated, the Toronto & York Radial Ry. furnished a service from Sept. 24 on the new double track line between Eglinton Ave. and Farnham Ave. with cars supplied by the Transportation Commission, the service from Eglinton Ave. northward being furnished by radial cars on the temporary track. A week later the radial line extended its service on the new line, with the T.T.C. cars, to as far north as Glencair Ave., thus releasing the section of temporary track between Eglinton and Glencair Aves., and on Oct. 15, the loop at the northern city limits being completed, the service on the new track was extended to the northern city limits, releasing the remaining section of the temporary track. During this period the T.&Y.R.Ry. cars were maintained and repaired at temporary sheds at the northern city limits.

while any machine work necessary was done at the old shops at St. Clair Ave. and Yonge St., the work being brought to and from the shops by motor truck. Operation by the T.&Y.R.R. with the cars furnished by the Transportation Commission on the new double track line was continued till Nov. 2, when the Transportation Commission took over the new line, and when a celebration to mark the introduction of the city street car system into North Toronto was held. Four motor cars with trailers were run down Yonge St. to Front St., the first train, in charge of J. McCulloch, Traffic Superintendent, Toronto Transportation Commission, carrying a band, and members of the North Toronto Ratepayers' Association, the second train, consisting of an old type motor car and trailer, introduced into the celebration to emphasize the remarkable strides made in equipment construction, carrying Toronto Transportation and City and Provincial Hydro-Electric Power Commission officials, the third carrying other members of the North Toronto Ratepayers' Association, and the fourth carrying members of the North Toronto Business Men's Association. The trains were turned by the Scott St. loop, and then proceeded north on Yonge St., through the new Eglinton car house yard, around the loop at the north city limits, and back to the North Toronto town hall, where speeches were made by numerous civic officials. H. H. Couzens, General Manager, Toronto Transportation Commission, and D. W. Harvey, Assistant Manager, were greeted with enthusiasm, and Mr. Couzens, in a short speech, paid a tribute to the efficiency of the Commission's staff, which had made possible the work's rapid completion. Other participants in the celebration included Sir Adam Beck, Chairman, and F. A. Gaby, Chief Engineer, Hydro-Electric Power Commission of Ontario; P. W. Ellis, Chairman, and Geo. Wright, member, Toronto Transportation Commission; other Transportation Commission officials, and many civic officials and aldermen. In speeches made, the Transportation Commission was highly praised for the efficient work done by the officers and staff in charge of the work, under the direction of A. T. Spencer, Engineer of Way; A. E. Gibson, Construction Engineer; J. Neild, Electrical Engineer; and C. E. Schwenger, Engineer of Distribution. It was also emphatically evident that North Toronto citizens thoroughly appreciated the advantages which will accrue to their part of the city through the advent of efficient street railway transportation, providing a non-transfer service between the north and south city limits.

Fort William Municipal Railway Matters.

The report of G. L. Guy, of Winnipeg, who was engaged by the Fort William, Ont., Public Utilities Committee to investigate the operations of the electric railway and other departments having charge of public utilities, has come before the city council. A press report states that it advises that all the public utilities be placed under one management; that the railway staff be reduced in several departments, and that the overhead wire maintenance be transferred to the telephone department, and sundry other changes made. The report adds that the council, acting on this recommendation, has asked A. L. Farquharson, Manager of the railway for his resignation, and has voted him three months' salary.

Cars for Montreal and Southern Counties Railway.

The Montreal & Southern Counties Ry. has had 2 motor cars and 2 trailers built for interurban service, the principal dimensions being as follows:—

Length over corner posts.....	43 ft. 1 in.
Length over vestibule.....	53 ft. 8 in.
Length over all, about.....	56 ft.
Distance between bolsters.....	30 ft. 8 in.
Width over eaves.....	8 ft. 6 in.
Width over side sills.....	8 ft. 4 in.
Height of top of rail to top of roof.....	12 ft. 8 1/2 in.
Normal seating capacity.....	60

The car sides are straight, and sheeted vertically with poplar sheeting; the roof is of monitor type, with ventilating deck sash, operated by utility ventilator, and glazed with opalescent glass. The side sash are of mahogany, the top sash are stationary, and extend over 2 window

panatase curtains. There are twelve polished bronze parcel racks, one being placed between each 2 seats.

The car is heated by a hot air heater, located at front end of smoking compartment. There is a toilet lavatory room at front end of main compartment, equipped with standard dry hopper closet, also 5-gall. water cooler, with faucet in an alcove reached from main aisle of car. The headlining is agasote painted green. The seats are cross-over. Each vestibule door is equipped with a steel trapdoor, to cover step opening when the door is closed. These trapdoors are hinged to the bottom of the vestibule door and held up with a spring latch when the door is opened. All vestibule doors are equip-

Interurban Car, Montreal & Southern Counties Railway.

openings, and are glazed with opalescent glass, set in lead cathedral design. All body side windows are equipped with wire screens of no. 12 gauge wire. The cars are built on a special, light weight, all steel underframe, of through platform type. The side sills are of 5 x 3 1/2 in. at 11.6 lb. The center sills are of 10 in. channel at 20 lb., continuous from bumper to bumper; the knees and bumpers are of 6 in. channel, the headstocks are built up of plates and angles, the bolsters are built steel castings; the body is strengthened up of pressed steel sections, plates, and with both top and bottom cross rods, and is also stiffened laterally by diagonal bracing in the underframe. There is also an antechamber spring buffer at each end of car, to take any small collisions. The floors are of Georgia pine, laid double, with heavy felt between. The body side framing is of light and strong construction.

The interior of the car is finished in Mexican mahogany, full finish. All metal trimmings are of the builder's standard reversible type, upholstered and lacquered. The seats are M. & S. C. R. standard reversible type, upholstered in green pegamoid. The side windows are equipped with national single cam sash locks and national compression cam antirattlers; also national spring plug rollers and

ped with the builder's standard hold-backs.

The cars are mounted on trucks with steel wheels, and are equipped with a Westinghouse quadruple 306 CV motor equipment with controls, with train line receptacles at each end for train operator. The cars are equipped with 2 trolleys on Ohio Brass Co. trolley bases, also O.B. trolley retrievers. The air brakes are Westinghouse type A.M.M., with supplementary reservoirs and governor synchronizing system, arranged for trolley circuit. The cars are equipped with Westinghouse electric pneumatic signal system, pneumatic sanders, luminous are headlights, strong locomotive type pilots, also steel snow scrapers; also Tomlinson automatic car and air couplers. The cars are painted green and lettered in gold.

Owing to the limitation in weight, due to the Victoria Bridge, over which these cars are to operate, they had to be built as light as possible consistent with strength. The weight, completely equipped, is 61,000 lb. They were built by Ottawa Car Manufacturing Co., Ottawa.

The Detroit, Mich. Municipal Street Railway, and its employees, are reported to have agreed to a new wage scale of \$5 for an 8-hour day, and holidays with pay.

Canadian Electric Railway Association's Activities.

The Canadian Electric Railway Association's executive committee met in Chicago, during the American Electric Railway Association's recent annual convention, those present being Major F. D. Burpee, Manager, Ottawa Electric Ry., President; G. Gordon Gale, Vice President and General Manager, Hull Electric Ry., immediate Past President; D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; R. M. Reade, Superintendent, City Division, Quebec Railway, Light & Power Co., and the Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry.

A number of accounts were passed for payment, most of which were incurred in connection with the annual meeting in Quebec in June. While that meeting cost considerably more than previous annual meetings, it was felt that it had been a great success and most instructive and useful to those who attended.

The question as to how the Association could be made more valuable to member companies, and how the importance of each company sending one or more representatives to each annual meeting, was very fully discussed, and action will be taken in these directions. Considerable other routine business was transacted.

As, in addition to the members of the executive committee, there were a number of other officials of member companies, and also associate members at Chicago, a general meeting of the Association was then held.

The President referred to the great success of the last annual meeting at Quebec, as far as the papers and discussions following them were concerned, and which had been most instructive, and also the excellent exhibit of railway appliances and supplies, but regretted that more representatives of electric railway companies did not attend. He emphasized the value of the Association to the industry in Canada, and urged upon member companies the importance of sending as many representatives as possible to the annual meeting. He stated that as most of the Canadian companies are also members of the American Electric Railway Association, a duplication of work will be avoided, as Canadian members of the American Association can avail themselves of the large amount of data constantly being collected by that Association, and that the Canadian Association should devote its activities particularly to problems that are peculiarly Canadian.

The President suggested the appointment of standing committees on public relations, on standards, and on safety, and stated that the following had been added to their lists of members as published in Canadian Railway and Marine World for October, pg. 532, viz: Standard committee, J. T. C. O'Connor, Wainhouse Co.; W. G. Gordon, Canadian General Electric Co.; Hugh Millar, Lyman Tube & Supply Co.; Safety committee, Jas. Lighthby, Publicity Agent, British Columbia Electric Ry.

The President suggested the appointment of a special committee, to report on the advisability of recommending to the Dominion Government certain changes that are desirable in the classification of electric railway accounts, and on the proper accounting of maintenance, and depreciation of street railway properties. He pointed out that this sugges-

tion followed the paper by L. A. Herdt, D.Sc., E.E., and G. Burr, read at the Quebec meeting, and it was decided to ask A. E. Weyman, Manager, Lewis County Ry., who led the discussion on that paper, to act as chairman of the committee and proceed with its formation.

It was reported that the following had been asked to watch electric railway interests in regard to legislation, etc., at the Dominion and Provincial capitals, as follows:—Dominion, F. D. Burpee, Ottawa; Nova Scotia, W. L. Weston, Halifax; New Brunswick, J. A. Olive, St. John; Quebec, W. J. Lynch, Quebec; Ontario, C. L. Wilson, Toronto; Manitoba, E. Anderson, K.C., Winnipeg; Saskatchewan, D. W. Houston, Regina; Alberta,

railways in handling the large and small Canadian 5c and 1c coins, and suggested that the Association ask the Finance Minister to recall the small 5c coins and the large 1c coins. G. Gordon Gale, Hull, reported that last year he saw Sir Henry Drayton, then Minister of Finance, and had been informed that it was not the Government's intention to recall the coins referred to. President Burpee reported having had an interview this year with the Deputy Minister of Finance, with the same result. It was decided to write the Finance Department asking that the coins objected to be recalled, and to endeavor to secure the co-operation of the Canadian Bankers Association.

The question of securing a greater attendance at the Association's annual meetings, by having every member company represented, was fully discussed, and the matter will be dealt with at the next executive meeting.

The Toronto Transportation Commission, having invited the Association to hold its next annual meeting in Toronto, it was decided to hold it there next summer. It was also decided that, as many of the C.E.R.A. members attend the A.E.R.A. annual convention in the United States, a general meeting of the Canadian Association be held each year, at the same time and place as the American Association's Convention.

Ottawa Electric Railway Franchise Negotiations.

At a meeting of the Ottawa City Council, Nov. 7, accounts of \$4,028 and \$2,199 from R. M. Fuestel, of Fort Wayne, Ind., were submitted for services rendered in connection with the Ottawa Electric Ry. Co.'s franchise negotiations which a special committee of the council has been conducting since the beginning of the year.

Mayor Plant explained that the city had reached a deadlock in the negotiations where only Mr. Fuestel's approval was needed to the latest proposals. After this was secured the draft of the new agreement would be submitted to council. There would then be a plebiscite taken on the agreement at the next civic elections as the Municipal Act did not permit two votes or plebiscites dealing with similar matters in any one year. At the civic elections last year the people gave a majority for renewal of the franchise. A short time ago it was announced that possibly a vote would be taken on the new franchise in November, but this could not be done legally. The Mayor promised that copies of the proposed agreement would be distributed long enough before the voting to enable it to be thoroughly discussed.

An Ottawa press dispatch of Nov. 17 says that the company has offered to sell the city its entire system, with all property and assets, including water lots, for \$4,500,000 or to accept a price to be fixed by arbitration. The offer is subject to acceptance by Nov. 31. T. Ahearn, President and one of the founders of the company, replying to the committee which has been negotiating with the company in behalf of the city, states that no fixed 5c fare contract, as asked by the city, could be entered into, as it might mean bankruptcy for the company. Ottawa's fare at present is 8c, with reduced fares on Sunday and during limited hours.

Canadian Electric Railway Association.

Honorary President, E. A. Robert, President, Montreal Tramways Co., and Quebec Ry., Light, Heat & Power Co.
Honorary Vice President, Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co.

Honorary Council, Thos. Abrams, President, Ottawa Electric Ry.; Acton Burrows, Proprietor, Canadian Railway and Marine World; Geo. Kidd, General Manager, British Columbia Electric Ry.; Lt.-Col. J. E. Hutcheon, General Manager, Montreal Tramways Co., and director, Quebec Ry., Light, Heat & Power Co.

President, Major F. D. Burpee, Manager and director, Ottawa Electric Ry.
Vice President, H. H. Couzens, General Manager, Toronto Transportation Commission.

Executive Committee. The President, the Vice President, the immediate past President (G. Gordon Gale), Vice President and General Manager, Hull Electric Co., and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; E. F. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; D. W. Houston, Superintendent, Regina Municipal Ry.; A. W. McLmont, Vice President and General Manager, Winnipeg Electric Ry.; R. Mayne-Reade, Superintendent, Quebec Railway, Light & Power Co.; W. R. Robertson, General Superintendent, Ottawa Hydro-Electric Power Commission of Ontario; W. L. Weston, Manager, Nova Scotia Tramways & Power Co.; H. E. Weyman, Manager, Lewis County Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.
Treasurer, W. S. Hart, Managing Director, Three Rivers Traction Co.
Auditor, Lt.-Col. G. C. Royce, General Manager, Toronto Street Railway Co.
Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry., Ottawa, Ont.
Publicity Agent, Canadian Railway and Marine World, Toronto.

M. Freeman, Lethbridge; British Columbia, V. Laursen, Vancouver.

The President urged representatives of member companies to use the Association's office freely for obtaining information. The Association has a large amount of valuable data on file, and if information required is not on file, a questionnaire will be issued, and the general practice in the Canadian field ascertained. The American Electric Railway Association has appointed a committee to create and foster co-operation between electric railway associations by the interchange of circulars, data sheets, etc. The Canadian Association has been asked to nominate a committee on the committee, and he recommended that this be done, and urged as complete co-operation as possible with all other associations dealing with matters of general interest to electric railway officials.

R. M. Reade, Quebec, mentioned the difficulties being encountered by street

The Toronto Transportation Commission's Work.

The Toronto Transportation Commission is now engaged on the last of the large track rehabilitation and extension undertakings on the 1922 programme, viz. the rehabilitation of the track on Bloor St., between Spadina Ave. and Avenue Road, and between Yonge and Church Sts., and the construction of a double track line on Kingston Road from Queen St. to Victoria Park Ave., at the eastern city limits. The work on Bloor St. between Spadina Ave. and Avenue Road involves the rehabilitation of 2594 ft. of double track, type 122-S-G construction being used. Work was commenced Oct. 30. Temporary tracks were laid on each side of the permanent right of way, the street being closed to vehicular traffic, and street cars are using the temporary tracks while the rehabilitation work is progressing. Excavation was done by steam shovel and the stone foundation laid in the usual manner. At the time of writing (Nov. 17) the work is well on the way to completion. On Bloor St., between Yonge and Church Sts., where 1010 ft. of double track is being rehabilitated, the work is being done under traffic, and as a consequence steam shovel excavation was impossible. Type 122-S-G construction is being used here also. Work was commenced Oct. 31, and at the time of writing good progress is being made. A great deal of discussion in civic official circles relative to the proposed widening of a section of Bloor St., one of the city's chief east and west arteries, resulted in a decision to widen the street to 86 ft. within the next 3 1/2 years. The Commission is laying its new tracks in the same place occupied by the old, however, it not being practicable to lay the tracks to conform to the position they will occupy when the street is widened. The track will be moved over at the city's expense after the street is widened.

On Kingston Road, between Queen St. and Victoria Park Ave., 9,392 ft. of double track are being laid. The Toronto and York Radial Ry.'s Scarborough Division line, which operates on Kingston Road from Queen St. easterly, is providing service while construction of the new double track line is progressing. As the radial line is located at the north side of the road, while the new double track line is to occupy the center, no shifting of the radial line was required, except at a few points where it had to be moved slightly farther north to allow excavation to proceed. Work on the new line was commenced, Oct. 26, and the excavation done by steam shovel in the usual manner, was completed Nov. 9. At many points extra excavation was undertaken to bring the new rail level down considerably below the existing grade. Type 122-C-G construction is being used. As the laying of the concrete slab foundation has been kept right up to the excavation, it is likely that the completion of having the work completed early in December will be realized. By arrangement with the City Works Department, the Commission did the excavating necessary to bring the entire street grade down to that of the new rail level. In view of the city postponing roadwork paving on Kingston Road until 1923, it is likely that vehicular traffic on Kingston Road will interfere to some extent with street car operation during the winter, and chiefly for that reason the Commission will not inaugurate a through car ser-

vice from the eastern city limits to city's downtown section via Kingston Road, as any delay at the eastern end would disrupt schedules over the whole route. A shuttle service between Queen St. and Victoria Park Ave. will be provided for the time being.

Yonge St. Work. As stated in the article in this issue dealing with the work on upper Yonge St., the track extension has been completed and the Commission's large new double track cars are furnishing a through service from the northern city limits to the downtown section.

Loop for Kingston Road Line. To provide for turning cars at the eastern city limit terminus of the new Kingston Road line, the Commission proposed the construction of a loop running north on Victoria Park Ave. from Kingston Road, thence west to Bingham Ave., and south on Bingham Ave. to Kingston Road, thus enclosing several houses and stores. Residents of the district objected, and proposed a loop to the south of Kingston Road. A deputation interviewed Chairman Ellis of the Transportation Commission with a view to having the loop's location changed, but the proposed change was not considered advisable. As a result, representations were made to the Ontario Railway and Municipal Board, which issued instructions to the Commission to withhold work on the loop until a hearing, scheduled for the near future, has been held on the matter and a decision rendered by the Board.

Interchange Facilities at North City Limits. The Commission and the Toronto and York Radial Ry., Metropolitan Division management, have undertaken the construction of a covered interchange platform for the convenience of passengers transferring from Commission cars to radial cars, or vice versa, at the north city limits, the cost to be borne jointly. A concrete platform is being provided with a canopy roof extending about two-thirds its length, and construction is proceeding. The Commission is building the platform with its own forces, while the roof superstructure has been contracted for.

Elimination of Stops on Yonge St. With a view of speeding up the service on Yonge St., on which cars are now running from downtown to the north city limits, the car stop schedule has been radically revised. Originally, on the round trip from Woodlawn Ave. to the union station, 6.34 miles, there were 66 stops, and 4 of these have been eliminated. On the original route from Deloraine Ave. to the union station, part of which was over the southern end of the Toronto and York Radial Ry. Metropolitan Division, there were 114 stops, in the round trip of which 14 have been eliminated. The round trip distance in this case is 13.68 miles. All posts for the new stops have been arranged, the change being effective Nov. 2. While the change has resulted in slightly increased walks for some patrons, the resulting speeding up of the service proved to be in the general public's interest.

Eglinton Car House.—This large new car house, described and illustrated in Canadian Railway and Marine World for November, is rapidly nearing completion, all work being up to schedule. Wells & Gray, Toronto, are the general contractors.

West Toronto Transportation Situation.

—There has been a great deal of agitation in West Toronto concerning alleged inadequate transportation facilities. The Transportation Commission's lines terminate at the intersection of Keele and Dundas streets, from where further west-bound service is furnished by the Toronto Suburban Ry. Some time ago the citizens voted to have the city acquire that company's system, including the lines to Guelph and Woodbridge, from the Dominion Government, the portion outside the city to be operated by the Hydro Electric Power Commission of Ontario and the portion within the city to be operated by the city. In the event of the city obtaining control of that portion in the city, it would be handed over to the Transportation Commission for rehabilitation and operation, but it is evident that the Commission will not be able to conduct the service to the extreme western part of the city until the Toronto Suburban Ry. acquisition question is settled.

Delivery of Coal by Flat Cars.—Due to the threatened coal shortage, the city authorities bought a large tonnage of Welsh anthracite for re-sale to the public. Transportation Commission flat cars have been used to transport this coal to the various city yards, at a charge equal to that usually charged by the Commission for transportation of heavy materials on its lines.

The Rail Hardening Work, which was described in Canadian Railway and Marine World for November, is being gone ahead with on different sections of the Commission's lines. Both light and heavy rails are being treated. About a mile of track will be done this year, and if results are as satisfactory as anticipated, the process will be used more extensively in 1923.

Main St. Car Service.—A car service is now being furnished on Main St., the cars running over the bridge over the G.T.R. tracks on the line laid by the Commission last spring. Operation is being carried on under a Board of Railway Commissioners' order, which granted the Commission permission to operate, pending the Board's decision as to what part of the bridge the cost the Commission should bear. When the Commission laid its tracks over the bridge, the G.T.R. claimed that the Commission thereby made itself liable for a part of the bridge construction cost.

General.—With the completion of the Eglinton car house, the track extension on Kingston Road, and the two rehabilitation jobs under way on Bloor St., the Commission's construction programme for 1922 will have been completed, and track work in the future will be largely restricted to the usual maintenance necessary. The extra forces have been considerably reduced lately, and further reduction early in December is in prospect.

Montreal Tramways Co. is adding 2 stories to its head office building at the corner of Craig St. and Place d'Armes Hill. The addition is expected to be completed by May 1, 1923, when the departments now located in the Royal Trust building will be transferred. The present building, which is 6 stories high on the Craig St. front, was built in 1894, and is connected with the Royal Trust Building by a bridge, which will be removed when the addition is completed.

Winnipeg Electric Railway Franchise Negotiations.

The negotiations which have been in progress during the year between a special committee of the Winnipeg City Council and the Winnipeg Electric Ry. Co. with respect to that company's franchise were brought to a conclusion at the end of October, and the committee's report was submitted to the city council, at a special meeting on Nov. 2. The report signed by Aldermen Sparling, Leonard, Shore and Douglas, recommended the extension of the franchise for 10 years, from 1923 to 1932; a reduction of fares from 1923 to 1926, with a maximum and a minimum rate to control the fare fixable by arbitration after that date, with findings on a number of other matters which had been under discussion, the bylaw comprising the agreement to be made, to be submitted for approval to municipal voters. After the opening of the meeting a question was raised as to whether the council should do anything at all, and a motion to adjourn was negatived by 6 to 1. The report was then received and read and a motion submitted to consider it clause by clause. This was met by an amendment to postpone its consideration until Jan. 1926, which was defeated by 12 to 5. Some further discussion resulted in the passing of a resolution by 9 to 6 to submit the bylaw, when approved by council, to electors entitled to a vote on money bylaws. The Council held another special meeting, Nov. 7, to consider the bylaw and after a lengthy discussion it was given a first reading by 11 to 6. Following is a summary of the bylaw:—

The text states that it is a bylaw to submit to the electors qualified to vote thereon, the matter of entering into an agreement with the Winnipeg Electric Ry. Co. to operate the street railway system, the first date on which the city can acquire the company's street railway system. The main objects of the agreement outlined in the bylaw are, in addition to postponement of the date when the city may take over the system, as follows:—To give the city some control over repairing and remodelling of road beds and rails. To provide for a reduction of fares with a view to reverting to the fares under bylaw 543. To definitely fix the value of the property in respect of which a reasonable return should be given to the company by way of fares. To provide for the segregation and the separation of the accounts of the transportation utility of the company. To give the city power to have the company's books audited. To fix a minimum rate at which the traction utility should purchase its power from the company's power producing utility, or its subsidiary companies. To provide that the city's agents may inspect the company's motors and electrical devices. To give the city option to purchase the company's franchise and the property in adjacent and contiguous municipalities, and improvements in respect of its trolley wires; for the company's payment to the city of a proportion of the cost of constructing or enlarging subways and bridges in the city; for the payment by the company to the city of the amount

due for damages by electrolysis, and for inspection of and improvements in measures for mitigating electrolysis; for the continuance by the city and the company of the joint pole agreement and the application thereof to wires in lanes; also to provide for removal of wires from streets and placing them in lanes in residential districts; for the grounding of secondaries and other safety measures in connection with the reduction of voltage; for a progressive scheme of placing by the city and the company of wires underground and removal of wires from the streets in areas where wires are placed underground; for the remodelling of the company's rolling stock; for the taking over of the company's system, in default (after notice to remedy) of certain of the provisions of the agreements, or instead of taking over, that the default may be remedied by the appointment of a receiver with power to collect the revenue of the company and remedy the default; for the fixing and settling of what property the city should take over in acquiring the system, and the means of arriving at the value thereof. That the city shall not be bound by any agreement entered into by the company, or any guarantee given by the company; that in the event of the city's declining to acquire the property, it might enter and take possession and collect the revenue thereof before the value will have been ascertained or paid; for the creation of a fund of \$1,250,000, as security for payment of overdue taxes, payment changes and damages by electrolysis and providing a working capital for carrying out other terms of the agreement.

Making definite certain provisions of bylaw 543 relating to the public utility of the city. Providing again that the Public Utilities Commission having any jurisdiction over the matters involved in the agreement. Providing that the agreement shall not assignable without the city's consent.

Electric Railway Passenger Fares.

British Columbia Electric Ry.—The Board of Railway Commissioners has ordered he Vancouver, Fraser Valley & Southern Ry., British Columbia Electric Ry. Co.'s subsidiary, to reduce the fare on the portion of its Burnaby Lake line within the City of Vancouver, to 6c, the same rate the B. C. E. Ry. Co. charges on its city lines. Details of the hearing of the application for this reduction were given in the Canadian Railway and Marine World for November, pg. 580.

Edmonton Radial Ry.—A press report states that the Deputy Minister of Education for Alberta, has taken up with Edmonton City Council the question of fares for students attending the Normal College. At present the students pay \$2.50 for a monthly book of tickets, and a reduction has been asked. The city claims that it cannot make any distinction between normal and university, or other students, and that the province should pay the difference between the present rate charged students and any reduction that it desired. There are about 250 students in attendance at the Normal School for 8 months in the year.

Guelph Radial Ry.—We are officially advised that the Hydro Electric Power Commission of Ontario, which is operating this railway for the city, put in operation, Nov. 1, the following increased schedule of fares: Cash, 6c, with 20 tick-

ets for \$1; children, half-fare. The fares previously in force were: Cash, 5c; 21 tickets for \$1.

The Ontario Legislature, in 1921, passed an act relating to the city, which, among other things, authorized the Guelph Radial Ry. to charge fares up to, but not exceeding the following: Cash fare 7c; tickets, 4 for 25c; fares between 11 p.m. and 5 a.m. to be double the ordinary maximum single fares.

Ontario Hydro Electric Ry.—Essex Division.—We are officially advised that the following fares were put in operation in Windsor, Ont., on Nov. 1: Cash fare, 6c; 6 tickets for 35c, 20 tickets for \$1; free transfers between trackless trolleys and street cars. The fares formerly in force were: Cash, 5c, 20 tickets for \$1, and a 1c transfer fee between trackless trolleys and street cars. No change has been made in school children's fares, which are as follows: Under 12 years, half fare; school children's book of 60 tickets, \$1.50; children under 18 years of age (restricted hours), book of 48 tickets, \$1.50.

In connection with this increase, it was reported, Oct. 30, that if the fares were increased, steps would be taken by Windsor City Council to withdraw from the agreement with the Hydro Electric Power Commission of Ontario for the operation of the railway. On Nov. 3, the city council's transportation committee was reported to have passed a resolution recommending the council to ask the Ontario Government "to give the Municipal Street Railway Act its third reading." It is stated that under this measure the city could apply to the Government for permission to run its own street cars. There is decidedly some misunderstanding about this matter as the Municipal Electric Railway Act was attended to on June 13, and according to sec. 31, went into operation on that day. Sub sec. a, sec. 3, provides that the Hydro Electric Railway Act of 1914, and amendments made therein, shall, in so far as they apply, remain in full force and effect with respect to the maintenance and operation of the Sandwich, Windsor and Amherstburg Ry. and the Windsor and Tecumseh Ry., acquired and operated by the Commission for certain municipal corporations under contracts confirmed by the Hydro Electric Railway Act of 1920, secs. 8 and 9.

Sir Adam Beck is reported to have said that he did not think the city council's threat to withdraw was a true expression of public feeling on the matter, but if the border cities were to agree on secession the Hydro Electric Power Commission of Ontario would accede to their request without opposition. He added that the new schedule of fares does not provide for any real increase except in the case of transient users who pay the cash fare.

Electric Railway Employees' Wages, Working Conditions, Etc.

Cape Breton Electric Co.—A press report states that the company has put in effect, voluntarily, on Nov. 1, an increase of wages for its motormen, conductors and other employees, amounting to from 10c to 15c a day.

Montreal Tramways Co.—An alderman submitted to the Montreal City Council, recently, a motion calling for the provision of a pension fund for the Montreal Tramways Co.'s employees, at the company's sole expense. Consideration was laid over for a future meeting.

British Columbia Electric Railway's Agreement with City of Vancouver.

After prolonged negotiations, a new agreement has been made between the British Columbia Electric Ry. Co. and the City of Vancouver. It amends the existing franchise, dated 1901, in several important respects, especially in providing for the continuance of the 6c fare, and for new motor bus routes. It provides for a reduction in lighting rates within the city limits from 6c to 5c a kilowatt hour.

The 6c fare charged in Vancouver has been the subject of negotiation and temporary measure for three and a half years. The last permit was due to expire on Dec. 15, by which time the city was to make a new agreement, or the B.C. Government to form a board of some nature to adjudicate the matter. This is not the first time recently that a new franchise has been proposed. On two former occasions the city council failed to come to any agreement, and it was believed that no agreement could be made suitable to it. To the last, some members were inclined to submit the agreement to the voters, but a declaration by the company that it would withdraw its concessions, deterred them.

The B.C. Government has announced its intention to pass an act providing for a board of arbitration to decide passenger rates for the B.C. Electric Ry. Co., but the new agreement with the city stipulates that both parties shall not apply to such a board to modify the agreement's terms.

The provisions of the new agreement are briefly as follows: The 6c fare within the city is continued for 3 years, at the end of which time it is to be decided by agreement, or, failing that, by arbitration. The domestic lighting rate in Vancouver is to be reduced on Jan. 1, 1923, from 6c to 5c a kilowatt hour. Where transportation is not adequately provided, the company is to operate buses, provided reasonable roadways are available. A unique feature of this proviso is that the city is to contribute towards any deficit in the operation of such lines. The company agrees to stand one-half the deficit on these lines up to \$5,000. The remainder is to be deducted from percentages to be paid to the city out of the gross annual receipts of the system. Only two bus lines are at present proposed and it is likely that under this arrangement the city will carefully scrutinize the possible traffic before ordering the company to provide service. The company is to replace several portions of temporary track with permanent track within a year, the cost being estimated at about \$100,000. Other clauses call for further contributions by the company for the maintenance of pavement between the car tracks. The company is required to provide granite blocks for each side of the rails, to pay the city \$5,000 for maintaining pavements, and construct and maintain the sub-base between the tracks in future permanent construction. Within the next five years the company is to spend \$250,000 in placing overhead light and power wires underground.

As the city of Vancouver is only a small portion of greater Vancouver, with only two-thirds of the population of the greater city, this agreement affects only a part of the city system, but agreements are in existence with the municipalities of South Vancouver, Point Grey

and North Vancouver, and the City of New Westminster which makes fare permissions contemporaneous with those in Vancouver. The commutation fare to the suburbs of Vancouver is 7c and this will therefore remain until amended by the proposed provincial board.

Proposals for Purchase of London Street Railway by the City.

London, Ont., City Council took up on the report of the special transportation commission, which has been considering the whole situation regarding the London Street Ry. Co.'s franchise and other transportation matters, for some months past. The commission submitted a summary of a report by A. E. K. Bunnell, on the London St. Ry. and recommended that the following question be submitted at the municipal elections, Dec. 4: "Are you in favor of acquiring the London St. Ry. under bylaw 916?" The council adopted the recommendation.

Mr. Bunnell's summary of his report states that it is based on estimated requirements of the situation in March, 1925, the date of the expiration of the company's franchise. After reviewing the situation the report makes the following recommendations: That the London Street Ry. Co.'s system be taken over and operated by the city at the expiration of its franchise, March 8, 1925, and that it be operated by a civic commission. That no local transportation services other than those provided by the civic system be allowed.

That upon the acquirement of the system the following extensions be made: On Quebec St. from Dundas St. to Oxford St. On Colborne St. from Dundas St. to Victoria St. On Wellington St. from Dundas St. to York St. On York St. from Wellington St. to Richmond St. On the Hamilton Road, from St. Julien St. to East St.

That track be removed from the following streets: Cheapside St. from Richmond St. to William St. William St. from Cheapside St. to Oxford St. Central Ave. from Richmond St. to Adelaide St. Askin St. from Wortley Road and Elmwood Ave. from Wharmcliffe Road to Ridout St. Nearly all of this track is of light construction and badly worn.

That of the 65 passenger cars owned by the company, 28 be retired from service, being both worn out and obsolete. That of the 35 remaining cars, 30 be converted into safety cars and the other 5 (being large double-truck cars) retained for exclusive service on the Springbank line. That the following cars be bought: 15 one-man safety, seating capacity of each, 32; 16 two-man safety, seating capacity of each, 50; 6 double-truck trailers, seating capacity of each, 50. The trailers to be primarily for the Springbank line.

That all track extensions or track totally rehabilitated be of paved construction. That the city assume the normal cost of construction and maintenance of pavement for the roadway occupied by the railway's track allowance, the railway to assume the additional cost of substructure for the use of the track.

That left-hand turns for vehicular traffic be prohibited during business hours at the intersection of Richmond and Dundas Sts. That future bridges across the river be of sufficient weight and width to carry street car lines in center of the roadway. That wherever possible loops be installed at the termini of lines instead of Y's, or cars with double-end con-

trol be used with cross-overs. That service be increased approximately 35%.

That the fares be: City lines—Adults, cash 5c, 6 tickets for 25c; children, cash, 3c, 10 tickets for 25c. Springbank—Adults, cash 10c, one way; 4 tickets for 25c. Children, cash, 5c, one way; 8 tickets for 25c.

That the question of freight service be made the subject of further consideration. That cars be routed as per detailed recommendations.

The estimated cost of acquiring, rehabilitating and extending the London St. Ry. lines in 1925, on the basis of the above mentioned recommendations, is \$2,600,000.

Rates for Carriage of Mails by Electric Railways.

Canadian Railway and Marine World for October contained the full text of an order in council, passed by the Dominion Government on Sept. 13, fixing rates and regulations for the transportation of mails by steam railways. It is said that electric railways which were not under contract with the Department have also been given the same rates, and if any electric railway companies are not receiving those rates, it would be well for their managements to consider the desirability of applying for them. Even where electric railways were under contract at lower rates, the Post Office Department should be willing to make the same advances to them as have been given to steam railways.

In many cases, where electric railway companies are carrying mails, considerable side service is performed, most of which has undoubtedly been very inadequately paid for, and it seems desirable that each electric railway performing side service, should make a determined effort to obtain the full value for it.

Hydro Electric Power Distribution in St. John, N.B.

The principal question at issue in the municipal elections at St. John, N.B., Nov. 13, had to do with the proposed contract for the distribution in St. John of power from the provincial hydro electric plant at Musquash Falls. This question was an issue at the previous election when the retiring mayor, who favored distribution by a private company for two years, when the city would take it over if the arrangement did not prove satisfactory was defeated, and Mr. McLellan was elected on a public ownership platform. During the period ensuing up to the recent election Mayor McLellan favored a policy looking to the purchase of the New Brunswick Power Co.'s plant and undertaking, rather than the installation of a new civic distribution plant. At the recent election G. F. Fisher opposed Mr. McLellan, on a platform calling for a contract with the New Brunswick Hydro Electric Commission, the installation of a civic distribution plant, and purchase of the New Brunswick Power Co.'s plant, if the company would accept for it within 10 days, \$2,577,655, that being the valuation put on it by the N. B. Supreme Court. Mr. Fisher received 4,304 votes and Mr. McLellan 3,209.

In Vancouver a passenger can ride on an electric railway car 12.38 miles for 7c, and 8.27 miles for 6c. In Toronto a passenger can ride 12 1/4 miles for 7c cash, or a 6c ticket.

Proposed Electric Railway Service from Toronto East.

The question of electric railway development east of Toronto took on a new aspect on Nov. 3, when a deputation representing a number of municipalities along the lake shore east of Toronto waited on J. S. Hungerford, Vice President and General Manager, and G. Ruel, K.C., director and General Counsel, Canadian National Rys., in Toronto, to urge the completion of the Toronto Eastern Ry. and the electrification, in connection therewith, of certain sections of the Canadian Northern Ry., as a means of continuous electric railway from Toronto to Cobourg. The delegation, according to one press report, consisted of heads of the municipal councils of Scarborough, Pickering, East and West Whitchy, Darlington, and Clarke townships; Whitchy, Bowmanville and Oshawa towns, and was introduced by F. H. Richardson, Warden of Ontario County. Another report stated that three of the municipalities named were not represented.

The Reeve of Oshawa, read a lengthy document which had been prepared, and had been assented to by representatives of all the municipalities interested. After reviewing the situation, it said: "We have come to the conclusion that the proper course for us as municipalities to take is to request the Canadian National Rys. to give suburban service to our district. We, therefore, have by resolution approved of giving up the option to purchase the Toronto Eastern Ry. by the municipalities. We have unanimously come to the conclusion that the creating of a suburban service around Toronto by the municipalities can only be established by a trunk line to be operated by the Canadian National, and also by building a trunk line from Port Hope through Toronto and Hamilton to Niagara, to the detriment of the Canadian National Rys., and resulting in keen competition with the Canadian National Rys. by the municipalities, and of incalculable value to the C.P.R."

The delegation suggested that the Canadian National Rys. complete the Toronto Eastern Ry., between Toronto and Bowmanville, connect it with the Canadian Northern Ry. tracks at Orono, and electrify that line between Orono and Cobourg.

The Premier of Ontario, who accompanied the delegation, is reported to have stated that the Government strongly supported the municipalities in their attitude. He felt that it was not right that one form of public ownership should be organized and conducted at great cost to work against the interests of another form of public ownership. The Government took the position that the Canadian National Rys. should be asked to make the necessary improvements east of Toronto.

Mr. Hungerford is reported to have stated that he was glad to be assured that the municipalities were willing to co-operate with the Canadian National Rys. in providing better service. The matter had been considered by the officials, and he was prepared to recommend to the directors that the C.N.R. make the necessary expenditures upon the electrification. The idea, he is reported to have stated, was to extend the Toronto Eastern Ry. either from the present eastern end to a connection with the Canadian Northern Ry. in the Don Valley, or to a connection with the G.T.R., and so run into Toronto.

Mr. Ruel also spoke favorably of the

proposition, and stated he would recommend its adoption by his co-directors.

In connection with this project, residents of Darlington Tp. are reported to have met at Hampton, Nov. 12, and to have passed a resolution protesting against the suggestion to close for traffic, the Canadian Northern Ry. between Cherrywood and Orono.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—A press report states that plans are under consideration for the abandonment of the interurban station at the Granville St. bridge, and the utilization of all the interurban lines in the city as city lines. The city's fire and police committee is reported to have approved of the suggestion. (Nov. pg. 581.)

Cape Breton Electric Co.—A press report states that the company is overhauling its electric railway lines in Sydney and Glace Bay, N.S., and their equipment, and getting everything in first class order for the winter's operations. (Dec., 1921, pg. 660.)

Hamilton St. Ry.—A press report states that the single track T rail line on King St. West, between Dundurn St. and McKittrick bridge, has been taken up, and is being replaced by a double track line, on which new lip rails are being laid. (Aug., pg. 429.)

Levis County Ry.—We are officially advised that a contract has been let to Anglin-Norcross Co. for the construction of a fireproof car house and shops at an estimated cost of \$50,000. They are to be located at Point Levis, on the low level line, about a mile from Levis ferry, and are to be built of a combination of steel, brick and concrete. (Nov., pg. 581.)

Ontario Hydro Electric Rys.—Essex Division.—A press report states that approval has been given to a proposal to remove the tracks to the center of Ottawa St., Riverside, Ont., and tenders for doing the work, as well as for the necessary paving, will be asked for next spring. This is a part of the works of betterment proposed to be carried out, as stated in Canadian Railway and Marine World for July, pg. 375, for which the approval of the municipalities was being asked by the Hydro Electric Power Commission of Ontario. (Sept., pg. 479.)

Port Arthur Civic Ry.—The Port Arthur, Ont., Public Utilities Commission is reported to have authorized the manager of the Civic Ry. to proceed with an arrangement with the Canadian Resources Development Co. relative to the short piece of electric railway connecting the city's lines with the Country Club. The C. R. D. Co. is, it is reported, anxious to abandon the line.

Quebec Ry., Light & Power Co.—The question of the betterment of the company's lines in Quebec City is reported to be under consideration, and it is said are being made, but it is not expected that they will be announced for some little time. (Oct., pg. 535.)

Waterloo-Wellington Ry.—A press report states that the Waterloo-Wellington Ry. Co. has applied to Kitchener, Ont., City Council for a renewal of its franchise in that city, or that the city purchase the line. The original company, the Berlin and Bridgeport Ry. Co. built an electric railway between those two places, the city granting a 25 years franchise, which has expired, and an exten-

sion to Feb. 1923, was granted. The present company has a charter to extend its line to Guelph, and it is stated that construction on that line will be proceeded with if the franchise extension is granted by Kitchener City Council. W. H. Breithaupt is President. (Aug., pg. 429.)

Motor Omnibus Notes.

F. Breaux, owner of the Grey Bus Line operating in Moncton, N.B., is reported to have ordered a new 20 passenger bus to add to those now on the route, and to have stated that the buses will be operated throughout the winter.

The Blue Bird Transit Co., Ltd., operating motor buses on the Toronto-Hamilton highway has assigned, and a meeting of creditors was called for Nov. '29, at Hamilton. It is stated that the buses operated by the company have been seized under liens.

The United Lines is reported to have amalgamated or co-ordinated the various bus line services operated in the vicinity of Hamilton, Ont., and to have arranged for the opening up of additional lines. The directors are:—President, M. B. Morden; Vice President, W. J. Hamilton; Secretary Treasurer, C. R. Brown; other directors, R. M. McCulloch, R. T. Kelley, W. H. Fenton, Niagara Falls, Ont., proprietor of the Red Bus Line. A suit was sued by R. Daybell, to recover \$3,000 damages for injuries sustained by being knocked off the running board of his car, by one of the defendant's buses, at Niagara Falls, Dec. 30, 1921. The jury found for the plaintiff and fixed the damages at \$1,500 for which judgment with costs was entered.

The Saanich, Vancouver, B.C., municipal council received a petition recently from the Lake Hill area for the establishment of a municipal motor bus service. It stated that the jitney service was inadequate, dangerous and uncomfortable, and that a privately owned motor bus line had given up business owing to lack of encouragement by the council. In the discussion it was pointed out that the council had no power to compel jitneys to run on schedule time. The council amended the jitney bylaw so as to permit of the operation of three additional vehicles on the route. The jitney men charge 10c for the trip, while the private bus line charged 6c.

Toronto and York Radial Railway Ownership Changed.

In connection with the Toronto "clean up" deal, the Toronto & York Radial Ry. lines have passed under the Hydro Electric Power Commission of Ontario's control, and are now known as the Hydro Electric Ry. of the Toronto & York Division, and are under the jurisdiction of W. R. Robertson, General Superintendent of Railways, Hydro Electric Power Commission. Sir Wm. Mackenzie, heretofore President, and W. H. Moore, heretofore General Manager, T.&Y.R.Ry. have resigned, but no changes in officials have been made in the meantime. C. L. Wilson continuing as Assistant Manager, and F. S. Livingstone as Traffic Manager.

T.&Y.R.Ry. cars on the Metropolitan Division, have ceased to run within the city limits, their new southern terminus being at the northern city limits, and the service on Yonge St. within the city is performed by the Toronto Transportation Commission. No changes have been made on the Mimico and Scarborough Divisions.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry., and allied companies—

	3 mos. to Sept. 30, 1921	3 mos. to Sept. 30, 1922
Gross	\$326,605	\$445,185
Expenses	\$383,899	\$341,637
Net	\$142,706	\$203,548

Cape Breton Electric Co.

	12 mos. to Sept. 30, 1921	12 mos. to Sept. 30, 1922
Gross	\$52,299	\$62,232
Expenses	\$87,665	\$105,650
Net	\$13,534	\$16,582
Interest	5,731	5,731
Balance	7,803	5,961

Nova Scotia Tramways and Power Co.

A press report states that the gross earnings for September were \$105,973; operating expenses, \$87,683; taxes, \$8,848, leaving net earnings of \$29,442, to meet bond interest of \$17,221, after which there was a balance of \$12,221, against a deficit of \$20,636 for Sept. 1921. The percentage of operating costs to gross earnings, which was 82.85 in Sept. 1921, was reduced to 64.03 this year.

Gross earnings for the 9 months ended Sept. 30, were \$1,039,338; operating expenses \$723,653; taxes \$82,761, bond interest \$155,558, leaving a net balance of \$77,360 against a loss of \$58,009 for the corresponding 9 months of 1921.

Ottawa Electric Ry. Co.—County Judge Mulligan, gave judgment recently on the company's appeal against the city court of revision's decision confirming an assessment on the company's property of \$141,188 for business tax. In 1893 the city and the company entered into an agreement whereby the latter was exempted from municipal taxation. In 1904 the Ontario Legislature passed an act reducing a business tax of 25% of the assessed value of the land of any person or company carrying on a tramway or street railway business, but the city did not act on this, until this year. The court of revision confirmed the city assessor's action, but Judge Mulligan has held that the agreement gave the company exemption from taxation, and decided that the business tax authorized in 1904, could not be enforced against the company. It is said that the city will appeal to the Ontario Railway and Municipal Board.

The Toronto Ry. Co. gave notice Nov. 6, that payment of principal would be made on its 4½% bonds, due Aug. 31, 1921, together with interest at 6% a year, from that date until date of presentation at the Bank of Commerce, Toronto, for redemption. The bonds will be received for redemption with interest to Feb. 28, 1923, when interest will cease.

Winnipeg Electric Railway—

	10 mos. to Oct. 31, 1921	10 mos. to Oct. 31, 1922
Gross	\$459,906	\$441,315
Expenses	\$317,980	\$244,152
Net	\$141,926	\$197,163
Fixed charges	77,556	44,173
Surplus	64,372	72,873

The surplus for October shows an increase of approximately \$6,700 over Sept., 1922, and a decrease of approximately \$9,000, compared with Oct., 1921, which decrease is due to conditions, viz.: a decrease in the railway's gross revenue on account of a decrease in daily receipts due to unusual good weather throughout the month, passengers walking or using automobiles instead of using the cars, and also to the generally prevailing poor business conditions as experienced in other cities. The gross earn-

ings of the electric utility show an increase of approximately \$23,000 over Oct., 1921, due to a continued building up and expansion of the light and power load. The operating expenses on both utilities show an increase over Oct., 1921, those for the railway being due to extraordinary maintenance repairs in track and roadway, a general overhauling of the passenger equipment, and an increase in the cost of power due to steam power production on account of power shortage. The increase in operating expenses of the electric utility was also due to extraordinary maintenance and increased cost of power. The result, as a whole, shows that while there was a decrease for October, as compared with Oct., 1921, had operations been conducted under normal conditions, or conditions that prevailed during 1921, the net results for the month would have shown a very substantial increase.

Toronto Suburban Railway's Purchase.

Toronto City Council has passed a by-law approving the agreement between the Hydro Electric Power Commission of Ontario and the city respecting the purchase of the Toronto Suburban Ry. from the Canadian National Ry. The agreement which is a schedule to the Toronto Suburban Ry. Act of 1922, provides for the purchase of the company's shares and securities or property, by the Hydro Electric Power Commission of Ontario on behalf of the city by taking over the company's bond issue, for the transfer to the city of the portions of the company's lines within the city on the city issuing and delivering to the Commission \$202,800 of debentures. The city agrees with the commission to issue \$2,778,000 of debentures for the purchase and equipment of the railway. The commission agrees to operate the lines outside the city limits on behalf of the city, the latter to be responsible for meeting any loss on operation, and any surplus over operating charges to be used for the betterment of the lines, or paid over to the city at the commission's option. The agreements to run for 50 years.

Mainly About Electric Railway People.

C. C. Curtis, General Manager, Cape Breton Electric Co. addressed the Sydney, N.S. Academy students recently on the advantages of a good education.

M. M. Inglis, Manager, Port Arthur, Ont., Civic Ry. has been authorized by the Port Arthur Public Utilities Committee to change the cars into one-man cars according to his own plans and specifications.

T. H. McCauley, formerly Manager, Calgary Alta. Municipal Ry. and subsequently General Manager, St. John, N.B. Street Ry. is reported to have been engaged by Port William, Ont. City Council to supervise the changing of the Municipal Ry. cars to one-man cars.

A. S. Mathias has been elected President, International Street Railway Men's Union, Division 99, Winnipeg.

Hugh Smith, Superintendent, Pinawa Hydro electric plant, Winnipeg Electric Ry., has resigned, after several years

service, to enter private business on his own account, on Vancouver Island, B.C., and has been succeeded at Pinawa by —, Ferguson, who has been in the company's electrical department for some time.

S. Wilkins, Engineer of Maintenance of Way and Structures, Winnipeg Electric Ry., has resigned after 15 years service with the company. He has gone to the Pacific Coast, but has made no plans for the future. We were advised Nov. 11, that no one had then been appointed to succeed him. On Oct. 31, he was presented with a gold watch by A. W. McInmont, Vice President and General Manager, on behalf of the department heads, and Mrs. Wilkins, with a travelling bag and wrist watch, by the track department employees.

Electric Railway Notes.

Oshawa Ry. is in the market for 2 motor passenger cars.

The University of Manitoba Arts Faculty held an inter-class debate, recently, when a resolution, "That the Winnipeg St. Ry. system should be owned and operated by the community," was discussed, and defeated.

Moncton Tramways, Electricity & Gas Co. is reported to be arranging to give a car service on its electric line in Moncton, N.B., throughout the winter, as provided for in the recent agreement with the city council.

The Ottawa Electric Ry. Co. supplied a talk recently on safety first, by the editor of the Ottawa Electric Railway News, which was broadcasted by radio throughout the Ottawa district. Further talks on subjects of public interest will be supplied for Saturday night broadcasting entertainments.

Hamilton, Ont., City Council is considering plans for the removal of all overhead wires in the city, and placing them underground. The recommendation is that the city lay all its own wires underground at once, and call upon the companies to do the same within six months. The Dominion Power and Transmission Co. is reported to have 226 poles in the city carrying its own power wires, and to have wires on 162 poles belonging to other companies.

Joseph Morissette was fined \$25 and costs in the Quebec Recorder's Court recently for being disorderly on a street car and assaulting the conductor. Morissette, with two companions, got on the car at night, and continued to smoke inside the car. When requested to discontinue by Conductor Coulombe, they became disorderly, struck him, dragged him about the car and tore his coat off. The police were called and succeeded in arresting Morissette, but the others got away, taking the conductor's cap with them.

Mr. Justice de Lormier gave judgment in the Quebec Superior Court at Montreal, recently, in the action of P. Brabant against the Montreal Tramways Co. The plaintiff, a conductor in the company's employ, fell when descending from his car, injuring his arm. He claimed \$3,000 as damages under the Workmen's Compensation Act for permanent incapacity to the extent of 75%. The company claimed that the claim was exaggerated and the court held that plaintiff had suffered to the extent of 15%, and, taking his wages at \$1,300 a year, gave judgment for damages, with costs.

Marine Department

United States Ships Admitted to Canadian Great Lakes Coasting Trades.

The question of the suspension of the coasting laws to combat alleged discrimination against grain shippers, and against the St. Lawrence route to the seaboard, in favor of the route via Buffalo and the U.S., has been fully dealt with in previous issues of Canadian Railway and Marine World. The discrimination cry has died away, as it was predicted it would, and the matter has resolved itself into one of dealing with an unprecedented congestion of grain at Canadian ports. There being such congestion that lake ships are held for unloading for from one to three weeks, it is evident that the congestion would only be aggravated by increasing the number of ships in the grain traffic. If there were sufficient facilities at the ports, for the quick unloading of lake ships, and the quick loading and dispatch of ocean ships, the Canadian lake ships would be able to double the number of trips in the course of a season, and handle all the grain from the head of the lakes. There is little doubt that in carrying on their propaganda, those who favor the suspension of the coasting regulations entirely misrepresented the situation to the Dominion Government, and the statements placed before the Government, by the Dominion Marine Association, show clearly that the admission of U.S. tonnage would simply increase the tremendous congestion and further block the available facilities, the inadequacy of which is at the root of the trouble.

The whole matter has been under consideration by the Dominion cabinet for some time, and the following statement was issued by Hon. Chas. Stewart, acting Minister of Trade and Commerce, Nov. 18: "From time to time the Department of Trade and Commerce has had attention directed to the possibility of a very serious congestion of grain at the lake ports. The past season has produced a very large crop in the prairie provinces, and, although the transportation companies have been operating at maximum capacity, and have taken care of this movement in an exceptionally capable manner, nevertheless it has become evident recently that serious congestion is bound to occur if the movement is confined to present shipping facilities. The Government has been carefully investigating the situation in all its bearings, and, after mature deliberation, has come to the conclusion that it can be materially assisted by allowing other than Canadian vessels the privilege of loading and storing cargoes and of discharging same at Bay ports during winter or early spring, and in this way assisting in relieving the congestion, and more adequately meeting the demands of the increased volume of traffic over Canadian lines, and materially augmenting the storing facilities, and also relieving the congestion at the terminal elevators, as well as the line elevators throughout Western Canada. It is to be distinctly understood that this applies only to grain. The Government believes it is desirable to adopt this course, in order to increase the volume of storage to as great a degree as possible, and, as pointed out above, to avoid any indication of congestion at prairie points, which is inevitably followed by a deflation of prices

where such congestion occurs."

This proceeding, which allows U.S. ships to load grain at a Canadian port and to proceed to another Canadian port to remain during the winter and unload their cargoes in the spring, is, without doubt, absolutely illegal. There is no authority for it under any Dominion Act governing shipping. The Revised Statutes of Canada, chap. 113, provide as follows:—

"955. No goods or passengers shall be carried by water, from one port of Canada to another, except in British ships.

"2. If any goods or passengers are so carried, contrary to this part, the master of the ship or vessel so carrying them shall incur a penalty of \$400, and any

Dominion Marine Association.

goods so carried shall be forfeited, as smuggled.

"3. Such ship or vessel may be detained by the collector of customs at any port or place to which such goods or passengers are brought, until such penalty is paid, or security for the payment thereof is given to his satisfaction, and until such goods are delivered up to him, to be dealt with as goods forfeited under the provisions of the Customs Act.

"958. The Governor in council may, from time to time, declare that the foregoing provisions of this part shall not apply to the ships or vessels of any foreign country in which British ships are admitted to the coasting trade of such country, and to carry goods and passengers from one port or place to another in such country."

It has been stated that a precedent for the Government's recent action may be found in an order in council of Dec. 6, 1913, but a thorough search in the volume of statutes, which also contain orders in council, has failed to discover such an order, and, if it was passed, it

was illegal. It may, however, be mentioned that on Nov. 29, 1912, the Government made arrangements whereby U.S. ships arriving at Fort William and Port Arthur, after Dec. 5, when lake insurance expired, would be permitted to load grain, and remain at those ports until the reopening of navigation, when they could deliver their cargoes at Point Edward, Goderich, or Georgian Bay ports, the Government elevator at Port Colborne not being included in the permission. The Dominion Marine Association strongly opposed the concession, and stated that there was no lack of Canadian tonnage to make use of the full loading capacity at Fort William and Port Arthur, and that it would be unjust to crowd the loading ports beyond the limit, and run the risk of greater congestion at Georgian Bay and Lake Huron ports. The method adopted then was irregular, and had no legal authority, and the Government's present action has none. However useful the following of a precedent may be as an excuse for shifting responsibility, the fact remains, that there is no legal authority for the concession now being made, and that it is a distinct violation of the law.

The act, as quoted above, distinctly states that the Government may, by order in council, declare that the provisions forbidding the carrying of cargoes by foreign ships, between Canadian ports, may be suspended in favor of the ships of any foreign country which admits British ships to its coasting trade. The U.S. does not so admit British ships, therefore the Dominion Government has no legal power to admit U.S. ships to the Canadian coasting trade. Probably realizing this, the Government has apparently not passed any order in council in connection with the matter, but has decided to instruct customs officials to allow infractions of the law. One of the Liberal party's chief election planks was the abolishment of government by order in council, though it was not charged that the order complained of had been issued illegally, or were ultra vires. The Government's recent action in allowing U.S. ships to trade between Canadian ports is far worse than governing by order in council. It is a distinct defiance of the law and introduces a most dangerous precedent and example. If the Government will not observe its own laws, how can the people generally be expected to do so? We do not think we go too far in saying that such action is an encouragement to anarchy.

The U.S. coasting laws are most drastic, and are rigidly enforced against Canadian ships. Our ships are kept just as strictly against the U.S. ships. The suspension, or rather chloroforming, of the Canadian coasting regulations, even temporarily, is most unfair to Canadian shipowners and shipbuilders. It is not likely that people will be prevailed upon to build ships for handling Canadian trade, when, at the whim of a government, the privileges of Canadian ships may be nullified, without any compensating advantage.

The contract for rebuilding the dam at Young Point on the Trent Canal has been awarded to F. R. Wilford, Lindsay, Ont.

A. A. Wright on the St. Lawrence Canals Proposals.

A. A. Wright, Honorary President, Dominion Marine Association, Toronto, writes:—"The advocates of enlarged St. Lawrence canals are telling the public that the lack of canals is costing the country millions of dollars. In view of the very heavy taxation which the citizens of this country are paying, I trust you will pardon me for at least trying to show the absurdity of such statements, and avoiding, if possible, spending money on prospects, possibly worthy in some ways, but which can do absolutely nothing to remedy existing conditions. The trouble at present is simply the annual one, of which Canadian lake ship-owners have complained for years, viz.; lack of sufficient modern elevator capacity at Georgian Bay ports and Montreal, particularly the latter port. For the past two years Montreal has had a long line of lake ships waiting to unload, and another long line of ocean ships waiting to load, reducing the carrying capacity of lake ships seriously. I believe, with proper elevator facilities at Montreal, the capacity of the ships now running between Port Colborne and Montreal would be doubled, as each ship would make about twice as many trips as she has done.

Take the elevator situation at Georgian Bay. Large ships have been lying there all fall, waiting from two days to nearly two weeks at a time, because the elevators are either too slow, have too little storage space, or there are not enough of them, again aggravated by Montreal's inability to unload promptly grain railed by them to that port. There are three elevators at Midland and Tiffin, and one at Port McNicoll, which if run night and day to maximum capacity should unload from lake ships and load into cars about 1,500,000 bush. a day. Up to date I doubt if any of these elevators have averaged over half their capacity, and some of them have done much less, and I would not be surprised to learn that at the moment Montreal cannot take care of more than 400,000 bush. a day from them all.

"At present according to the list published in Montreal daily, there are over 70 ocean ships in that port, about 5 or 6 clearing daily, and a similar number arriving, so that it is virtually all a question of speed in Montreal, since there are plenty of ocean ships there.

The present high rates are not being paid for carrying grain, but for the time the ships are lying around waiting to load and unload, forcing exporters to bid up rates in a desperate effort to get boats to Montreal in time to fill contracts, and it costs just as much to keep a boat at the dock as to run her with cargo, except for about two-thirds of her fuel cost.

"From the standpoint of navigation only, it would be criminal folly to spend say, \$250,000,000, enlarging canals on top of probably \$75,000,000 being expended on the Welland Canal at present. Forgetting the money being wasted on the Welland, as that is under way, the interest on \$250,000,000 at 6%, or \$15,000,000, would pay the freight annually on 250,000,000 bush. of grain from Port Colborne to Montreal at 6c a bush., and with facilities at Montreal to give the same unloading at Montreal which ships can get at the Government elevator at Port Colborne, grain could be carried at that rate more profitably than it is being carried now, so that to justify the expendi-

ture for navigation purposes only, you would require to get grain carried in the enlarged canals for nothing. In view of the foregoing, it would be interesting to learn how the enlarging of the St. Lawrence canals would help the present situation or take care of the future."

Editor's Note:—We do not think that many people will agree with Mr. Wright's opinion that the money being spent in building the Welland Ship Canal is being wasted. In our opinion it is an absolute necessity, and we think a great mistake was made in cancelling contracts and totally suspending the work during the war, which did cause immense waste.

Great Lakes Grain Freight Rates.

Dispatches from the head of the Great Lakes and Cleveland, Ohio, during November, reported an easing off in outward cargoes during the early part of the month, with the demand for tonnage somewhat light. Following is a summary:

Nov. 2.—Grain freight market quiet, demand for prompt loading capacity not very active. A ship was placed at Duluth to load for Georgian Bay ports at 4c, and another at Fort William, for Buffalo, at 4½c. Some storage cargoes were booked for late November loading, to hold at Buffalo, at 8c. Eight cargoes of grain were cleared from Fort William and Port Arthur, including about 2,000,000 bush. of wheat, and some other grains. The S. S. W. Grant Morden cleared with 365,000 bush. of wheat, and 150,000 of oats.

Nov. 6.—Much time is reported lost at Buffalo, grain coming in faster than it can be handled, and boats being held from 10 to 20 days. Tonnage demands decreased considerably, and rates were cut all round. A number of charters were made to Buffalo at 3½c, and one ship loaded at Fort William at that figure, with demurrage at \$1,000 a day for time held at unloading port over 2 days. Shippers try to obtain boats without any dispatch guarantee. Some tonnage was in the market for last trip and storage at 8c.

Nov. 7.—Demand for tonnage continued light, and another cut was made in the rate for early loading for Buffalo, one ship being placed for loading for Buffalo at 3c, and another at Duluth for Chicago at 3½c, both with dispatch guarantees. Last trip and storage was quoted at 7c. Shipments out of Buffalo were 3,020,000 bush., of which 1,560,000 went to Montreal, and 1,460,000 by the barge canal.

Nov. 9.—Cargoes taken from Duluth to Georgian Bay ports at 2½c, but no

Buffalo charters were reported. Ten ships reported loading at Fort William and Port Arthur, approximately 2,500,000 bush. Six of the 10 cargoes were for Buffalo.

Nov. 12.—Grain not offered freely and chartering light. A ship was placed at Fort William to load for Erie or Fairhaven at 2½c, and two at Duluth, for Georgian Bay ports, at the same figure. Tonnage was offered freely for early loading, to Buffalo at 2c, and a boat was chartered for Buffalo at 2½c, and a quantity of business was reported to have been done at the latter figure. A boat was placed at Fort William, for Toledo, at 3½c, one to South Chicago at 3c, and another at South Chicago, for Georgian Bay at 2½c.

Nov. 13.—The Buffalo-Montreal rate was quoted at 9c, and a number of boats followed this figure. Lake port tonnage offered freely, with the demand light. Three boats loaded at Duluth for Georgian Bay at 2½c, with dispatch guarantee, and there was some tonnage on the market, for Buffalo at the same figure. Shippers tried to get tonnage for Buffalo at 4c without dispatch guarantees, but owners declined, as according to the present lineup, it would mean storage. The highest rate bid for storage was 5½c.

Nov. 17.—Shippers bid up the rate to get prompt loading and tonnage, some business being done to Buffalo at 3c. One ship loaded barley and rye, and another wheat, at Fort William, for Buffalo, at that figure. A large number of ships were lined up for storage cargoes, but many will make another trip. A charter was made to load at South Chicago, to hold at Buffalo, at 4½c, at shippers' request. Four boats at Port Arthur were bidding 6c to hold at Buffalo, or at Fort William for spring delivery, but no charters were made.

Nov. 19.—A noticeable strengthening in the market. A ship was placed to load at Fort William for Buffalo, at 3c, but later the market was marked up and two ships were chartered at 3½c, an advance of 1c compared with a week ago. Dispatch guarantees were given, and better rates were offered on two cargoes without demurrage. Buffalo storage remained at 6c bid, and no tonnage offering, it was intimated that 6½c would be paid.

Canadian-American Shipping Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$10,000 authorized capital, and office at Vancouver, to carry on business as shipowner, broker, shipping manager, warehouseman, and general trader, and to own and operate ships.

Ship Building and Ship Repairing Throughout Canada.

Canadian Vickers Ltd., Montreal.—The steel single screw hopper barge, which the company is building for the Marine Department, as mentioned in our last issue, will be classed 100 A1 at Lloyd's, for river purposes, under special survey and Government inspection. It will have a straight stem, elliptical stern and forecastle deck, with hopper placed amidship, and curved beam constructed over the hopper, to take leads from the winches forward and aft to operate the hopper doors. Heavy doors will be fitted on each side of the hopper keelson, arranged to hinge downward, and designed so that only one half of each door will project below the ship's bottom. The doors will be closed by chain arrangements, connected to steam winches at each end of the hopper. The hull will be divided into 8 watertight compartments, by steel bulkheads extending to the main deck. The propelling machinery will consist of one set of inverted, vertical, direct acting, triple expansion, surface condensing engines, with cylinders 18½, 30 and 50 in. diam., by 36 in. stroke, to develop 1,250 i.h.p. at about 105 r.p.m., with 180 lb. of steam pressure in the boilers. There will be Scotch boilers, each 14½ ft. diam. by 10½ ft. long, single ended, arranged to work under natural draft. The auxiliary machinery will include an Edwards air pump, 3 bilge pumps, a centrifugal circulating pump, 2 feed pumps, a surface feed heater, a feed filter, 2 general service pumps, a sanitary pump, a fresh water pump, etc. Electric lighting will be furnished from a steam generating plant. The deck machinery will consist of a special type of steam windlass, steam and hand capstan, and 2 hopper door winches. The steam steering gear will be of the horizontal type, mechanically controlled from the navigating position. The accommodation for the captain and engineer will be on the main deck aft, and for the crew, on the lower deck forward. The barge's main dimensions will be—length b.p. 210 ft.; length overall 218 ft.; breadth, moulded, 35 ft.; depth, moulded, 19 ft.; net hopper capacity, 950 cub. yds.; complement, officers and men, 20; maximum draft loaded 10½ ft. The barge is being built under the supervision of Chas. Duguid, Naval Constructor, Marine Department, who is represented at the plant by A. K. Verablen. Lloyd's being represented by W. T. Alderson, Montreal surveyor. The keel was laid in November, and it is expected that delivery will be made in June 1923.

Dominion Shipbuilding & Repair Co., Toronto.—Osler Wade, liquidator of this company, which is in bankruptcy, has issued a report, stating that the stock in trade, plant and machinery have been disposed of, and, including the amount realized on the completion of the Canadian Government Merchant Marine ships built at the yard, produced a total of \$423,466.60. An item in the preliminary statement of assets, under the head of bills receivable, for \$100,000, is considered a total loss. The Nova Scotia Transportation Co., which owed the amount for the s.s. Le Quenoy, went into liquidation, and its assets did not realize sufficiently to pay the mortgage advances against the ship. Another item, accounts receivable, \$533,874.48, is also considered worthless. Christoffer Hannevig, of New York, who owes the estate \$526,439.08, is a bankrupt. A report of his

estate shows cash assets of \$11,233.41, and liabilities of \$10,402,715.96, and there are contingent assets consisting of large claims against the U.S. Government, which are disputed, and it is doubtful if anything will be realized on them. The original statement of affairs for the Dominion Shipbuilding & Repair Co. showed an investment in buildings and yard equipment of over \$1,000,000, and the agreement with the Toronto Harbor Commissioners in connection with the lease of the grounds on which the equipment was erected, provided that no consideration would be allowed the insolvent company for its investment in this respect on any default in the terms of the lease, which has over 20 years to run. The Harbor Commissioners eventually agreed to abandon their claim, for rent alone, of \$63,175.09, on the abandonment by the liquidator of these particular equipment assets. The liquidator's disbursements in completing the two ships for the Canadian Government Merchant Marine, and realizing on the plant and machinery, were \$76,485.79, leaving \$346,980.81 available for secured and preferred claims, aggregating \$397,521.26. The only other available asset is \$24,943.24, due from the Dominion Government, so that the net amount realized from the estate is not sufficient to satisfy the preferred claims. The final accounts do not provide for any claim by the Dominion Government in connection with income or business profits taxes, and this question has not been disposed of by the government, so that there is a possibility of a claim on this account.

Fraser Brace Co. Ltd., Three Rivers, Que.—The second of the four steel steamships which this company is building for the George Hall Coal Co. of Canada, was launched at the end of October, and named Frank A. Augsburg, by Mrs. F. A. Augsburg, Ogdensburg, N.Y., wife of the President. The first of these ships, N. H. Botsford, which was launched several weeks ago, is in service. They are steel single screw bulk freight steamships of full Welland Canal size, of the following dimensions: Length over all, 258 ft.; length b.p., 250 ft.; breadth, 43 ft.; depth, moulded, 20½ ft. They are designed with full topgallant forecastle and long raised quarter deck aft. The hulls are on the Isherwood system, with water ballast in the cellular double bottom, which is divided longitudinally for about two-thirds of the ship's length, for turning purposes in working the cargo, and water ballast is provided for in the fore and after peaks. There are two cargo holds, with 6 large hatches, 2 of which are especially large for handling beams and billets 60 ft. long. The propelling machinery consists of triple expansion engines, with cylinders 19, 32 and 56-in. diam., by 36-in. stroke, supplied with steam by 2 Scotch tubular boilers, each 13 ft. 7 in. diam., by 10 ft. 8 in. long, at 180-lb. working pressure. The boilers are equipped for coal burning, and there is bunker accommodation for 150 tons. There is an ash ejector, and the usual ballast pumps and auxiliaries. Steam and hand steering gear is placed aft over the after peak, and is controlled from the wheel house forward, and the top of the deck house aft. There are 3 steam winches for the rapid handling of cargo, and 2 especially designed for warping. Other equipment includes 3 heavy derricks, electric lighting plant, refrigerating plant, etc. The

ships are designed for a deadweight carrying capacity of 2,500 tons, on a canal draft of 14 ft., and with grain capacity of about 120,000 bush. Inboard paint and deck plans of the Frank A. Augsburg were published in Canadian and Marine World for September (pg. 485).

Halifax Shipyards Ltd., Halifax, N.S.—Canadian Government Merchant Marine s.s. Canadian Voyager, which, as stated in our last issue, was repaired at this plant during October, after having suffered damage through running ashore in Bedford Basin, Halifax, in the autumn of 1921, was undocked Oct. 4. The contract was signed Sept. 20, and called for the completion of the work in 16 working days, or by Oct. 7. The Royal Mail Steam Packet Co.'s s.s. Chaleur was docked Oct. 5, for scraping and painting and minor hull repairs and work was completed Oct. 8. The C.P.R. s.s. Empress, running between Digby, N.S. and St. John, N.B., which ran aground at Black Point, near St. John harbor, Sept. 29, was docked at Halifax, Oct. 11 and surveyed, after which the repair contract was given to this company. Thirty-five plates on the ship's bottom had to be renewed, and 18 frames on the starboard side, and 15 on the port side had to be treated. In addition there was a large amount of repairs required on the boilers, main engines and all auxiliary machinery. Extensive repairs were also necessary to the decks throughout the ship and crew's accommodation aft, this latter damage being caused by the ship being partially submerged at high tide. The contract called for the completion of the work by Nov. 8, but it was done by Nov. 5.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—Canada Steamship Lines' s.s. A. E. McKinstry was drydocked at the end of October at this plant, for general repairs, after grounding on Traverse Island, Lake Superior, Oct. 22, when she sustained considerable damage. It is stated that 70 steel plates required removal and replacement.

The Detroit and Cleveland Navigation Co.'s two new steamships, which it is having built by the American Ship Building Co., Cleveland, Ohio, for service between Detroit and Cleveland, some details of which were given in our October issue, will have the following chief details—length overall, 335 ft.; length b.p., 319 ft.; beam, hull, 58 ft.; beam, gundecks, 30½ ft.; depth, hull, 23 ft. 7 in.; depth, guard, 22 ft. 10 in. The propelling machinery will consist of inclined compound engines, with cylinders 66, 96 and 96 in. diam., by 108 in. stroke, supplied with steam by 6 single ended and 3 double ended boilers at 167 lb. working pressure. There will be 625 staterooms. Delivery is required by the spring of 1924.

Central Wharfage and Trading Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$10,000 authorized capital, and office at Victoria, B.C., to acquire the business now carried on at Kingston wharf, there by the Central Wharfage Co., and also to take over the s.s. Forager, and to carry on a general trading business, and act as carrier by land and water. The Forager was built at Victoria, in 1904, and is a screw driven wooden steamship, with engine 11 n.h.p., and has the following dimensions—length 84 ft., breadth 18.8 ft., depth 6.6 ft., tonnage 90 gross, 57 net.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Stranding of s.s. Glenmoor.

Held at Montreal, Oct. 24, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and J. B. Henry as nautical assessors, into the grounding of W. Runciman & Co's s.s. Glenmoor, of Glasgow, Scotland, in Montreal harbor, near buoy 174M, in the River St. Lawrence, marking the existence of shoal water off the Vulcan cement wharf. The Glenmoor was inbound to Montreal from South Shields, Eng., with coal, remained aground for 29 hours, and was refloated after a considerable amount of her cargo had been lightened. She had not suffered any material damage. The witnesses examined were Capt. R. C. Collins and pilot C. Dufresne. The ship had been moored at the Vulcan wharf, had left with the assistance of a tug, and after proceeding about 550 yards, the tug was displaced with, and the ship was steered to enter the main channel west of the buoy, marking the end of the spit, the ship grounding shortly after. The pilot corroborated the master's evidence, and gave as his only excuse for the mishap, that 20 years ago he had passed the same spot safely. The court found that the pilot, for no valid reason, ignored the aids to navigation, which are placed for the guidance of navigators, to indicate the spit off the Vulcan wharf. There was no logic in his reason that 20 years ago he passed safely over the shoal with a deep draft ship, and he was therefore found in default for indifference. The court recognized his straightforward report and statements, and did not deal with his license, but fined him \$100, to be paid by Nov. 1.

Collision of Steamships Izgled and Orkild.

Held at Montreal, Oct. 24, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and J. B. Henry as nautical assessors, into the collision of the Jugo-Slavia s.s. Izgled and the Danish s.s. Orkild, near buoy 76Q in the St. Lawrence River, Oct. 12. Evidence was given by the master, pilot, second officer and second engineer of the s.s. Izgled, and the master, pilot, third officer, second engineer, wheelman and lookout of the s.s. Orkild as well as by P. Schou, Consul General for Denmark. The s.s. Izgled was represented by A. W. Atwater, K.C., W. L. Bond, K.C., and L. Beauregard, the s.s. Orkild by A. R. Holden, K.C., the pilots, A. Marchand of the s.s. Izgled, and T. Perron of the s.s. Orkild, not being represented. The Izgled is a steel ship, drawing 22½ ft. forward, 23½ ft. aft, has 4,829 tons gross, 2,705 net, with a crew of 37, including 2 certificated deck officers and 3 certificated engineers. She is single screw driven, by triple expansion engines, with a speed of 8½ knots when loaded, and is owned by the Navigazione Libera G. Racich and Co., Trieste. The s.s. Orkild is 1,968 tons gross, 1,178 tons net, length 281 ft., breadth 42 ft. with a crew of 22, including 3 deck officers and 3 engineers. She is single screw driven, owned by Danneborg Steamship Co., and was bound from Philadelphia, Pa., to Montreal, light, and drawing 7½ ft. forward, 11½ ft. aft. On the day of the collision both ships were navigating, each in charge of a pilot, near St. Charles Channel, in the River St. Lawrence, the Izgled being ahead, and to the south of the Orkild, but supposedly in the middle line of the

channel, or if anything to the south of it. She had steered fairly well, and nothing untoward had happened since she left Quebec, when, at a head stage, the pilot wishing to change the course, so as to pass close to buoy 76 Q the order to port was given, and the buoy, which was about 2 points to starboard bow, was brought to one half point on the starboard bow. It was then realized that the ship was swinging too fast, and an order, steady and hard to starboard, was given, and at the same time one blast, two blasts, and the danger signal, and full speed astern. The Orkild was advancing on a similar course on the Izgled's starboard quarter, her stem being even with the Izgled's stern. The Orkild was an overhauling ship and the intention was to pass the Izgled, but on the northern side of the buoy 76 Q. This was known by the Izgled's pilot, as the Orkild had been overtaking her for some time. For some unaccountable reason, supposedly the strength of a current which was unforeseen, the Izgled could not be steadied, and with her screw going full speed astern, continued to swing to port, having at the time of the collision, brought buoy 76 Q on her port beam. The court could not find any fault with the Izgled's masters, officers or pilot, it being an unforeseen and undetermined cause, which rendered the ship uncontrollable, and the court's impression was, that the beginning of the flood tide, meeting the downward current, occasioned a surface eddy, which neutralized the rudder's action, the swinging to starboard being accelerated when the engines were put full speed astern. Under the circumstances the court absolved the Orkild from criticizing the full speed astern order. The collision was comparatively slight, having occurred when the ship had practically lost her headway. Regarding the Orkild, had nothing untoward occurred in the steering of the Izgled, both ships would have passed clear of each other, but there had been no signal given by the Orkild that it was the intention to pass north of buoy 76 Q. The regulations call for the signal from the overtaking ship, and this was not given. It was a violation of the letter of the regulation, but did not contribute to the collision. The unexpected happened, and, in the court's opinion, the circumstances were met to the best ability of the Orkild's pilot and officers who exercised good judgment, and dangers being avoided by prompt action. In the final finding the court held that the masters, officers and pilots of both ships were blameless of any neglect, or error of judgment.

Cairdhu-Spray Collision Case Reviewed.

In connection with the enquiry and judgment in the case of the collision between the Cairn Line's s.s. Cairdhu and the Sincennes-McNaughton Line's steam tug Spray near Isle St. Onrs, in the St. Lawrence River, July 1, when 6 lives were lost, the British Board of Trade has, on the Imperial Merchant Service Guild's application on behalf of the second officer of the s.s. Cairdhu, T. D. Healey, reviewed the case, and has come to the conclusion that while he was not blameless, his action, or inaction, did not appear to have been the cause of the disaster, and, in returning his certificate, which had been in suspense for nearly two months, stated that, in its opinion, a censure would have sufficiently met the case.

The judgment appealed from, which

was delivered by Capt. L. A. Demers, Dominion Wreck Commissioner, July 6, and which was concurred in by Capt. J. B. Henry and C. Lapierre, as nautical assessors, placed the chief blame on the tug Spray's master, Capt. N. Mongeau, and suspended his certificate for 12 months. It exonerated the Cairdhu's master and found the second officer, T. D. Healey, guilty of wilful disobedience in failing to call the master's directed, when there was a risk of collision, and that by his conduct, he failed to measure up to his responsibilities, and suspended his certificate for 6 months.

Marine Public Works Contracts Awarded.

The Public Works Department has awarded the following contracts.—Sept. 21, reconstruction of retaining wall of lock and dam at Riviere du Lievre, Poupere, Que., Doran Construction Co., Ottawa, Ont., unit prices; wharf at Grondines, Que., Doran Construction Co., Ottawa, Ont., unit prices; Sept. 30, dredging entrance channel and basin at Cobourg, Ont., Frontenac Dredging Co., Toronto, class B, 58c a cub. yd., scow measure; Oct. 2, repairs to south section of temporary pile protection breakwater, Port Arthur, Ont., unit prices; Oct. 3, repairs to wharf Pointe aux Trembles, Que., Onesime and Poliquin, Portneuf, Que., unit prices; Oct. 9, repairs to eastern and western breakwaters, Port Colborne, Ont., Port Arthur Construction Co., Toronto, unit prices; Oct. 14, repairs and improvements to wharf, L'Original, Ont., Murphy and Lowrey, Ottawa, Ont., unit prices; Oct. 14, dredging channel in Maganawan River, Byng Inlet, Ont., W. Bermingham, Kingston, Ont., class B, 60c a cub. yd., scow measure; dredging channel at mouth of McIntyre River, Port Arthur, Ont., O'Brien and Martin, Ottawa, Ont., class A, \$4.12 a cub. yd., class B, 31½c a cub. yd., place measure, material overcast at 2/3 regular contract rate; Oct. 23, construction of piers, Whitby, Ont., T. P. Charleson, Ottawa, Ont., unit prices; Oct. 25, dredging channel Wolfville, N.S., Harris and McKinlay, Wolfville, N.S., class B, \$1.20 a cub. yd., in situ.

U.S. Prohibition and Ocean Steamships.

—The U.S. prohibition law, which has been held to apply to all U.S. ships, and to all foreign ships in U.S. territorial waters, has caused considerable agitation in shipping circles. The law, according to this decision, is presumably being carried out on all U.S. ships, but its operation, so far as foreign shipping in U.S. territorial waters, is concerned, is not yet enforced, and whether it will, or can be, is still to be decided. An incident, which gave the matter a somewhat humorous turn, took place in London, England, recently, when the U.S. s.s. President Harding was refused clearance papers there, because there was not on board one gallon of brandy for every 100 steerage passengers, as provided for in the British marine laws. Before clearing, the captain had to ship five gallons of brandy.

National Stevedoring Ltd. has been incorporated under the Quebec Companies Act, with \$20,000 authorized capital, and office at Montreal, to carry on business as shipowner, carrier by land and water, stevedore, lighterman, etc.

Canadian Government Merchant Marine Operations, Etc.

Officers of Steamships.—The following appointments of masters and chief engineers have been made since those mentioned in previous issues.—Canadian Adventurer, Capt. P. Shaw; Canadian Cruiser, Capt. E. C. Seers; Canadian Leader, Capt. W. J. Davies; Canadian Miller, Capt. R. A. Goudry; Canadian Runner, J. W. D. Cumming, chief engineer; Canadian Spinner, D. Coulter, chief engineer; Canadian Squatter, Capt. S. D. Corkum; Canadian Warrior, J. G. Phillips, chief engineer.

The *s.s.* Canadian Seigneur was reported Nov. 1, to be in a disabled condition, having lost her rudder, 738 miles northeast of St. John's, Nfld., when bound from Garston, England, to Montreal. On Nov. 3, the Reid Newfoundland Co.'s *s.s.* Meigle was sent to her assistance, and was reported by radiotelegraph, Nov. 10, to have got alongside on Nov. 9, and to be preparing to tow the Canadian Seigneur, which, of course would enable her to use her own power. Subsequently, at the request of the Canadian Seigneur, by wireless, additional assistance was sent, the Canadian Sapper being dispatched from St. John's.

San Francisco Service.—It is announced that the service between Vancouver and San Francisco is to be augmented, sailings taking place weekly, instead of every 10 days as heretofore. Arrangements are reported to have been made with California citrus fruit growers, whereby the Canadian Government Merchant Marine ships will take all shipments of fruits intended for Canada.

Trans-Pacific Rates.—A San Francisco press dispatch of Nov. 5, stated that at the Pacific westbound conference there, which concluded Nov. 3, representatives of 10 trans-Pacific steamship lines signed an agreement to maintain until May 1, 1923, standard rates, which had been agreed on at a preliminary session at Portland, Ore., but that three Japanese companies and the Canadian Government Merchant Marine declined to sign. We are advised that the various lines met in conference, but were unable to come to a mutual understanding on several points, and the meeting was adjourned to some time in January, it being understood that, in the meantime, all lines would quote the same rates. So far as Canadian Government Merchant Marine is concerned, we are advised that it never signs contracts in respect to any conferences, it having followed the principle from the start not to bind itself in respect of such matters, although, of course, it works closely in connection with private lines.

St. John, N.B., Sailings.—

Liverpool Service—Canadian Spinner, Dec. 6; Canadian Ranger, Dec. 20.

London Service—Canadian Victor, Dec. 13; Canadian Commander, Dec. 27.

Cardiff & Swansea Service—Canadian Volunteer, Dec. 2; Canadian Runner, Dec. 16.

Glasgow Service—Canadian Squatter, Dec. 14.

Halifax, N.S., Sailings.—

Australia & New Zealand Service—Canadian Cruiser, Dec. 22.

Bahamas, Trinidad & Demerara Service—Canadian Beaver, Dec. 2; Canadian Logger, Dec. 16; Canadian Conster, Dec. 30.

Hamilton, Nassau, Kingston, Belize, Bermuda, Bahamas, Jamaica, British

Honduras Service—Canadian Fisher, Dec. 7; Canadian Forester, Dec. 28.

Newfoundland Service—Canadian Sapper, Dec. 5, 16 and 27.

Vancouver, B.C., Sailings.—

Australasian Service—Canadian Traveller, Dec. 20.

Oriental Service—Canadian Inventor, Dec. 10.

Mainly About Marine People.

John Barnsley, heretofore Manager, has been appointed Managing Director, Union Steamship Co. of British Columbia, Vancouver, B.C., vice R. A. H. Welsford, elected President.

Capt. C. F. Barnes, master of the C.G.S. Estevan has been placed on the retired list, after 35 years service on the Pacific Coast, under the Dominion Marine Department. He first went to sea as a boy in the Royal Navy, and remained in the service for 13 years. He joined the Dominion Government marine service as a seaman on the C.G.S. Douglas, and passed through the various grades to second officer and first officer, on the C.G.S. Quadra. He was then appointed master of the C.G.S. Newington, and in 1915 was appointed master of the C.G.S. Estevan.

Capt. H. Bilton, heretofore master of the C.G.S. Newington, has been appointed master of the C.G.S. Estevan, vice Capt. C. F. Barnes, retired. He commenced his sea service as a seaman on the clipper ship Thermopylae, then sailing between Victoria, B.C. and China. He remained with that ship for 4½ years, when he entered the Dunsmuir service, and was employed on coasting ships out of Victoria. He was later with the Boscowitz Steamship Co., on the *s.s.* Barbara Boscowitz, one of the first passenger and mail steamships to ply up the Pacific coast. He then entered Leeming Brothers' service on a freight steamship, under charter to the Dominion Government, and later was for a year on the steam tug Lorne. On the C.G.S. Newington being put into the lighthouse service on the Pacific Coast, he was appointed master.

A. Melville Dollar, formerly Managing Director, Canada Robert Dollar Co., has incorporated the Universal Shipping Co., to carry on the business of ship chartering and ship brokerage, devoting special attention to oriental, continental and intercoastal business.

Sir Thomas Fisher, K.B.E., General Manager, Canadian Pacific Steamships, London, Eng., who contested Portsmouth in the recent general elections in Great Britain, was defeated.

Capt. F. H. Griffith, master of the Dominion Hydrographic Survey *s.s.* Lillooet, died at Queen's Charlotte City, B.C., Nov. 14, from apoplexy, while charting and surveying northern waters along the coast. He was a native of St. Martins, N.B., but had lived in Victoria, B.C., for many years, and was buried there.

Capt. James Joy, ship's husband for Job Bros. St. John's, Nfld., died there at the end of October, aged 78. He had been engaged in seafaring almost the whole of his life, and was at one time a sealing master. He had been in Job Bros.' service for over 35 years.

D. R. McLaughlin, master ship builder, died at St. John, N.B., Oct. 28.

Sir Joseph MacKay, who acted as British Shipping Controller during the war, has been created a baron.

W. Grant Morden, a member of the London advisory committee, Canada Steamship Lines, was re-elected a Member of Parliament in the recent general elections in Great Britain.

Capt. M. G. Munro, Canso, N.S., has been given the Royal Canadian Humane Society's medal for life saving. In January, he swam through a heavy sea, during a snow storm, with a life line, and brought safely to land three of the crew of the schooner Alexander, which had been driven on the rocks at Black Point, in Chedabucto Bay, near Canso.

James W. Nicoll, heretofore Assistant Manager, has been appointed Manager, Furness, Withy and Co., Montreal, vice J. R. Binning deceased. He was born at Montreal and was, for about 10 years, to 1903, in the Foreign Freight Department, C.P.R., Montreal, after which he entered Furness, Withy and Co.'s service as freight clerk, and was appointed Assistant Manager in 1919.

Mrs. S. M. Norcross, mother of J. W. Norcross, Vice President, Canada Steamship Lines, died at Port Colborne, Ont., Nov. 17. Mr. Norcross is at present in Great Britain on business.

Capt. S. Orr, master of the Head Line *s.s.* Dunaff Head, was entertained at dinner in Montreal, recently, by the management of McLean Kennedy Ltd., Canadian agents for the company, on his retirement from the service after over 30 years in it. During his service with the company, which commenced with the entering of its ships into the St. Lawrence River over 30 years ago, when he was first officer of the *s.s.* Benzore Head, he commanded nearly every ship of the fleet, and never had an accident during his service.

W. T. Payne, who has retired from the position of Manager of Japan and Canada, Canadian Pacific Steamships Ltd., Yokohama, Japan, has been given the Order of the Rising Sun of the third class, by the Emperor of Japan. He had previously been given the fourth class of the same order, and also the Order of the Sacred Treasure of the third class. Mr. Payne has been visiting friends in Montreal and Toronto recently.

Capt. Edward Smith, of Kingston, Ont., died at Perth, Ont., at the end of October, aged 73. He spent nearly his whole life in navigating inland waters, and for many years prior to his retirement in 1918, owned and operated the *s.s.* Jeska, owned later by J. F. Sowards.

Arnold N. Smith, heretofore General Manager, has been appointed President and Managing Director, Montreal and Cornwall Navigation Co., Cornwall, Ont., succeeding his father, Robert Smith, K.C., whose appointment as a judge of the Supreme Court of Ontario, was announced in our last issue.

Arthur W. Snell, heretofore Assistant Foreign Freight Agent, C.P.R., Montreal, has been appointed Assistant Manager, Furness, Withy & Co., Montreal, vice J. W. Nicoll, appointed Manager.

R. A. H. Welsford, heretofore Managing Director, Union Steamship Co. of British Columbia, Vancouver, B.C., has been elected President, succeeding his father, J. H. Welsford.

W. G. Winterburn, consulting engineer and naval architect, and surveyor for the British Corporation of Shipping, the American Bureau of Shipping, and Bureau Veritas, Victoria, B.C., has been named as Vice President of the Institute of Marine Engineers, London, Eng., for the coming year.

Atlantic and Pacific Oceans.

Furness Withy and Co. have, it is reported, arranged to operate their steamships this winter between West St. John, N.B., and Hull, Eng., on a fortnightly schedule, instead of from Portland, Me., to Hull, as formerly.

The chief and second officers of the s.s. Heronspool owned by Pool Shipping Co., West Hartlepool, Eng., have been given respectively a silver cup and a pair of binoculars, by the Newfoundland Government, in recognition of their services to the shipwrecked crew of the Newfoundland schooner, *Elsie L. Corkum*, in the Atlantic Ocean, Dec. 26, 1920.

With the conversion of the steamships Robert Dollar and Esther Dollar, from coal to oil burners, which is to take place on their next arrival at New York, all of the Canadian Robert Dollar Steamship Co.'s ships will be oil burners. These two ships were formerly German owned, and named *Kurland* and *Parisienne*. The cost of the conversion is stated at about \$20,000 for each ship, and the high cost of coal, compared with the more moderate price of oil fuel on the Pacific coast, makes the change advantageous.

The Royal Mail Steam Packet Co.'s motorship *Loch Gool*, which was launched at Govan, Scotland, Aug. 24, is scheduled to sail from London, Eng., Jan. 3, 1923, on her maiden trip to the Pacific coast, and will include Victoria, B.C., amongst her ports of call. She is a sister ship of the *Loch Katrine*, already in the service, and is equipped with Diesel type engine of 6,000 i.h.p., giving a sea speed of 12½ knots an hour. Her dimensions are,—length 502 ft., breadth 62 ft., depth 38.6 ft., tonnage 9,500 gross.

The Union Steamship Co. of New Zealand is reported to have ordered a steamship to be built by Fairfield Shipbuilding and Engineering Works, Glasgow, Scotland, for its Canadian-Australian Line. It is stated that the ship will be a duplicate of the C.P.R. s.s. *Empress of Canada*, by the same builders, with the exception of the propelling machinery, which will be of the Diesel type, instead of turbines. This, it is stated, will be the first time that Diesel engines have been adopted for a large passenger steamship for long voyages at high speed.

The Canadian Robert Dollar Co.'s s.s. *Stuart Dollar*, which sailed from Vancouver recently for the Orient, taking a portion of the cargo from the C.P.R. s.s. *Empress of Australia*, which had to return to port owing to a breakdown of her turbine engines, was also compelled to return to port, having broken her rudder. She called for assistance when well out to sea, and the tug *Sea Monarch* was dispatched from San Francisco, and stood by, while the *Stuart Dollar* came in under her own steam. Arrangements were made for docking her at Esquimalt for repairs, prior to resuming her voyage.

Maritime Provinces and Newfoundland.

The Newfoundland Marine Department has re-established the white acetylene light at Jacques Cartier Island, Quirpon, showing 20 flashes a minute.

The s.s. *Inca*, which arrived at St. John, N.B., Nov. 2, reported that when one day out from San Domingo, the captain, Thos. M. Barnette, committed suicide by shooting.

The Marine Department has estab-

lished a green wood spar buoy on the channel side of the wrecked s.s. *Dream*, which lies sunk about a mile south of Palmer Point lighthouse, and about 90 yards easterly from the shore of The Mistake, in the St. John River, N.B.

St. John, N.B., harbor revenue for the first 10 months of this year was about \$15,000 ahead of the same period of 1921. During October the receipts were nearly double those of Oct. 1921, nearly \$7,000 being taken in wharfage charges, compared with \$3,708 in October 1921.

Lightship no. 15 will be withdrawn from Heath Point, Anticosti Island, Dec. 1, and after being overhauled, will be placed on the Sambro outer bank in the approach to Halifax harbor, for the winter. On the reopening of St. Lawrence navigation she will be replaced at Heath Point.

The steamboat *Bernard M.*, owned formerly by the Wedgeport Steam Trawling Co., Wedgeport, N.S., and latterly by the United Fruit Co., is reported to have been bought by Capt. B. M. Melanson, Gilberts Cove, N.S., and again sold to St. John parties. For some time, the boat has been engaged in the coastal trade in the West Indies.

The Eastern Steamship Co.'s s.s. *Governor Dingley* which operated on the St. John, N.B.-Boston route during the summer, has been transferred to the Portland-Boston route, for the winter. At the time of writing no announcement had been made as to another steamship for the winter service between St. John and Boston.

Freight handlers at St. John, N.B., after a conference with J. M. Woodman, General Superintendent, New Brunswick District, C.P.R., have made an agreement regarding wages for the ensuing year. The rate will be 45c an hour for an 8-hour day, with time and a half for overtime, and double time for Sundays and holidays. The rate last year was 40c.

The *Bras d'Or Lakes Steamboat Co.*'s s.s. *Marion* was destroyed by fire at her wharf at Whycomagh, N.S., Oct. 31. She was built at New York, N.Y., in 1876, and was paddle wheel driven by engine of 49 h.p. Her dimensions were,—length 142.4 ft., breadth 26.5 ft., depth 8 ft., tonnage 478 gross, 269 net. She has been operated for 46 years on the *Bras d'Or Lakes*.

The Marine Department is reported to have bought the steam tug *Murray Stewart* from Nagle and Wigmore, St. John, N.B., for lighthouse and buoy service on the Great Lakes. She was built by the Port Arthur Shipbuilding Co., Port Arthur, Ont., in 1918, and is screw driven by engine of 109 h.p. Her dimensions are,—length 119 ft., breadth 26 ft., depth 15.7 ft., tonnage, 234 gross, 94 net.

The Brito Line, which is operating the s.s. *Malm* between St. John, N.B., and Havana, Cuba, had to cancel the sailings at the end of October, for the present, owing to accident to the ship. It was announced that possibly another ship would replace the *Malm* temporarily, as it is the company's intention to maintain a service between these ports throughout the winter, and, if sufficient inducements offers to place additional ships on the route.

F. M. Ross, General Manager, St. John Drydock and Shipbuilding Co., is reported to have stated at St. John, N.B., recently, that it is hoped to have the drydock ready for operation by the autumn of

1923. The gates are under construction, and 80% of the channel has been dredged. A portion of the pumping equipment has arrived at St. John from Scotland. In connection with the drydock equipment, a marine railway will be installed on the north side, capable of hauling up smaller ships, up to about 2,000 tons.

The C.P.R. s.s. *Empress*, which ran ashore at Black Point, near Partridge Island, about 4 miles from its western terminus at Redds Point, St. John harbor, N.B., Sept. 29, resumed service between Digby, N.S. and St. John, N.B., Nov. 6, after having been repaired and overhauled by Halifax Shipyard Ltd. After the accident, the service was suspended for a few days until arrangements were made for chartering the Dominion Government s.s. *Arnamore*, which was operated on the route from Oct. 11 to Nov. 5.

The s.s. *Bethlehem*, which sailed from North Sydney, N.S., Oct. 27, with 300 tons of coal for Wabana, Nfld., broke her rudder chain and disabled her steering apparatus during a heavy gale, becoming completely disabled. She shipped more water than the pumps could clear, and a makeshift rudder kept her on her course for a short while, but this was eventually carried away. Her plight was noticed by some fishermen, who notified the Reid Newfoundland Co.'s s.s. *Kyle*, which proceeded to her and took her in tow to Port aux Basques.

H. J. Russell, Assistant to General Manager, Reid Newfoundland Co., is reported to have announced recently that the s.s. *Sagona* would replace the s.s. *Home* on the Humbermouth-Battle Harbor service, the latter being transferred to the Green Bay service. The s.s. *Meigle* was ordered to St. John's to lay up after her last trip to Labrador, at the end of October, pending further requirements. Early in November she was dispatched to the assistance of Canadian Government Merchant Marine s.s. *Canadian Seigneur* which had become helpless about 700 miles from Newfoundland, having lost her rudder.

Province of Quebec.

The George Hall Coal Co.'s s.s. *Harvey J. Kendall*, operating between Montreal and Fairhaven, N.Y., in the coal trade, ran ashore near Fairhaven, recently, was refloated Nov. 5, and towed to Fairhaven by the wrecking tug, *Joseph L. Russell*.

Another record was created at Montreal, Nov. 1, when 1,000 ships had been cleared at the port, for the sea, during the season. The highest number for any completed season, was 1,004 ships cleared for the sea, in 1914, the rush then being caused by the war.

The first crib of the new wharf which is being built by the Marine Department alongside the King's wharf at Quebec, was laid at the end of October. The wharf will be built on three cribs, each 42 ft. long, and will give an additional mooring space of 126 ft. The other two cribs were laid early in November.

The C.P.R. s.s. *Monteagle*, arrived at Montreal, Nov. 1, via the Panama Canal from Vancouver, B.C., with some 1,250,000 ft. of lumber, the first consignment of 5,000,000 ft. which the Montreal Harbor Commissioners have ordered for use on caissons to Alexandra, King Edward and Jacques Cartier piers, which work is in progress.

J. H. Manseau is suing the Dominion Government for \$2,430 for damage to the s.s. Delilah C, which while playing between Sorel and Beloeil on Oct. 15, grounded, and suffered considerable damage, the propeller and shaft being twisted. The accident was claimed to be due to the negligence, imprudence and carelessness of the Marine Department's agents, who had misplaced a buoy which was supposed to mark the channel. This was denied by the Department, and it was submitted that if the buoy had moved, it was due to the current or wind.

H. Guerin and J. Cardinal are suing Canada Steamship Lines Ltd., for \$5,000 and \$2,500 respectively, in connection with their work in landing passengers from the company's s.s. Rapids Prince, when she stranded in the Lachine Rapids, July 30. The former states that he was offered \$15 a day for two weeks and a bonus of \$500, by the company, which he refused, as he considered that, being an experienced boatman, his services were worth more. The claims were subsequently settled out of court for \$2,800 and \$1,200, respectively.

The Hammerhill Paper Co., Erie, Pa., which has a mill at Matane, Que., has asked the Dominion Government to do a considerable amount of dredging and wharf improvement in the harbor, to allow of large ships calling there for logs. The expenditure asked for by the Government is approximately \$106,000, and the company is prepared to spend \$100,000 on improvements. The proposition is reported as being opposed by Canadian National Rys., Canada and Gulf Terminal Ry. and the Railways and Canals Department on the ground that the traffic there is being handled by the railways, and would be lost if the harbor was made available for large ships. On behalf of the Railways and Canals Department, it was stated that the Canada and Gulf Terminal Ry. was subsidized by the Dominion Government to the extent of \$210,000, and if it were to be put on a non-paying basis, it would be one more railway for the Government to take over.

Ontario and the Great Lakes.

The Dominion Government has appointed I. P. Hughes, chairman, and H. G. Earle, harbor commissioners for Belleville, in place of B. L. Hyman and P. Allen, who were appointed Dec. 2, 1911.

The Tomlinson Steamship Co.'s s.s. Sul-

tana grounded in front of the New Ontario dock, Sault Ste. Marie, Ont., Nov. 15, and was released after a considerable portion of her cargo had been lightered.

The steamboat Nereid, registered as owned by A. E. Wagoner, Alexandria Bay, N.Y., has been bought by D. W. Munro, Nananogue, Ont., and transferred to the Canadian register under the name of D. W. She was built in 1882, is 89 ft. long by 13 ft. beam, and is 36 gross tons.

The Chicago, Duluth & Georgian Bay Transit Co.'s steamships North American and South American have been equipped with oil burning apparatus, and under trial trips between Detroit and Sarnia, Ont., Nov. 21. They are stated to be the first oil burning steamships on the Great Lakes.

The Great Lakes Transportation Co.'s s.s. Glenisla ran ashore about 4 miles above White Fish Point, Lake Superior, Nov. 1. Tugs which went to her aid were unable to release her, but by dredging the sand round her, she was loosened sufficiently to enable her to release herself the following day, when she continued her voyage undamaged.

Hamilton Harbor Commissioners are having prepared plans for development of the harbor front, and for the reclamation of land. It is reported that the reclamation work would involve an approximate cost of \$1,077,000, and the complete scheme, an expenditure of about \$13,000,000. Gore, Nasmith and Storrie, engineers, Toronto, are preparing plans.

During the last day of October and the first two days of November, continued easterly winds kept the water down in the Welland Canal to a depth of 13½ ft. over the aqueduct at Port Colborne, thus delaying all ships which were loaded for a regulation canal draft of 14 ft. The depth of water was similarly affected, but to a lesser degree, Nov. 13.

It is reported that a terminal elevator, with capacity for 1,500,000 bush, will be erected at Port Arthur, shortly, by James Stewart, President, Maple Leaf Milling Co., and James Stewart Grain Co., and also a director, Canadian National Rys., at an estimated cost of \$850,000. The site selected is near the Thunder Bay elevator, and it is said that construction will be commenced during the winter.

The U. S. Lake Survey reports the mean stages of the Great Lakes for October, in feet above mean sea level, as follows:—Superior 602.50; Michigan and

Huron 579.97; St. Clair 574.69; Erie 571.86; Ontario 545.61. Compared with the average October levels for the past 10 years, Superior was 0.22 ft. below; Michigan and Huron 0.57 ft. below; Erie 0.33 ft. below; Ontario 0.26 ft. below.

Canada Steamship Lines' s.s. Kenora was considerably damaged by fire at Hamilton, Nov. 16. The cargo in the forehold, which consisted chiefly of inflammable articles, is stated to have been completely destroyed. No other part of the ship seems to have been affected by fire, although water caused a large amount of damage. The cause of the fire has not been made public, but it is stated that it was probably caused by a heavy weight falling on a case of matches.

The motor ferry boat Detroit, built recently at Bay City, Mich., for ferry service between Detroit and Belle Isle, has the following dimensions,—length 65 ft., breadth 20 ft., draft 5 ft. She is equipped with a Fairbanks-Morse 4 cylinder oil engine of 60 h.p., with an average speed of 9 miles an hour. She has a 42 in. propeller running at 325 r.p.m. There is also a Fairbanks-Morse engine driven generator and air compressor, both belt driven. There is accommodation for 350 passengers.

Engineers are reported to be making surveys for considerable improvements in the Goderich harbor including the joining of the river breakwater to the outside north breakwater, dredging the harbor to 25 ft., and, probably, the removal of the island at the eastern end of the harbor. It is stated that this work will probably be commenced next year, and on such assurance, it is reported that the Goderich Elevator and Transit Co. has decided to build a 1,000,000 bush, annex to its grain elevator.

The Union Transit Co. is being organized in Toronto, to own and operate the s.s. Wahcondah, which was bought recently from A. B. Mackay, formerly of Hamilton, Ont., now of London, Eng., by Capt. J. B. Foote, Toronto. The Wahcondah was built in Scotland in 1903, with steel hull, 4 watertight compartments, hatches spaced 24 ft. centers, and has the following chief dimensions: Length 330 ft., 230 ft. 4 in.; breadth moulded, 37 ft. 6 in.; depth moulded, 24 ft.; tonnage, 1,554 gross, 996 net. She is equipped with triple expansion engines, with cylinders 18, 28 and 47 in. dia. by 33-in. stroke, 750 i.h.p., and is supplied with steam by 2 Scotch boilers, each 12½ ft. dia. by 10½ ft. long, 86 sq. ft. grate surface, 2,508 sq. ft. heating surface, with a steam working pressure of 180 lb. a sq. in.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during October, 1922:

Articles	Canal	U.S. Canal	Total
Lumber	20,183	20,183	20,183
Flour	789,550	632,070	1,421,620
Wheat	1,901,631	34,800,224	36,701,855
Grain, other than wheat	601,695	7,970,177	8,571,872
Copper	3,552	5,449	9,001
Short tons	1,892	6,871,892	5,971,902
Pig Iron	110	7,790	7,900
Short tons	300	2,000	2,300
General Merchandise	8,137	1,939	10,076

Total Freight	223,345	11,010,123	11,233,468

Manitoba, Saskatchewan, Alberta and Northwest Territories.

Navigation on the Red River between Winnipeg and Lockport closed for the winter, Nov. 1, when the St. Andrews dam was opened slightly to allow the water in the river to lower its level by one or two feet a day, according to the prevailing weather conditions. The five dredges which were out at Selkirk during November, had been working in the neighborhood of Big George Island, Cumberland Lake, Grand Marais, Victoria Beach and Lac la Biche. The rebuilding of another dredge is being done at Winnipegosis, and she is expected to be ready for operation next year.

The Hudson's Bay Co. is, we are officially advised, contemplating building a

steamboat to replace the one wrecked on the Liard River, near Fort Nelson, last summer. The proposed boat will be a full tunnel boat, 60 ft. long, and propelled by a semi heavy duty 90 h.p. engine. She will be designed to suit the waters of the Great Slave Lake, and the Mackenzie River, and will be used in them as an important auxiliary, and when necessary will handle one of two big scows. If it is decided to build a boat, construction will commence early in the spring.

During the summer a survey of the Great Slave Lake was made by G. H. Blanchet, and the whole has been mapped out, with the exception of the northeast arm, which will be completed next summer. The greatest length of the lake is 490 miles, from the Mackenzie River to old Fort Reliance on the northeast arm. Navigation buoys were placed, at the opening of the navigation season, at the mouths of the Slave, Hay and Mackenzie Rivers, and beacons on shore. At the close of the navigation season, the buoys and beacons at the mouth of the Mackenzie River were removed by the Northern Trading Co.'s auxiliary powered boat Speed, and the others by the same company's s.s. Northland Trader. Navigators on these northern waters state that these aids to navigation have been of considerable assistance, but that much more remains to be done before the northern rivers and lakes may be considered reasonably safe.

British Columbia and Pacific Coast.

The C.P.R. s.s. Tees, which has been laid up for some time, has been placed in service to and from the west coast of Vancouver Island, handling fish.

The Grand Trunk Pacific Coast Steamship Co.'s steam tug Lorne is reported to have been chartered by B. L. Johnson, Walton and Co., Vancouver, for the coastwise towing trade.

The British Columbia Pilotage Association, which received its charter recently, has been granted authority to draw up examination papers, appoint examiners and give certificates to pilots.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert, completed her 500th trip in the coast service, Nov. 8. She was built at Wallsend on Tyne, Eng., in 1910, and has been in constant service on the northern route ever since.

Bondholders of Canadian Western Steamships Ltd., Vancouver, are reported to have foreclosed on the s.s. Margaret Coughlan, and to have appointed H. A. Stevenson as receiver. The Margaret Coughlan is en route from British Columbia to Montreal with lumber for Montreal Harbor Commissioners. She was built at Vancouver in 1920 by J. Coughlan and Sons, of which Canadian Western Steamships Ltd. is a subsidiary.

Lieut. Charles Julien has been appointed Superintendent of Signalling, Harbor Police and Equipment, Vancouver Harbor Commissioners, who have taken over the Prospect Point signal station. Considerable improvements in connection with this station are announced. A 24 hr. service will be given, by semaphore during daylight, and by seaglights at night.

The Victoria-Anacortes Ferry Co., which operated the s.s. Harvester King in ferry service between Sidney, B.C., and Anacortes, Wash., last summer, is reported to have invited tenders for the construction of a new ferry boat to be ready for similar service next spring.

The plans are said to cover a steamship 145 ft. long, 34 ft. beam, and 9 ft. deep, equipped with a 500 h.p. Diesel engine, capable of a speed of 12 knots, so as to enable her to make the run between Anacortes and Sidney in 3 hours. Space is to be provided for 34 automobiles and the accommodation is to include luncheon room, smoking room, women's rest room and a gasoline station.

The Hudson's Bay Co.'s auxiliary powered ship Lady Kindersley, which sailed from Vancouver, June 17, for the company's port along the western Arctic coast, returned to Vancouver, Nov. 6, when she reported the worst ice conditions known in the north during the summer. On the outward journey, ice was met just north of Point Hope, on July 28, which is considered very far south to encounter ice at that time of the year. On this account she was delayed at Herschell Island. Wainwright coast, was reached Aug. 22, where Amundsen, the Arctic explorer, was found building winter quarters. The ship returned to Herschell Island, Aug. 30, where reports were received that conditions at Coronation Gulf were much worse than had already been encountered, so it was decided to land the Mackenzie River freight at Herschell Island, and return to Vancouver.

The s.s. Trebla, which was bought some time ago by Capt. A. Berquist, has been remodelled and overhauled, and will be operated shortly in the coastwise ore and general freight trade, and also in tug business. She was formerly the Santa Cruz and at one time operated in freight service between San Francisco and Santa Cruz, Mexico, to Honolulu, Alaska, and on the San Francisco route. She was later bought by the Puget Sound Salvage Co., Seattle, Wash. She was built at San Francisco in 1868, and has a hull of Oregon fir, 133 ft. long, 31½ ft. beam, and 10.4 ft. deep, and is equipped with engines of 350 h.p. The engines have been completely overhauled and a new water tube boiler and smoke stack installed, as well as steam steering gear, steam cargo and anchor winches, and the latest towing machinery. She uses coal as fuel, but may be converted later into an oil burner.

The C.P.R. has, as intimated in our last issue, decided to establish a ferry steamship service for conveying motor cars and passengers between the mainland and Vancouver Island. The terminals decided upon are Bellingham, Wash., and Sidney, on the Saanich Peninsula, Vancouver Island, about 20 miles north of Victoria. Bellingham has been chosen on account of its being the center of a large population and directly on the paved highway between Seattle, Wash., and Vancouver, B.C. The route taken by the ferry will be through the San Juan Islands, a delightful sail in thoroughly protected waters. The design of the ferry has not yet been fully decided but it is stated that the plans are practically ready, and tenders are being invited from British Columbia shipbuilders for its construction. Press reports state that the order will probably be placed with either Yarrows Ltd., Victoria, B.C., or Wallace Drydock and Engineering Co., North Vancouver.

The Pacific Salvage Co., Victoria, has been awarded the contract for salvaging the Mexican s.s. Guerrero, which is stranded on the beach at Mazatlan, Mexico. The salvage steamship Algerine left Victoria, Oct. 20, and arrived at Mazatlan, Oct. 30, the distance being 2,100

miles. The Guerrero was lying broadside on the beach, full to the deck. The installation of pumps was undertaken immediately, and anchors laid out. The Algerine is in charge of Capt. J. M. Hewison, and the company's Superintendent, T. W. Allan, will handle the salvage operations. During the absence of the Algerine in the south, the company's salvage steamer Salvor will be standing by at Victoria, with steam up, night and day, ready for any emergency. She is an oil burner, and carries sufficient fuel for 60 days. She is fully equipped with salvage gear of all kinds, including diving equipment for 6 men, air compressor and tools, spare portable donkey boiler, collision mats, heavy anchors and cables, four 10-in. steam pumps, two 6-in. steam pumps, three 4-in. steam pumps, two 6-in. gasoline pumps, all complete with suction and discharge hose, foot valves, strainers, etc. She also has sleeping accommodation for from 30 to 40 men, and is equipped with radiotelegraph apparatus.

Canal Statistics for September.

The Dominion Bureau of Statistics, Transportation Branch, has issued the following summary for September:—

Sault Ste. Marie.—Total traffic through the Canadian and United States locks at Sault Ste. Marie increased 4,503,984 tons, or 70% over Sept., 1921. The big increases were in iron ore and bituminous coal, which increased 3,047,694 and 1,360,892 tons, respectively. A total of 2,354,743 tons of bituminous coal passed up the canal. Wheat increased 9,376,874 bush., and other grains, 1,472,527 bush.

Welland.—Total traffic increased 84,167 tons, or 19%, grain, steel and general merchandise accounting for the greater portion of the increase. Corn fell off, but increases in oats, rye and wheat more than offset it. Pulpwood and soft coal decreased 7,964 and 53,822 tons, respectively. Soft coal upbound totalled 3,729 tons, against 9,703 during August, but down bound shipments increased to 39,549 tons, from 7,100 tons in August.

St. Lawrence.—Total freight traffic increased 125,587 tons, or 24%, but passenger traffic decreased slightly, being 8,412 against 8,571 for Sept., 1921. Shipments declined 51,317 tons, but rye increased 43,141 tons and wheat increased 116,053 tons or 3,668,400 bush. The total shipments of wheat since the opening of navigation were 39,463,800 bush., an increase of 17,029,200 over the same period in 1921. Iron and steel increased 7,652 tons over Sept., 1921, and for the season increased 97,824 tons over 1921. Pulpwood increased 53,294 tons for the season, although September shipments showed a slight decline. Coal shipments had not reached last year's record, although they showed considerable increase over Aug., 1922.

Measuring Ocean Depths.—The U.S. Navy Department is reported to have developed a new device for measuring ocean depths, and also for enabling navigators to take soundings easily, at any time they desire. The device employs a sound apparatus similar to that used for submarine detection, the principle being the creation of a sound aboard the ship and the measuring of time between the sound and the return of the echo from the ocean bottom. It is said that the time can thus be obtained within one-thousandth part of a second.

H.M.S. Raleigh's Wreck in Belle Isle Strait Investigated.

Canadian Railway and Marine World for November contained a short report of the court martial in connection with the loss of H.M.S. Raleigh, flagship of Admiral Sir William Pakenham, Commander in Chief of the North America and West Indies station, at Amour Point, Belle Isle Strait, on Aug. 8. Capt. C. K. Maclean, Chief of Staff to the Commander in Chief at Portsmouth, was President of the Court, which was opened at Portsmouth, Eng., Oct. 25. Capt. H. O. Reinold was prosecutor, and Commander J. H. D. Cunningham and Paymaster Lieutenant E. Hazlehurst, acted as friends of Commander Leslie Charles Bott, O.B.E., who was charged with having negligently or by default, stranded and lost the ship, to which he pleaded not guilty.

The circumstantial letter read by the Deputy Judge Advocate, Paymaster Rear-Admiral F. J. Krabbe, stated that the evidence appeared to indicate that Commander Bott was to blame for failing to point out to the captain the extreme navigation risks which were being run; for not starting sounding machines; for not reducing speed on his own initiative and immediately informing the captain when the density of the fog increased; and for not pointing out to the captain that the conditions of visibility in close proximity to Forteau Bay, the ship's destination, could be obtained from the wireless station on Amour Point as the ship approached Forteau Bay.

Capt. Arthur Bromley, who was in command of the Raleigh on Aug. 8, stated that the ship struck at a speed of about 8 knots. So far as he could remember the original suggestion for a reduction of speed came from him. He did not hear the fog signal on Amour Point before the ship grounded, but he heard it afterwards. A conference was held as to the advisability of attempting to save the Raleigh, but a telegram afterwards from the Admiralty stated that they would not proceed with the salvage work. After further evidence the case for the prosecution was closed and the

court adjourned till next day. At the resumed hearing, Commander Bott submitted that there was no reason, before altering course, to expect thick weather, and that when fog was encountered, its extent and density were not immediately appreciated either by the captain, the officer of the watch, or himself. As to the suggestion that he should have begun taking soundings sooner, he said that these were started soon after the ship was steamed on her course, and which she was to approach land. Until that time he was satisfied that the safe navigation of the ship did not require the sounding party to be closed up, and the officer of the watch shared that opinion. With reference to the suggestion that he should have reduced speed on his own initiative when the ship ran into thick weather, he said that while at the sounding machine he learned that the captain had gone on the bridge, and it seemed obvious to him that the captain would reduce speed if he considered that necessary. He submitted that no alternative action on his part would have prevented the accident, in view of the fact that the main cause of the ship stranding was the serious inaccuracy of the published charts.

The court found that the charge of negligently or by default stranding and losing the Raleigh was proved, and that the stranding was due to the accused having made an alteration of course without having definitely ascertained the position of the ship before doing so; and omitted to act in accordance with the directions in the King's Regulations and Admiralty Instructions, article 1,018 and request the officer of the watch, in the absence of the captain, to take immediate action to reduce the speed of the ship to slow, when the Labrador coast was lost sight of. The court considered that the discrepancy between charts 284 and 1,631, as regards the longitude of Amour Point lighthouse being 0.65 of a mile out, was not a contributory cause of the stranding of the ship; and in view of the warnings issued in the Sailing Directions, Newfoundland and Lab-

rador Pilot, vol. I., and St. Lawrence Pilot, vol. I., the risks accepted by the accused were quite unjustifiable. The sentence was that the accused, whose certificates spoke highly of his ability as a navigating officer, should be dismissed H.M.S. Victory and severely reprimanded.

Capt. Arthur Bromley, C.M.G., who commanded the Raleigh was tried by court martial, Oct. 27, on the charge of negligently or by default stranding and losing his ship. Rear-Admiral H. F. P. Sinclair was president of the court. In his defence, Capt. Bromley pointed out that it had been proved that Amour Point was charted on the charts in use in the Raleigh, 1 min. of longitude to the eastward of its true position, while Ferrolle Point off which the ship was fixed last, was charted only 0.4 min. of longitude to the eastward of its true position. It had also been proved that had these two points been correctly charted the Raleigh would have passed 3.9 cables clear to the westward of the point on which she stranded. As the charts officially supplied to him for navigating purposes were responsible for the stranding, he submitted that the charge against him had not been proved. The court found the charge proved, on the ground that the accused did not go on the bridge early enough, and that after arriving there he did not take immediate steps to have the speed of the ship reduced. The sentence was that the accused should be reprimanded, and dismissed his ship.

A London press dispatch of Nov. 5, stated that the Admiralty had announced that Vice Admiral Sir Michael Culme-Seymour who had been second in command of the Mediterranean fleet since 1920 had been appointed Commander in Chief of the North America and West Indies station, in succession to Admiral Sir William Pakenham. It is not stated whether the new appointment is in any way connected with the courts martial respecting the loss of the Raleigh, or is due to the expiration of Sir William Pakenham's appointment by effluxion of time.

Ships Registered in Canada During August, 1922.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

Wage Dispute, C.P.R. British Columbia Lake and River Service.

The board of conciliation consisting of R. S. Lennie, chairman, E. A. James, representing the company, and John Eyfe for the men, which, as stated in our last issue, was appointed to deal with the dispute between the C.P.R. and its employees on its British Columbia lake and river steamship service, sat during the latter part of October and in November. The men concerned include the masters, deck officers and engineers on the company's light draft stern wheel steamboats, and tug boats handling barges, operating on the interior lakes and rivers in British Columbia. The particular point of their complaint is objecting to reductions made in their wages a little over a year ago, which were made in common with reductions in the pay of other employees, both on the railway and steamships. Since that reduction further reductions have been made in the pay of other railway employees, but no further reduction has been made in the pay of the steamboat men concerned in this present dispute. It is generally supposed that the object in obtaining this board of conciliation was to try and discourage any further reductions in pay to correspond with the reductions made in the pay of men on the railway. The application for a conciliation board was made by the Canadian Navigators Federation and the International Association of Marine Engineers comprising officers and engineers on coast steamships operated by various companies between Alaska and Puget Sound. The company contended that the work of operating light draft lake and river steamboats is in every way comparable with deep sea operation, the qualification of the officers not being nearly so strict, and the work being easier in every way. The company filed with the board of conciliation, a statement showing rates paid to deck officers and engineers by a U.S. company operating similar steamboats on similar waters, viz., the Columbia, Willamette and Snake Rivers, etc., and these figures show that the C.P.R. is paying higher wages than the U.S. company for similar work. It is contended that this comparison is a perfectly fair one and the company's evidence was put in to justify the 10% reduction it made in Oct., 1921.

Captain Foote Protests Against Suspension of Coasting Laws.

Captain J. B. Foote, of Toronto, wrote Hon. C. Stewart, acting Minister of Trade and Commerce, Nov. 10, as follows:—"At the present moment the Canadian Government Merchant Marine, has 8 ships engaged in the carriage of grain from Fort William to Georgian Bay ports. If it appeared that reasonable dispatch might obtain, the management might add to this fleet now on the lakes; and roughly these ships, with normal dispatch, would carry and deliver about 1,200,000 bushels of wheat every 9 or 10 days; and incidentally earn a little money. Every United States ship that delivers a cargo to the already badly congested ports of Georgian Bay, impairs the dispatch and earning power of the government owned light owned boats; and other Canadian tonnage, to just the extent that it takes to provide cars to unload her and move her cargo. As that has occurred many times and often this autumn, when

United States ships from Duluth and Chicago have delivered cargoes at Georgian Bay ports, it may, I assume, be taken for granted that the Canadian public will not be called upon to witness a department of the government trying to make a profit, or at least avoid a deficit on their ships, while another department aggravates the existing congested situation by a suspension of the coasting laws. As the Minister of Marine comes from a province that is vitally interested in shipbuilding, I am prompted to send him a copy of this letter."

Mathews Steamship Co's Financing.

The Mathews Steamship Co., Toronto, issued recently, \$400,000 ten-year serial 1st mortgage bonds at 7%, maturing \$40,000 annually to Sept. 15, 1933, callable at 60 days notice at 102½ and accrued interest. The company has an authorized common stock of \$2,000,000, of which \$600,000 is issued. It has also issued 7% first mortgage serial bonds against the steamships Mathewston and Berryton, for \$400,000, and against the steamships Riverton and Laketon, for \$300,000. The prospectus states that the company was incorporated in 1905 and that it owns and operates steamships aggregating 63,000 d.w. tons, engaged almost entirely in carrying grain from the head of the Great Lakes to Montreal, the total carrying capacity of the fleet per trip being about 2,300,000 bush. of wheat. The President states that "the average annual net earnings derived from operations, after depreciations and taxes, for the five years ended Jan. 31, 1922, amounted to almost five times the total interest charges on the bonds now outstanding, including the present issue. Preliminary figures for the first half of 1922, indicate that the earnings for this year will be considerably in excess of the above proposition."

Canadian Notices to Mariners.

The Marine Department has issued the following:—

62. Oct. 6.—174, Nova Scotia, south coast, entrance to Port Latour, changes in buoyage. 175, Quebec, St. Lawrence River, between Quebec and Montreal, vicinity of Cap Madeleine and Three Rivers, change in character of buoys.

63. Oct. 23.—176, Ontario, Lake Huron, Great Duck Island, character and characteristic of fog alarm to be changed. 177, United States, Detroit River, Mamejuda light wreck. 178, United States, Detroit River, Lake Huron, Lake Superior, and connecting waters, aids to be discontinued for winter.

64. Oct. 23.—179, British Columbia, Seaforth Channel, uncharted rocks.

65. Oct. 26.—180, New Brunswick, Bay of Fundy, entrance to Musquash Harbor, character of buoy to be changed. 181.—Quebec, St. Lawrence River, between Quebec and Montreal, foot of Lake St. Peter, new edition of chart. 182, Newfoundland, North Coast, Jacques Cartier Island (Noble Island), light re-established.

66. Oct. 28.—183, Ontario, St. Lawrence River, Cornwall Island to Cardinal, new chart. 184, Ontario, Lake Erie, west end, Middle Island, light to be discontinued. 185, Ontario, Lake Superior, Cape Garçantua to Otter Head, new chart.

67. Nov. 2.—186, British Columbia, Vancouver Island, Kijikout Sound, Amos Island, beacon established. 187, British Columbia, Vancouver Island, Barkley

Sound, David Channel, Richard Rock, beacon established. 188, British Columbia, Seaforth Channel, uncharted rocks.

68, Nov. 4.—189, Quebec, St. Lawrence River below Quebec, Red Island new lightship to be placed. 190, Quebec, St. Lawrence River below Quebec, Cap au Corbeau, fog bell discontinued.

Canada Steamship Lines' Earnings.

In accordance with an announcement made recently by W. H. Coverdale President, Canada Steamship Lines Ltd., the first of the periodic statements of its earnings, has been given out, for the 9 months ended Sept. 30. It shows total operating revenue of \$8,426,000, and net operating revenue of \$1,363,000, with interest charges of \$50,000. Figures for the same period of 1921 are not available, so that a direct comparison cannot be made. The monthly averages for the 9 months ended Sept. 30, 1922, were, gross revenue \$936,222; net revenue \$151,444; interest charges \$60,000, and the monthly averages for the complete year of 1921, were, gross revenue \$1,053,084; net revenue \$183,576; interest charges \$53,662. The heaviest freight traffic is during the last three months of the year, so that the monthly averages quoted are not altogether a fair comparison.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers, or by dealers in the articles referred to, and no publisher in the name we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or in equivalent. Advertising contracts will not be taken with any condition that acceptance them will oblige us to publish reading notices. In other words, our reading notices are not for sale, either to advertisers or others.

Dominion Insulator & Manufacturing Co., Ltd., a division of the Ohio Brass Co., is building a factory at Niagara Falls, Ont., for manufacturing high tension porcelain insulators and other O-B products, such as trolley materials and rail bonds, for electric railways and mines, electric car equipment, and steam railway electrification materials.

The **Smart-Turner Machine Co.**, Hamilton, Ont., reports the following orders: Marine & Fisheries Department, 10 small triplex power pumps, for shipment to Dominion Lighthouse Depot at Prescott, Ont. Essondale Asylum, Vancouver, pair of 8 x 10 x 12 simplex vacuum pumps on one base plate; 2 motor driven centrifugal circulating pumps, and automatic feed pump and receiver equipment, with motor driven centrifugal pump. Vipond-North-Thomson mines, Timmins, Ont., 5½ x 6 triplex power pump. Abso-Pure Ice Co., Hamilton, 2 no. 4 double suction centrifugal pumps, to be direct connected to electric motors. H. F. Routley, Toronto, no. 4, belt driven, centrifugal pump, for use near Caledonia. Standard Paving Co., Lindsay, Ont., duplex packed piston pump, 4½ x 2½ x 4.

NOTICE

The General Railway Signal Company of the United States of America, the owner of the exclusive rights to Canadian patents No. 92221, No. 91277, No. 92516, issued to Yarns and Townsend, and covering methods of signal-lamp electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents to the fact that it is prepared to sell and furnish, at short notice, all such devices and to install such systems upon any railway in the Dominion of Canada.
All inquiries regarding the above should be addressed to The General Railway Signal Company of Canada, Limited, Lachine, Province of Quebec, Canada.

REDEMPTION OF CANADIAN NORTHERN RAILWAY COMPANY

5% Land Mortgage Debentures.

Notice is hereby given that on December 1st, 1922, the Canadian Northern Railway Company intends to redeem all the above Debentures now outstanding, and which in ordinary course would not mature till June 1st, 1923. The December 1st coupons will be paid on December 1st at the usual places in the usual way.

Debentures of the above issue, together with the June 1st, 1923, coupon attached, should, in accordance with the terms of the Trust Deed securing them, be presented for payment at Lloyd's Bank Limited, 72 Lombard Street, London, E.C. 4, England. The Debentures should be received by the bank three days before December 1st. Interest on the Debentures will cease as of December 1st.

This notice is given in addition to the formal notices required under the above Trust Deed and already duly given.

CANADIAN NORTHERN RAILWAY COMPANY,

The Power of Advertising

It is often difficult for an advertiser to realize what he is actually paying for, because he cannot project his imagination into the thousands of homes and offices and see his advertisement doing its work. The advertiser does not pay for ink and paper. These are merely mechanical essentials. He pays for the effect upon people's minds, and that is as intangible as air, but as permanent as a towering structure of steel and concrete.

RELIABILITY

One of the foremost qualities of Q & C Rolled Steel Step Joints is the fact that they can be depended upon to give a reliable service, for our first thought in building a step joint has been given to a reliable product.

Without bother, without attention, Q & C Step Joints maintain the normal gauge month in and month out, in fact, as long as the rail lasts.

Combined with their feature of strength, which under actual test has proven many times stronger than case metal—Q & C Rolled Steel Step Joints embody the fac-

tors of safety and economy. By our process of manufacture, the rolled steel joint with the Bonzano-Thomson features is pressed to fit any section of rail. This process involves heat treatment which further strengthens the joint and also permits pressing to a perfect fit.

On your road you want the step joint that is the most efficient. When you find a Q & C Step Joint on your section—keep an eye on it—compare it with the others and as time goes by you will be convinced of its superiority. Drop us a line today requesting blue prints, literature or prices.

Immediately—Permanently and Adequately Active

IMPROVED HIPOWER NUT LOCKS are so designed that they permanently and adequately maintain the stress imparted to a track bolt by initial wrenching in anticipation of and in preparation for the super stresses induced by traffic.

IMPROVED HIPOWER has greater thickness and more curves than the standard shape to give the enormous reactive pressure necessary.

IMPROVED HIPOWER cannot be compressed completely by ordinary wrenching. The high reactive pressure therefore becomes *IMMEDIATELY* and *ADEQUATELY* active to absorb the impact of the rolling load.

We firmly believe that **IMPROVED HIPOWER** more closely approaches the Ideal Track Nut Lock than any other device heretofore manufactured.

Reducing the Dynamic Augment of Union Pacific No. 7,000

AT 73 miles per hour (a speed in miles per hour equal to the diameter of the drivers in inches), the dynamic augment of No. 7000 as built, is 45,230 pounds per side.

Had the reciprocating and revolving parts of No. 7000 been made of ordinary carbon steel, the dynamic augment would have been 48,454 pounds per side or 3,224 pounds greater.

This saving in dynamic augment as well as a saving in weight was accomplished by using Carbon-Vanadium, the Normalized forging steel, for main and side rods, driving axles, trailing axles, crank pins and piston rods.

With its unquenched Carbon-Vanadium Steel forgings, Union Pacific No. 7000 will haul more ton miles at less maintenance cost, for it is lighter in weight, less destructive on the track, and its vital running gear parts are equal to the stresses imposed by present-day operation.

Write for information about Carbon-Vanadium Steel and the steel companies from whom you can get it.

Send for a copy of
Bulletin L F-1, with
its interesting data
on Carbon-Vanadium
Forging Steel.

PEDLAR'S "PERFECT" TONCAN METAL CULVERTS

PURE Iron Culverts are rapidly coming into their own. The Province of Nova Scotia has officially adopted them (including Pedlar Culverts) for all Provincial highways. And engineers everywhere are more and more "sold" on them. Pedlar's Culverts are made from the well-known anti-corrosive ~~CLONCAN~~—a pure iron, deeply corrugated and heavily galvanized. We also manufacture Steelcrete, Metal Lath, Rib Fabric, Floor Tyle, Metal Roofing and Siding, etc.

Write for Culvert Booklet "R.M."

The PEDLAR PEOPLE Limited

Branches: Montreal, Quebec, Ottawa, Toronto, Hamilton, Winnipeg, Calgary, Vancouver.

For Railroad, Hotel and Steamship Upholstery CHOOSE "CHASE" MATERIALS

CHASE

**MOHAIR
PLUSH**

The trade mark "Chase" stands for seventy-five years' leadership in manufacturing.

CHASE GOAT BRAND CAR PLUSH: This product, made from the fleece of the Angora Goat, has been the choice of railroads and steamship lines for over thirty years. It is **DURABLE—FAST IN COLOR—RICH APPEARING—MOST SANITARY.**

Recently there was exhibited a car seat upholstered with our Mohair Plush, and the seat had already been in service twenty-five years.

CHASE LEATHERWOVE: The modern, leather-like upholstery material for use where flexible toughness is the one thought.

For cleaning Plush and other upholstery fabrics choose **CHASE PLUSH RENOVATOR**—That remarkable liquid cleanser which does not start the dyes or injure the fabric. **GUARANTEED effective but NOT HARMFUL.** Write for samples.

Practical Training for Business and Industrial Executives

Business Management—
Personnel Organization—
Industrial Management—

THE success of the International Cor-
respondence Schools in Business
Training, as well as in technical sub-
jects, has been due not only to the per-
sonal, problem-solving method of instruc-
tion of which they were the originators,
but also to the high business and profes-
sional character of the men behind the
courses.

Among the more than 300 men who have con-
tributed their experience and advice to the prepa-
ration of I. C. S. courses are:

J. Lee Nicholson, First President of the
National Association of Cost Accountants;
Edgar P. Traak, Assistant Naval Architect,
The William Cramp & Son Shipbuilding
Co.; Charles J. Naemyth, F.A.A., C.P.A.;
Dr. Owen L. Shimmy, Professor of Chem-
istry, University of Pennsylvania; Stanley
Rhoades, Telephone and Telegraph Engi-
neer, New York Central Railroad; J. H.
King, Research Engineer, Babcock & Wilcox
Company, New York; Bradley Stoughton,
Mining Engineer and formerly Secretary of
the American Institute of Mining Engi-
neers; S. G. Whitehead, Special Traffic
Agent of the American Express Company;
A. Hamilton Church, the well-known indus-
trial engineer; Edward P. Moxey, Jr., A.M.,
C.P.A., Professor of Accounting at the
University of Pennsylvania, and Dr. Clar-
ence Stratton, Director of English in the
Cleveland Public Schools.

Whatever the course, if it is an I. C. S. course,
you can be sure it represents the best thought of
men who are leaders in that particular field and is
drawn from their practical experience.

Why not at least find out what the I. C. S. can
do for you? It takes but a moment to mark the
work of your choice, tear out and mail the coupon
printed below. There's no obligation and not a
penny of cost, yet that one single act may be the
means of changing your whole life. Today—not
"Tomorrow" is the day to take your first definite
step toward Success.

YOU can effect a **SAVING** in Lubrication costs by using **TULC** for it will give results not to be obtained by the use of any other Lubricant.

T
U
L
C

Will not splash over commutators.
Will not cause short circuit or burnt armatures.
Will not leak or rot fields.
Will so save in brass and babbitt to pay for itself.
Will only feed sufficient to lubricate properly.
Will save dripping losses.
Will make axles and journals last longer.
Will cut down a lot of pull-ins.
Will eliminate hot boxes and cut axles.
Will be sent for trial on request.

"Safety" Car Lighting Regulator Panel

When you buy Safety Equipment, you buy more than high-grade apparatus, electrically and mechanically right. With the physical value goes all the pioneer experience in car lighting—a mastery of the science gained in over 35 years of specialization—the assistance of experts skilled in this specialty—a service country-wide in scope. Safety Equipment represents standard practice as determined by daily contact with operating conditions. And back of it are the resources and responsibility of this Company as a warranty of sound design and honest construction.

"Made in Canada"

MONCRIEFF'S

Moncrieff's "Unifac" is not a cheap glass. But because it outlasts many ordinary glasses, the "Unifac" is economical. British made.

JOHN MONCRIEFF LIMITED, PERTH, SCOTLAND.

"UNIFAC" WATER GAUGE**GLASSES**

The "Unifac" does not readily corrode. It resists extreme changes of temperature and withstands the highest working steam pressure.

Canadian Representative: W. J. WALL, 134-136 Bloor St. MONTREAL, Canada.
